Shimpo-to recently held a conference there at which a resolution was adopted, first, that the Cabinet should be held responsible for the return of the Liaotung Peninsula; secondly, that the independence of Korea should be maintained by Japan single-handed; thirdly that, so far as national resources admit, the fighting capacity of the country should be increased; and fourthly, that energetic efforts should be made for the establishment of a great political party. The last mentioned item must be interpreted as meaning that the local factions should be united into one body.

Count Katsu is never weary of talking about his old friend Saigo. Recently in a conversation with a representative of the *Kokumin Shimbu*, the aged Count of Hikawa lamented the lack of large-minded statesmen at the present time and recounted the circumstances connected with his celebrated conference with Saigo at Tamachi during the war of the Restoration. The ablest Minister of the Shogun, and an enthusiastic advocate of the surrender of the Castle of Yedo on reasonable terms, Katsu Awanokami sent a note to Saigo, a General of the Imperial forces, then encircling the city, requesting a conference with him at the Satsuma *yashiki* at Tamachi. Saigo at once replied to him, specifying the date and hour of the meeting. Katsu went to the place of meeting on horseback, attended only by a single *belto*. When he had waited a short while in one of the rooms of the Satsuma *yashiki*, Saigo, followed by his faithful servant, approached the room through the garden. He wore an old suit of foreign clothes, and came in asking pardon for his delay in the tone of a man who was going to enjoy a friendly chat rather than that of a responsible General about to engage in negotiations on a weighty matter of State. "Saigo," says the Count, "believed every word that I told him, and settled the whole question by declaring that, although on this question (the settlement of the Tokugawa House) opinion was divided, he would answer with his life for its adjustment in a manner suggested by myself." When the Tokugawa Minister took leave of Saigo, the latter saw him as far as the gate. There a large body of Imperial forces had gathered together to have a look at the celebrated Tokugawa man. Observing him come out side by side with Saigo, they instantly assumed a respectful posture and saluted them by presenting arms. Katsu, turning toward them and pointing at his breast, told them to have a good look at him, for should the matter in hand not be arranged it might be their lot to aim their guns at him. Count Katsu is convinced that, had it not been for Saigo, the matter would not have been settled so speedily and so satisfactorily to both parties.

The *Fiji Shimpo* repeats its advice that some orders for the construction of war-vessels should be placed with the dockyards of the United States. Our contemporary states that the American builders are confident that they will be able to execute orders as cheaply and as efficiently as contractors in Europe. The *Fiji's* article being essentially a repetition of one already reproduced in these columns, we do not think it necessary to make any further reference to it here.

IS THERE A WRITTEN COVENANT BETWEEN FRANCE & RUSSIA?

Since the French Government has spoken as though there actually existed an alliance between France and Russia, the Continental press has devoted no little space to the discussion of the subject from various standpoints. In Germany the existence of a written covenant is still doubted. The widely known *Vossische Zeitung* has an interesting leader on the subject, from which we reproduce the following:—Is there a Covenant between Russia and France? French Ministers, who are accustomed to weigh their words on a golden scale, have spoken in the Chamber of an alliance, and have declined to comply with the request

to make known the contents of the agreement. They have not publicly withdrawn or disowned the correctness of the interpretation of their words that an actual agreement had been consummated at Cronstadt. For the first time has the statement of the existence of an Alliance come from the Ministers' table in Paris; for the first time has the assurance been given that the political situation experienced an essential change in the year 1891, and no sooner was this stated than the ruler of all the Russians decorated the President of the Republic with the chain of the St. Andrew's Order. Has then France obtained her object? Shall the prophesy of the first Napoleon, that at the end of this century Europe will either be republican or be ruled by the Cossacks, be strangely contradicted by the Republic and Cossackdom going arm in arm, though not to rule the old world, but to threaten it? According to Messrs. Ribot and Hanotaux, the covenant, if there is one in existence, was made four years ago when the White Czar uncovered his anointed head on hearing the Marseillaise. Had this taken place immediately before the Kiel festival, under the reign of Nicholas II., the event might make one feel uneasy, perhaps one would expect the guns to go off by themselves. For has not the longing of the Chauvinists been fulfilled; has not that for which Floquet and Déroulède yearned, when making their pilgrimages to Russia, become a fact? Now for four years this Russian-French covenant is said to have been in existence, but during these four years the relations between Russia and Germany have, to say the least, not become worse, consequently we need give ourselves no concern on this score.

The French wooing of the friendship of Russia is nothing new. Who does not remember the ridiculous attitude of the French Ambassador, General Lefebvre, in the year 1875, when the rumour was abroad that Prince Bismarck was seeking a new excuse to begin a new war with France? The French representative begged piteously for protection from the Czar. Duke Decazes wrote to the Czar that he trusted "His Majesty will protect us with his sword!" "With my sword? That is asking much. My word will suffice." Thus replied Alexander II., according to the reports of Lefebvre. The peace was not disturbed, for Bismarck indignantly denied the rumour that he had entertained any intentions against France, and a few years later, at the Berlin Congress, he played the rôle of an honest broker, where he had to hear from the opponents of Russia that he sometimes appeared more Russian than even Russian diplomacy. However, he never went so far as to put German politics in the service of foreign interests, wherefore he consummated the agreement with Austria, and later with Italy, so that in the extreme event of a war with France, at two frontiers, Germany would be sure of success. What Bismarck had intended already in 1871, found expression in the agreement between the three Powers. But the highest task which Bismarck undertook was the maintenance of peace in Europe, without violating the dignity of the German nation. When therefore, at a time of political excitement, an influential paper said that there existed a rivalry between Germany and France to secure Russia's favour, and that this might degenerate into servility, the Chancellor of the German Empire replied, "We recommend to the author of that article, that if he disapproves the course of the Government, he should rather doubt the discretion of the leaders of the Government than their sense of honour." Bismarck was favourably disposed towards Russia and appreciated her friendship; he had brought about the relation between the three emperors (Dreikaiserthum), and he endeavoured to retain amicable relations with the northern neighbour, even after the covenant with the Hapsburg Monarchy, for he did not wish to see the string which led from Berlin to Petersburg torn; but could also say, "We will no longer canvass for friendship!" and that the *saldo* of gratitude had been equalized, and that "We Germans fear God, nothing else in the world."

If the French to-day are jubilant over the St. Andrew's chain around the neck of Felix Faure,

we certainly do not begrudge their joy. Russia will continue to pursue her steady course of perseverance. The empire of the Czar has never furthered other interests than its own. In December, 1871, during the course of an interview with Prince Frederick Carl, Michael Katkow said:—"We wish to see Russia act entirely independently in her affairs and in accordance with her judgment of what may serve her best interests." So said one of the most influential writers of a century ago, and so says every Russian statesman to-day. What do the French want? Alsace-Lorraine? Will Russia, for the sake of these provinces, ever give marching orders to a single regiment? One can with safety reply in the negative, regardless of the character of the covenant that may exist between the empire of the Czar and the republic. Russia will ever be willing and ready to utilize the services of France, and the St. Andrew's chain may be an excellent symbol of dependence in which the Czar wishes to hold France. But that Russia should serve French interests, that she should allow herself to be dictated to by chauvinists as to the time when to begin a foreign war, would be irreconcilable with the traditional policy of Russia. For this very reason, the festivities of Kronstadt, Cherbourg, Toulon, and Nancy passed off without influencing the political situation and everything remained as before, even if an unwritten covenant of four years ago should have been changed into a written one. The Dreibund does not merely rest upon treaties nor upon the wishes of the respective nations and governments, but upon obvious life interests of these States. This homogeneity of interests does not exist between the two nations, which according to their state of culture and contemplation are naturally opponents rather than allies. Here on the one hand, absolute and stubborn autocracy, which suppresses all freedom and with unrelenting intolerance upholds an intolerant state-religion; there, on the other hand, the very embodiment of the ideas of the great revolution, democratic freedom, and the combat for light and liberty against all clericalism. It is indeed astonishing how Frenchmen, who can scarcely get enough liberalism, allow themselves to be hitched to the chariot of despotism! But they are pleased to appear in the rôle of a coquettish lover, beyond the Vosges, because of the pain over the loss of Alsace-Lorraine. True, there are many Frenchmen to this day who have not been able to overcome the memory of Sedan, while others have recognized the fact that the French claim to these ancient German provinces has become superannuated. However, the cry for revenge is a convenient riding-stick for agitators, and is always sure of receiving the applause of the passionate masses. And for this reason every government is obliged to cultivate the friendship of Russia, even though it might attach to the written covenant merely Platonic value, without the least thought of coming to blows with Germany. Joyful festivals, triumphant speeches, and decorations, are cheap means in the hands of the government with which to establish its own position more firmly. And this is perhaps the chief object in making public mention of the existence of a Franco-Russian alliance.

THE LOSS OF THE STEAMSHIP "CATTERTHUN."

SIXTY PERSONS DROWNED.

We received a telegram yesterday informing us that the loss of the steamer *Catterthun*, which we reported on Wednesday last, was unfortunately attended by considerable loss of life, no less than sixty persons being drowned, of whom forty-six are Chinese. It appears that the vessel struck on Seal Rock on the 8th inst., having left Sydney the previous day, and foundered.

THE SALVATION ARMY.

One of the Salvation Army's magazines is called *The Conqueror*. It is a record of the Army's work throughout the world. Certainly this singular movement has assumed dimensions that will earn it a place in history. Its critics claim that the Army's basis is hysteria, and that it never won a perfectly sane recruit. We do not see that even if such things were true, they would greatly signify. Human nature has many aspects, and the Salvation Army appeals to one of them. Possibly if the hysteria and sentiment that it turns to useful ends were not enlisted in its cause they might add appreciably to the world's record of crime. At all events the Army is now an immense organization working to save men and women from sin and degradation. With such a purpose no one can quarrel, whatever may be his opinion of the masquerade attending the movement. We of the Established Church who dress our clergy in stoles and cassocks and other strange garments, have no business to gird at the uniform coat of the Salvation soldier, nor is there so much difference between the ringing of a bell and the beating of a drum, or the pealing of an organ and the braying of a trumpet. One need not look far afield to find another huge organization, having for its chief, indeed its only, purpose the doing of deeds of charity, whose members spend upon collars and aprons and similar frivolities money enough to support a thousand hospitals or maintain a thousand schools. Mankind has not yet risen to the full level of the grave philosophical science that graces the close of this nineteenth century. We have not altogether put away childish things, and probably we never shall. So there is a niche for the Salvation Army. We read in *The Conqueror* that one of the Army's great sources of strength is its poverty. It spends as fast as it receives, on the principle, doubtless, that the corruption of the moth and rust had better be avoided. Yet we observe in the Balance Sheet of the General Funds that the value of the Army's real estate is put at \$303,579, on which, however, it apparently owes \$192,100. It deals annually with something like three hundred thousand dollars, a sum in itself sufficient to indicate the magnitude of the work. Strange incidents are related in connection with that work. It seems that Edward Trickett, sometime champion sculler of the world, now carries the Army's flag in south Australia, and declares that he is happier as a standard-bearer than he ever was when winning races among the plaudits of thousands. From Sweden there comes this striking despatch:—"Commissioner Ridsel recently captured 230 souls during a Two Days with God in a city of 30,000 inhabitants." In India and Ceylon the military authorities do not look with favour on the Salvationists. Staff-Captain Deva Vadedu writes from Ceylon:—"A Queen's soldier, also a soldier of our No. 6 corps, Colombo, was falsely reported to his officer, as taking part in one of our open-air meetings a few nights ago. As a matter of fact he was only standing near, as so many soldiers do during these meetings. We pleaded for justice, but in spite of our evidence, the soldier has been deprived of his good conduct stripe and sent to the guard-room for one week." Read this, again, from Major S. Rolfe in Jamaica:—"Three Salvationists on board the British warship *Magicienne* have recently been ashore both at St. Ann's Bay and at Montego Bay, and have rendered valuable assistance in the meetings. On one occasion a woman fell down under conviction, crying for mercy, and her brother caught hold of her to drag her away. At the same moment, however, one of the Salvation Jack Tars caught hold of the other side of her and succeeded in dragging her to the penitent-form, where, we have reason to believe, she got saved." That was in truth a struggle for a soul. From Germany we find a report that shows how much need that empire has of a few newspapers like our local *Tritons* to keep things straight. Captain Muller was in the streets of Hildesheim selling *War Cry*, a publication of the Army. Accosted by a person from an open window, he sold him two copies.

For that offence he was arrested, and after a detention of thirty hours was released, "without either trial or explanation." Conceive what journalistic screaming we should hear did such a thing happen in Japan! But in Europe the journals seldom espouse the cause of the Salvationists. "A newspaper of Madrid having made an attack upon The Salvation Army, Commissioner Railton tackled one of its reporters. The Commissioner reports in characteristic terms that this individual has been examined closely under the searchlight of his knees, and is now properly converted. Two excellent players on the guitar are among others who have shared the experience of the reporter." We are to have the Army in Japan also. *The Conqueror* says:—"Brigadier and Mrs. Wright have been appointed to commence our war in Japan. The reason for the cancellation of the orders to Colonel and Mrs. Wilson for this work arose from the refusal of the doctors to pass Mrs. Wilson."

RACE HORSES.

A correspondent writes:—"I see that the Committee of the Nippon Race Club have ordered 15 Australian horses for the next Autumn meeting at a cost of \$300 each. Do you not think it a mistake to order horses from Australia when there could be procured at the same price Japanese half-breeds equally suitable for racing purposes in Yokohama? Were this money paid to Japanese breeders, it would encourage them to import good sires, and racing men would have the satisfaction of patronizing ponies bred in Japan. It looks as though the Committee, in their anxiety to have horse races, forget the distinction between roadsters and racers. I may add that the last lot of imported China ponies, which were sold at \$500 each, can not beat a good Japanese pony, which costs only \$55. Let the programme be made for Japan and China ponies to race together, and I am willing to prove what I affirm." As to these criticisms, we may observe that the Committee of the Race Club are never right in everybody's eyes. They have doubtless acted after full deliberation, and are probably quite sensible of all the objections that may be urged against their scheme. Australian horses at £30 each can only be hacks, and probably mediocre even in that category. But we should like to hear the Committee's reasons before venturing to pronounce any definite opinion. For our own part, we have long doubted whether the Japanese pony can ever be improved; that is to say, whether he can ever be made the basis of a satisfactory breed of cattle. He is, on the whole, a wretched specimen of horseflesh. The first aim of any judicious breeder should be to exclude from the stud every animal disfigured by characteristics such as those of the Japanese pony. The dam plays as important a part as the sire in fixing the type, and any man choosing a Japanese dam for stud purposes must be prepared for a disappointing progeny. This is a grave question for the Military Authorities of Japan. The Japanese cavalry as now mounted would be absolutely powerless against the cavalry of any Western Power: the difference in weight would be instantaneously conclusive. For agricultural purposes the Japanese cattle may serve well enough; but for military service they are contemptible. Naturally the attempt to breed good stock from them has been a failure. A really radical measure would probably pay best in the long run, namely, the introduction of a new breed from abroad. Holding these opinions, we must confess that the step just taken by the Race Committee commends itself to us. Why should racing in Yokohama be for ever limited to parodies of horse flesh like Japanese and Chinese ponies, and the weak loined, long pasterned, weedy half-bred? Let us have a new departure that will carry us somewhat closer to the real thing. Australian horses at \$300 each cannot be show animals, but their importation indicates a degree of pluck and enterprise that we should be the last to condemn.

MARQUIS YAMAGATA.

Marshal Yamagata has withdrawn his opposition to be raised to the rank of Marquis. According to an account published in the *Nichi Nichi Shimbun*, he too is stated to have been kept entirely in the dark as to the honours that were conferred on him on the 5th instant. On receiving the honours from the hands of the Sovereign, he retired to an adjoining room, where, after signing a paper testifying to his grateful acceptance of the Order of the Golden Kite, he wrote a memorial begging to be permitted to decline the rank of Marquis. He prepared this document secretly in order that it might not become known to the other recipients of honours, and then handed it to the Minister of the Imperial Household, requesting him to present it to His Majesty. Marshal Yamagata thought that, by declining the Marquisate in secret, before it could be announced in the *Official Gazette*, the matter would end without being noised abroad. On the morning of the 6th, however, he was astonished to see himself gazetted a Marquis. Official duty called him to the Court that morning, and when he saw the Minister of the Household he asked the reason why the honour which he had declined to accept had been announced in the *Official Gazette*. The Minister replied that the rules of the Court required the publication of all honours that have been granted by His Majesty, whether accepted or not. Meanwhile, certain documents had to be signed by the Marshal, and as the matter had to be settled without any more loss of time, he sought an audience with the Emperor on the 8th, when he begged His Majesty to relieve him from the onus of being compelled to accept an undeserved honour. His Majesty treated the Marshal's petition with a good humoured smile, and dismissed him with the command to consider well the line of conduct he was attempting to pursue. On the following day the Emperor sent Viscount Tanaka, Vice-Minister of the Imperial Household, to the Marshal's residence to inform him that his petition could not be granted. Nothing remained then for the Marshal but to obey the Imperial will, and on the morning of the 10th he presented himself before the Emperor and expressed his gratitude to His Majesty for the great favour shown to him. The *Nichi Nichi* also states that the Premier met the Marshal in the ante-room, and they expressed to each other their surprise at the honours that had suddenly been conferred upon them.

FINANCIAL PROGRESS IN JAPAN.

The Minister of State for Finance, according to the *Chuo Shimbun*, thinks that one of the first duties of his office at present is to provide cheap capital for agriculturists and industrialists. Investigations show that the loans contracted by these two classes throughout the empire aggregate 300 million *yen*, and that the rate of interest is from 10 to 15 per cent. Handicapped by such a burden, farmers and manufacturers can not hope, in Count Matsukata's opinion, to compete with their Western rivals, or even with their neighbours the Chinese. His programme therefore, is to bring cheap capital within their reach by establishing two great banks, an Agricultural Bank and an Industrial Bank. The latter he proposes to locate in Tokyo; the former would have branches in all the Cities and Prefectures. No statesman has done more for Japan than Count Matsukata in the way of bringing cheap money within reach of enterprise, and diverting capital from unproductive to productive channels. This scheme of an Industrial and a Commercial Bank is understood to have been entertained by him four years ago, but an opportunity to carry it satisfactorily into practice has not yet presented itself. In the interests of the country it is to be hoped that the project will soon become an accomplished fact.

THE RICH MEN OF JAPAN.

The *Hochi Shimbun* has compiled some figures with regard to the wealthy men of Japan. It does not appear to have any special sources of information on the subject, and accordingly relies upon the income-tax returns, which certainly afford no complete data in other countries. The Iwasaki family stand at the head of the list. Mr. Iwasaki Yanosuke pays annual income-tax amounting to 3,770 yen, and Mr. Iwasaki Kiuya's figure in 3,900. These payments (7,670 yen), being at the rate of 3 per cent. of the income on which they are levied, it follows that the income is 255,666 yearly. The *Hochi*, whose arithmetical methods we confess ourselves unable to follow, puts the income at 255,333 yen, omitting fractions, but as 3 per cent. of the latter is 7,660, there is obviously some mistake somewhere. Still more incomprehensible is our contemporary's assertion that such an income represents a capital of at least 60 million yen. Sixty million yen at even 3 per cent. gives an income of 1,800,000 yen annually. Eight and a half millions at that rate would produce the income assigned to the Iwasaki family. We do not understand the *Hochi*, but its conclusions may nevertheless interest our readers. It puts the Mitsui family next, but gives the tax paid by five heads of houses only, whereas there are really eight. The five are:—

Mr. Mitsui Hachiroemon	Yen 1,113.00	Income Tax.
Mr. Mitsui Genyemon	Yen 1,711.58	Income Tax.
Mr. Mitsui Takayasu	Yen 1,110.00	Income Tax.
Mr. Mitsui Hachirojiro	Yen 1,141.35	Income Tax.
Mr. Mitsui Takenosuke	Yen 1,264.80	Income Tax.

The total tax paid by the five is 7,341.03 yen, indicating an income of 244,701 yen. Despite the close approximation between the incomes of the two great houses, the *Hochi* thinks that there is a marked disparity of capital, the advantage being largely on the side of the Iwasaki family. It also thinks that this state of affairs may possibly be reversed in the course of time, in consideration of the fact that the Mitsui capital is more profitably employed than that of the Iwasaki, but it qualifies this forecast by adding that the Iwasaki investments are safer and more stable than the Mitsui. For our own part, we attach very little value to the whole calculation. Is it conceivable that the two wealthiest houses in Japan do not enjoy incomes of more than twenty-five thousand pounds sterling each? The idea sounds to us preposterous.

RAYMOND'S VACATION EXCURSIONS.

Messrs. Raymond and Whitcomb have published a handy little volume for the use of tourists visiting Japan, China and the Hawaiian Islands. We have not before heard of Messrs. Raymond and Whitcomb, but they appear to have assumed in the United States the part played by Messrs. Cook and Company in England. Their first Grand Tour, embracing the field of Japan, China, and the Hawaiian Islands, and including a journey across the Continent of America, with visits to famous scenic points, is arranged on the basis of a start from Boston on August 14th, and their second on that of departure from same place on Sept. 2nd. The tours occupy a period of four months, and the total cost, all travelling expenses included, is \$1,250—presumably in gold. If the organization of the scheme may be inferred from the guide book before us, travellers should be fully satisfied. It is an excellent little volume, not too large to be put into the pocket, yet containing, so far as we can see, all the information needed by a tourist. We doubt whether such a compilation would have been possible for such a purpose had not the author had access to the Guide Book par excellence, that of Messrs. Chamberlain and Mason, large use of which has evidently been made, though we can not find any corresponding acknowledgment of obligation. The book is beautifully printed on good paper, and is embellished by a number of well selected collotypes. It is well worth having for its own sake, and doubtless it can be purchased independently, but no statement of price or place of sale is advertised.

THE TOKYO CHAMBER OF COMMERCE.

The Tokyo Chamber of Commerce held an extraordinary general meeting at 5 p.m. on the 12th instant. There were present Messrs. Shibusawa Eiichi, Oku Saburobei, Ginbayashi Tsunao, Sakuma Teiichi, Oye Taku, Nakano Buyei, Imamura Seinosuke, Masuda Takashi, Watanabe Hiromoto, and so forth. Mr. Shibusawa, who was in the chair, reported that the memorial on the subject of standard transactions decided upon at the last meeting was presented to the Government on the 29th ultimo; and that a paper embodying the views of the New York merchants about the improvement of Japanese silk fabrics had been received from a firm in Yokohama. The first subject submitted to the meeting was the report of a Committee that had been appointed for studying the question of the development of the marine business of the country. Mr. Nakano, Chairman of the Committee, briefly recounted the proceedings of the Committee and explained the purpose of the memorial drawn up for presentation to the Ministers of Agriculture and Commerce, of Communications, and of Finance. The document comprised four headings; namely, first, the education of seamen; second, the encouragement of the shipbuilding business; third, the encouragement and subsidizing of the business of mercantile navigation; and fourth, the estimates of expenditures required for carrying out the measures recommended. The memorial was approved by the meeting almost unanimously. Besides presenting it to the three Ministers of State mentioned above, it was suggested and decided that copies of the memorial should be distributed among the members of the Diet and the Chambers of Commerce throughout the country. The next topic of discussion related to the Governor of Tokyo's request to be informed whether in the opinion of the Chamber there was room for the establishment of new private banks in the capital, and, if so, to what extent new banks might be allowed to come into existence. After some debate, the investigation of the subject was entrusted to the economical department of the Chamber. The third matter brought up was the construction of a harbour in Tokyo. After a brief explanation of the subject, the Chairman was requested to name eight persons, beside himself, to serve on the committee. He nominated Messrs. Binbayashi, Yamanaka, Kato, Nonaka, Sakuma, Umeura, Masuda, and Watanabe.

Among other matters considered, mention may be made of a draft law for the encouragement of navigation (approved), the proposal for the disposal of the remaining exhibits of the Fourth Domestic Exhibition by lottery (rejected), the presentation of a memorial to the Government for a more speedy execution of the scheme of City improvement, and for the early construction of a railway connecting Shimbashi and Ueno (approved), and the appointment of delegates to represent the Chamber at the meeting of the associated Chambers of Commerce to be held at Nagoya in September. Messrs. Shibusawa and Imamura were elected delegates. The meeting adjourned at 8.30.

RUSSIA AND THE SALE OF LIQUOR.

The "Dispensary System," that involved such serious trouble last year in the United States, is apparently to be adopted in Russia. In other words, the Russian Government will assume control of the liquor traffic throughout the empire. An experiment made last year in four provinces succeeded so well that the Authorities have determined to apply the system everywhere. With reference to its working in the four provinces, we read that drunkenness has diminished, and that the riotous scenes formerly so familiar in saloons and on the streets have disappeared; that the number of arrests for intoxication and of accidents due to it, has perceptibly decreased, and that workmen are beginning to be more regular in their attendance

on Monday mornings. In view of this record, the Emperor has directed that from July 1st, 1896, the system shall be brought into operation in eight provinces, to be extended to seven others from July 1st, 1897, and to the greater part of the empire from January 1st, 1898. The Moscow *Viedomosti*, as translated by an American journal, says:—"The object of Government monopoly of the sale of liquor is principally to do away with the abuses of liquor-dealers who take advantage of the disposition to drunkenness. To say nothing of the fact that the liquor-dealers are generally also usurers who manage to enslave the population, they try to encourage drunkenness and to make the saloon a necessity to the people. They gladly deal on a credit basis and take all kinds of household goods as security. The law, to be sure, prohibits this, but it is notorious that the saloon-keepers obtain most of their incomes by evading the legal restraints. Government sale, on the other hand, aims at the substitution for drunkenness of a normal consumption of liquor. Equally important is the improvement of the quality of the liquor manufactured." It is also claimed that over-production of alcoholic beverages must cease under the dispensary system, since the competition of distillers will cease to influence the price of spirits.

SHOCKING OCCURRENCE IN YOKOHAMA.

A terrible affair occurred upon the Bluff Yokohama, on Friday afternoon, which has caused a shock to the whole community. About twenty minutes past 4 o'clock a Japanese house-boy in the service of Mr. B. E. Brackenbury, one of the junior staff of the Hongkong and Shanghai Banking Corporation, entered his master's bedroom at No. 156, Bluff—more familiarly known as "The Niche"—and found him extended upon the floor, with a revolver lying near his hand, and a bullet wound in his right temple. The events immediately preceding the finding of Mr. Brackenbury may never accurately be known, but some of the more salient, as ascertained by the servants and friends of the unfortunate gentleman, can be given in print. It appears that Mr. Brackenbury—than whom a pleasanter or more genial companion, both at work and play would be difficult to find—left the Bank, apparently in the best of spirits, shortly before closing hours, and, getting into a *jinrikisha*, rode up to the Bluff. Arriving at his residence, which he shared with four other gentlemen, his servants saw him rush across the lawn, which lies in front, and disappear into his room. They heard the sound of a pistol being discharged and when the house-boy entered the room, he found Mr. Brackenbury in the position described above. He was conscious and made some request in English, which the Japanese servant scarcely understood. The alarm being raised, the servants at once sent for Mr. Pinckney, one of the Mess, and another messenger went in search of Dr. Wheeler. What medical assistance could be rendered was quickly afforded by Dr. Wheeler, who found that the bullet had penetrated the skull for a distance of over three inches. The condition of the injured man was so serious that Dr. Wheeler telegraphed to Tokyo for Dr. Scriba, and Dr. Todd was also called in.

At 8.30 a.m. on Saturday, Mr. Brackenbury was removed to the English Naval Hospital, where an operation was performed, without success, Mr. Brackenbury dying on Tuesday morning at 4.30 o'clock. At the inquest, held that afternoon, a verdict of "temporary insanity was returned." The revolver, which was found in the room, was an American "Automatic" of Messrs. Hopkins and Allen's manufacture, with a calibre of 38. Out of a package of 50 Eley revolver cartridges, one was subsequently found missing, and on examining the revolver only one barrel was found to be discharged.

FORMOSA NEWS.

According to correspondence published recently in Hongkong papers, bringing the story of the subjugation of Formosa up to the 18th of July, the insurgents were then pressing northward, and the country in the immediate vicinity of Tamsui was in an unsafe condition. We ventured at the time to question the correctness of that information, because official Japanese reports sent by telegram did not indicate any such strength on the part of the Hakkas and aborigines. News has now arrived from Viscount Kabayama, showing that the Japanese forces have pushed southward to points 23 miles beyond Teckcham (Sinchuh) and more than 60 miles south of Tamsui, and that a junction has been effected between the fleet and the advancing forces. The Governor-General's message reads as follows:—"On the 8th instant, the programme being to sweep away the enemy from the vicinity of Teckcham, the Guards were put in motion, the Right Wing, under the command of Major-General Kawamura, being directed against Chinto-shan and Giuhoshan, places about 2½ miles distant from Teckcham on the West and South respectively. The Left Wing, under Colonel Naito, advanced against Keiranmen (2½ miles south-east of Teckcham), and the Reserves formed the Centre, Major-General Yamane's command, marching from the direction of Hokuho against the enemy's right. By 7 a.m. our troops had gained possession of the greater part of the entrenchments on the hills. In this engagement two of our ships that had come from Kelung, took a small part, helping to intimidate the enemy. After routing the enemy at Keiranmen, Chinto-shan, and Giuhoshan, the Division pushed on, driving the fugitives before it, and at 11 a.m. the eminences on the east of Keong-shan (a seaport town, 18 miles south of Teckcham, with a bay of the same name) were crowned, and the troops went into cantonments. According to statements elicited from prisoners, the enemy numbered 3,000. We captured some cannon, and other warlike material. On the 9th, at 5 a.m., the troops were against put in motion in the direction of Tsienshi-shan. The attack on that place provoked little resistance, the enemy having apparently lost heart since the preceding day. At 8 a.m. Tsienshi-shan was completely in our possession, and by 11 a.m. the main body of the Division reached Changkong (5 miles south of Keong-shan), where the men went into quarters. The Right Wing, under Major-General Kawamura, pushed on to Oulong. A part of the enemy retired westward, and a part to Miao-li. Thus Changhong and Oulong came into our possession. From each of these places troops can be landed. The whole of the Fourth Mixed Brigade arrived to-day" (9th August).

JAPANESE CORRESPONDENCE FROM PEKIN.

Four Japanese newspaper correspondents are at present in Peking, representing the *Nichi Nichi Shimbun*, the *Fiji Shimpō*, the *Kokumin Shimbun*, and the *Kokkai*. Their latest letters are dated the 22nd and 27th ultimo, and among other subjects, refer to the position of Viceroy Li in Peking, the insurrections in the western part of the Empire, the new Chinese Minister to Japan, and so forth. Concerning Li Hung-chang, both Mr. Furuya, of the *Kokumin*, and Mr. Kobayashi, of the *Kokkai*, are agreed not only in stating that his influence in Peking is almost nil, but in ascribing his unpopularity chiefly to the envy and suspicion excited by his enormous wealth. "Viceroy Li," says Mr. Furuya, "has no equal among his contemporaries in China, either in point of knowledge or ability. But he is still a Chinaman, and is not free from the faults of his nationals. His influence, his ability, and his position together have enabled him to amass a large fortune. The fortification of Pu Shun, Talienshan, and Wei-hai-wei, the creation of the Peiyang Fleet, and every other undertaking con-

ducted under his superintendence, has contributed to building up his immense wealth. He is reported to be worth nearly 600 million taels, and his subordinates like Lo Fung-lo, Wu Ting-fang, and Ma Kien-chan are also sufficiently wealthy to excite envy." The rate at which the great Viceroy increased his wealth is stated to have always made the Ministers of the Peking Court suspect his loyalty to the Throne. The advisers of the Chinese Emperor are reported by Mr. Kobayashi of the *Kokkai* to be comparatively free from the vice of rapacity so commonly noticed among the Chinese officials, and consequently the sight of a great mandarin of Ming extraction rolling in what seemed to them to be ill-gotten gains must have been extremely irritating and disgusting. Rightly or wrongly, therefore, the Manchu statesmen of Peking have always regarded Viceroy Li with suspicion and hatred, nothing but the apparent success of the progressive measures suggested by him and the feeling that he alone was capable of conducting some of the most important business of the State had prevented an open manifestation against him until the recent war with Japan, when the disasters that befell Chinese arms both on land and sea were laid upon the shoulders of the Viceroy. Some of the Peking statesmen are even reported to have accused Li Hung-chang of complicity with Japan during the war.

How much influence Li Hung-chang possesses in Peking may be seen from the way in which the post of Representative to Japan has been filled up. Viceroy Li sent up the names of several candidates, but they were all discarded, and the choice has fallen upon a confidant of Prince Kung. Somebody asked the Prince why he did not appoint one of the Viceroy's nominees, when His Imperial Highness is reported to have replied that Li's partisans have been put aside because, had one of them been appointed, it would have been necessary to send another functionary to Tokyo to keep a strict watch on his movements.

As to Mr. Yu Keng, he is said to be now occupied with the selection of his secretaries and attachés, a task involving much difficulty, inasmuch as a great number of candidates are said to have presented themselves, each being backed by powerful patrons. His departure for Japan will not, in Mr. Kobayashi's opinion, take place within two or three weeks.

Concerning the Mohammedan rising in Ili, Kansu, and Shansi, it is stated that the trouble is owing to the absence of the Governor, who had been summoned to Peking to defend it with his army of 12,000, reputed to be the bravest in the whole Empire. This army was stationed in the vicinity of the capital to be ready for the attack on the place by the Japanese. The Governor is said to have recently hurried back with his troops to Ili to restore order.

Reports of insurrections and famine are said to be coming in from all parts of the Empire. But in many cases the reports are stated to be great exaggerations if not pure fabrication. The Viceroys and Governors were compelled during the recent war to keep up their local armies to full strength, and were thus unable to pocket so much of the military expenses as they wished. They therefore now desire to make up for this loss by getting up excuses for maintaining a nominally large army. But in some cases the reports are too true, for in many localities the disbanded soldiers are causing endless trouble to both the people and the authorities. They were, it is said, disbanded with three months' extra pay at best.

The *Kokumin's* correspondent states that a course for the study of the Japanese language has been opened in the *Tung-wen-kwan* (the University of Peking), and that a Japanese professor is to be engaged.

Little reference is made to the Japanese Minister, except to his visit to Mr. Yu Keng at the latter's private residence. In Peking the Chinese officials are said to dislike being visited by foreigners at their private houses. Mr. Hayashi, however, departed from the conventional usage and called on Mr. Yu at his residence early one morning. Mr. Yu is said to have express-

ed sincere regret that, his wife being absent from home, he could not have the honour of presenting his guest to her.

After translating the above, letters of later date, the latest being the 2nd instant, have been published. From them we learn that, after procrastination extending over more than ten days, the Peking Government at last, yielding to the Japanese Minister's persistent demand, has issued an order to all parts of the country prohibiting the use of the term barbarian to the Japanese.

As to the Chinese Minister to Japan, it is stated that he was to leave Peking about the middle of the present month. He proposed spending about a week at Shanghai on his way to this country.

Writing under date of the 30th ultimo, the *Nichi Nichi Shimbun's* correspondent states that thus far the weather had been cooler with more rain than usual. He also mentions that cholera has made its appearance in Peking, some cases having come under his own observation in the vicinity of his hotel. But there being no official returns, he could not say anything as to the actual condition of the pestilence, though the entire absence of sanitary measures and the propensity to conceal cases led him to suspect that things were very bad.

THE ALLEGED ATROCITIES IN FORMOSA.

Another mail has arrived from Shanghai and we remain without any confirmation whatever of the sweeping accusations preferred by the *Japan Gazette* against the Japanese troops in Formosa. We need not repeat the accusations. It is enough to say that they were wholesale, and that they were couched in the strongest possible terms. "The atrocities of a Herod" were declared to be "inoffensive" when compared with what the Japanese soldiers were doing by express order of their commanding officers. The article containing these violent and terrible charges appeared in the *Japan Gazette* of August 3rd. At that time our latest correspondence from Formosa was dated July 25th. Ten days have passed since the accusation was published and two mails have been received from Shanghai. But not one word of evidence is yet forthcoming in support of the *Japan Gazette's* indictment. On the contrary, we find the following in the *Kobe Herald* of the 9th instant:—

It is only fair to the Japanese to place before the public the emphatic denial which we are authorized to make by a war-correspondent who has just returned from the scene of operations. Mr. Jas. W. Davidson, the representative of a powerful syndicate of American newspapers, left Keelung by the *Matsushima Kan* on July 27th. He was in Taipei on the 26th ultimo and was an eye-witness of several actions. Mr. Davidson assures us that the reports as to atrocities have emanated mainly from Chinese sources and are grossly exaggerated and misleading. He denies that there has been any "ruthless butchering of men, women, and children;" and exonerates the Japanese from all blame as to the manner in which hostilities have been carried on. It is certainly strange that this gentleman should not have seen some of the atrocities if inhuman atrocities were actually committed. He admits that the Japanese are pursuing more severe measures and that less consideration is being shown the islanders, but this he explains by the fact that the suicidal folly of lenient methods has been only too forcibly demonstrated, and that the necessity of drastic steps has been forced home to the Japanese. They recognise that if the conquest of the island is to be effected no further opportunities must be given the natives to mistake consideration for lack of power. As this correspondent only left Keelung on the 27th ultimo, after witnessing much of the operations, it is clear that the *Japan Gazette* must adduce its proofs if its most sweeping and damning statements are to be credited.

Mr. Fujita Shigemichi, chief engineer of the Japan Railway Co., leaves Tokyo on the 18th inst. for Europe and America to inspect railway works there.—*Asahi Shimbun*.

KOREAN NEWS.

Count Inouye is said to have had a second audience with the King on the 30th ultimo, his attendance having been requested by His Majesty through the Minister President of State. The meeting lasted five hours. As usual it gave rise to various rumours, all tending to a belief that a Ministerial change was impending.

The *Nichi Nichi Shimbun's* correspondent, writing under date of the 31st ultimo, surveys the situation in an intelligent manner. He calls it a mistake to suppose that the followers of Pak Yong-ho are alone friendly toward Japan. With the exception of an extremely small number, all the politicians of Söul are said to be so entirely devoid of the true sentiment of national independence that they are ready to be the friends of any Power apparently willing and able to assist and guide them. Neither Conservatives, like Kim Koshu, Gyo Inshoku, and Gyo Inchu, nor Opportunists, like Ankeiju and Yu Kitsuei, nor men of the English language faction, as Li Kanyo and Li Saiyen, nor the so-called Independents, as In Chiko and Tei Yeika, nor the compliant Kin Kachin and Boku Teiyo, none of these has the slightest idea or purpose of rejecting the leadership of Japan. Even the Bin (Ming) faction, namely, the adherents of the Queen, are believed to be not unwilling to place themselves under the guidance of the Japanese Minister. The only controlling motive of conduct is promotion of personal interests and ambitions. Hence what is required is that Korean politicians should be made to understand, beyond any possibility of doubt, that their interests will be best served by allying themselves with Japan. In this way, even the Queen herself may be gained to the Japanese side. The writer professes total ignorance of the Japanese Minister's ideas, but nevertheless speculates that the Cabinet will probably be reconstructed with Kim Koshu at its head, and comprising among its members politicians belonging to the principal parties; in other words, that the new Ministry will be a coalition of all the influential factions.

His forecast has been realised, for the latest telegram, dated Söul, August 10th, 11.42 a.m., runs as follows:—

"The new Cabinet in the course of formation will be organized on the principle of coalition. Kim Koshu will be Minister President; An Keiju, Minister of War; Boku Teiyo, Minister of Home Affairs; Chin Sokun, Minister of Finance; and Li Inyo, Police Inspector-General."

Li Shun-yo, the Tai Wön-kun's grandson, was reported sometime ago to have been murdered in prison, but the rumour has proved baseless. When the story of his alleged fate reached the ears of his grand-parents, they caused two of their domestics to proceed to the place of his confinement, a few miles from the capital, so as to gather conclusive evidence. These messengers, however, did not return. Subsequently the grandmother of the royal prisoner found means to enlist the good offices of a certain kind-hearted police inspector, who had been ordered to proceed on official business to the place where her grandson was kept in jail. This officer, on returning to Söul, reported to the Tai Wön-kun and his wife that their grandson was still alive, but so emaciated and so worn out that he looked more like a corpse than a living man. The police inspector was severely reprimanded by his chief for having consented to render a humane service to the ex-Regent. The Tai Wön-kun's wife then became a frequent visitor at Court, praying for the pardon of her grandson. Her entreaties seem to have been successful, for a telegram, dated at Söul on the 9th instant, announces the release of Li Shunyo by the special grace of the King.

The Korean Queen seems to be kept well informed of what appears in the Japanese papers. Recently the *Fiji Shimpö* published a caricature, in which a cuttle-fish, dressed like a Korean lady, was held down with a gourd by a Japanese gentleman, whose face exhibited an unmistakable resemblance to Count Inouye. Her Majesty is said to have shown this picture one day to An Keiju, Police Inspector-General, saying that,

although she was aware that the cuttle-fish was meant to represent herself she did not quite understand why the Japanese Minister's left hand was uplifted as though he were invoking aid. The correspondent who mentions this story, adds that the Queen does not know the Japanese saying "*hyotan namasu*," which embodies the acme of impossibility, namely, an attempt to restrain the movements of a slippery cuttle-fish by holding it down with a globular gourd.

The Korean Cabinet recently appointed several commissions to conduct investigations into various political matters, including among other things, detailed regulations as to Cabinet meetings, the election of officials, and the establishment of a constitutional system of government. Commenting on the last mentioned subject, the *Pomiuri Shimbun's* correspondent states that the object of the Ministry seems to be to impose a check upon the power of the Queen by some kind of parliamentary institution.

The *Kokumin Shimbun's* correspondent has collected some interesting information about the financial condition of the Korean Government. In the Budget for the current year the revenue was put at 4,557,587 yen, consisting of 3,000,000 yen borrowed from the Japanese Government, and 1,557,587 yen obtained from taxes and duties. Of the taxes, only about 800,000 yen are likely to be realized, owing to imperfection of the collecting machinery. The money borrowed from Japan has been nearly exhausted, and there is a project among the Ministers to ask for a second loan. It may not be without interest to know the estimated expenditures as distributed among the different departments. The following figures are found in the *Kokumin's* correspondence:—

	Yen.
Court Expenses	384,610
Department of Foreign Affairs	35,435
Department of Home Affairs (including Local Governments)	525,198
Department of Finance (including payments on account of debts)	1,694,518
Department of Justice	41,806
Department of Education	70,349
Department of War	321,772
Department of Agriculture and Commerce	50,977
Metropolitan Police Board	120,240
Total	3,244,905

Among the creditors of the Korean Government, we notice the Specie Bank of Yokohama (17,852 yen), the 1st National Bank of Tokyo, (180,000 yen), the China Merchants' Steam Navigation Company (45,833 yen), Tung Shun-tai and Co. (98,061 yen), the American Legation (10,000 yen), Foreign Employés (arrears of salary) 15,802 yen.

While the Government's financial condition is so markedly unsatisfactory, the distress of the citizens of Söul is said to be intense. As a result of the rigorous suppression of all bribery, a large class of nobles in the capital, who have hitherto eked out their means of subsistence by acting as brokers of official patronage and corruption, have been deprived of their income from that source, and their financial embarrassments have reacted upon the merchants, who depended chiefly on their custom. These things are unavoidable consequences of the administrative reforms now in progress. The very fact that the nobles of Söul are in distress shows how far the work of reform has been successful in one most important respect, namely, the repression of official corruption.

According to the *Kokkai's* correspondent, wheat is produced principally in Hwang-hai-do, but the quantity raised there is inadequate to meet the demand of the country. In addition to being used in various kinds of cakes and other preparations for food, wheat is employed for brewing a liquor very much relished by the Koreans. The import of the grain consequently shows a constant increase.

The rice harvest is expected to be bad throughout the peninsula, with the exception of Chhung-chhông-do, where the weather having been favourable a good crop should be obtained.

MARINE BUSINESS IN JAPAN.

A series of articles recently published in the *Nichi Nichi Shimbun* contains some interesting information about the growth and the present condition of marine business in Japan. Under the Tokugawa Government, private individuals not being permitted to own any ships of foreign model, there was no scope for the rise of a mercantile marine. It was in 1869, two years after the downfall of the feudal régime, that the prohibition was first removed. At the end of 1870, the total number of ships of European form, both steam and sailing, was 46, with an aggregate registered tonnage of 17,952 tons. At the end of 1893, these figures had swelled to 1,429 and 155,172 respectively. Thus, during twenty-three years, the number of ships increased by 1,383 and the aggregate registered tonnage by 137,220 tons; in other words an average yearly increase of 60 ships and 5,966 tons. As to steamships, their number at the end of 1870 was 35, with an aggregate registered tonnage of 15,498 tons; and by the end of 1893, these numbers had increased to 680 and 110,205, respectively. The number of sailing vessels at the end of 1870 was 11 and their aggregate registered tonnage 2,454 tons; and these figures had become, in December, 1893, 749 and 44,960 respectively. The following table shows the statistics for the last ten years:—

Year.	Steamships.	Sailing Vessels.	Total.
1885	228	55,538	55,766
1886	227	58,480	58,707
1887	251	68,012	68,263
1888	251	76,398	76,649
1889	311	84,082	84,393
1890	335	89,302	89,637
1891	353	91,145	91,498
1892	375	97,569	97,944
1893	400	104,009	104,409
1894	469	163,309	163,778

N.B.—Ships in this table are those of and above 200 tons, the tonnage of steamships is burthen, and that of sailing vessels register.

The writer then proceeds to consider Japan's position in the maritime catalogue of the world. According to trustworthy statistics, she stood below Turkey in June, 1894, as shown by the following table:—

Country.	No. of Ships.	Tonnage.
England	11,660	12,969,951
U.S.A.	3,314	2,171,459
Germany	1,765	1,784,725
Norway	3,137	1,669,087
France	1,178	1,089,540
Italy	1,276	771,759
Spain	760	547,358
Sweden	1,449	498,004
Russia	1,069	476,672
Holland	461	437,179
Greece	887	343,442
Denmark	815	333,231
Austro-Hungary	431	302,618
Turkey	1,069	266,352
Japan	369	196,365
Brazil	290	145,976
Belgium	88	118,827
Portugal	185	105,259
Chile	137	102,199
Argentine Republic	170	59,833
China	37	44,688
Hawaii	26	21,663
Uruguay	42	20,326
Egypt	29	19,264
Peru	41	12,483

In the latter half of the year 1894, the war with China led to a sudden and large increase in the number of Japanese vessels, especially steamers, so that by the end of that year, Japan had probably overtaken Turkey and reached a position close below Austria-Hungary.

The Japanese mercantile marine has thus far been principally occupied in the coasting trade. Navigation to foreign ports is still in its infancy. Not to speak of far distant countries, even in the case of Chinese ports the number of Japanese ships visiting them is behind that of some European countries. In 1893, the number of Japanese vessels visiting Chinese ports was 623, and their aggregate tonnage 566,379 tons. In the matter of the carrying trade with China, England stands first, then Germany, and Japan comes third. The comparative shares of the carrying trade falling to the vessels of the principal

countries in the five years ending 1893 are shown in the following table :—

Country.	1889.	1890.	1891.	1892.	1893.
England	62.0	64.0	63.0	65.0	65.0
China	24.0	24.0	23.0	21.0	22.0
Germany ..	6.0	5.0	8.0	4.0	5.0
Japan	1.8	2.0	1.0	2.0	1.9

Turning to the entering and clearing in the various open ports in Japan, the writer gives the following table :—

Year.	Japanese Vessels.		Foreign Vessels.	
	No.	Tonnage.	No.	Tonnage.
1885	844	282,238	1,386	1,499,083
1886	1,035	347,126	1,514	1,722,014
1887	1,289	377,320	1,532	1,877,887
1888	1,483	460,874	1,698	2,214,286
1889	1,744	649,255	1,793	2,262,565
1890	2,582	731,192	1,748	2,464,989
1891	2,632	742,895	1,862	2,613,909
1892	967	712,212	3,528	2,896,620
1893	2,052	694,002	2,626	3,633,919
1894	750	560,124	3,093	4,347,211

The following table shows the value of merchandise carried by Japanese and foreign vessels :—

Year.	Japanese Vessels.		Foreign Vessels.		Ratio. J.V. F.V. per cent.
	Yen.	Tons.	Yen.	Tons.	
1885	5,915,445	58,598,336	9...	91	
1886	7,541,555	71,842,321	10...	90	
1887	9,522,465	84,798,442	10...	90	
1888	8,976,608	118,859,992	7...	93	
1889	10,467,673	122,957,061	8...	92	
1890	14,577,078	121,299,816	11...	89	
1891	14,787,817	125,307,071	11...	89	
1892	15,676,689	144,556,650	10...	90	
1893	14,427,144	161,071,514	8...	92	
1894	16,830,497	203,733,475	8...	92	
Average			9...	91	

Expressed in tonnage, the quantities of merchandise carried by Japanese and foreign vessels during the last five years were as follow :—

Year.	Japanese Vessels.		Foreign Vessels.		Ratio. J.V. F.V. per cent.
	Tons.	Tons.	Tons.	Tons.	
1890	556,782	1,950,931	22...	78	
1891	532,424	1,837,669	22...	78	
1892	564,503	1,845,243	23...	77	
1893	448,619	2,433,884	10...	84	
1894	344,791	3,022,775	10...	90	
Average			18.6	81.4	

The following table shows the amounts of freight earned by Japanese and foreign vessels during the five years ending 1893 :—

Year.	Japanese Vessels.		Foreign Vessels.		Ratio. J.V. F.V. per cent.
	Yen.	Yen.	Yen.	Yen.	
1889	1,401,123	10,250,349	12...	88	
1890	1,755,312	10,564,089	14...	86	
1891	1,620,221	9,505,492	15...	85	
1892	1,820,929	9,134,287	17...	83	
1893	1,415,651	15,470,279	8...	92	
Average			13...	87	

Various other figures are given, but they are too minute to be reproduced. We may, however, refer to those concerning the Nippon Yusen Kaisha and the Osaka Shosen Kaisha, the two largest steamship companies in Japan. The number of ships owned by the Nippon Yusen Kaisha in November, 1894, was 52, with an aggregate registered tonnage of 54,584 tons. The Osaka Shosen Kaisha's ships in December, 1894, aggregated 52; with a total tonnage of 11,499 tons. The writer remarks that these companies, compared with foreign shipping concerns, are as mere mounds by the side of lofty mountains, and urges the importance of developing the country's mercantile marine.

The Hakodate Town Assembly, which applied to the Home Minister the other day for permission to reconstruct Hakodate harbour at an estimated outlay of yen 820,000, presented another application on the 15th inst. for grant of permission to construct a big dock at Hakodate at a cost of yen 1,200,000. The proposed dock will be larger than the Yokosuka dock, and will accommodate a vessel of over 10,000 tons. When the plan of the dock was shown to the Chief of the Bureau of Naval Command the other day, the latter is said to have remarked that should such a dock be built at Hakodate by private enterprise the Naval Department would find it unnecessary to construct a naval dock in the north, as repairs to warships could be effected in the private dock.—*Kokkai*.

CHINESE ITEMS.

There seems to be little doubt that the Chinese Government is now resolutely bent upon having a railway constructed through the centre of the empire, namely, from Chinkiang on the Yangtze to Peking. Six years ago a project of the same nature received Imperial sanction, the southern terminus of the line, as then proposed, being Hankow. The task of constructing it was entrusted to the celebrated Viceroy Chang Chih-tung, then serving in Canton, whence he was removed to Wuchang for greater convenience in carrying out the work. But Chang behaved like a man who, wanting a steak for dinner, resolves that, instead of buying some beef from a butcher, a pasture shall be sown and a calf reared and fattened to produce the necessary loin. He announced his determination to build and equip the line from first to last with materials manufactured in China, and in pursuance of that programme he began by erecting huge iron-works at Hanyang. Had any other Chinese official conceived such a scheme, the public would assuredly have suspected him of devising means to enrich himself and his creatures rather than of seeking to build a railroad. But His Excellency Chang enjoys an unassailable reputation for integrity, and no graver crime than financial folly has been laid to his charge in connection with the Hanyang works. Six years, however, can not be said to have materially advanced the prospects of the great railway's completion, and since the line now projected, from Peking to Chinkiang, has also been entrusted to Chang Chih-tung, its future must depend largely upon his adherence to his old fancy or his conversion to more practical ideas. Chinkiang is 150 miles from the entrance to the Yangtze, and stands at the point where the Grand Canal communicates with the waters of the great river. It is easily approachable by sea-going vessels of the heaviest burden, and it used to be a place of immense importance when the grain tribute from the southern provinces of China was transported to the capital by the Canal. But so soon as the development of maritime facilities, notably the establishment of the China Merchants' Steam Navigation Company, opened the much quicker and cheaper sea route, the Canal's *métier* disappeared, and it gradually silted up to the condition of a mere ditch. The recent war, however, clearly demonstrated to the Chinese Government that the maritime highway by the Gulf of Pechili may at any time be obstructed by a hostile fleet. Hence the resolve to build a railway which shall perform the functions once discharged by the Grand Canal, and secure the advent of supplies to the capital under all circumstances. A work inspired by such a motive can not be regarded as a proof of the Government's conversion to the cause of railways in general, but it does not greatly matter what object immediately dictates the enterprise if only it be carried out. Railways, once they are born in any country, soon develop a self-multiplying power. Hopes are entertained that after the line reaches Chinkiang it will be carried on to Shanghai. But that would involve a tremendous task—the bridging of the Yangtze. The fact that at a distance of two miles below Chinkiang, the channel, there about a mile in width, is divided mid-way by Ts'iao-shan Island—Silver Island, as it is commonly called—is regarded as facilitating the construction of a bridge. But the channel between this island and the southern bank is swept by a swift current, 27 fathoms deep, at a distance of 300 yards from the shore and full of eddies caused by sunken rocks. To bridge such a place would be no light task.

Cholera is committing terrible ravages in the great city of Nanking. At first only the southern part of the town was affected, but now the plague is everywhere. All the preventive measures dictated by modern prophylactic science are totally neglected. The proverbial filth of a Chinese city reigns supreme. Night-soil from stricken quarters is carried to suburban gardens and freely used to fertilize vegetables some of which are subsequently eaten raw. Heaven

alone is relied on to stretch forth a helping arm, and, in order to propitiate the deities, lofty scaffolds are erected in the principal thoroughfares, supporting pavilions wherein are altars with lighted candles and smoking incense. A much advertised method of cure is to take a copper cash into the mouth. It is supposed to melt at once, when it should be replaced by another. Six or seven doses kill the disease.

The United States Minister in Peking has appointed the Rev. Spencer Lewis, of Chungking, to represent America on the Commission appointed to investigate the Szechuan outrages. It is admitted that Mr. Lewis possesses all the necessary qualifications from a missionary point of view, but dissatisfaction is expressed because a Secretary of Legation or a Consul-General is not nominated, in order to give the commission greater weight.

It is alleged that when the new German Concession becomes an accomplished fact in Tientsin, a German Company will place 15 steamers on the Shanghai-Tientsin line. At present the service is in the hands of several companies which, by pooling their earnings, manage to keep freights at very high figures. The voyage of 2½ days from Shanghai to Tientsin costs a first-class passenger sixty American dollars.

In honour of the 60th birthday of the Empress of China last November, all condemned criminals were pardoned, except robbers, parricides, and matricides. Among those coming within the act of clemency was a coolie who had been lying under sentence of death since 1889 in Shanghai jail for killing a fellow-coolie by a stroke of a carrying pole. Had the sentence been carried out, the public executioner would have received a fee of 20 taels, and the public undertaker would have been paid 5 taels for a coffin. These payments would of course have been made by the Magistrate, but the latter considered that if the criminal escaped, the executioner and the undertaker, on the one hand, ought not to be disappointed, neither ought the Magistrate, on the other, to pay for un-rendered services. If took nine months to solve the riddle and to prove that the prisoner, at all events, could not possibly pay. During that interval of reflection the reprieved man remained in prison, and the Magistrate at length consented to set up the pernicious precedent of paying the fees himself.

A curious device has been employed by the anti-foreign agitators in Chêngtu to perpetuate and intensify the feeling against missionaries. After the latter had all been driven out and their houses burned or razed, sedan chairs containing children began to arrive at the sites of the ruins. The bearers averred that the little ones were for the foreigners, who had purchased them. This was quite an artistic sequel to the digging up of bones said to have belonged to infants eaten by the foreign devils.

Chêngtu has been decorated with placards accusing the Japanese of stirring up the Szechuen riots in order to embarrass the Peking Government, and promising the Christians that if they will worship the idols and conform to the customs of the multitude, they shall be spared. In spite of all that has happened, the officials suffer these placards to remain exposed.

General Tsiang, who commanded the garrison at Yingkow when the Japanese captured that place, has been sentenced to death. Not only did the General decline to obey the Tao-tai's orders, requiring him to march out and intercept the advance of the Japanese, but he and his troops also had the misfortune to be leaving Yingkow westward just as the Japanese were entering it from the east. Subsequently, he had various imaginary encounters with the enemy, and won sundry signal ideographic victories. All these things, however, might have been extenuated—so says the Imperial Decree—had he not, after reaching Tientsin, attempted to put two months' pay of his troops into his own pocket, thereby causing the men to mutiny. So he is to die.

The death of Sir Thomas Wade has drawn some very appreciative remarks from the pens of Shanghai journalists. The difference in the

tone of their comments on the late diplomat now that he has passed "to where beyond these voices there is peace," and those printed in his lifetime, is very refreshing. This is what the *N.-C. Daily News* says:—

By his (Sir Thomas Wade's) departure from the world we have lost one of the most distinguished officials who ever served the public in the Far East. Indeed, with the exception of Sir Harry Parkes and Lord Elgin, no name occurs to one at the minute which one would be inclined to place before his. A man of varied accomplishments, he had in early life a very diversified training. If we remember right, a Harrow boy to begin with, he went to a private tutor living close to Audley End House in Essex. Some verses written by him at this period are still preserved in that great mansion, and its noble owner still speaks of him as "the cleverest young man that I ever knew." Then he went to Cambridge; and after a not very prolonged stay there he obtained a commission in the army. Quartered in Ireland, he showed his irrepressible tendency towards linguistic studies by giving his attention to the Gaelic of Ireland. Transferred to Corfu, he set to work and learnt modern Greek. Coming out to China and having served in the war of 1842 he learnt first Cantonese and then Mandarin. He was for a long time lent to the civil government, but finally left the army and joined the Consular Service. But we need not dwell on his official career. We need only remark that he was one of the inaugurators of the great establishment now ruled for so many years by Sir Robert Hart, and that he commanded the Shanghai Volunteers when they saw active service at the battle of Muddy Flat. As an official, we have always thought Sir Thomas received rather hard measure from his countrymen in the East. There was a distinct feeling in early days that knowledge of Chinese was incompatible with capacity in a public officer. We have often heard this asserted in old times. It was partly the fault of Wingrove Cooke, that brilliant writer of articles for *The Times* from Hongkong, all the more brilliant indeed because he wrote with the courage of a man who has studied a subject for but a few weeks. Wingrove Cooke used to express freely his contempt for what he called "the twenty years in the country and speak the language men," and a good many readers took their opinions from him. Yet there were many cases in which Sir Thomas Wade strongly supported British interests, and only gave in when he was told by legal authorities that law and the treaties were against him. Of such cases we can recall two at the moment, those of the *Cadiz* hulk at Chinkiang and the Woosung Railway. He was the mark of severe reproaches in the latter case for letting the Chinese buy and take away the railway; but if the Chinese Government had been as intelligent and as strong as, let us say, the Japanese, the builders of the line would have had to remove it at their own cost without a penny of compensation. Towards the latter end of his career his countrymen were much more in sympathy with him than they had been, as may be seen by turning over the old files of the *North China Daily News*. As a Chinese scholar, Sir Thomas' merits deserve the highest recognition. It is not merely for the greatness of his attainments, deep as they were and on a level with those of the most distinguished student of the day. What must be remembered is that when he began, there was no Wade's Course, nor any other Course, to help him. He went a pioneer into the wilderness with no guide except Morrison's cumbrous and incomplete dictionary. Still, while working hard at official tasks he not only mastered the language, but by his publications made it possible for men of the next generation to achieve success with a fourth of the labour formerly necessary. Fastidiousness was a strongly marked point in Sir Thomas's character. A writer of really beautiful English, he could not satisfy himself, and would correct and re-write till it seemed that his composition would never have received its final touches. To cure himself of this time-wasting characteristic, after he became Minister he adopted a plan which but few men would be competent to carry out. He would write straight away the fair copy of his simpler despatches, leaving his secretaries to take a draft from it for the archives. As a story-teller or conversationalist, he could claim a very high rank, possessing both an accurate memory and a flow of beautiful English, and being into the bargain a mimic of no mean powers. He was a man of taste in every way, a good judge of poetry, of art, cookery, of wines. Choleric, but refined, and a perfect gentleman, he was never ashamed to beg a man's pardon if he had given him cause for offence; and, what is perhaps the truest sign of nobility of character, he never harboured a grudge or availed himself of an opportunity to pay off an old score.

As an instance of the mortality caused by the heat in Shanghai, the various hospitals and charity dispensaries in the native city report that from Thursday, the 1st instant, up to 1 o'clock on the 4th, no less than 119 persons had died. This, of course, does not include the foreign Settlement.

It is reported in the Shanghai papers that the ex-Viceroy Li Han-chang, who has been living in Kiangse Road for the past month or so, has ordered his agents to buy a hundred odd *mow* of land in the vicinity of the Bubbling Well in order to build a country residence for himself and family at Shanghai.

Verily are the vast majority of China millions sitting in great darkness. The other day the *N.-C. Daily News* published the letter of a correspondent at Ngan-lu, reporting the effects of the recent rising of the Hsiang and Yangtze rivers, etc. News has now arrived that the people have attributed their disaster to the extortions of a member of the gentry, who forced them to give money for the repair of existing and building of extra dykes. As a result, the unfortunate representative of the gentry and *literati* was attacked and quartered by the infuriated sufferers from the floods, who threw his dismembered body into different parts of the river "to appease the wrath of the dragon king's satellites whose abodes had been destroyed by the erection of the extra dykes and embankments."

The once all-powerful Censor Chung Tê-siang has fallen and Chinese officialdom breathes again. An Imperial decree of the 2nd inst. approves of the sentence of banishment to the military post roads in Mongolia recommended by the Assistant Grand Secretary, Hsi T'ung, in the case of the degraded Censor Chung Tê-siang. The Censor met his downfall by the accusation of an Imperial Clansman accusing Chung of an attempt to extort money from him. This, says the *Daily News*, is the Censor whose facile pen denounced within the two past years so many of the highest in the land, from the Prince of Ch'ing and the Viceroy Li down to a number of *chehsiens* in the provinces. Lin Ping-chang, the degraded Viceroy of Szechuan, also owed his downfall to Chung Tê-siang's scathing memorial. He had become such a terror to the official world that the recent accusation against him, his trial and sentence, were evidently the result of a conspiracy to put the man out of the way of telling more truths about high officials.

The Mahomedan rebellion in Kansu is still in progress, though the revolting people have suffered several defeats and been driven into the northern borders of Shansi province. A large body of Imperial cavalry about 6,000 strong, and several batteries of horse and mountain artillery, have set out to chase the fleeing insurgents, while the authorities at T'aiyuen, the capital of Shanse, have also received orders to send troops to surround them. The only body of Mohammedans who remain, so far, intact, having not yet met any Imperial troops, are those at Shuhchou, near the western extremity of the Great Wall. They number some 25,000 adults, and are expected to seek refuge in Turkestan if defeated. Governor Tao Mu at Urumsai is organising a force to send against them.

The Shanghai Amateur Circus, which was such a huge success last year, was revived with even great splendour on August 5th. This entertainment is got up solely by the members of the Shanghai Race Club, and everything that an ordinary legitimate circus can produce is given by them, even to the riding of and vaulting upon barebacked horses. Folk went to see a burlesque, but at the close were feign to confess that they had seen the real thing. It speaks volumes for the energy of the *jeunesse dorée* of Shanghai that such a performance can be given, even though the thermometer ranges during the day at a figure very near to 100° in the shade. One visitor to the Amateur Circus, struck by the splendid performances there of "young" Shanghai, handed to Mr. Alex. McLeod, the Representative, a cheque for one hundred taels towards the establishment of a Gymnasium.

The Tientsin high officials intend soon to open some iron mines in the vicinity of the Jehu

hunting reservation. This is regarded as the commencement of a general development of the mineral resources of the whole of Chihli province, including portions of Manchuria and Shantung.

LITERARY.

The *Waseda Bungaku* informs us that Mr. Fukuchi Genichiro has adapted Victor Hugo's "Les Misérables" for the Japanese stage. How far the well known dramatist has altered the original may be judged from the circumstance that he has introduced the great earthquake of the Ansei era as well as the war of the Restoration. But he has been at great pains to preserve the spirit and tone of the original. Recently he invited Mr. Morita Shiken, an ardent admirer of Victor Hugo, to his house to hear the play read and to criticise it. The two authors are said to have been engaged six hours discussing the different aspects of the piece. The drama, when completed, will be produced on the stage by Danjiro.

In proportion to the increasing popularity of historical studies, a more wholesome spirit of independent criticism is shown with regard to the mythical age of Japanese annals—an age hitherto regarded as too sacred to be exposed to the scalpel of scientific research. Professor Kume Kunitake is one of the boldest champions of critical study, in the cause of which he has even sacrificed his official position. Mr. Yoshida Tosaku follows the same path in his recently published "History of the Relations between Japan and Korea in Ancient Times." The position taken by him is that these two countries formed at first one and the same nation. He is a painstaking author, and his book deserves the attention of every student of Japanese history.

The *Teitoku Bungaku* observes that a great majority of the novels turned out during the first fifteen years of the present era, were either based upon or contained incidents connected with the war of the Restoration, especially incidents relating to the stout resistance that a small band of the Tokugawa adherents—called Shōgi-tai—offered to the Imperial forces in the Park of Ueno. The recent war with China will furnish material to the rising generation of Japanese novelists and romancers. One or two stories founded on the war have already appeared, but they are not of a calibre to survive the lapse of time.

The same journal laments that the so-called authors of the present day lack the qualities of true men of letters. The young writers with whom the literary world is flooded are denounced as panderers to popular fancy and prejudice.

Mr. Shiga Shigetaka continues his interesting reviews of the poets of Australia in his journal, the *Nippon-jin*. He has words of praise to bestow on each of the amateur versifiers of the Southern continent. In the latest article, he notices the poems of Alfred Domett, C.M.G., the Hon. William Foster, Sir Henry Parkes, G.C.M.G., John Siddell Kelly, the Rev. John Dunmore Lang, D.D., and so forth. The number of Japanese readers capable of enjoying the really interesting quotations from these poets is limited, but the fact that they are read even by a few must be regarded as significant. It indicates a desire on the part of the Japanese to know more about Australia and her people.

Mr. Miyake Yujiro, joint editor of the *Nippon-jin*, has an interesting article on the late Oliver W. Holmes, a writer hitherto little studied in this country. Mr. Miyake tells his countrymen that in the great American poet they will certainly find much to enjoy and admire. He draws attention to a remarkable coincidence in conception and tone between "The Last Leaf" and a celebrated poem by the Chinese scholar Liu Ting-che. The two pieces are published side by side. The resemblance is really striking, all the more so in that the American author could never by any possibility have possessed a knowledge of the Chinese writer's verses.

COUNT ITO.

ELSEWHERE in our columns will be found a statement of incidents that have led up to a situation likely at any moment to precipitate a Cabinet crisis. The Prime Minister has left the capital, thus ceasing to become available for the discharge of his official duties, and he declines to resume his functions unless his refusal of the honours recently conferred on him by the EMPEROR be accepted. It is a singular conjuncture, unprecedented, indeed, so far as we know. What the public will of course find most inexplicable is that such an important step as that taken in the Palace on the 5th instant should have been determined upon without the knowledge of the Minister President of State. According to Occidental ideas, the SOVEREIGN of a constitutional country never thinks of conferring peerages or high decorations without consulting the Prime Minister, and though in Japan this sequence of events is not necessarily followed, any very marked departure from it cannot but be construed as wanting in consideration towards the Premier. In the present case there was a very signal departure from the usual custom. Two new peers were created, two Viscounts were raised to the rank of Counts, and four Counts were raised to that of Marquis, while several of the highest Orders in the Empire were bestowed without any previous reference to the views of the Prime Minister. We do not speak with absolute certainty. It is possible that the whole of the programme, except the part relating to himself, may have been submitted to Count ITO. But we find that hypothesis scarcely tenable, since it would imply either concealment too clumsy to be consistent with the general scheme, or a childish desire to spring a glittering surprise upon the head of the Government. Some time ago a board was appointed to inquire into the services rendered by officers and officials in connection with the war, and while it is conceivable that the recommendations of the Board may have been laid before the SOVEREIGN and may have received HIS MAJESTY'S approval without direct reference to the Premier, it is scarcely possible that a part can have been referred and a part kept back. But, why, it will be asked, does not Count ITO accept the honours bestowed on him? He certainly deserves them, for seldom, if ever, has it fallen to the lot of any statesman to play so large a part in raising his country from the position of an insignificant Oriental State to that of a considerable Power. The question is easily answered by examining the list of distinctions. Seven of the names on it are those of men who served in a military or naval capacity. The Premier himself is the only civil official on the list. He is thus differentiated from all his civil colleagues in the Cabinet, not-

ably from Viscount MUTSU, whose services as Minister of Foreign Affairs could not possibly be overlooked in any fair distribution of rewards. It is quite inconceivable that Count ITO could ever have been a consenting party to such differentiation. It is quite inconceivable that the framers of the list could ever have expected him to be a consenting party. They foresaw that they were about to place him in a position of extreme embarrassment. The device is so subtle, so adroit, that it almost commands admiration, though in truth it does not rise above the level of a trick. The EMPEROR, of course, can not have had any knowledge of the true inwardness of what was going forward. HIS MAJESTY doubtless supposed that everything was proceeding upon a basis of good faith and sincerity. It certainly never entered his conception that the Throne was being dragged into a political intrigue, and that in soliciting marks of Imperial favour for the most eminent subject in the realm, a plot was being laid to overthrow the Cabinet. We may, perhaps, be overestimating the significance of what has occurred, but it is difficult to arrive at any other conviction. Under the mask of distinguishing him as few statesmen in Japan have been distinguished, it has been contrived to place Count ITO in the dilemma of either losing the confidence of his colleagues in the Cabinet, or accepting a position of apparent disrespect towards his SOVEREIGN, whose confidence he enjoys probably more than any other statesman in the realm. The present is not a juncture when Count ITO can lay down his office without detriment to the interests of the nation. He has to settle the Liaotung problem; to conclude the new commercial treaty with China; to organize and submit to Parliament measures for large naval and military development; to provide resources for carrying out these measures; to complete the subjugation of Formosa, and to lay before the Diet an explanation of the Administration's policy during the momentous events of the past twelve months. From a purely personal point of view, however, it would be difficult to find a more favourable opportunity for resigning the Premiership. His clever rivals built a golden bridge for his retreat when they constructed it out of such materials as a Marquisate refused, a grand order of merit rejected, and loyalty to colleagues preserved. But that is sentiment and selfishness. Count ITO will look beyond such considerations, we trust. He will not allow the Throne to be involved in a political trick, or the Cabinet to be broken up by an artifice that certainly should not win public confidence for its contrivers. We confess that we cannot see how Count ITO may extricate himself without either establishing a precedent that the nation would resent and that must be particularly distasteful to a man of his profound loyalty, or suffering a loss of dignity that would

impair his usefulness as leader of the Cabinet. The situation appears to us decidedly grave, but so long as Count ITO does not resign, there is hope of some adjustment.

FORMOSA.

WHEN the Japanese troops went to Formosa they behaved with the utmost leniency and forbearance towards the people of the Island. The key-note of their policy was conciliation, and for a time it seemed likely that they might succeed. All foreign correspondents writing from Formosa were unanimous in bearing testimony to the merciful and considerate measures adopted by the invaders. But, at the same time, a note of warning was sounded: it was predicted that the kindly methods of the Japanese would be misconstrued, and that in the end they might be driven to use the sword with all the greater resolution because they had at first kept it sheathed. Unfortunately, that is what has happened. The Japanese found that conciliation only encouraged treachery, and that clemency merely prompted their semi-savage adversaries to stouter resistance. We say "semi-savage" advisedly, because the men now arrayed against the Japanese in Formosa are chiefly the Hakkas and the aboriginal tribes. The latter are veritable barbarians: from time immemorial their hand has been against every man, and their ferocity and cruelty have made them bywords. As for the Hakkas, they are described by WELLS WILLIAMS as "tramps who roam over the country, settling in vacant places and then encroaching on their neighbours. Never heartily addicted to sedentary pursuits, they generally take to marauding after a brief spell of settled life." A large colony of these Hakkas were sent from Canton to Formosa some years ago, and were there established in the hills between the Chinese settlers and the aboriginal tribes. They seem to be lawless, bloodthirsty raiders, and most assuredly they are the very last type of settlers that a civilized Power would desire to see within its territories. It was probably an altogether too sanguine forecast on the part of the Japanese to expect that such people could be brought under subjection by gentleness and benevolent assurances. The Hakkas and aboriginal savages judge others by themselves, and being incapable of mercy or magnanimity, place no confidence in any exhibition of such qualities by a foreign invader. They appear to have deliberately chosen to fight to the bitter end, and the result of their choice is that the Japanese are now compelled to employ overwhelming force, and to undertake one of those campaigns with the inevitable features of which history have made us unhappily too familiar. It might reasonably have been supposed, however, that

the plain facts of the case would not be perverted to Japan's discredit by foreign local critics, and that, when discussing the strong measures to which her troops have now been driven by the sheer necessities of the situation, their previous patience and forbearance would be remembered. But it is not so. The Japanese must always be condemned. Under no circumstances can they hope to escape abuse and denunciation at the hands of foreign local journalists. The very critics who, a short time ago, accused them of incompetence and false judgment because they did not at once send a large army to Formosa and crush every semblance of resistance from end to end of the island, are now crying out that they have been too impatient and too precipitate; that they ought to have sought to acquire the confidence of the savage aborigines and the semi-savage Hakkas by assuring them in the possession of their property and persuading them to believe in the existence of qualities unknown to such barbarians, and that, really and truly, it is abominable and unendurable to see the Japanese shooting down men that employ every device of treachery to murder them, and levelling houses which, so long as they remain standing, are employed for purposes of attack. We have witnessed a great many instances of anti-Japanese prejudice on the part of the Yokohama foreign press, but, on the whole, this latest example seems qualified to take the leading place. What are the Japanese to do? Are they to submit quietly to be shot down at any and all times by men whose lives they have spared? Are they to refrain from attacking and destroying a hamlet because, although its inhabitants rain bullets upon them from behind the brick walls of the houses, some women and children may happen to be sheltered within? Any wanton sacrifice of female or child life is terrible, but we have not a scintilla of trustworthy evidence that such a cruelty has been perpetrated by the Japanese. A Chinese rumour in that sense was once referred to by a correspondent of the *Hongkong Telegraph*, but what does that same correspondent say in his last letter?

As already reported, after the first scare was over, the Japanese were more or less heartily welcomed by the Chinese settlers in North Formosa, and all would doubtless have gone well had not the emissaries of the Black Flag Chief and certain Chinese officials filled the minds of the Hakkas and savages with all sorts of bad notions of the Japanese. The consequence has been that although the heroes of Port Arthur and Weihaiwei have treated the settlers with the greatest forbearance and have remitted all *lekin* and taxes for 3 years, yet the basest treachery is practised on them. They are "potted" at from every direction and wherever they go, and when a few miles out of the capital, small parties of Japanese troops are waylaid, mobbed, and butchered to a man; transports are constantly robbed and the escorts killed and quartered; the telegraph lines have been cut; railway lines torn up, and every species of brutality and savagery practised on unfortunate natives and officers who fall into the hands of the insurgents.

The most cowardly attacks on the Japanese are often made just after they have marched through some ostensibly friendly village, only to find as soon as they get outside the town that they are

"potted" at from every direction, which, of course, often results in many Japanese being killed and wounded without getting a chance to retaliate on the wily foe.

To these very pointed comments he adds that the Hakkas "have already killed scores of women in the most cold-blooded manner," and that, in his opinion, "the Japanese do not give sufficient protection to the women and children to render them independent of the native chieftains." So far, then, from massacring women and children, the Japanese "protect" them, according to this correspondent, but do not protect them sufficiently to secure them always against the savage Hakkas who "have already killed scores of them." Unhappily no kid-glove method of successfully warring against barbarians, or semi-barbarians, has ever been discovered, nor can it be honestly said that Great Britain herself has contributed much to the discovery. It is easy to compose sensational paragraphs out of such materials as burning villages and devastated districts, but these calamities are the inevitable concomitants of an invasion under circumstances such as those now existing in Formosa. We may here take the opportunity of emphatically contradicting the extremely silly rumour that the Foreign Representatives in Tokyo have shown a disposition to protest against the methods pursued by the Japanese in Formosa. It would be incredible that men of the commonest discernment should believe such an extravagance were they not so blinded by prejudice as to have lost all power of calm judgment.

MR. COWEN ON THE WAR.

MR. COWEN, who took the field with the Japanese troops in the capacity of *Times* correspondent during the recent war, delivered a lecture in Hongkong on the 19th of July. The newspaper reports of what he said are meagre, but a few points seem to have been reproduced with sufficient clearness to be interesting. Concerning the battle of Pingyang, especially, Mr. COWEN makes a striking statement. "According to the Japanese records," he says, "which were most reliable, the fight lasted all day, and then the Japanese drew off, having failed to capture the place; but the Chinese fancied themselves defeated, and so went away under cover of darkness, leaving the Japanese to claim a victory which demoralised the whole nation of China. From the same authorities it appeared that the Japanese forces were divided for attack in such a way that they might have been annihilated in detail."

This has at any rate the merit of being a novel view. All other readers of the records have come to a very different conclusion. The story of Pingyang was the story of almost every fight throughout the war. With the exception of the

desultory attempts made by SUNG and I to re-capture Haicheng and Fenghwang, the Chinese invariably entrenched themselves in a position of vantage and awaited the onset of the Japanese. The tactics of the defenders were uniform. They placed their whole reliance upon outworks, and after the capture of these they abandoned further resistance. That was precisely what happened at Pingyang. All the strong positions on the east and north-east of the town were taken by the Japanese, the Chinese being driven from them with heavy slaughter. At one point only did the assaulting columns meet with a reverse, namely, on the south, where Major-General OSHIMA, disregarding his instructions, converted a feigned attack into a real assault. After that day's fighting, Pingyang ceased to be tenable. It is true that the final assault would not have taken place until the following morning, owing to the fact that the column directed against the north-west, or undefended face, did not reach its final position as soon as was expected. But the place had practically fallen when night came. Mr. COWEN does not speak from personal observation. He was not present at the fight, nor did he ever visit the ground. He bases his opinion on records equally accessible to everybody, and he will find himself in a minority of one when he asserts that "the Japanese drew off, having failed to capture the place." Of course we do not for a moment endorse the extraordinary exaggerations published in London immediately after the fight: they were grotesque. But we are confident that every military man will agree as to the issue of the Japanese onset. Pingyang depended entirely on its line of outworks, and when these had fallen, the place ceased to be tenable. What is certain is that the Chinese fled from it *pêle-mêle*, leaving a large fraction of their number dead on the field, and that they never again rallied on the south of the Yalu. How such a result can be construed as Mr. COWEN construes it, we fail to perceive. Neither can we follow his assertion that "the Japanese forces were divided for attack in such a way that they might have been annihilated in detail." Mr. COWEN cannot possibly mean to condemn altogether a division of forces under such circumstances, since that would be condemning the strategy followed from time immemorial in the escalade of fortified positions. He can only mean that the movements of the assaulting columns were so badly synchronised as to offer an opportunity for their destruction in detail without any dangerous uncovering of Pingyang on the part of the Chinese. But that is precisely the mistake that the Japanese did not make. They contrived to time their advance so that the defenders had to treat it as one general movement, not as a series of disjointed efforts. We confess that we can-

not follow Mr. COWEN'S criticism in this matter, and that he seems to us to be labouring under a singular misapprehension. He is reported as saying, in the immediate context of the Pingyang affair, that "the Japanese certainly did not show any great amount of tactical ability in the war," and subsequently he committed himself to the very sweeping statement:—"I do not think the Japanese have any strategical ability at all. I do not think they will have any for a very long time to come." Tactics and strategy or two very different things. The principles of the former are, for the most part, mere matters of military instruction, but the principles of the latter, though not independent of such instruction, can not be successfully applied without special aptitude on the part of a commanding officer. What Mr. COWEN alleges is, first, that the Japanese, throughout the war, showed little ability to move their troops and place them in battle array; secondly, that they are totally lacking in the art of generalship. It is out of the question to discuss such large problems within the limits of a newspaper article, and, besides, the sweeping comprehensiveness of Mr. COWEN'S criticisms, unsupported by any explicit evidence whatever, defies reply. This, however, we venture to assert, that there is not in the whole of the Occident a tactician or strategist of experience and competence who would commit himself to such wholesale verdicts as those of Mr. COWEN. But the courage of the youthful newspaper correspondent has always contrasted magnificently with the caution of the grey-headed expert.

There is one more point in Mr. COWEN'S lecture to which attention may be drawn:—

With reference to the vexed question of Port Arthur, there certainly was much to censure; but at the same time the needless wrangling that had arisen made the affair appear more serious than it really was. Practically, it amounted to hardly anything more than the killing of men who could have been captured alive. This was certainly reprehensible; but none the less, almost anybody on earth would have done the same after the provocation given. The difference was that, after it was done, the Japanese in cooler moments should have submitted to the censure and let the matter drop, whereas they disputed and kept the sore open instead of letting it heal.

This is Mr. COWEN'S mature verdict about the Port Arthur affair. "Practically it amounted to hardly anything more than the killing of men who could have been captured alive," and "almost anybody on earth would have done the same after the provocation given." Now Mr. COWEN must be well aware that against such a statement as that no voice would ever have been raised on the Japanese side. Why then, in connection with such a statement, does he accuse the Japanese of "keeping the sore open" by "needless wrangling?" There is no question of keeping the sore open or of healing it. There is question simply of sifting the true from the false. It is a new principle of morality that because part of a terrible indictment is true, its victim's wisest course is to tacitly plead guilty to the whole. The public are

gradually coming to learn the facts about Port Arthur, as they would never have done had the field been abandoned from the first to sensational exaggerators.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A LITERARY GEM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a gem of literary description, I beg to call attention to the following extract from one of your local contemporaries:—

On its obverse, is shewn an effigy of Britannia, with arms which do not match, and her lower limbs are of disproportionate design; her left hand rests on a shield decorated with the Union Jack; in her right, which is unnecessarily elevated, she holds the trident indicative of the sea power which Britannia wields, but in consequence of the staff of the trident being too much elongated, its prongs encroach on the key pattern border, which runs round the coin; but in order to obtain as much room as possible for the staff of the trident, for which the designer appeared ready to go to any length, Britannia is made to stand somewhat aside from the middle of the field; this is endeavoured to be rendered somewhat less obvious by the exaggerated blowing of her upper garment across what would otherwise be a blank space, to the latter a meaningless dot has been added, to which, with a view to the establishment of a balance, a similar one appears on the other side, which coming at some distance from the word "dollar," looks like a full-point which has had the misfortune to have lost its way, and is consequently not in the place it ought to occupy,—that is to say, after the word "dollar," which forms part of the inscription of "one dollar" denominating the value of the coin.

Yours &c.,

August 10, 1895.

HUXLEY AND BELIEF.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A similar article to that which appears in your issue of Saturday last on the late Prof. Huxley was published by you last summer shortly after the death of Prof. Romanes—not so comprehensive a writer, but a far greater scientist, I suppose, than Prof. Huxley. The writer of the article wrote in ignorance that the whole trend of Prof. Romanes' thought during the last years of his life was towards faith, and that he died in the communion of the Church. The publication of his autobiographical papers under the editorship of Canon Gore has placed the facts within the knowledge of all.

No change of a like magnitude took place in the opinions of Prof. Huxley, but I am, I believe, justified in saying, from information given me by one who has lately been in intercourse with him, that he had learned respect for that from which he differed, and in his latest years certainly would not have condescended to the ignoble sneer of your correspondent, that religion only "serves to soothe and support the feeble in intellect and infirm of will." Such modes of writing are obsolete in the West. May we not hope that they shortly will be so in this country?

I may add that the tendency of the greatest thinkers to revert to belief, as seen so strikingly in Mr. Mill's "Three Essays," is a remarkable but by no means inexplicable phenomenon. Their wider outlook enables them to apprehend, as smaller men cannot, the limitation of their own methods. "The leaders of a party," it has been said, "are often in despair at the utterances of their followers."

I am, Sir, yours obedient servant,

HISTORICUS.

August 12th, 1895.

THE FORMOSA "ATROCITIES!"

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Upon arriving in Yokohama, I was very much surprised to read in the *Japan Gazette* of the alarming condition of affairs in Formosa as portrayed by that journal. As the Japanese have so honestly endeavoured to be friendly with the Chinese and have treated them with more kindness and overlooked acts of antagonism with more patience than I think we would have done under the same circumstances, I feel, as I think do the foreigners in North Formosa, that the Japanese should rather be credited with a great deal of

forbearance for the way in which they have handled opposing Chinese.

It is unfortunate that any journal should publish such a fearful indictment as that in the *Gazette* without first investigating the truth of the alleged information. A letter to either Consul, or to any of the tea merchants in North Formosa, would have elicited an answer that would have determined its entire falsity. The accusations are claimed to be based on the authority of an eye witness. There has been no foreign eye witness of any of the engagements in Formosa, since the fall of Kelung, except myself. Mr. Thomson, a gentleman connected with one of the tea firms in Taipeifu, made a trip to Takoham to purchase tea, but the city had then been taken several days. The supposition that, because Mr. Thomson had a bullet shot through his sun hat, which was identical in appearance with the hat worn by Chinese soldiers, "he was near enough to see what occurred," is very unreasonable. Orders were given at Taipei-fu, and guards at the mouth of the river enforced them, that no Chinese boats were to be allowed on the river, as the opposing Chinese had taken that method of travelling, and it was impossible to distinguish the good from the bad. And as this trip of Mr. Thomson's occurred soon after the massacre of the thirty-one soldiers who were guarding the rice boats, the guards along the river were on the constant look-out to avoid a surprise from the enemy. Mr. Thomson had given no information to the Japanese about his trip, and might have been shot at at any time along the river, as his appearance was such that it would lead the outposts to believe he was a Chinese soldier.

In the same paragraph that the *Gazette* states that its information did not come from Chinese sources, it quotes an extract from the original report which contradicts its own statement. "Blood-curdling reports of atrocities, perpetrated by the Japanese, are circulating very freely in every direction, and it is even alleged that the troops have been guilty of revolting and brutal excesses of the most atrocious and savage description." I am well aware of such reports, as is also every foreigner who has been in Formosa for the last few months. Such reports did circulate, and will circulate so long as there are Chinese in Formosa. Until one has been intimately acquainted with the Chinese in that island no one can realize that it is possible for such gigantic lies to originate from incidents so minute. Upon my return from Hsin Chu, I was greatly amazed to find the report current that 1,500 of the Japanese force had been killed. But as we had only 1,000 men altogether, and only four were killed, it is difficult to comprehend how such falsehoods can be framed and then believed by the Chinese.

If the Chinese now opposing the Japanese were fighting for their country with anything of a patriotic spirit, one might have some sympathy with them, but the Hakkas, who are the "Roaming vagabonds of Formosa" and are making the trouble at present, are fighting only because it offers unexcelled facilities for driving the better classes of Chinese from the villages and looting their property. And now that they have started to oppose the Japanese they dare not cease. The Japanese owe it to the respectable Chinese as well as to themselves that these low-lived thieves and murderers are exterminated as long as they remain dangerous. Even Chinese have asked permission of the Japanese to oppose the Hakkas themselves.

As to Hakka bravery; there are no bigger cowards in China. Not a single stand has been made by them against the Japanese army, and the only courage shown is in two or three hundred killing a few Japanese coolies from an ambush. If they were brave and would fight well, it would be easier for the Japanese to take the island, but, as it is at present, the Chinese, regardless of their strength, will never make an attack unless they are pretty sure that their position is such that they can retreat with safety. They never hold their ground unless hidden in ambush, even though they outnumber their opponents ten to one, and before they are within rifle range they scamper over the hills like a flock of sheep. The Japanese troops pass by, and it is then that the bravery of the Hakkas comes to the surface, for they return, bold and defiant, ready and willing to attack any small party of coolies or soldiers that come their way.

The *Gazette* states that it was while the Japanese were retreating from Takoham that the atrocities were committed. This in itself should satisfy anyone that the whole story is a falsehood, because all the foreigners as well as the Chinese knew, five days after the capture of Takoham, that the Japanese had not been defeated, and there was therefore no retreat.

I have been living with the foreigners in North Formosa, at intervals, for five months, and am intimately acquainted with all of them, and am con-

fidant that the report referred to in the *Gazette* never originated with any of them.

The policy of the Japanese has been from the first to deal leniently with the Chinese and persuade them to settle down to their usual occupations; and it is unreasonable to think that they would encourage "sacrifices of life" before which "the atrocities of a Herod seem inoffensive," and thus delay the day when the country can be placed upon a paying basis.

The Chinese have often taken up their position in the houses and on the roofs while opposing the advance of the Japanese, and in many cases the Japanese have answered the fire and shelled the towns. Women and children might have been killed in such operations, although usually the women and children are packed off to the hills long before the Japanese arrive. At all events, I have not seen, nor have I heard from any of the foreigners, that any women and children had been killed, and I feel sure that if any so-called atrocities had occurred I would be aware of it.

Between Taipeh-fu and Takoham are a few small villages. When the fighting commenced in their vicinity the better classes of Chinese removed to Taipeh-fu and sought protection of the Japanese. The rebels, or rather brigands, occupied the houses and kept up a constant fire day after day on any small parties of Japanese who came within range. It was impossible to find the guilty ones when any force of Japanese advanced, and for days the Japanese were subject to these cowardly attacks, and as affairs grew worse and worse, it was soon evident that, if the Japanese meant to occupy the district or protect the peaceful Chinese without placing a regiment in every village, a more determined stand must be taken. As long as these villages existed they offered splendid shelter, and on account of the hills near by it was an easy matter for the enemy to retreat and hide themselves in the jungle. The climax came with the extermination of the thirty-one Japanese guarding the rice boats. The order was then given to destroy the huts in the villages that had been harbouring the opposing Chinese and several of them were burnt to the ground, the enemy retreating to the hills. It is now easy to keep up communication with head quarters, as no attack can be made without encountering great danger, and a Hakka avoids that every time. The peaceful Chinese are now able to return, and the second crop of rice is being planted.

Yours truly, JAS. W. DAVIDSON.

Yokohama, August 13th, 1895.

JAPANESE TOPICS IN AUSTRALIA.

By JOHN PLUMMER, M.J.S.

Sydney, July 9, 1895.

At the present moment New South Wales is in the throes of a great political struggle, the attempt of the premier, Mr. G. H. Reid, to substitute a system of direct taxation in place of the protectionist tariff introduced by the ex-Premier, Sir George R. Debbs, having resulted in the dissolution of the Legislative Assembly, and a General Election, the results of which will become known within the next few days. One of the questions raised during the crises is that of the extent to which Australia is bound by the treaty concluded between Great Britain and Japan. In South Australia a sub-committee of the Adelaide Chamber of Commerce have prepared a report on the subject, which is sufficiently important to reproduce in full. After describing the provisions of the treaty and the protocol clause, the report says:—"This treaty must be viewed in the light of the economic and social conditions of the contracting parties. Japan is a country with a large population, industrious, enterprising, and intelligent, simple in habits, and very frugal. The cost of living is very small. During the developmental period of its history an enormous trade must be done in British manufactures under this treaty, but when the cost of living and labour conditions of the manufacturing portion of the British Empire are considered, it seems inevitable that within a few years most the manufactures of the old world will be produced in Japan, at such cost and in such quantities that not only will the Eastern market be lost to England and America, but it is a question whether in England and other freetrade manufacturing countries, the Japanese goods will not be supplied at such prices as will destroy the home industries. The bearing of the treaty on producing colonies, such as Australia, is very different. The certain growth of manufactures in Japan, with its consequent civilisation, will create such a good demand for food supplies and raw material as will ensure a good market to all producing countries protected by the treaty,

and Australia being so near, and with products so varied in character, should be the first to benefit. It must not, however, be overlooked that beyond the increased demand for home consumption in Japan by her associated people, it may mean little more than a transference of trade in products from Europe to the East. If Japan is going to manufacture at a cheaper rate than the Western world, the goods must be purchased by Australia in preference, and a reciprocal trade will become a necessity of our existence. It will be wise, therefore, for us to place ourselves on the footing of the most favoured nation if we are to secure the benefit to the utmost. The clause most nearly affecting the practicability of our joining the treaty is that of equal citizenship, as it concerns the labouring classes. The answer to the objection urged by some is that Japan is already an accomplished fact, and that no possible restriction we could impose will prevent her progress. The characteristics of her people will force them to the front in spite of us, and we must either rise with her or, as the inevitable consequences of the labour doctrines, taught and believed by the masses to-day, be overwhelmed, and perhaps this may come about sooner than some of us anticipate."

Copies of the report have been forwarded to the Chamber of Commerce and similar bodies in the other colonies, with a view to united action in the matter. The real difficulty, so far as Australia is concerned, will be in connection with Japanese labour. There exists some apprehension that the unrestricted introduction of cheap labour from Japan would lead to social and industrial troubles of the gravest character. The American correspondents of Australian papers state that California is being flooded with cheap Japanese labour, every steamer from the Orient, Honolulu, and Victoria bringing them in large numbers in violation of the Alien Contract Labour law; and that within the last year about 10,000 Japanese have found employment on farms and vineyards, and white farm hands are idle by thousands.

This will explain the alarm created among the Australian labouring population, and the adoption by the "General Council for the Federation of Labour," sitting at Sydney, of the following resolution:—"That this general council of the Australasian Federation of Labour enters its strong protest against the introduction into Australia of alien coloured labour, calls upon all Australian Governments to legislate against the introduction of Japanese or other Asiatic races, is opposed to the acceptance by the Australian colonies of that portion of the treaty between Great Britain and Japan which gives the latter race the right to reside in Australia, and urges all workers in each colony to make this a test question at every Parliamentary election."

This resolution has given rise to considerable comment. The *Riverina Recorder*, one of the leading papers in the New South Wales pastoral districts, says:—"Great Britain has made the move because she has recognised first among the Western Powers that the claims of the Japanese to have done with the old restrictive treaties, which have served their term, and to be placed in a position of equality and reciprocity, could not advantageously be disregarded. If this was the case before the war, when the main consideration was only the rapidly increasing importance of Japan as a manufacturing and commercial country, it is doubly the case now that she has shown the intention and the ability to make herself by force of arms the dominant nation in the Western Pacific. One of the most important points conceded to Japan in the treaty is what is called "extra-territoriality."

This means that the subjects of each nation, within the dominions of the other, are to be amenable to "and protected by" the laws of the country in which they dwell. The old standing immunities of British subjects in Japan—their exemption by treaty from the jurisdiction of native courts—is done away with, and the Consular Courts abolished. In return for this the trade of the country will be thrown open to them, and although Japan retains the right to exact certain tariff duties she is bound to favour Great Britain where competition may arise with other powers. Other nations will doubtless follow Britain's example, and the question arises, is Australia to stand aloof? Japan, with its 40,000,000 inhabitants, is a large consumer of the very commodities Australia can best export. Raw sugar, lead, leather, preserved milk, etc., are articles of import in which these colonies should have a share, and, more important still to Balranald and the pastoralists of the surrounding district, the Japanese are daily becoming large meat eaters. The only difficult obstacle that crops up is that clause of the treaty which secures to the subjects of each of the contracting parties full right of entrance and residence within the territory of the other. The Labour Coun-

cil of course is at once up in arms against the introduction of Japanese into Australia and in the resolution carried last Wednesday, urges all workers to make it a test question at every Parliamentary election. But is the dread of a moderate influx from the progressive nation which has made its way in the world so quickly to outweigh all the advantages which commercial intercourse may bring us? Is Australia to keep the barriers standing when all other nations have swept them away? The Labour party, of course say "yes," but the question is a critical one, and a reply given in the affirmative to-day may very probably be repented of in the near future. The *Newcastle Morning Herald*, touching on the same subject, in the course of a somewhat lengthy article, says that it "is undoubtedly one of such serious importance that legislation on the subject of the admission of aliens should not be framed by one colony only. It ought to be dealt with by a federated Australia, and should be the first subject with which the central Government of this continent should deal." After a few more remarks to the same effect, the *Herald* says, alluding to the Bill introduced into the late New South Wales parliament to extend the Chinese Restriction Act, so as to include Japanese, Javanese, and Kanakas, that:—"While no one wishes to see this country made the dumping ground for the vagrant elements of the population of the Orient and Polynesia, it should be clear to the most unthinking that a subject like this should not be rashly entered upon. Japan is a country which has entered into reciprocal relations with Britain regarding commerce and other cognate subjects, among them the right of people of both nationalities to trade in each other's territory. Holland is a land with which Britain is on the best of terms, both in Europe and in the territories under the government of the Dutch East Indies. As for Polynesians, France, which rules over New Caledonia and Tahiti, and has other spheres of influence in Polynesia, would be effected by the use of a word of such vagueness as "Kanakas" in a statute passed by New South Wales. In any legislation on the subject of the immigration of coloured races, care should be taken that the meaning of the Legislature should be well defined. Any desire to prevent all attempts at the introduction of what is known as servile labour should not have the result of bringing about a breach of the amicable relations existing between this country and other nations, and embroiling it in serious dispute with them. There might, however, be a system of reciprocity in this matter, so that China, or Japan, or the Dutch East Indies, should have the right to expect the admission into Australia of a number of their people equal to the number of British or Australians that obtained admission into their territories within a given period. The number could easily be obtained every two or three years. The result would, doubtless, not be very alarming for this country, and the adoption of such a system would avert the stigma of illiberality and hostility to other countries that is sometimes endeavoured to be placed on us.

The relations between Russia and China continue to create much uneasiness in the various colonies, by reason of the many probabilities to which they naturally give rise. The *Sydney Daily Telegraph*, alluding to Russia guaranteeing the Chinese indemnity loan, says:—"The news should not be treated lightly. It would imply that Russian threats have again overpowered British diplomacy, and that China is about to place herself unreservedly in Russian hands. For China to assign to Russia a first charge upon Customs revenues amounting to some three and a half millions annually in return for a loan for so small an amount, is to give away the power to issue any further loans upon the same security completely. It is not only that the assigned revenues amount to considerably more than 20 per cent. annually upon the amount of the loan, but if Russia obtains a priority over the entire tangible revenue in this way it will preclude any further loan being raised upon the security without Russian consent; and Russia would know how to take advantage of such a position when it suited her. That the Chinese Government would willingly have surrendered themselves is hardly to be thought of; but it is quite possible that the draught may have been sweetened by the intimation that if China yielded on this point she could escape from any further obligation to Japan, for that country could not venture to approach ports the first fruits from which were the property of Russian agents. There can be no question that Russia is resolutely bent upon strengthening her position upon the shores of the North-Western Pacific, and to control the treaty ports of China would be a great point gained. Upon any slip being made, she could, at any time, proceed to enforce her "rights."

The *South Australian Register*, under the heading, "Diplomatic Japan," has a long article,

intended to show that the Japanese concessions to the Powers who objected to the terms of the Treaty of Shimonoseki, must not be accepted as an indication of Japanese weakness, but rather of astuteness. It says:—There is good reason to think that their (the Japanese) compliance was a "curtain scene" in every way worthy of their astute action throughout. It will probably be found that their policy was influenced by the following weighty consideration—Russia, France, and Germany, and especially the first-named Power, have virtually made themselves parties to the treaty of Shimonoseki. China, an accomplished shuffler, will be "assisted" to pay the indemnity with punctuality, in itself a matter of some moment to Japan; and, whatever course the Celestial Empire may in her extremity take to relieve herself of her present liabilities, she is not likely to regard with too friendly an eye the Power urging her from behind to pay up, and striving to exact terms for any assistance rendered her. Meanwhile, Japan, with her present grip upon China, will use all the well-known pretexts for remaining in "temporary possession," and will meanwhile devote her most assiduous attention, with the help of the indemnity, to the perfecting of her navy. It is doubtful whether three years will see the completion of the Siberian Railway, and in any case by the time it has been constructed Japan will be in a position to regard it with comparative complacency. Possessing a dominant voice in Chinese Councils, backed possibly by the much-dreaded "subordinate alliance;" holding the great fortresses on the Yellow Sea, which she will have made impregnable; and, above all, owning a navy as relatively superior to the Russian then as it is now, she will have virtual command of the China Sea. Her fleet acting from either coast of the Korea will make that peninsula untenable by Russia, whose line of supplies would be at the mercy of a Japanese expeditionary force able to strike at any point. To dam back Russian advance will be as much an object with China as with her late conqueror, and the forces of the two Eastern Powers, rendered effective by Japanese training, will be able to offer an irresistible opposition to Muscovite aggression. The Jap, it may safely be concluded, has "backed down" because he has got all that he wants for the present, and because he can make sure, not only of keeping it but of adding in future to what he has already secured.

THE FATAL AFFAIR IN YOKOHAMA.

INQUEST—VERDICT, "TEMPORARY INSANITY."

An inquest was held on Tuesday afternoon at the Royal Naval Hospital, by John Cary Hall, Esq., H.B.M. Consul, acting as Coroner, into the circumstances attending the death of Mr. Bennet Emra Brackenbury, age 23, a clerk in the service of the Hongkong and Shanghai Banking Corporation at Yokohama. The jury empanelled were Messrs. D. McLaren, E. T. Nicholas, and W. Tucker. Having viewed the body, the following evidence was taken:—

Inouye Yoshiroku, cautioned, deposed—I am the table-boy of the Mess at No. 156, Bluff, of which deceased was a member. About 5 minutes to 4 o'clock on the 9th inst., whilst I was in the kitchen, Mr. Brackenbury returned, and called for a glass of whisky, which he drank. He then went to his own room. A short time after, I heard a sound, as of the report of a pistol, whereupon I ran out, ran round and looked into the room, and found that he had shot himself. There was no one else present in the room at the time. I had no conversation with the deceased whatsoever.

Herbert Pinckney, sworn, deposed—I met the house-boy just outside the Club, about half-past 4 o'clock in the afternoon, just as I was leaving. The boy said that Mr. Brackenbury had shot himself. I immediately went up to the Mess and found that this was so. Mr. Brackenbury was tiffing at the Mess that day, and appeared as usual.

To a Juror—Mr. Brackenbury had his eyes open when I entered the room and looked up at me.

C. D. Moss, Chief Clerk of H.B.M. Court for Japan, was next sworn. He deposed—I heard, while walking along the main Bluff road, that Mr. Brackenbury had shot himself. The information was given me by the mess-boy. On arriving at No. 156, Bluff, I saw the deceased lying on his left side, with a pillow under his head, and a pool of blood near to. I said to him, "Brackenbury, how is this?" He simply smiled. I don't think he was conscious. I left him alone, consulted with Mr. Pinckney, and remained until the Doctor arrived, whom I knew had been sent for. Dr. Wheeler arrived within five minutes of my own arrival. The house-boy told me that Brackenbury had shot

himself. I asked him to produce the pistol, and upon his doing so I took possession of the weapon, and also of a packet of cartridges. The pistol has five chambers, and is of revolver pattern. One chamber only has been loaded and discharged. I also produce 49 out of a package of 50 Eley's revolver cartridges. They have been in my possession ever since the day of the occurrence. The cleaning instruments accompanying the weapon have never been used, showing that it is a new one. The pistol has a spot of blood upon it. The cartridges were wrapped in a Japanese newspaper.

Dr. Wheeler, next sworn, deposed—On Friday afternoon, a Japanese boy stopped me in Water-street, about half-past four o'clock, and told me that Brackenbury had shot himself. I drove up to the Bluff at once. I found the deceased lying on the floor of a bedroom, his head supported on a pillow. He was not conscious, though his eyes were open. I spoke to the last witness and asked for the pistol. He directed me to the dressing-table, where the pistol was lying on a piece of Japanese newspaper. We examined the weapon together and found that it was one of 38 calibre. We also found one cartridge, out of a package of 50, missing. I then asked Mr. Pinckney to go for Dr. Todd, as I desired to place deceased upon a table to ascertain in which the direction the bullet had gone. I found on examination that the bullet had entered the right temple, a little over half an inch behind and above the external angular process of the frontal bone. On Dr. Todd's arrival, I had deceased removed to the dining-room table. With the probe I found that the bullet had penetrated the brain in a direction backwards and inwards and slightly upwards. I could not detect any bullet, although I passed the probe fully three inches. I did not feel myself justified in going any further. About 6 o'clock I asked Mr. Brackenbury a question or two. He answered me in a dazed sort of way, and only in monosyllables. There was no paralysis present. An hour and a half afterwards, when I was at dinner, Brackenbury got up, pushed the Japanese boy aside, and walked to the dining-room door. I took him by the arm, and I told him he was not well enough to come into the dining-room, and that he had better go back to bed, which he did very quietly. That evening, about 9 o'clock, I arranged with Dr. Todd, that deceased should enter the Naval Hospital the following morning, as he could not be properly attended to and cared for at "The Niche."

Dr. Howard Todd, Staff-surgeon R.N., sworn, deposed—On Friday evening, at 5 o'clock, Mr. Pinckney arrived at the Hospital and asked me to go to "The Niche," to see Mr. Brackenbury who had shot himself. Mr. Pinckney had come at Dr. Wheeler's request. On arriving at "The Niche," I found that Mr. Brackenbury was suffering from a bullet wound in the right temple. Dr. Wheeler and myself probed the wound and found that at three inches we could not find the bullet. At half-past nine o'clock on Saturday morning, Mr. Brackenbury was admitted to the Hospital, and after consultation with Dr. Wheeler and Dr. O'Regan, I trephined the skull above the bullet wound, and extracted four fragments of skull that were embedded in the brain. Mr. Brackenbury rallied very well from the operation. It was only done to relieve the brain of the irritation caused by the pressure of the bone substance, as the extraction of the bullet was almost hopeless considering how close the pistol must have been applied to the skull. Mr. Brackenbury became very much worse yesterday, and died at half past four o'clock this morning. A post mortem examination was held at half-past eleven o'clock this morning in the presence, and with the assistance of, Dr. Wheeler and Dr. O'Regan. The bullet had passed completely through the brain from before to behind, and was found in the lower lobe of the cerebrum. The bullet wound was the undoubted cause of death. A phial of laudanum was found in one of the pockets of the deceased's clothes. It contained about 2 drachms. The label bears the name "J. Schedel, Yokohama."

This concluded the evidence.

The Coroner said—I do not propose to call any further evidence, but if any friends or acquaintances of the deceased desire to come forward to make any statement which might throw light upon the motives or antecedents which would further clear up this unfortunate affair, I shall be, as no doubt the jury also feels, only too glad to hear him or them. To my own mind, the evidence is quite sufficient to enable the jury to arrive at a finding and give their verdict. The particulars of the case are perfectly clear; it is a simple case, perhaps the simplest ever put before a Coroner's jury. If there had been any doubts or complications in the matter, it would be my duty to point out to you where any such conflict might

arise, and to instruct you accordingly. But I think you have a clear case before you, and you may now retire to consider, when, how, and by what means the deceased came by his death.

The Jury then retired to consider their verdict, and on their return,

Mr. McLaren, the foreman, said—We have agreed upon our verdict. It is, that Bennet Emra Brackenbury died on the 13th August, 1895, at 4.30 a.m., from a bullet wound inflicted by himself at about 4 p.m. on the 9th of August, while in a state of temporary insanity.

Before dismissing the Jury, the Coroner said that as a simple duty he wished to place on record the admirable conduct of the Japanese police on the day of the lamentable occurrence. Within half an hour of the affair everybody who could be considered as in any way necessary, had been notified and warned. He, the Coroner, had received information and arrived upon the scene within half an hour of its being discovered. The police acted in a quiet, efficient manner worthy of all praise, and as soon as they found that the premises were in charge of the proper authorities they as quietly effaced themselves. There was a complete absence of officiousness, and their arrangements could not possibly have been better. They were suddenly called upon to face an emergency created by the late Mr. Brackenbury's unfortunate attack upon himself, and they discharged their duties most satisfactorily. The Jury were thanked for their services and dismissed.

THE FUNERAL.

The mortal remains of the late Mr. B. E. Brackenbury were interred in the Yokohama Cemetery at 7 a.m. on Wednesday. A large concourse of friends, including representatives of nearly every business house in Yokohama, the staffs of the various Banks, and the Master and many members of the Yokohama Lodge of Freemasons—of which deceased was a member—were present. The heads of the H. & S. Bank, Messrs. D. Jackson, R. Holme Cook, and Thos. S. Baker were the chief mourners, the staff acting as pall-bearers. The service was conducted by the Rev. E. Champneys Irwine, and at its close, the reverend gentleman referred in feeling terms to the great regret felt by the friends of the deceased at his most untimely death. Many beautiful wreaths were laid upon the coffin, among the senders being Mr. and Mrs. Thos. Baker; M. and Madame Pereira; Mr., Mrs., and the Misses Rickett; Mrs. Wheeler; Miss Wheeler; The Mess at No. 75, Bluff, Messrs. F. J. Hall, F. H. Hooper, B. H. Pearson, and E. O. Kenyon; Mr. and Mrs. L. J. Healing; Mr. J. Favre-Brandt; the Mess at No. 243, Bluff; "The Niche" Mess; Mr. F. E. White, and Mr. M. Wan San, Compadore of the Bank.

THE KUCHENG MASSACRE.

The first published news of the massacre of missionaries at Kucheng, near Foochow, appears in the following telegrams in the *N.-C. Daily News* of August 5th:—

Foochow, 3rd August, 11.20 a.m.

News is to hand of an attack on the Kucheng missionaries at their sanatorium at Whasang, not far from Kucheng. Five foreign ladies have been killed and two foreign ladies and two children wounded, while others are missing. The outbreak is the action of the Vegetarian Society.

August 4th, 5.20 p.m.

Archdeacon Wolfe and the Rev. W. Banister went in a steam-launch to Sueykw last night to meet the Rev. H. S. Phillips who came in charge of the wounded, namely Miss Codrington, who has a bad head wound, and the Rev. R. W. Stewart's four children, the eldest with knee-cap badly injured, and the youngest with eye gouged out; all arrived and are in the hospital here.

The attack took place early on the 1st instant. The houses were set on fire, and the Rev. Mr. and Mrs. Stewart and one child were burnt to death. The corpses of the killed and the charred remains are now on the way down. The Rev. Mr. Phillips escaped through living in a native house a short distance away. Spears and swords were used in the massacre. The following is the list of those killed.—The Rev. Mr. and Mrs. Stewart and one child, Miss Yellop, Miss Gordon, Miss Marshall, Two Misses Saunders, Miss Gordon (?), Miss Hettie Newcombe.

Foochow, August 3rd, 7 p.m.

Trouble, riot, and rebellion at Kutien about ninety miles interior, west Foochow. Miss Hartford, American, badly wounded. Dr. Gregory another American, believed escaped injury. Five English Missionary ladies killed, others wounded, United States Marshal with steam launch gone to relief wounded parties at Sueykw. Particulars by later telegram.

4th August, 3.10 p.m.

Marshal returned bringing all survivors massacred. Miss Hartford not wounded; every American missionary safe now in Foochow. Ten English killed instead of five as first reported; three very badly wounded.

On Tuesday, August 6th the following telegram was printed in the *N.-C. Daily News*, having been handed to that journal for publication:—

VERBATIM STATEMENT OF DR. GREGORY,
AMERICAN MISSIONARY.

"At 12.30 p.m. on the 1st of August a native Christian rushed into my study saying that some of the foreign ladies at Whasang, a mountain resort near Kucheng city, had been killed that morning and our houses burned. Fifteen minutes later a note from Mr. Phillips confirmed the report, for he said that five ladies were dead, four seriously wounded, and the Stewarts missing. I at once went into the yamên where hundreds of people had already gathered. The District Magistrate (Wang) said he would immediately go right up to Whasang, taking some sixty soldiers with him. At 3 p.m., I left Kucheng city under escort of thirteen soldiers and arrived at Whasang at 8 p.m. to find that nine adults, English subjects, had been murdered and that all those alive at Whasang (nine) had been more or less severely injured, with the exception of Mr. Phillips, who had arrived at Whasang only two or three days before and was lodging at a native house some distance from the English cottages. I at once set to work to make the injured as comfortable as possible, and found Miss Codrington (English) had received one sword cut extending from the left angle of the mouth diagonally upward and downward seven inches in extent, completely dividing the lower lip and exposing the jawbone. One cut in the crown of three inches exposed the inner table of the skull; there was a cut across nose; under the eye a cut three inches long; on the right side of the neck two wounds, also wounds on the arms, and a deep wound on the right thigh, serious. Miss Hartford (American) received slight injury in chest, having been beaten by an assailant, while down. While the servant struggled with him she escaped to the hills and remained hidden until the affair was over. Her worst injury was shock. Mildred Stewart, aged twelve, was wounded; her right knee joint was exposed six inches; she had two wounds on the left leg, serious. Kathleen Stewart, eleven, slight bruises. Herbert Stewart, six, deep wound right side of the neck, four inches; compound comminuted fracture of the skull; on back of head wound through the skull, through which the brain was exposed; wounded left side of head; wound chest, stab back. He died thirty hours after, *en route*. Ewan Stewart, three, stab left thigh, bruised but not seriously. Baby, Stewart, thirteen months, stabbed in the right eye, wounded in the face and on the head; fractured skull several bruises, serious.

Of those killed, Mr. and Mrs. Stewart, Miss Nelly Saunders, and Lena, the Irish nurse, were killed and burned with the house. Miss Hettie Newcombe was speared and killed by being thrown from a precipice. Miss Marshall's throat was cut, her head being nearly severed. Miss Stewart's body showed no wounds; death from shock probable. Miss Gordon had deep spear wounds on the face and neck and side of the head. Miss Topsy Saunders' death was caused by a spear wound entering the brain, right orbit.

The missionaries were apparently massacred by members of a Secret Society known as the "Vegetarians." The party is estimated to have consisted of eighty men armed with spears and swords, strongly organised and under one leader. There was no suspicion of an attack, which was sudden and terrible. The whole affair was over in thirty minutes. Miss Codrington says they begged for life and promised property and valuables. Some assailants were inclined to yield, but the leader, who carried a red flag, waved this and shouted to his men: "You know your orders, kill outright!" In the evening we placed the bodies in coffins and after much effort succeeded in getting the magistrate to order the coffins to be carried to Suikow and secure chairs for the survivors. We left Whasang at 3 p.m. on the 2nd of August for Suikow; travelled all night, arriving at 8.20 at Suikow. The party left for Foochow at 3 p.m. on the 3rd, and met a launch with the U.S. Marshal Hixson and Messrs. Wolfe and Banister, English missionaries, on board with supplies. We arrived at Foochow at 12.30 on the 4th."

Further telegrams were to hand on the 7th, 8th, and 9th August. They ran as follows:—

Foochow, 6th August, 10.30 p.m.

Affecting funeral of massacred this morning. This evening meeting at Club, all residents present. The Rev. Phillips, who saw nearly all, gave his harrowing account. Dr. Gregory, who arrived at Whasang after massacre, related all he saw. Resolution proposed by Mr. Westall carried, expressive of feeling of horror and indignation at the barbarous outrage and sympathy with friends of victims. Resolution proposed by Dr. Smyth carried, that moral force was no longer of use, and deprecating money compensation. Resolutions to be telegraphed to respective governments, 1,000 troops have been sent to Kucheng. A gunboat is due here to-morrow.

Foochow, 6th August, 7.45 p.m.

Secured forty-eight names of members of Vegetarian Society at Kutien. Nineteen are names of leaders, and two are believed to be names of actual murderers.

The above is from reliable sources. The Chinese officials are sending vague, indefinite reports about action taken at Kutien. The Viceroy has just stated that he had no information that any arrests have been made. The officials were not represented at the funeral of the victims this morning.

Foochow, 6th August, 10.10 p.m.

A mass meeting here has unanimously resolved that the American and English Governments must use severe measures, and never accept dollars for lives. The resolution was introduced by missionaries.

Hongkong, 7th August, 4.30 p.m.

A meeting to protest against the massacre at Kucheng will be held here to-morrow.

H.M.S. *Linnet* left for Foochow yesterday, but no troops.

Foochow, August 7th, 9.30 a.m.

Resolution passed here last night at indignation meeting that no confidence would be felt at this port until England had brought murderers and responsible officials to justice, and that Missionary Societies concerned decline in this case to be satisfied with a money indemnity; severely condemning the milk-and-water policy of the Foreign Powers in China where life and property are at present unsafe.

A later telegram has the sad news that one of the wounded Stewart children is very low and is not expected to live.

Hongkong, August 8th.

The public meeting held in the theatre at the City Hall this afternoon was crowded. Great indignation was expressed at the criminal connivance of the Chinese Government and the apathy of the British Government, which should demand strong, stern measures. The speakers were the Chief Justice Sir Fielding Clarke, Mr. J. J. Francis, Q.C., Mr. G. B. Dodwell, Mr. Tom Jackson, and others.

There has been a riot at Fatsan, and the mission there was attacked. It is now alleged that the telegraph line is broken.

The French mission at Huyen in Kuangtung was attacked by a mob, and defended with fire-arms. Several of the rioters were killed, and the rest having received a ransom from the priests retired. No foreigners were killed.

Foochow, August 8th.

H.M.S. *Linnet* arrived yesterday, and the *Redpole* is due to-morrow.

News has come from Minching, thirty miles away, that the Vegetarians have robbed a Chinese Customs officer of five thousand dollars, in transit from Suikow. The officer and guard of eighteen men were killed. This news, telegraphed down to the authorities, is thought to be bogus.

The force of Vegetarians is said to be twelve thousand, a proportion of them being very well armed. Four hundred heads of the society meet daily in a village three miles from Kucheng. It is thought that the Viceroy is powerless to make arrests without extraneous help, though the military force in Foochow *on paper* is ten thousand.

Foochow, August 8th, 8.25 p.m.

It is reported that eight arrests have been made at Kucheng.

Foochow, 7th August 9.10 p.m.

Mr. Mansfield does not know yet of whom his military escort is to consist, but is awaiting news from Kucheng. The first thing the Viceroy's troops did there was to loot the late Mr. Stewart's house. I hear to-night that the Vegetarians are much stronger than was supposed. It may suit them to hand over some hirelings for massacre, otherwise the Viceroy will have to send up a stronger force.

H.M.S. *Redpole* has arrived here.

The following telegram from the Rev. G. B. Smyth has also been published:—

Foochow, 7th August, 9 p.m.

Hykes, Shanghai.

A special messenger from Kutien says that the

Chinese soldiers sent to Kutien City to protect Mission property plundered all valuables in Stewart's house. The British and American Consuls should go to Kutien for a thorough investigation as here it is impossible. Delay longer and there is danger of riots elsewhere. Are the Foreign Ministers dead? Publish this. SMYTH.

News has just been received by wire from Foochow that a Chinese official conveying Government funds was last night killed, together with his guards, by the Vegetarians, one hundred in number at Mingching.

The Shanghai morning journal was informed that Colonel Denby has telegraphed that a U.S. gunboat has been asked for to proceed to Foochow. Also that the burying within the Foochow settlement of the bodies of natives who have died from cholera had just been forbidden by the Tsung-li Yamên.

Mr. R. M. Campbell took the chair at the Shanghai meeting of protest, held on August 5th. The gathering was one of the largest, most representative, and enthusiastic ever held in Shanghai. The following resolution was carried:—

That this meeting is resolved to appeal directly to our respective governments for protection from outrage by Chinese; and against the apparently inadequate manner in which the persons guilty of former outrages have been, and are being, dealt with.

With the heading, "The Situation," the leading Shanghai journal prints the following, under date 7th August:—

In reply to their telegram to Sir Nicholas O'Connor, the China Association received yesterday from Mr. George Jamieson, British Acting Consul-General, the following despatch:—

"I have received a telegram from Her Majesty's Minister in Peking requesting me to convey through the China Association his profound sympathy with the relatives and friends of the British subjects foully murdered at Kutien.

"I am also directed to inform the Association that Her Majesty's Consul at Foochow has been instructed to proceed at once under military escort to the scene of outrage to hold an enquiry with a view to the prompt punishment of the culprits concerned, high or low, and such satisfaction as is now possible, and that an Imperial proclamation decreeing capital punishment on all the guilty will be issued forthwith.

"I am to add that the Chêngtu Commission inquiry will be held as soon possible. The general scope of this inquiry will be gathered from the following extract from the instructions addressed by H.M.'s Minister to Acting Consul Tratman, who will represent British and American interests at the inquiry.

"After directing Mr. Tratman to proceed to Chêngtu as soon as circumstances will permit, H.M.'s Minister continues, 'your duty there will be in conjunction with the Chinese officials mentioned and the Missionaries who will probably also be placed on the Commission to inquire in the first place into the origin of the riots and the adequacy or otherwise of the measures taken to prevent or suppress them by the officials concerned. . . . The findings of the Commission will not have a final character, its object being mainly to throw light on the causes of the outbreak and supply material for consideration here.'

That the China Association or the Shanghai public can be content with such a reply as this is incredible. There are fatal blots in it. There is nothing to be said against the choice of Mr. Mansfield, H.M.'s Consul at Foochow, to go up to Whasang to make a proper enquiry there. Mr. Mansfield is an able Consul, and is not likely to be humbugged; but what is the character of his military escort? Is he to be accompanied by a rabble of coolies in uniforms, or has—as should have been done—a company of the Hongkong Regiment been sent up to Foochow? It is suspicious that the words "under British military escort" are not used; but we still hope that the escort is not to be Chinese. It is well that the guilty, high or low, are to be decapitated forthwith; Mr. Mansfield will no doubt secure that some innocent Vegetarians who never lifted a hand against the foreigners are not put forward as the guilty persons. It is significant that Chinese here laugh at the idea of Vegetarians having committed this outrage. It was no doubt, they say, the work of paid rowdies told to call themselves Vegetarians.

As to the Chêngtu Commission, our statement that Mr. Tratman is to be sole lay representative of British and American interests is confirmed. But Sir Nicholas is very careful not to say who his Chinese colleagues are to be; we know, however,

that two of them are among the officials whose conduct should be enquired into. The Commission is confessedly a farce; for its findings are not to be final, but are only to supply material for consideration at Peking, and we may trust Peking to make that consideration last out until all the guilty parties have made themselves safe from pursuit.

In accordance with the resolution passed at the public meeting on Monday, the China Association despatched yesterday evening direct to Lord Salisbury the following telegram:—

"Public meeting Shanghai yesterday expressed horror indignation massacre by Chinese of English men women children Ktien Resolved appeal direct respective governments for protection from Chinese outrages and protested against inadequate manner persons guilty former outrages have been and are being dealt with also strongly against constitution Chêngtu Commission Americans telegraph Washington. Campbell, Chairman."

The Rev. J. R. Hykes, the Committee appointed at Monday's meeting for American citizens here, also sent the following telegram to Mr. Olney, United States Secretary of State, after it had been submitted to and approved by all the American citizens who could be collected together after yesterday's missionary meeting:—

"Public meeting Shanghai yesterday expressed horror indignation Kucheng massacre resolved appeal direct respective governments for protection from Chinese outrages and protested against inadequate manner persons guilty former outrages have been and are being dealt with also strongly protested against constitution Chêngtu Commission British cabled London."

Thus Shanghai has done what it can for the present. Meanwhile, we read with great satisfaction the news telegraphed by Reuter that the massacre at Kucheng has aroused the deepest horror and anger throughout England. There were reports here yesterday that an American mission station on the Yenfu river, near Foochow, had been destroyed, and that Fukien was on the brink of a rebellion, but it must be remembered that it is common thing for officials in whose district a riot occurs to try to shift the responsibility by declaring that the country is in a state of rebellion. We want justice, only justice, because justice now means security for the future.

The *China Gazette* publishes the following:—

Foochow, August 5th, 1895.

Rev. H. S. Phillips, English Church Mission, has made the following statement:—

About 6.30 a.m. August 1st hearing shouting from the direction of the Stewart house (I was sleeping in a house five minutes' walk off, though spending most of the day with the Stewarts) I went out, and at first thought it was a number of children playing. But soon I was convinced that the voices were those of excited men, and started off for the house. I was soon met by a native who almost pulled me back, shouting the "Vegetarians" had come. I said I must go on, and soon got in sight of the house and could see numbers of men, say forty or fifty, carrying off loads of plunder. One man seemed to be a leader carrying a small red flag. I could see nothing of our Europeans; as this was in full view of the rioters, I crept up a hill in the brushwood and got behind two trees from twenty to thirty yards from the house. Here I could see everything, and appeared not to be seen at all. As I could still see no foreigners I concluded they had escaped off, and as to go down was certain death I thought better to wait where I was. After a minute or two the retreat horn sounded, and the Vegetarians began to leave, but before they did so they set fire to the houses; ten minutes after this every Vegetarian had gone. I came down looked about the front of the house, but could see nothing of any one, though I feared something dreadful had happened, as I heard the Vegetarians as they left say repeatedly "Now all the foreigners are killed." I just then met one of the servants, who told me the children were in the house in which Miss Hartford of the American Mission was staying. I found Mr. Stewart's eldest daughter Mildred here, with a serious wound on one knee, and another severe cut. When I had washed these and put what old calico we had to stanch the bleeding, I turned to Herbert, Mr. Stewart's son, who was fearfully hacked almost everywhere. Then Miss Codrington sent me a message that she too was in the house.

I found her in a fearful condition, but, with cold water and rags we managed to stanch the bleeding. She begged me not to wait, as she thought Miss Topsy Saunders was still alive; I then rushed up to the back of the house and found the bodies of Miss T. Saunders, Miss Stewart, Miss Gordon, and Miss Marshall. The latter was awfully cut, her head almost severed, but beyond wounds given in the struggle the bodies were not mutilated; then later

I found Miss H. Newcombe's body at the foot of a hill in front of the house where it had evidently been thrown. As then I could see no traces of Mr. and Mrs. Stewart, Miss N. Saunders, and Lena, the nurse, we hoped some had escaped and I returned to the house where the children (4 Stewart children) and Miss Codrington were. Presently Miss Hartford arrived; she had received a nasty cut under one ear, but had been saved from death by a native Christian. I learned later from Miss Codrington that the five ladies of the Zenana Missionary Society, who lived in the lower of the two houses which form the Kucheng Sanatorium, after a futile effort to escape, got out at the back and were immediately surrounded by Vegetarians. At first they said they intended to bind them and carry them away, and they begged if that was their intention they might be allowed their umbrellas, but this was instantly refused, some even of the Vegetarians seemed touched with their pleading for life; an old Huasang man alone of the natives who did not take part begged that their lives might be saved. Some of the Vegetarians were inclined to spare them, but were ordered by their leader to carry out their orders. Had they been able to escape into the brushwood round, there seems little doubt they might have been saved. The great misfortune was that only two were dressed. Mr. and Mrs. Stewart, I learned from Kathleen Stewart, were not dressed. Lena, the nurse, died protecting baby, whom Kathleen managed to carry her out of the house, though not before her (baby's) eye had been injured. Miss Nelly Saunders, Kathleen told me, was also knocked down at the nursery door going to help the children, and as we afterwards found the remains of a burnt body there, we had little doubt it was hers. For a long time we thought that at least Mr. and Mrs. Stewart had escaped, but later I found their bodies or rather ashes in what had been their bed-room. The Huasang people seemed to have as a whole no hand in the affair, though doubtless four or five Vegetarian families were concerned; the natives say a Vegetarian band came from the east road (of Kucheng city) many from Ang-tong and Adeng-bang within thirty or forty li of Kucheng. The Kucheng former magistrate, named Wang, came up in the evening to examine into the case.

BELGIAN CONSULAR POLICE COURT, NAGASAKI.

(Specially reported for the *Japan Mail*.)

Before F. RINGER, Esq., Consul.

The Public Procurator of Nagasaki versus Peter Verstappen, a Belgian subject, accused of the manslaughter of a Japanese woman named Nakamura Shige.

This case again came on, and the witnesses for the defence were now called.

Itoda Mon, until July 18th maid-servant in the house of Verstappen, was the first witness. By request of the counsel for the defence, the policemen present in court were directed to withdraw during the examination of this witness. Witness described how on the morning of the 18th July, Verstappen had brought the deceased back to his house in a jinrikisha. Witness was then sent by Verstappen to fetch deceased's clothing. When she returned to the house she heard Shige crying. Witness asked Verstappen not to offer Shige any violence, for he would get a bad name, and Verstappen promised not to do so. Just before dinner Verstappen called witness upstairs. Witness found Verstappen telling Shige that he had been to Amakusa with the baby to search for her. Witness also told Shige about it, and how she herself had gone with Verstappen. Shige said she had not known that witness and Verstappen had gone to Amakusa together, and that she did not wish to hear anything about it. She added that she, Shige, intended to leave the house the next day, taking the baby with her. After dinner witness asked Verstappen to give her her discharge, but he asked her to stay three days more. He said he intended to send Shige and the baby to Amakusa and would himself take them as far as Moji, and he wished witness to stay to take care of the house. As Verstappen pressed her to stay, she consented to stay, intending however, to run away. She refused to take three dollars that Verstappen offered her as wages for fear that he might be able to force her to stay if she accepted the money. At about two in the afternoon she ran away from the house. She had lived three months in Verstappen's house. She ran away because she thought that if Shige went to Amakusa, Verstappen would not let her (witness) go away. Shige had seemed angry in the morning. Witness had never thought that Shige was not right in her head. Witness had heard that Shige had been found with a razor in her hand. Asked if she had

ever seen Shige struck by Verstappen, witness replied that she had seen Shige struck on the occasion of her return after running away the first time. Witness had heard that Shige had made use of false keys to steal money or clothes. Shige had cried out for help when she was locked up in the room upstairs on the morning of the 18th July. Witness saw Verstappen beat Shige on the morning of the 18th. He used his hand, not a stick, and did not beat her severely. Witness had never heard Shige threaten to commit suicide. Two ropes were shown to witness. She recognized the smaller one as one she had often used in drawing water from the well. It was usually kept in the kitchen.

Père Salmon, Roman Catholic Priest of Nagasaki, stated that the deceased and the accused were both personally known to him, and that he had performed the sacrament of marriage between them in December, 1892. On the second of May of the present year the youngest child of the pair was sent away from home and placed in charge of some person at Urakami. On the morning of that day Verstappen had told witness that he (Verstappen) had seen Shige with a razor in her hand, and that he was therefore alarmed for his son's safety. The witness believed that it was for this reason that the child had been sent away to Urakami. Witness believed that the deceased had reason to be jealous of her sister.

Urso Floruvante, compradore, of Nagasaki, had gone into Verstappen's house on the morning of July 18th. He saw Shige, and said good morning to her, but she paid no attention to his salutation, she merely stared at the ceiling and said "Hei!" Witness said to Verstappen that he was scared to stay there and he went out immediately. He was scared to stay because he thought that Shige was out of her senses.

Maurice Eden Paul, English medical practitioner, resident at Nagasaki, had attended the post mortem examination on the deceased. The actual cause of death was asphyxia. Witness then described the various marks of violence found on the body. Witness believed that concussion of the brain of a sufficient degree to cause insensibility could not be produced by a blow on the head without a bruise on the skin being caused by the force of the blow. In the case of a healthy young woman struggling with a man attempting to choke her, witness would have expected to find numerous and severe bruises caused in the struggle. Such bruises were not to be found on the deceased. Witness inclined to the opinion that death was due to suicidal hanging with a double rope about one quarter of an inch in diameter. This theory fully accounted for all the post mortem appearances, with the exception of the bruise on the left arm. The bruise on the head and the bruises on the right arm were too insignificant to be worth consideration. Witness had examined the state of health of the accused two days ago. The accused was suffering from inflammation of various peripheral nerves. His illness was of long duration. It had produced atrophy of the interossei muscles of both hands, and of the extensor muscles of the left leg. The grasping power of the accused's hands was unquestionably greatly diminished. Witness considered it in the highest degree improbable that the accused would have had sufficient strength to suffocate deceased by holding a handkerchief over her mouth and nostrils, if any resistance were offered. From the post mortem examination, it was evident that the deceased was in the early stage of pulmonary consumption. In this condition melancholia with suicidal tendency was not uncommon. The bruise on the left arm might certainly have been caused while taking the body out of the rope. The blow that caused the bruise beneath the skin on the back of the deceased's head would certainly not have been sufficient to produce insensibility. Had the woman first been smothered and the body then raised by an unaided person and the neck placed in a noose, the witness would have expected that additional marks of violence would be produced by the manipulation of the limp insensible body. Witness doubted greatly whether accused in the present state of his health, had physical power sufficient to lift a body weighing 103 lbs. off the ground, without mechanical assistance. Of two ropes produced, the smaller one might, if used doubled, have produced the marks on the neck.

S. F. Lawrence, British Consular Constable, knew the deceased very well. He saw her on the morning of the 18th July, and thought her conduct very queer. She did not respond to his greeting, as she was in the habit of doing. She was scrubbing a stone floor in which the stones were laid in such a manner that there were intervals of mud between them. Deceased was scrubbing away indifferently on the stone and on the mud.

Mr. Forster then summed up for the defence,

He submitted that no evidence whatever had been produced by the prosecution to show that the accused had caused the death of the deceased. The case rested entirely on the hypothesis of the Japanese medical expert that the deceased was first choked, and then hanged by the accused to conceal the true cause of death. But even this witness himself admitted that the marks on the body were not such as he would have expected to find in such a case; and in cross-examination the Japanese expert had suggested that the patient had been struck on the head, that concussion of the brain had ensued, and that therefore there were no marks of a struggle. He admitted, however, that there was no external sign of bruising of the scalp, and Dr. Paul had testified that a blow on the head sufficiently violent to cause loss of consciousness would produce a bruise of a decided nature. The evidence given by the last named witness as to the physical weakness of the deceased went further to show that the charge was untenable. The witness Sato Kichijiro had testified that from his room he could see nearly the whole of the interior of Verstappen's kitchen. He returned to his house at seven-thirty p.m. The first thing that attracted his attention to Verstappen's house was hearing accused call for his daughter, and immediately afterwards he saw accused lowering the woman's body. If the deceased had been murdered in the way suggested by the prosecution, surely this witness's attention would have been attracted to the house by the sounds of a struggle. Mr. Forster regretted to be compelled to draw the attention of the court to the fact that during the cross-examination of the witness Nakamura Kuyo, sister of the deceased, when the witness was asked if she knew anything of the deceased's having been found with a razor in her hand, and she admitted that she had actually seen the deceased with a razor in her hand, the Japanese Police Inspector present in the court addressed a remark to the witness in a menacing tone. Witness thereupon retracted the statement that she had actually seen the deceased with a razor, and said she had only heard of it. Two of the medical witnesses, Dr. Ikebe and Dr. Paul, had testified that the marks on the deceased's body were typical of suicidal hanging. The other medical witness, Dr. Oyama, differed from them, but this witness's contention had been sufficiently shown to be a highly improbable one. Evidence of considerable weight had been brought forward to show that on the morning of July 18th deceased was not in her right mind, and Dr. Paul had testified that the deceased was in the first stage of pulmonary consumption, and that in this condition melancholia with suicidal tendency was not uncommon. Mr. Forster consequently asked for the acquittal of the accused in view of the fact that no evidence whatever had been brought forward to prove him guilty of the crime with which he was charged, while very strong *prima facie* evidence had been adduced to show that the deceased had come to her death through suicidal hanging. Judgment was reserved. The Court then adjourned.

CRICKET.

THE Y.C. AND A.C. VERSUS THE WILLARD OPERA COMPANY.

It speaks well for the sportsmanlike energy of the members of the Willard Opera Company that in the blazing heat of Saturday afternoon they made such a good stand against a team picked up by the Yokohama Cricket and Athletic Club, and made the match a draw. Losing the toss, the visitors went out to field, Warrington and Munroe taking on the bowling. The ball, owing to the extreme dryness of the ground, rose from the pitch at a great pace, and the first few batsmen were dismissed with small scores. Warrington, a left handed bowler, was very swift in his deliveries, which were all the more deceptive from his quiet manner of approaching the wickets. Munroe bowls with the right hand, and keeping a good length obtains a leg break. Eight wickets were dismissed for 42 runs, and things looked black for the home side. The ninth man in stayed until ten had been added, then Libeaud and Kenyon became associated and a stand was made. The score rose rapidly, both men hitting freely and placing with judgment. The century was eventually passed, and at 5 o'clock, when the score stood at 111, the innings was declared closed.

The visitors, who had done some smart fielding in the course of the afternoon, then went in. They could not hope to win in the short time still remaining, and so played for a draw. Fearley and Dunstable went in as first bats, and the

former was bowled by Lias for 0. Then Munroe joined Dunstable, and with some capital play made the top score of the match, 36, not out. He only gave one chance early in the innings. His score included 4 threes, and 6 twos, the rest being singles. Others of the team, with the exception of Fletcher, 10, failed to get into double figures. Scores:—

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 13.

Parliament assembled yesterday.

Mr. Gully has been re-elected Speaker.

The Queen's Speech will be delivered on Thursday next.

London, August 16.

The Queen's Speech, which was delivered yesterday, expressed a hope that peace between China and Japan would be maintained; that much regret is felt at the outrage upon missionaries in Fukien, China, and trusts that the Chinese authorities are taking rigorous measures—which it is hoped will prove effective—for the punishment of the murderers and others who may be proved to be responsible. The Speech also says that Her Majesty's Government is anxiously awaiting the decision of the Sultan in regard to the Armenian atrocities, and that the consideration of important legislative measures has been deferred to another session.

[FROM THE "KOBE CHRONICLE."]

Nagasaki, August 11, 3.20 p.m.

Fuller information received states that a Chinese Society, known as "Vegetarians," attacked the houses of missionaries at Whasang, near Kucheng, on the 1st instant, and killed ten English missionaries, eight of those killed being women. Many were injured and others are missing.

The Fatshan mission (near Canton) has also been attacked, and the French mission at Hu-yen in Kwangtung.

[FROM "N.-C. DAILY NEWS."]

Pekin, August 2.

The Chêngtu Commission cannot meet yet, as the Consul at Chungking, Mr. Trotman, cannot leave his post, and the state of the river prevents sending up a substitute, while time is needed to collect the depositions of the victims of the riots. The Tsung-li Yamên is being pressed to punish the guilty officials and suspend meanwhile those who are implicated.

London, August 1.

It is understood that the new Cabinet will not oppose the re-election of Mr. W. C. Gully to the Speakership of the House of Commons.

London, August 3.

Dr. Bickersteth, Bishop of Exeter, in a pastoral, enjoins a thanksgiving for the defeat of the party which was menacing the Church.

Messrs. Bingen Brothers, Bankers at Genoa,

have failed, their liabilities being ten million *lire* (£400,000).

London, August 5.

M. Matakief, a friend of the late M. Stambuloff, has been fatally wounded by assassins.

The reply by the Sublime Porte to the Powers, in reference to Armenia, is said to be unsatisfactory.

The Bulgarian Mission has received an ovation at Sofia on returning from St. Petersburg, and it is stated that they have arrived with instructions to demand the release of all unconquered Armenian prisoners.

Great Britain, jointly with the Signatories of the Berlin Treaty, has informed the Porte that a European Commission is to be appointed immediately to administer the Province on behalf of the Sultan.

London, August 6.

The massacre at Kucheng has aroused the deepest horror and anger throughout England.

An interview has taken place between Prince Hohenlohe, the German Chancellor, and Count Kalnoky, the Austrian Minister for Foreign Affairs, at which the foreign situation, notably as regards Bulgaria, was discussed.

London, August 7.

It is understood that the reasons for the delay in the departure of the Shahzada are political.

August 8.

Four British ironclads are to leave Gibraltar to-morrow under sealed orders. It is believed that their destination is Morocco.

Prince Ferdinand is still absent from Bulgaria, where the situation is grave and complex, owing to the overthrow of the hopes of a reconciliation with Russia under the present régime.

[FROM JAPANESE PAPERS.]

Osaka, August 12.

A case of cholera was reported among the Chinese prisoners, and their departure has been postponed until to-morrow.

Nagoya, August 12.

A number of Chinese prisoners, who have been staying at Nagoya and Toyohashi, left for Kobe to-day.

Yokkaichi, August 12.

The repairs of the track between Seki and Tsuge on the Kanzai Railway are completed, and traffic is once more resumed.

Hiroshima, August 12.

The captured ships *Chen-pien* and *Chen-chung* have arrived at Kure.

Shimonoseki, August 2.

The steamer *No. 2 Riojun Maru* (over 700 tons), which was captured at Port Arthur, reached here to-day.

Hiroshima, August 12.

Some 550 officers and men of the Imperial Guards, and 122 gendarmes leave Ujina to-night for Formosa.

Gifu, August 12.

An extensive landship occurred at Kawakami, Ikeda-gun, on the 5th inst. The *débris* fell into the river, and dammed the stream. A large pond was formed, and nine cottages were destroyed, four persons and one beast being drowned.

Nagasaki, August 12.

A Shanghai correspondent, under date the 9th inst., states that although the British Minister in Peking has ordered Mr. Mansfield, British Consul at Foochow, to proceed to Kutien, he is still at Foochow watching affairs at Kutien. It has been ascertained that 1,000 Chinese guards sent by the Chinese Governor-General are behaving in a riotous manner, and it is impossible to proceed to Kutien with Chinese escorts. The rioters are in possession of arms and will not easily be subdued. On the 6th inst., some Chinese officials, who were conveying money to a district near Kutien, were attacked by rioters and all the money was stolen. The British and American residents at Foochow and Hongkong are greatly excited. The rioters number 11,000, and have 400 leaders. They are meeting daily near Kutien. If the Chinese soldiers find it difficult to subdue the riot, British soldiers or British marines will be dispatched to deal with them. Eight men-of-war are at Foochow.

Tsu, August 15.

The captured Chinese gun-boat *Chen-tung* arrived at Toba last night.

The following telegram by Admiral Count Kabayama, at Taipei on August 14th, was received by Headquarters, Tokyo, on the 15th.

For the purpose of attacking the enemy at Miao-li, about 10,000 strong, the Imperial Guards were put in motion on the 13th inst., the front and the main body starting from Woo-tsz, and the left wing from Tofun. The front line met with 700 rebels in the neighbourhood of Oulong the same day, and the enemy being defeated, the place was occupied. Our casualties were 7 killed and wounded. The loss of the enemy is not yet ascertained. The retreating Chinese ran toward Miao-li. The left wing reached Langi-shan the same forenoon without meeting any enemy. Early on the 14th the whole of the Guards moved to the attack of the enemy at Miao-li, but the latter made no stand whatever, and escaped towards Taiwan-fu. Thus Miao-li was occupied in the forenoon of the 14th without resistance. The residents of Miao-li are likely to oppose us, but the majority of them cleared out for the neighbouring hills. The Yamane Brigade will be stationed at Miao-li, and the Kawamura Brigade will proceed to Tsusho to-morrow (15th). The *Sumidagawa Maru*, which arrived at Chang-kong on the 12th, left for Kelung to-day after disembarking stores there. Oulong will be suitable for the landing of provisions.

Kyoto, August 16.

Although an application was made for permission to continue the Industrial Exhibition by organizing a private company for that end, the Government is not likely to accede to the request, and the promoters have abandoned arrangements to continue the Exhibition.

Hakodate, August 16.

Three British steamers have arrived here.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season : and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

PROBLEM No. 191.
By VALENTIN MARIN.

White to play and mate in three moves.

AUSTRALIAN CHAMPIONSHIP.

We have not yet received the scores of the final games but it seems that Wallace maintained his title of Champion as per the following from the *San Francisco Chronicle* :—" Wallace beat Esling in a match played a few weeks ago, involving the chess championship of Australasia. The match created great excitement in the Antipodes. Esling played more brilliantly than his opponent, but went to pieces several times when victory was in his grasp. At the close R. L. Hodgson, at one time champion of Victoria, challenged the winner. The peculiarity of the match was that both the players were mere boys and hundreds of the enthusiasts who crowded around the boards during the games were old spectacled men.

Curt von Bardeleben defeated Teichmann in a match played at the Bohemia Chess Club, London, which was concluded on the 6th July. The final score :— Bardeleben 3 games, Teichmann 1 game, and 6 games drawn.

NEW ZEALAND

Our enthusiastic friend and chess player Mr. Oscar Balk sends us a line from Dunedin, where he now lives. He has joined the *Otago Chess Club*, but could not achieve the Championship of that Club : a strong player of some note in the Southern hemisphere (Mr. R. A. Cleland) being too much for our friend. Lovers of chess in Japan will be delighted to hear of Mr. Balk's welfare from time to time.

When thou with study deep has toil'd,
And over dull'd thy brain,
Then use this game, which will refresh
Thy wits and it again. —BARBIER.

EVANS GAMBIT (ALBIN.)

Herr Adolf Albin, late of Vienna, has recently been visiting New Orleans, and in *The Times Democrat* several games have appeared, wherein Black plays after move 5 (White), 5—, B to Q 3. Herr Albin's theory is that this defence, though not recognized as such, is satisfactory, and with it he has won a good many excellent games. We give two examples which are very interesting. We do not see any great feature in the new defence and shall look for any opinion of Steinitz or Lasker on the point.

DEVELOPMENT.

If we were asked to declare what in our candid opinion is the first and most vital principle of chess, and what need be most strongly impressed upon the mind of any who desire to attain to moderate proficiency, the answer must of necessity be development. Let it ever be borne in mind that the pieces are generally of little use, and are often an impediment, at home. To become of service they must be brought into action, and you must endeavour to so open your game that each and all may be of service and in some sort of combination either for attack or defence or both. And if the learner (this has a very wide application and includes all Openings as we have before noted) will school himself to such constraint as is necessary to avoid premature attacks he will have gone far on the road to becoming something like a strong player. You are a general, and chess is a battle. No sane general would venture on approaching the enemy's line with only one or two of perhaps his most valuable battalions, and pro-

voking a contest with the whole of the enemy's forces, they being in their intrenchments and he in the open. But worse insanity than this may be observed any day in all our clubs and chess rooms. There is the hope of snatching a victory by some off-chance, and Queen and Kt are, with utter disregard of first principles, brought to bear on some point which is most easily defended; you, have to retire, your opponent has gained (while you have lost) time, you have provoked attack, perhaps carelessly lost a pawn or two at least in the encounter, and, forlorn and discouraged, you find your opponent in possession of the field with superior forces and yourself without a semblance of attack left. If you had devoted those few lost moves to development how superior would have been your position.

How to develop is a very practical question. Faults are easily pointed out, but what is the remedy? Learn the Openings by all means. But how? By striving in the first place to get this one principle—development—deeply graven on the mind. It will save from many a snare.

Generally, and especially until you learn certain Gambits pretty well, it may be wise to avoid advancing your pawns too far at first. You may steer clear of many troubles—especially as second player, and even with the move—by simply playing at an early stage such vitally important developing moves as P to K3, followed by P to Q4 and P to Q B4. Then it is of supreme importance to bring out the Kts, and these should nearly always be played to B3 squares. With K B at K2 or Q3, and Q B at Q2 your game is fairly developed and you may soon find openings for interesting combinations and be ready to Castle and take the offensive with a fair prospect of success. If, meantime, the enemy approaches you will be ready for the encounter.

A good style may be cultivated, and development the more strongly impressed upon the mind, by the habit, now largely adopted by players of all ranks, of playing over and noting good published examples in the shape of games actually played. This can scarcely be stated with too great emphasis. The best examples of modern chess afford all the information any player needs, and that in the most pleasing and attractive form.—*Weekly Times*.

LASKER ON DEVELOPMENT.

The prudent commander will not venture an advance until he has completed the mobilization of his forces. An attack made with insufficient means will assuredly end in disaster; and even in the case of partial success the means of following up and taking advantage of it are wanting, and the safety of the whole line of defence will thus be endangered. The practised chess player proceeds exactly in the same way. On beginning a game he proceeds with the utmost expedition to develop his forces—that is to say, every move is directed to opening the lines for the pieces so as to secure for them all possible freedom and power of action.

LATEST COMMERCIAL.

IMPORTS.

Yarns and Grey Cloth—At last there are some signs of an awakening in this market, but not much business done as yet. Let us hope the sluggard will not roll over and sleep again, this time. Fancy Cottons—Some business done in T. Reds, Velvets, and Cotton Italians. Woollens—Fair sales of Italians, while Cloth and Mousselines have also participated to slight extent.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—8 1/2 lb, 38 1/2 yds, 39 inches	\$2 25 to 2 85
Grey Shirtings—6 lb, 38 1/2 yds, 35 inches	2 70 to 3 10
1. Cloth—7 lb, 24 yards, 32 inches	1 60 to 1 90

METALS.

Bars and Plates weak, the town being full of Iron said to be all contracted "to arrive." Consequently holders of "Spot" cargo have to meet the market. Pig is in request. Nails move to a fair extent.

	PER PICUL.
Flat Bars, 1 inch	3 20 to 3 25
Flat Bars, 1 1/2 inch	3 25 to 3 30
Round and square up to 1 inch	3 20 to 3 30
Iron Plates, assorted	3 40 to 3 50
Sheet Iron	4 30 to 4 50
Galvanized Iron sheets	8 50 to 8 75
Wire Nails, assorted	5 60 to 6 00
Iron Plates, per box	5 20 to 5 40
Pig Iron, No. 3	1 70 to 1 75

KEROSENE.

Quotations are marked down once more and still buyers only operated from hand to mouth. Deliveries are good for the time of year, and despite some recent arrivals the total stock is something below 10 million gallons. Holders say they will reduce no further; but they have said that before and finished by giving way once more. It seems certain that buyers must operate freely ere long.

American	\$2 15 to 2 20
Russian	2 05 to 2 10
Langkat	1 90 to 1 95

SUGAR.

Brown—Small arrivals and fair sales in China and Manila sorts. For mossa nothing done, but prices are called firm at quotations. White—No change, a fair amount of business is doing at late rates.

	PER PICUL.
Brown Takao	\$3 70 to 3 75
Brown Manila	4 30 to 4 50
Brown Daitong (New)	3 10 to 3 20
Brown Canton	3 20 to 3 70
White Java and Penang	6 10 to 6 20
White Refined	6 00 to 9 25

EXPORTS.

RAW SILK.

A large daily trade has been done, and the eagerness of buyers has pushed up the market a bit. Settlements to date are considerably in excess of last season, and although arrivals have been on a free scale the available stock is not large.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 deniers	\$890 to 900
Filatures—Extra 13/15, 14/16 deniers	890 to 900
Filatures—No. 1, 10/13 deniers	870 to 880

Filatures—No. 1, 13/15, 14/16 deniers	860 to 870
Filatures—No. 1, 10/14 deniers	840 to 850
Filatures—No. 1, 13/16, 14/17 deniers	840 to 845
Filatures—No. 2, 10/15 deniers	820 to 830
Filatures—No. 2, 14/18 deniers	810 to 820
Re-reels—No. 1, 13/15, 14/16 deniers	830 to 840
Re-reels—No. 1, 13/16, 14/17 deniers	800 to 810
Re-reels—No. 2, 14/18 deniers	740 to 750
Re-reels—No. 2, 14/18 deniers	720 to 730
Re-reels—No. 3, 14/20 deniers	700 to 710
Kakedas—Extra	790 to 800
Kakedas—No. 1	780 to 785
Kakedas—No. 1	760 to 770
Kakedas—No. 2	740 to 750

WASTE SILK.

Growers are apparently keeping back supplies of New fibre and are trying to sell their stocks of old Waste by telling buyers that there will be short supplies this season! But they have cried Wolf too often, and find no believers in their yarns. Meanwhile, transactions in old fibre are of a very retail nature; and the trade languishes. This market, indeed, presents a very marked contrast to that for Raw Silk.

TEA.

Holders have succeeded in raising prices about one dollar per picul all round—and buying seems to go merrily on at the advance. Stock down to 5,000 piculs, and the chief demand is for Teas between "Good Common" and "Fine." Settlements to date are 6,000 piculs ahead of last year.

	PER PICUL.
Choicest	\$30 to \$32
Choice	28 to 29
Finest	26 to 27
Fine	24 to 25
Good Medium	22 to 23
Medium	20 to 21
Good Common	18 to 19
Common	16 to 17

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.

Annual Subscription, post free, 25s., in the United Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 24TH, 1895.

BIRTH.

At No. 73, Bluff, on the 19th inst., the wife of L. POLLARD, of a daughter.

DEATH.

At Nikko, on the 18th inst., at 2 p.m., MASUWO, second son of Mr. and Mrs. R. MASUJIMA.

SUMMARY OF NEWS.

MARQUIS KWAZANIN TADAMICHI died on the 15th inst.

THE condition of H.I.H. the Crown Prince is causing great anxiety.

A YOUTH was killed by an up-train at Shiba-hama, Tokyo, on the 16th inst.

H.I.H. PRINCE KUNI has removed to No. 13, Ichibeicho Ichome, Azabu, Tokyo.

LIEUT.-COLONEL IDRISHI has been appointed Director of the Artillery School, Tokyo.

HEAVY rains have fallen during the week in and around Tokyo and Yokohama.

THE Tokyo fancy goods dealers have decided to separate from the Yokohama merchants in

the boycott of the Chinese merchants at Yokohama owing to the disputes among the Yokohama merchants.

THE net profits of the Bank of Japan for the past half-year were yen 6,916,352.541.

MESSRS. DOI and Nakaya have been appointed Secretaries of the Communications Department.

DIPHTHERIA is very prevalent among the gendarmes at the Military School at Toyama, Tokyo.

DYSENTERY is very prevalent in Kagoshima, Saga, Niigata, Okayama, Nagano, and Hyogo Prefectures.

SEVERAL fresh cases of cholera have been reported on board the Italian cruiser *Umbria* during the week.

CHOLERA is still very prevalent in over 30 districts of Japan. Osaka's death-rate from the disease is the highest.

MR. SODA KISAKU, a wealthy merchant in Yokohama, contemplates the establishment of bank with a capital of yen 300,000.

A JAPANESE seal-fishing company has been organised by Tokyo capitalists to compete with foreign sealers off the coasts of Japan.

THE New Willard Opera Company concluded their visit to Yokohama last Saturday, with a capital performance of "In Town."

It is hoped that the Waterworks Commissioners of Yokohama will be able to restore the full supply of water by the end of the month.

THE Minister of Communications has issued a notification announcing the re-opening of the Japanese Post Office in Shanghai on the 17th inst.

THE Ishioka and Tsuchiura Section on the Japan Railway Co.'s line has been completed, and will probably be opened for traffic on the 1st prox.

THE "Sannomiya Cup" has been won by the 17-rater *Sans Nom*. The boat belongs to a French syndicate, and the Cup was presented by an Italian resident.

THE machinists and superintending experts of the raw silk inspection offices to be opened at Yokohama and Kobe in April next will be supplied from France.

THE match export for July was:—1,040,558 gross of safety matches, valued at yen 283,451.85 and 206,386 gross of phosphorus matches, valued at yen 63,070 50.

THE Kagawa Local Assembly, which was suspended for passing a vote of no confidence in the Governor and Secretary of that Prefecture, was dissolved on the 16th inst.

AN inquest has been opened in H.B.M. Court for Japan into the circumstances attending the death at Shoji, on the slopes of Fuji, of Mr. H. W. Brockbank, late of Manchester.

THE Minister of Finance issued on the 19th inst. a notification permitting the Bank of Japan to add yen 10,000,000 to its capital. The money will be raised in 50,000 shares.

A LONG list of honours is published in the *Official Gazette* this week, the recipients being Civil, Military, and Naval dignitaries who rendered meritorious services during the late war.

THE Yokohama Specie Bank has decided to establish a branch at Hongkong, with Mr. Nabekura Naoshi, of the San Francisco Branch,

as Manager. Mr. Nabekura will be succeeded by Mr. Aoki Tetsutaro, of the London Branch, who will be succeeded by Mr. Tsuchiko Kinshiro.

MR. OTERA CHIYOTARO, son of the late Major-General Otera, who was killed during the attack on Weihaiwei, has been promoted to the rank of Baron in recognition of the meritorious services rendered by his father.

MR. UCHIDA, newly appointed Secretary of the Japanese Legation in China, was to leave Tokyo on the 23rd inst. with Lieut.-General Viscount Miura, who proceeds to Korea as successor to Count Inouye.

THE hearing of an appeal brought by John Thomas Bush, a coloured seaman of the U.S.S. *Yorktown*, against a decision of the U.S. Consul at Nagasaki, on a charge of having murdered a Japanese named Uyemura Kwanjiro, has concluded at the U.S. Legation, Tokyo, the man being sentenced to confinement for three years and fined \$1,000.

REUTER telegraphs:—It is stated in St. Petersburg that the Egyptian Question is to be discussed at the opening of the French Parliament, when an attempt will be made to obtain the British evacuation of Egypt by united diplomatic steps on the part of France, Russia, and Turkey. Support is also hoped for from Germany, as a strong anti-English current of feeling is displayed in the German Press, England being accused of frustrating German colonial aspirations. *The Times* concurs with the protests of the European communities in China against the inadequacy of the demands for redress for the recent outrages as made by Great Britain and other Powers, and states that, if the Pekin Government is incapable to control the people, Great Britain must deal with the provincial authorities. Reuter has been informed that the Franco-Chinese Treaty only agrees upon certain rectifications of the frontier near Chien-hung and does not grant the cession of the whole of that State east of the Meikong River; but that the portion ceded is so considerable that it is expected that the Anglo-Chinese Convention of 1894 will be annulled. Prince Ferdinand of Bulgaria has returned to Sofia. At a meeting of the Church Missionary Society, it was resolved that no disaster shall be allowed to interfere with the Society's work. A German Company hopes to begin the Central African Railway next spring.

THERE is not much to be said about the Import trade. There has been a good amount of enquiry, which bids fair to be followed by a large Autumn trade, though holders would like to see stocks reduced a little further. Yarns and Grey Goods have been moved to some extent, but Cottons and Woollens are not yet in much demand. The Metal market is unchanged, the small amount of trade last reported being continued at late quotations. The Kerosene trade has not yet sprung into activity, though there are signs of an approaching demand. Holders are firm, though anxious for business. Sugar is unaltered in value, though indications make for a rise, which will ensue if a brisk demand sets in. The Silk trade is brisk, and large shipments have been taken by recent mail steamers. Prices have hardened, and will probably yet farther advance. There is nothing to report in Waste Silk, but that the undesirable parcels of old fibre referred to last week are still on offer, and still neglected. The Tea trade has seen daily settlements on a moderate scale at late prices for the leaf on offer, and shippers are fairly busy. Exchange has been steady, rates having altered but little and close fairly firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The lull in the political world was at one time in danger of being disturbed by Marquis Ito's refusal of the honours conferred on him by the Emperor, but things have once more settled down into quietness. It is a noteworthy circumstance that an attitude of weariness and apathy characterizes the nation at large. Even the ambitious politicians of the Opposition do not seem to be completely free from the taint of the general tone among the public. Nowhere is this state of things more apparent than in the field of journalism; the current topics being discussed in a half-hearted and spiritless manner. The nation, it seems, is taking a short rest after the excitement of the past twelve months.

The Liaotung question still forms one of the most frequent topics of discussion in the vernacular press. The discussion of the subject from the point of view of the Japanese Ministry's responsibility for the return of the peninsula has gone out of fashion. The recent interesting controversy between the *Nichi Nichi* and the *Nippon* seems to have been of great service in clearing up a mass of misconception and delusion that has obscured this question. It is now not so much the question of the Cabinet's responsibility as the future adjustment of the matter that engages the attention of the Japanese papers. The *Kokumin Shimbun*, alluding to a recent Paris telegram announcing that the three Powers demand the immediate evacuation by Japan of Liaotung without any reference to the question of indemnity, remarks that such a demand, if true, is most unjust to Japan. Japan promised to renounce her permanent possession of the peninsula, but she did not give up her right of temporary occupation, and consequently there is no justification on the part of the three Powers to demand Japan's immediate evacuation. Such a demand, says our contemporary, if really preferred, ought to be rejected without the slightest hesitation. The propriety of Japan's occupying the peninsula by way of guaranty for the indemnity can not be gainsaid, and the *Kokumin* further thinks that it is important for Japan for the sake of the peace of the East to continue its occupation for a number of years after the payment of the indemnity by China.

The *Mainichi Shimbun* observes that there are two ways in which the Liaotung question may be settled, namely, either by demanding a fresh indemnity in return for the territory to be renounced, or by demanding a temporary occupation of it. There are persons who recommend the combination of these two courses. The *Fiji*, for instance, insists that a large additional sum of indemnity should be paid, and that pending the completion of the payment of the money—spread over a long period of time, say, fifteen or twenty years—the peninsula should be occupied by Japan as security for the fulfilment of the promise made by China. The *Mainichi*, however, does not deem it necessary to insist on such advantageous terms. In its opinion, it is sufficient either to get a money consideration and quit the place at once, or to continue its occupation for a certain fixed term of years without insisting on a pecuniary recompense. Between these courses, our contemporary would choose the latter, for to demand a petty sum of money would be, in its opinion, mean and undignified. The Progressionist organ further thinks that China will not agree to an increase of the indemnity, and that, even if she agreed to it, the result would be to throw her more forcibly into the arms of Russia. Instead of pursuing such a course, our contemporary advises the Government to deal magnanimously with China and induce her to coöperate with this country for the maintenance of peace in the East. In this way it will be possible for Japan one of these days to obtain sufficient influence to regain her foothold upon the continent of Asia.

Writing on the question of the development of Japan as a Naval Power, the *Nichi Nichi*

Shimbun urges its countrymen to realise the full importance of the matter. No country can become a great maritime power merely by the increase of the number of its war-ships; the commercial marine must progress side by side with the Navy. The *Nippon Yusen Kaisha*, the *Osaka Shosen Kaisha*, the *Asano Kwaishoten*, and other shipowners are earnestly advised to extend their lines and develop their business. The importance of the construction of dockyards is next touched upon; and in this department, our contemporary expresses much satisfaction at the rise of several private projects at Yokohama, Shimoda, and other places. As to the Navy, our contemporary regrets to state that the number of the successful candidates for admission into the Naval College has been comparatively small this year. This is all the more remarkable, because the entrance examination of the Military College drew an extraordinarily large number of candidates. The insufficiency in numbers of the successful candidates in the case of the Naval College is in part explained by the fact that the standard of qualification was raised a little this year; but even after making due allowance for this circumstance, our contemporary thinks the number of successful candidates has been unreasonably small. Parents and educationists are called upon to try to inspire the rising generation with love for a seafaring life. There was formerly some prejudice against a naval career on the ground that men from localities other than Satsuma and Hizen had little hope of rising in the service. There is no longer any grounds for such complaint, and men in all parts of the country are advised to educate their boys for the Naval service.

Concerning the treatment of the insurgents in Formosa, the *Fiji Shimpō*, as already stated, very strongly urges the necessity of meting out the severest punishment to them. In the latest article on this subject, our contemporary considers the relations between the insurgents and the principal landowners in the island. Many of the latter class are reported to have long since fled to the mainland and to have sent notes thence to the Japanese Government in Formosa testifying to their fealty to their new rulers. But the *Fiji* believes that these Chinese, at least a large proportion of them, are the real instigators of the present disorder in Formosa. It is they, no doubt, who have supplied the insurgents with arms, ammunition, and provisions. In this respect our contemporary seems to believe that the numerous family of Lin are most culpable. It recommends the Government to show no mercy to these instigators of rebellion, and punish them by confiscating their property.

The diplomatic arrangement defining the boundary between the Japanese and Spanish territories in the Western Pacific has been the subject of some foolish writing in the columns of certain metropolitan journals. These articles have already been noticed, and need not be discussed here. Suffice it to state that these utterances are not approved by the sober-minded section of the people. It is well understood that they are the harmless exercises of ignorant young men who, in the profession of journalism, are on the lowest rung of the ladder.

Viscount Miura, the new Japanese Minister to Korea, enjoys the reputation of being an able man. For the past few years he has led the quiet and retired life of a Buddhist student. The *Chuo Shimbun*, in bidding him godspeed, observes that his Buddhist studies must have been an excellent training for the difficult post which he has been called upon to fill; for the aim of the philosophy of the *Zen* sect, which he has been investigating, is to raise one above the temptations of the world and render one equal to any difficulty or emergency. Our contemporary then proceeds to point out the policy which may be pursued by Viscount Miura in the peninsula. In its opinion, there are three courses open to him, namely, first to utilize the Tai Wön-kun to keep under control the politicians of the Ming faction;

secondly, to gain over that Ming faction and let them carry on the Administration; or thirdly, to keep aloof from all parties, and let the faction which may prove strongest assume the control of affairs. To follow either of these courses, says the *Chuo*, presupposes a firm fundamental policy on the part of Japan.

Writing on China, the *Nippon* regrets to observe that affairs in that country are taking a course in the highest degree unfavourable to Japan. Contrary to the general expectation that after the restoration of peace Japan would have an opportunity to discharge her duty as the best friend of China, leading her in the path of progress and enlightenment,—contrary to this fond expectation, our contemporary regrets to perceive the chasm of doubt and suspicion is becoming deeper and wider between the two countries, and that the fruits of war are being snatched by Russia, France, and Germany. Unlike some of its contemporaries, the *Nippon* believes that China shows unmistakable signs of her slow but steady awaking, among these signs being the project of a great railway and the efforts which are being made for the reorganization of her Army. Then alluding to the efforts which Germany and Russia are making to gain commercial advantages, our contemporary in conclusion calls upon its countrymen to watch with keen attention the course of events in China.

EDITORIAL NOTES.

WEDDING AT CHRIST CHURCH.

THE nuptials of Fraulein Anna Margarita Madeleine Grobügge, niece of Mr. W. Grosser, of Yokohama, and Herr Carl Dietrich Wilhelm Beurmann, of Shanghai, were celebrated at Christ Church, Yokohama, on Thursday afternoon. The Church was tastefully decorated with arches of bamboos along the aisles, evergreens wreathed around the gas-standards, and clusters of white lilies and China asters upon the pew-heads. The service was conducted in German, in accordance with the ritual of the German Evangelical Protestant Church, the officiating clergymen being Herr Pfarrer Christlieb, Ph.D., assisted by the Rev. E. Champneys Irwine, M.A. As the bride entered the church, Mr. Schmidt (organ), and Mr. Ramsager (violin), played one of Handel's hymns, and later these gentlemen and Mr. Freyvogel (violin), gave an exquisite rendering of Gounod's "Ave Maria." The bride, who was dressed in a lovely costume of white satin trimmed with lace, had for bridesmaids the Misses Meier, Voigt, and Roosen, who were dressed in robes of white muslin let in with lace, and sleeves the same; and her train was borne by two wee ladies, the Misses Erna Grosser and Pors, who were attired in muslin frocks with wreaths of marguerites upon their dainty heads. The bridegroom's best man was Mr. Henry Baehr. As the bridal party left the Church, Mr. J. T. Griffin, played Mendelssohn's "Wedding March." A reception was afterwards held at the residence of Mr. and Mrs. Grosser.

MISS BURTON'S PAINTINGS.

WE see that the pictures painted by Miss Burton, sister of Professor W. K. Burton, during her residence in Japan, have been highly appreciated in London. The following paragraphs referring to them are taken from the *Daily News* of June 5th and *Echo* of June 6th:—

Miss M. R. Hill Burton is a colourist, and a gifted one, and those who know Japan say she has caught the true atmosphere in the collection of fifty-five water colours now being exhibited at the Clifford Galleries, in the Haymarket, the result of a six months' visit. Miss R. Hill Burton paints Japan as "the land of flowers," but eschews the chrysanthemum. The iris, the lotus, the azalea, and cherry blossom make demands enough on her palette and furnish her with lovely schemes of colour. To be noted are, "There's the Iris' Floating Purple Flaps" (2); "Azalea Garden" (7), aflame with fiery bloom; and "Tea House, Kameido" (8), in which a great wisteria whose stem twists half across the picture, drops purple rain. The "Peony Garden" (16) is delicate pink and

light in tone. The artist's manner is bold and broad, and distinctly *personnel*. In seizing and dealing with masses of colour she savours of the Impressionist, as in "Lotus and Iris" (1), "Iris and Lily" (55), and the "Cherry Tree Avenue" (53), but there is a primitive minuteness in the rendering of detail in works like "Kamakura" (40), where the lotus leaves massed in the foreground sprinkled with pink blossoms are all of them careful studies. The artist is fond of blue upon violet, and this key of colour is effectively employed in several pictures as in "A Summer Night, Kyoto" (21), "Evening at Kyoto" (32), "Lighting up Kyoto" (23), in which the contrast of the figures against the lanterns is cleverly wrought. At the end of the gallery are some half-dozen pictures in broad black flat frames, in which, while preserving her manner, the artist has left the delicate tone and diaphanous texture of most of her works for intense glowing colour, almost vitreous and enamel-like. This quality is most strikingly exhibited in "Entering the Temple, Shiba" (25). "The Rest House" (27) is bold in colour and treatment. Four figures are seated against a bright background. On the left, a tree of pink and flame-coloured blossom thrusts itself into the picture against the dark roof. "Main Street, Ikao" (29), shows a street of stairs winding between gables piled Pelion on Ossa to pine woods above. The colour is rich and subdued, relieved by the skilfully-grouped figures mounting the steps. "In the Temple Grounds, Kamakura" (31), is a notable drawing. The tree thrown across it reminds us of one of the features of Japanese Art. "In a Daimio's Garden" (46) and "Fishing for Tame Carp" (43) are both dainty studies of colour. The artist has seen Japan, and seen it in her own way, a way which is worth the telling. She makes bold use of her pencil, and is effective and rich in her colour, yet one feels that her work is realistic rather than decorative. All who see these drawings will join us in hoping that Miss M. R. Hill Burton will paint for us again, in Japan, or at home, or elsewhere.

The drawings of Scotch and Irish scenery which Miss Hill Burton exhibited three years ago in Bond-street were earnest that she was no amateur. The half-hundred water-colour drawings of figure and flower in Japan which occupy the room at 21, Haymarket, prove that she is now a complete artist. Her accomplishment is the accomplishment of assured breadth, and she obtains fine colour with her fully charged brush often used for lightly superimposed washes of colour on colour. The people and the plants of Japan have been pictorially rendered by many artists, but perhaps none of them convey so strong a sense of veracity and are so effective as Miss Hill Burton. There is great charm in her loose, free touch, coupled as it is with security of drawing and glowing hues, and especially with her skill in rendering light—whether this be natural and evenly distributed, or is artificial and local by being transmitted through the sides and opening of paper lanterns. Figure is delightfully unstudied in attitude, yet is always put in with judgment, and the home life she frequently depicts, such as Women fishing for tame carp (No. 43), "Children playing among azaleas," "Feeding carp under the wisteria," or "Women tending flowers in a Peony House," is altogether a change from the street scenes or landscape which Mr. Menpes, Mr. East, and Mr. Fripp have chosen when treating Japan. Lantern light is given perhaps best of all in "Ikao, Evening" (which is curious by showing a village of bathing houses built over rapids of natural hot water), and in "A Summer Night," while for evidence of good draughtsmanship we may point to the perspective of an ascending street of steps and of the varied figures which are shown there in "Main street, Ikao." But, indeed, nearly all of the drawings command regard.

A LINE OF STEAMERS TO CENTRAL AMERICA.

THE *Kobe Chronicle* hears that it is reported on good authority that a line of steamers is shortly to be established which will run between Kobe and Yokohama on this side and Mexico, connecting with the Tehuantepec Railroad and thus with the Gulf or Cotton States. It will be worked under the auspices of the Osaka Cotton-Spinning Association with the view of bringing cotton direct from the States, and we understand that definite promises have been obtained of a subsidy from the Japanese Government. Besides cotton, it is expected that iron will be brought from a mine in the northern part of Mexico, which, on the authority of an analysis made by an English firm, is said to contain ore of superior quality. It is believed that paying return cargoes to Central America will be

forthcoming of Japanese staples, matting for example, after the line has been in working order for some time, but the main object in view is the direct import of cotton. In consequence of so many of the Nippon Yusen Kaisha steamers being engaged on transport service, it was at first intended to run the line independently, but now that the transports are gradually being released, it is possible that arrangements will be made with the Nippon Yusen Kaisha to work the line.

THE "CONFIDENCE TRICK" ON A LARGE SCALE, A LIVERPOOL firm of shipbrokers have been the victims of a kind of "confidence trick" fraud which has more than once before been successfully carried out by Continental swindlers on confiding Britishers eager to secure an apparently big new connection. The Liverpool firm have been fortunate in getting off with a loss of not more than £400. In this instance the operators were located at Bordeaux. They proposed to transfer the consignments and general trade of their "line" from France—because of the heavy protective duties there—to Liverpool, and had chosen to confer the transaction of the lucrative business on the Liverpool firm in question. Correspondence was carried on for a couple of months, the letter-paper of the Bordeaux "house" being ornamented with a list of its ships, branch houses, etc., the official registers bearing out these details of information. Just here, as the Americans say, the story is a little difficult to follow. If the letter-paper of a famous Bordeaux shipping house was used, or forged, the replies from Liverpool should have reached, not the swindlers, but the eminent Bordeaux firm. May be a wrong address was adopted by the swindlers; anyhow the affair was successfully worked by them, and in due course the "son" of the principal put in his appearance at Liverpool—and then the old story was repeated. The "son," who created a most favourable impression on the Mersey by his exquisite manners, made some advantageous purchases for prompt payment, and the "father" was debarred by the intervention of a Sunday from sending instant remittances through his Paris bank; would the Liverpool firm advance the young gentleman what he might require on the enclosed draft for 10,000 francs? Of course the "enclosed draft" was a bogus document; but the polished youth got hold of £400 and then cleared out. The police now have the matter in hand, and are, as usual, "very reticent," except that they are free to admit that the perpetrators of the swindle have done the same trick with similar results at various other British ports.

RUSSIA ON THE PACIFIC.

REFERRING to the movements of Russia in the North Pacific since her people first appeared in that part of the world, a London journal writes:—

It is a curious but little-known fact that she has been on the shores of that sea much longer than ourselves, but while we have been honestly trading, Russia has been plotting—always for the acquisition of empire. On every conceivable opportunity, when China has been in difficulties, Russia has taken advantage of the first weak point for pressing a claim or annexing territory, as will presently be shown. In 1639 a band of Cossacks first planted her standards on the shores of the Pacific, and secured their position in the far North, near Okhotsk, laying waste the country with fire and sword. This was exactly thirty-nine years after a charter had been granted to our Leadenhall merchants for trading in India, but before the first cargo of tea had left Canton for London.

In 1643 a report reached Moscow of fabulous wealth and valuable gold mines on the shores of the lower Amoor River, and on the 15th July one Peter Poyarkoff, with a numerous following of Cossack horsemen, crossed the Ural ranges bound for this El Dorado. Gathering in numbers as they went along, it was their luck to meet a formidable Chinese Manchu army, which quickly dispersed the Cossacks somewhere about the meridian of Pekin, but far to the north. At this date Russia appears to have taken her cue from England, for no sooner had the first British ship arrived in London direct from Canton than the Czar despatched an ambassador to Pekin. His murder being effected by Chinese agents south of the Amoor River, Russia at once sent Khabaroff in charge of a small army provided with shipwrights and artisans for constructing boats on

the upper waters of that river, and so reaching the Pacific; but again a Chinese army of 18,000 men successfully opposed their passage, and compelled Russia to sign a treaty, at the frontier town of Nerchinsk, by which she for ever gave up all authority on the Amoor and recognised China as in possession. Still Russia or her agents always persevered, as they have done since in Central Asia, and to such an extent that in 1710 the Emperor of China sent the two Jesuit fathers, Jartoux and Fridel, to make a correct map of his northern boundaries; this they did so effectually that the present maps are nearly all based on the original. The boundary between China and Siberia shows unmistakably the comparative strength of China at that period—and for this reason, when Russia sent out her navigator to the Far East in the person of Vitus Behring, overland, he kept well north of the 57th parallel during his long journey to Okhotsk, where a ship had been previously built for him. The fact is, that at time Russia was, with all her vast extent of land, a very poor country, and completely at the mercy, so far away from home, of a Power like China.

The exploits of Behring are too well-known to warrant anything being said here beyond a running survey. He discovered Kamchatka to be a peninsula, and not, as had been supposed, a part of Japan; he discovered Awatska Bay; (Petropolovski) the coast of America in 58° 30' N., and the Aleutian archipelago; while returning to Awatska he was wrecked on Behring Island, where he finally died of scurvy and exhaustion. Here his crew built a small vessel from the wreck of their ship, and so returned to Russia. It is now generally supposed that this intrepid navigator did not discover Behring Straits, but supposed Cape Navarin, from which place he returned, to be the north-eastern point of Asia.

By virtue of his discoveries Russia claimed and took possession of Alaska, which, with Siberia, gave her a territory fully three times as large as the whole of Europe, but for purposes of trade at that date nearly worthless. In 1805 the Czar Alexander cast his eyes over the Amoor, and sent out Krusenstern with a squadron of frigates to assert the position his country had yielded to China in 1741. These war-vessels navigated the Amoor and founded thereon several Russian stations. In 1825-27 the voyage of the frigate *Krotky*, under Von Wrangel did much for Russia's position all over the Far East; but still it was discovered that China was too powerful in Manchuria for the success of a Russian seizure, and nothing was done of any importance till the great Quang-Si rebellion in China took the jealous eyes of the decaying empire away from Manchuria, when Russia at once seized the opportunity of breaking her treaty, annexing the lower Amoor, and founding the seaport of Nikovisk on its left bank near the mouth. This was in 1852. During the following year an English steamer was purchased in Southampton and left for the Amoor in company with the *Pallas* frigate. Coal had been discovered on the island of Saghalien, and Castries Bay was seized by Admiral Putiatin. In 1854 a paddle-steamer was built and her machinery manufactured by Belgian engineers at Petrovsk, 300 miles up the Amoor, for the purpose of towing barges and provisions to the Russian Pacific squadron, then engaged in war with Great Britain and France. On the conclusion of peace two steamers for the Amoor were purchased in America, large bodies of troops were sent overland, and another squadron of frigates despatched from Cronstadt.

During our war with China in 1860 Russia redoubled her efforts to get to the south in the Gulf of Tartary. German colonists and artisans were sent out round the Cape, vast numbers of convicts were hurried overland, condemned, it has been said, on the slightest evidence of crime. While Pekin was occupied by the British and French forces in 1860, the distracted Chinamen were compelled by Russia to sign a treaty by which the Amoor and the coasts of Manchuria, as far south as Vladivostock, were ceded. About this time no less than sixty towns, or trading stations, had sprung into life on the great river; the Russian steamer *St. Innobuentues* left Antwerp with two iron river-steamers of 60 h.p. each, and several barges, all ready for putting together, while later the steamer *Orus* left London with the parts of two other steamers amongst her cargo. Both these vessels were lost at Castries Bay, together with their contents, the result being that John Cockerell & Co., of Antwerp, got orders for several more river boats, which duly arrived at their stations, news of which reached St. Petersburg by telegraph, the laying of which overland, had just been completed. In 1861 two other steamers left San Francisco full of German colonists, it being discovered that the Cossacks, from their indolence and drunken habits, were quite useless for the purpose of developing a new country. It has been said in St. Petersburg that the war of 1860, waged by England and France, only brought advantages to Russia, which thereby took the opportunity of extending her boundaries 760 miles to the southward, and so acquiring the whole sea-coast of Manchuria, as well as such harbours as Olga Bay, Vladivostock, and many others. Still, the statesmen of Russia appear to have overlooked the fact that often more wealth can be got out of a foreign country by trading than by the actual possession of land. During the early years of this century the Russian trading flag was to be seen at Canton, together with those of other nations, but as years went on English competition

became so powerful that one by one her ships dropped off, till in the early fifties they had completely disappeared and nearly all the tea used in South or Western Russia was conveyed there by transshipping steamer from the London emporium. The opening of the Suez Canal brought South Russia ten days nearer to China than London, and thus the "Volunteer fleet" from Odessa was established, but the enterprise is still far from being a great success, owing to a lack of capital in Russia generally, and to a want of outward cargoes, beyond Government stores and troops.

Thousands of tons of tea for Russia are still carried in British bottoms, not only from China but also from India and Ceylon. The construction and finish of the Siberian railway will of course place the whole of North China at the mercy of Russia; it will have Hankow perhaps as its eastern commercial terminus, but, considering the enormous cost of railway transport, will no more seriously affect British trade than do the American Pacific lines affect the San Francisco grain carriage by sea. In due course we shall probably hear that Russia, in return for her interference, has acquired Port Lazareff, but if the Loan is really negotiated, from that moment China will have placed herself in a position, in regard to Russia, the end of which it would be very presumptuous for anyone to attempt to foretell.

Great Britain will not take up a selfish policy of ill-will in this momentous question. The world is still big enough for all, provided all are reasonable enough to abstain from treading on each other's corns. Herein lies the danger. Great Britain will no more acquiesce in a policy of spoliation in China than she did a generation ago, when the Czar Nicholas offered her Egypt as the price of her silence in regard to Turkey. A formidable coalition of her power with the United States, Germany, Japan, and of course China, is not only possible, but even very probable, should Russia and France together attempt anything like a policy of conquest. We know that Peter the Great "left orders" in his will for the conquest of India, and after that the subjugation of all Asia; but for the present, at least, it is likely that Peter's descendants will have to be content with the cession of Port Lazareff.

HORSE BREEDING INVESTIGATION COMMISSION.

THE following persons have been appointed to sit on the Commission for the Investigation of Horse Breeding:—Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce, Chairman; Mr. Fujita Shiro, Director of the Bureau of Agriculture; Colonel Okura, Cavalry; Mr. Hagiwara, an expert; Captain Nishihata, Cavalry; Veterinary Surgeon-Captain Imaizumi, Professor Katsushima, of the Imperial College of Agriculture; Mr. Niiyama Shosuke, an expert of the Household Department; Mr. Hayakawa Tetsuya, Private Secretary to the Minister of Agriculture and Commerce; Mr. Nishikawa, an expert of the Department of Agriculture and Commerce; and fifteen other persons, including members of both Houses of the Diet and private breeders. Mr. Miura Seikichi, of the Department of Agriculture and Commerce, is to be the manager of the Commission.

ATTEMPTED ROBBERY AT THE H. AND S. BANK AT KOBE.

On Thursday morning, says the *Chronicle*, it was discovered that during the night a daring and very determined attempt had been made to plunder the Hongkong and Shanghai Bank. On going to one of the safes at nine o'clock it was seen that the lock had been tampered with and a key had been broken in it. Further examination revealed that the thief, or thieves, had tried to open four safes, each in a separate room—the large office safe, the manager's safe, the comparadore's safe, and the accountant's safe. On inquiry last night we were informed that so far as is known the would-be plunderers left the premises bootless, though it was evident they had tried very hard to get at the contents of the safes. Access was no doubt obtained through a window which the disappointed thief—or thieves—forgot to close on leaving what they found to be a palace of well-protected treasure.

FUNERAL OF THE KUCHENG VICTIMS.

THE funeral of the ten victims of the Kucheng massacre took place at Foochow on the morning of the 6th inst., at 5.30. There was a large assembly, and universal sorrow and horror was expressed. The sight, says a newspaper correspondent, was certainly awful—one large long grave in compartments, and there in coffins lay all that was left of our dead country-women. Well might we be excused for feeling that

nothing too bad could be done to the instigators of the outrage. Archdeacon Wolfe and Mr. Eyton Jones read the service, and the English Consul, the Vice-Consul at Pagoda, Mr. Banister, and Mr. McClelland carried the little coffin containing all that was left of Mr. and Mrs. Stewart out of the chapel to the grave; the other coffins were put in the grave during the night. Mr. Banister spoke a few words after the service, asking that something be done to show the horror felt, but he could not go on, and completely broke down. Altogether it was the most appalling spectacle ever seen in this place. Each coffin had an inscription, and I thought that on Lena's (the nurse) most appropriate. It was "Faithful unto death." The poor girl died defending the baby under her charge.

METALS.

MESSRS. S. W. ROYSE & Co., in their circular dated June 9th, say:—"The Pig Iron trade during the first half of this month has been rather disappointing, prices having given way somewhat. Since the middle of the month, however, there has been an improvement, and values have advanced some 6d. to 8d. per ton. Shipments from Middlesbrough during this month are very satisfactory, being considerably heavier than in last month, and than in the corresponding period of June, 1894. There has been a fair business doing at Middlesbrough during this week, and though prices are at the moment a little easier, owing to slight weakness at Glasgow, there is a good feeling in the market and expectation of improvement. The higher-priced metals have not been moving well during the month. Copper has lost some 7s. 6d. per ton, and is now steady but quiet. Tin has given way steadily, and is some £2. 5s. per ton cheaper, and is easy. Spelter has lost ground slightly. Lead, after advancing a little, has given way, and is about 5s. per ton cheaper."

BRITISH SHIPBUILDING.

As an example of the facilities afforded to foreign governments by British shipbuilders, the following is worth quoting—Messrs. James & George Thomson, of Clydebank, have secured the order for the building of seven gunboats for the Spanish Government, to be engaged in putting down the insurrection in Cuba. The vessels will be from 100 to 300 tons displacement, and will have a speed of 12 knots. They will be armed with quick-firing Maxim-Nordenfeldt guns, and are to be completed in two months' time. It is evident that the Spanish Government finds that it does not pay to build in Spain, notwithstanding the attempts which have been made to establish large works at Bilbao and Cadiz. The time is certainly short to execute the work, but doubtless Clydebank will be equal to the occasion.

NEW STEAMER FOR THE AUSTRALIAN TRADE.

MESSRS. R. NAPIER & Sons, Limited, Govan, have received an order from the Eastern & Australian Steamship Company, Limited, London, to build a steel screw-steamer of about 3,500 tons deadweight capacity, and to steam about 12 knots. The vessel will be fitted for carrying first and second-class passengers, and also for carrying Chinese emigrants.

CHOLERA ON THE "ASHDOWN."

THE *Boyeiki Shimbun* states that a German carpenter (age 27), on board the British steamer *Ashdown*, which arrived here on the 16th inst. from Kobe, was attacked by cholera the same day, and she was at once sent back to the Nagahama Quarantine Station. Two Japanese were attacked by cholera at Yokohama on the 16th instant.

MORE CANALS.

ANOTHER German canal is now talked of, viz., one to connect the Lower Elbe and Lower Weser just above Bremen, and plans for cutting a ship canal between the Rivers Dnieper and Dwina, and thus connecting the Baltic and Black Seas, have been handed over by the Russian Government to the Department of Fluvial Communications.

THE BRITISH BAR AT BANGKOK.

SOME months ago the lawyers at Bangkok memorialized the Secretary of State for Foreign

Affairs against Mr. de Bunsen's decision to admit foreign lawyers to practice in H.B.M.'s Consular Court. A reply, it is reported, has been received to the effect that only English barristers and solicitors are entitled to plead in the said court.

THE VICE-GOVERNOR-GENERAL OF FORMOSA.

THE *Fiji Shimpo* has it that Lieut.-General Viscount Takashima was yesterday appointed Vice-Governor-General of Formosa.

NEW MEMBERS OF THE HOUSE OF PEERS.

MARQUISES ITO, OYAMA, SAIGO, and YAMAGATA are gazetted members of the House of Peers.

NEW JAPANESE MINISTER TO KOREA.

LIEUT.-GENERAL VISCOUNT MIURA is gazetted on Wednesday Japanese Minister to Korea.

INTEREST ON MONEY IN JAPAN.

The Department of Finance has undertaken interesting investigations about the rates of interest ruling at various places in the Empire during the three months of April, May, and June last. Among 105 places where one or more National Banks are in existence, the rates of interest on advances were highest in the Prefectures of Aomori, Fukui, Oita, Kumamoto, Miyasaki, Iwate, and Shimane. At Hachinohe, in the Prefecture of Aomori, the rate was 20 per cent. per annum, which is the maximum permitted by law. At Takebu, Saiki, Kawajiri, Hitoyoshi, Nobeoka, and Miyasaki in Kyushu—the ruling rate was 18 per cent., while at Tsuwano (Prefecture of Shimane), and Morioka (Prefecture of Iwate) the rate ranged between 15 and 18. The lowest rate reported is 5 per cent. per annum, but the locality where it prevailed is not named. The following table shows the averages of the highest rates reported from the different places during the three months under review for the two years, 1894 and 1895:—

	1895. per cent.	1894. per cent.	Difference. per cent.
April	13.60.....	12.52.....	Increase 1.08
May	13.60.....	12.66.....	" 1.04
June.....	13.95.....	13.00.....	" .95

The averages of the lowest rates reported from the different localities were as follow:—

	1895. per cent.	1894. per cent.	Difference. per cent.
April	9.56.....	9.00.....	Increase .56
May	9.56.....	8.83.....	" .73
June	9.64.....	9.17.....	" .47

With regard to the rates on deposits, the highest, 9.6%, was reported from Kochi. Next comes Tsurugaoka, with 8%. Other places reporting high rates were Nobeoka (7.6%), Fukui (7.5%), Toyama, and Sasayama (7 to 7.5%), Miharu, Futamata, and Tokushima (7%). Elsewhere the rates ranged between 1.8 and 6.8%. The following table shows the averages of maximum rates on deposits ruling at different places:—

	1895. per cent.	1894. per cent.	Difference. per cent.
April	5.61.....	5.08.....	Increase .53
May	5.65.....	5.14.....	" .51
June	5.71.....	5.21.....	" .50

The averages of maximum rates were as follow:—

	1895. per cent.	1894. per cent.	Difference. per cent.
April	3.89.....	3.52.....	Increase .37
May	3.92.....	3.48.....	" .44
June	4.00.....	3.54.....	" .46

As to the rates of discount, Nabeoka heads the list with 6 sen per diem per 100 yen. It is followed by Miyasaki with 5 sen 5 rin. Then come Sakata, Kochi, Saiki, and Yatsushiro, 5 sen. In other places, the rates ranged between 1 sen 5 rin and 4 sen 5 rin. The highest averages for the whole country were as follow:—

	1895. Sen. Rin.	1894. Sen. Rin.	Difference. Rin.
April.....	3 7.9.....	3 5.4.....	Increase 2.5
May	3 8.7.....	3 5.1.....	" 3.6
June	3 8.8.....	3 6.2.....	" 2.6

The averages of the lowest rates for the whole country were as follow:—

	1895. Sen. Rin.	1894. Sen. Rin.	Difference. Rin.
April.....	2 9.8.....	2 9.7.....	Increase 2.1
May	3 .6.....	2 7.7.....	" 2.9
June	3 .7.....	2 8.2.....	" 2.5

THE CROWN PRINCE.

H.I.H. the Crown Prince is seriously ill at the Palace of Takanawa. At the beginning of March last, His Imperial Highness was seized with influenza, from which he recovered in about a fortnight. To restore his health, he went to Hayama, in the vicinity of Zushi, on the 4th of May, where he rapidly gained in weight and was soon convalescent. But on the 21st of the same month, His Highness caught cold and suffered from catarrh. Completely recovered from this ailment, he returned to the capital at the close of the month, but only to become the victim of a fresh malady, for on the 2nd of June he contracted typhus fever of a rather severe character, his temperature rising at one time to 40.2° C. After several unfavourable changes, His Highness began to gather strength at the beginning of August. Being still too feeble to endure a journey, His Highness, who had hitherto been staying at the Aoyama Palace, moved to the Palace at Takanawa on the 8th inst. For two days, he showed signs of improvement, but on the 10th his temperature suddenly rose to 39° C., and the following morning symptoms began to manifest themselves of pleurisy and pneumonia on the right side. The temperature gradually fell until the 15th, when it began to rise again, and gradually inflammation spread over the right lung. The left lung is said to be unaffected. Since the 20th instant, the temperature is said to have gradually fallen, but His Highness's condition causes the gravest anxiety.

CURRENT TOPICS.

It is believed that on Tuesday next a second distribution of honours will take place at the Palace. According to trustworthy information, Lieut.-Generals Baron Yamaji, Baron Sakuma, and Baron Katsura will be raised to the rank of Viscount. The rank of Baron will be conferred upon Lieut.-Generals Nogi, Kuroki, Oku, and Okazawa; Major-Generals Oshima Yoshimasa, Oshima Hisanao, Tatsumi, Oseko, Nishi, Hasegawa, Kodama, Ogawa, Inouye, and Terauchi; Paymaster-General Noda and Surgeon-General Ishiguro. At the same time, the heirs of the late Major-Generals Odera and Fukuwara will be raised to the peerage with the rank of Baron. Among the civil dignitaries, Viscount Mutsu, Minister of Foreign Affairs, will be promoted to be Count; Mr. Watanabe, Minister of Communications, will be created a Viscount, and Mr. Ito Miyoji, Secretary-General of the Cabinet, a Baron.

It is stated on good authority that the measures for the increase of the Navy have been completed and forwarded to the Cabinet. They include the construction of warships, the establishment of Naval stations, and the education of officers and men. It is aimed to carry out these measures within five or six years. The number and tonnage of the ships to be ordered are not definitely known, but the magnitude of these figures may be easily imagined when it is considered that these ships are to constitute the strength of the future squadrons of the Japanese Navy, the majority of the ships now in active service being old and unfit for use much longer. As to the Army Bills, the rough drafts have been completed, but they are so complicated that it will be some weeks before they will be ready for presentation to the Cabinet. Until their final completion, it will be impossible for the Department of Finance to draw up measures relating to the increase of the Ordinary Revenue. Under these circumstances, it is yet premature to say when, or even whether at all, an extraordinary session of the Diet will be convened.

The Codes Investigation Council is now in vacation, but it is reported that it has thus far made rapid progress, nearly seven-tenths of both the Civil and Commercial Codes having been finished. The laws of succession and family relationship remain to be examined. It was in connection with these laws that the Civil Code has been most severely criticised. The members of the Council are determined to

give due importance to the time honoured customs and institutions of the country bearing upon these subjects, so that they hope that the new Code as revised by them will be acceptable to the Diet. The examination of these codes is to be finished some time next year.

The administration of the affairs of Okinawa (Riukiu) has hitherto been conducted in conformity with local customs and usages. Perceiving the importance of bringing it into closer harmony with the system followed in the other parts of the Empire, the authorities are now considering what reforms should be introduced. The greatest difficulty is said to be in connection with the question of taxation. A bill on the subject will be introduced to the Diet next session.

The *Mainichi Shimbun* has just concluded a long series of well-written articles on the Situation in the Orient. Our contemporary seems to believe that China is doomed to be divided among the Powers. In such an event, it is Russia, says the *Mainichi*, which by her decidedly aggressive movements will place herself in direct opposition to the interests of Japan. In almost every other great adjustment of affairs in the East, Japan and her northern neighbour are destined to play antagonistic parts. Such, in the Progressionist organ's opinion, is the inevitable result of the geographical position of the two countries. With England, the case is different. With her, Japan will always be able to get along in peace and amity, for in the *Mainichi's* opinion, the two Powers have different spheres of military expansion. The only competition between them will be in the field of industry and trade. In this direction our contemporary is convinced that Englishmen will be glad to welcome their young emulators. As to the question of alliance, our contemporary does not think it necessary for Japan to form any such relation with any Power. It believes that, should occasion arise, Japan will find herself in such company as shall feel a community of interests with her.

The *Jiyu Shimbun* has been disowned by the Radical party. Such a result has been foreseen for a long time. The *Jiyu* has never adequately represented the great party of which it has nominally been the organ, and of late its utterances on important political questions have been observed to be in direct opposition to the known views of the Radicals. With the backsliding of the *Jiyu*, the Radical party has no journalistic organ to represent it. The *Mezamashi* represents a section of the party, but then it is not a political paper. The Radicals are therefore believed to have under contemplation the starting of a new journal.

A certain outsider, quoted by the *Kokkai*, offers some interesting comments upon the state of feeling in the provincial localities. Concerning the Extremists, he says they are lecturing in the vicinity of the capital, where they are well received and their addresses are listened to with attention. But their lectures seem to produce not the least impression upon their audience, and no sooner do they leave the place than the inhabitants appear to forget even the fact that these politicians had paid them a visit. As to the Radical lecturers, they seem to confine their efforts to the explanation of the policy decided upon at the head-quarters of the party. In short, they are more defensive than aggressive, and consequently they, too, fail to excite any enthusiasm on the part of their provincial followers. From these statements, it is evident that a general lull has come over the provincial political world.

The Bills for the increase of the Army are said to have been completed at the General Staff Office on the 21st instant. The Department of War on receipt of these Bills is stated to have at once begun the compilation of the estimates of the expenditure required. Nothing is known about the nature of the increments projected by these Bills. The compilation of estimates, though a laborious task, will not take much time, so we may expect that the Army Bill will

be ready before long to be forwarded to the Cabinet.

As to the Naval Bills, which are now in the hands of the Ministers of State, the *Nichi Nichi* mentions that the completion of the measures proposed is to be effected in seven years. So far as the construction of warships and the increase of Naval stations alone are concerned, the work may be completed in a shorter time, provided the necessary funds are forthcoming. But the training of officers cannot be accomplished by money. Four years of instruction in the College and three years of practical training afloat are necessary to produce efficient officers. Hence the completion of the increase of the Navy cannot be expected in less than seven years at least.

Lieut-General Viscount Takashima, who has been on the reserve list, has been restored to active service, and appointed Vice Governor-General of Formosa. He is to command the army which is now being organized for the reduction of the southern part of the island. He will leave for the south in a few days.

CONCERT IN NIKKO.

The Chevalier de Kontski's concert in the Nikko Hotel on Saturday evening was an immense treat to the music-loving portion of the community that frequent the favourite mountain resort every Summer. It was a courageous essay on the part of the great pianist to give a concert at a place where so many difficulties presented themselves, and so little prospect offered of a profitable result. But the principal dining-room of the Nikko Hotel, spacious and well lighted, made an excellent salon, and a piano of fine tone was kindly lent by Captain Munter, so that the arrangements were completed with less trouble than might have been expected. The audience, though not numerous—as was inevitable under the circumstances—were thoroughly appreciative, and the Chevalier played with all his wonted skill and feeling, his wonderful power over the instrument sometimes electrifying his listeners. The programme was varied by four songs admirably rendered by a well known amateur. Madame de Kontski also gave two readings of a most interesting character from Memoires written by the Chevalier himself, whose association with Mozart and the other musical stars of seventy years ago has made him a veritable *répertoire* of anecdote and entrancing personal reminiscences. We append the programme:—

- 1.—Moonlight Sonata.....Beethoven.
Ch. DE KONTSKI.
- 2.—Air from the Huguenots.....Meyerbeer.
AN AMATEUR.
- 3.—Awakening of the Lion.....Kontski.
Ch. DE KONTSKI.
- 4.—Air from Nieblunzen.....Wagner.
AN AMATEUR.
- 5.—Interesting Memories, Weber.....Madame de Kontski.
- 6.—Romance from Marcella.....Kontski.
AN AMATEUR.
- 7.—Souvenir des Huguenots.....Meyerbeer.
Ch. DE KONTSKI.
- 8.—Memories, Beethoven.....Madame de Kontski.
- 9.—Chanson Niennoise.....Mozart.
AN AMATEUR.
- 10.—(a) Snow Spirits, Nocturne (b) Souvenir de Berlin.....Kontski.
Ch. DE KONTSKI.

We learn that Signorina Belinfante purposes giving a concert in the Nikko Hotel on Saturday next. Doubtless the opportunity of hearing such an exceptionally gifted singer will be availed of by all the foreigners now sojourning there. Professor von Koeber, whose exquisite playing on the piano would be in itself sufficient inducement to attract a large audience, has consented to play, so that a programme at once varied and delightful can be arranged.

Nothing is more easy than to grow rich. It is only to trust nobody, to be friend to none, to get everything and save all you get; to stint yourself and everybody belonging to you; to be the friend of no man, to heap interest upon interest, cent upon cent; and to have no man for your friend; to be mean, miserable, and despised for some 20 or 30 years, and riches will come as sure as disease and disappointment. And when pretty near enough wealth is collected by a disregard for all the charities of the human heart, at the expense of every enjoyment save that of wallowing in filthy meanness, death comes to finish the work—the body buried in a hole, the heirs dance over it.

ECONOMICAL AND INDUSTRIAL.

The *Chugai Shogyo Shimpō* states that the Japanese cotton spinning companies have on the whole realised encouraging results during the first half of the present year, as shown in the following table :—

	Spindles in Operation.	Profits Yen.	Profits per Spindle Yen.
Koriyama Boseki	5,376	25,055.934	4.661
Kishiwada Boseki	10,281	47,574.394	4.627
Owari Boseki	15,712	60,050.857	3.860
Sakai Boseki	5,300	20,150.203	3.802
Setsu Boseki	35,140	134,134.440	3.760
Hirano Boseki	27,006	101,378.220	3.741
Kurume Boseki	10,000	36,295.162	3.630
Wakayama Boseki	9,766	35,237.369	3.602
Fukuyama Boseki	4,680	16,477.498	3.521
Kurashiki Boseki	10,664	36,684.876	3.440
Osaka Boseki	50,774	169,402.989	3.336
Kanagawabuchi Boseki	10,057	9,923.126	3.220
Meiji Boseki	7,668	24,353.044	3.176
Mitsui Boseki	12,168	37,981.032	3.121
Uwajima Boseki	4,128	12,768.449	3.093
Amagasaki Boseki	26,320	75,032.617	2.851
Matsuyama Boseki	4,992	14,276.001	2.840
Mye Boseki	21,408	137,800.594	2.684
Senshu Boseki	19,204	48,873.171	2.537
Asahi Boseki	13,941	25,453.931	1.826
Tamashima Boseki	11,827	20,328.746	1.725
Himeji Boseki	10,000	17,226.857	1.722
Fukushima Boseki	10,410	15,443.673	1.484
Tokyo Boseki	21,520	30,824.951	1.433
Iyo Boseki	5,115	3,610.396	.706

Our contemporary ascribes three reasons for the generally favourable returns of the spinning factories, first, that speculative purchases in view of the revival of trade after the war led to an increase in the price of yarns; secondly, that the price of raw cotton has gradually risen; and thirdly, that the cost of coal has depreciated.

The same journal remarks that there is a growing tendency throughout the country to purchase imported rice. Correspondence from Sendai, Chiba, Shizuoka, Kofu, and Numazu, agree in stating that, in proportion to the rise in the price of the home produce, the demand increases for foreign rice, especially that of Saigon and Rangoon.

The projects of railway companies are so numerous that the total length of the lines for which charters have been applied for and not yet granted is over 2,000 miles, while the estimated capital exceeds 100,000,000 yen. Many of the projected companies will no doubt fail to obtain charters, while some will collapse after receiving official recognition. Making allowance for these eventualities, there will still be a large number that will carry out the projected lines.

It is stated that the Specie Bank of Yokohama has a project for increasing its capital by 5,000,000 yen, with a view to the extension of business operations. The present capital is 6,000,000 yen, of which 4,000,000 yen have been paid up. There is besides a reserve fund of 4,500,000 yen, so that the available amount of the bank's funds is 8,500,000 yen. But this sum is felt to be inadequate to meet the requirements of the rapidly increasing business of the bank. The establishment of a branch at Hong-kong and the extension of transactions to the Australian colonies are also said to be under contemplation. These projects will be submitted to the shareholders at their general meeting in September.

The bad weather and the consequent apprehension of a scanty harvest have doubtless tended to operate as a check upon the reviving activity of trade and industry. But the recent return of fine weather seems to have improved the outlook, for it is now generally believed that, should the present weather continue and no disastrous storms occur about the time of *ni-hyaku-to-ka*, the harvest, though still unsatisfactory, will not prove to be so bad as was at first apprehended.

The merchants of Yokohama propose the establishment of a warehouse company with a capital of 1,000,000 yen divided into 20,000 shares of 50 yen each. The company is to be styled the Yokohama Boyeki Soko Kabushiki Kaisha, and the site will be No. 1, Ichome, Sakaimachi. The following gentlemen have been appointed as a Committee of Constitution:—Messrs Iijima Yuzo, Katagi Yayekichi, Watanabe Teijiro, Matsuura Yoshimatsu, Takeoka Zenshichi, Hitomi Kuzo, Watanabe Shojiro, and Otomo Masanojo.

BANKING BUSINESS IN JAPAN.

The *Chugai Shogyo Shimpō* publishes interesting statistics in relation to banking business in Japan, where the number of banks is rapidly increasing. The following tables show the number and capital of the banks of various classes, existing in June, 1895, and in December, 1894 :—

JOINT STOCK BANKS.

	June 1895.		December 1894.

Grand Total. 822...58,763,249...761...54,247,900

It will be seen from the above that in the space of six months, the increase of banks was 61 in number and 4,515,349 yen in capital. The tendency for increase has not yet ceased, but, on the contrary, is going on at an accelerating rate. Such a state of affairs is an unmistakable indication of the progress which the country is making in the field of commerce and industry. But at the same time, a close inspection of the actual circumstances relating to the recent increase of banks leads the *Chugai Shogyo* to make a few observations by way of warning to the public in general and to the parties concerned in particular. Our contemporary perceives that

the recent increase of banks has taken place in places which already enjoy sufficient banking facilities and not places where they are still wanting. Thus the result of the rapid increase which is now going on in the number of banks, instead of remedying the present inequality of the rates of interest in different parts of the country,—an evil which is much talked of but which still continues,—may, it is feared, result in ruinous competition between banking establishments. Our contemporary then goes on to explain at length the various injurious consequences of such a competition, but we do not think it worth while to refer to these points. Suffice it to say that the warning raised by it seems to us to be timely and important.

THE BANK OF JAPAN.

The twenty-sixth semi-annual meeting of the shareholders of the Bank of Japan was held in the rooms of the bank on Saturday last. President Kawata Koichiro was in the chair, there being also present 68 shareholders. The Imperial Household was represented by Mr. Iida Son. The proceedings were watched by Count Matsukata, Minister of Finance; Mr. Tajiri Inajiro, Vice-Minister of Finance; and Mr. Matsuo, the Government Inspector of the bank. The report on the working of the bank during the first half of the present year, read by a clerk, was unanimously passed by the meeting. The statement of accounts for the period were as follow :—

	YEN.
Gross profit	7,668,250.365
Loss	938,073.356
Net profit	6,730,177.009
Carried over from last account.	186,175.532
Total	6,916,352.541
First dividend (6 per cent. per annum)	300,000.000
Second dividend (9 per cent. per annum)	450,000.000
Special dividend	5,000,000.000
Set apart as reserve	800,000.000
Rewards and expenses	93,000.000
Set apart as expenses towards new buildings	100,000.000
Carried over to next account	173,352.541
Total	6,916,352.541

Of the net profits, 5,000,000 yen represented profits realized by the sale of gold and silver bullion which had been purchased when cheap. This sum had nothing to do with the ordinary banking operations, so it had been put down as a special dividend. The ordinary dividend alone, however, amounted to 750,000 yen, which would be at the rate 15 per cent. per annum.

With the passage of the above statement of accounts the ordinary general meeting terminated, but the Chairman declared that the meeting would continue as an extraordinary general meeting, there being some special matters requiring discussion. The first topic brought up for deliberation related to the amendment of some of the provisions of the constitution of the bank. The amendments proposed were two; first, whereas under the existing constitution the call upon the shareholders for the payment of the remainder of the face value should be made six months beforehand, and such payment in amount should be not less than 20 and not more than 40 yen per share at one time. It was proposed to revise the provision to the effect that the call for payment should be made two months beforehand, and that the sum should not be less than 20 or more than 50 yen per share; secondly, it was proposed that the number of shares necessary to constitute a quorum at a general meeting, hitherto 60,000, be increased to 90,000. The next matter submitted to the meeting was the increase of the capital of the bank to 30,000,000 yen. The amount of increase, 10,000,000 yen, to be divided into 50,000 shares of 200 yen each. These shares to be distributed among the present shareholders in proportion to the number of shares held by them at the rate of one new for each two old shares. Half the face value of the new shares is to be paid at first, and it was proposed that the sum of yen 5,000,000

put down as a special dividend in the above statement of account should be converted into new shares. As to this sum, it might be supposed that it would have been better to set it aside as a reserve, but the Chairman explained that, there being already a sufficient reserve, there was no necessity for increasing it by so large an amount. All the proposals submitted to the shareholders were unanimously agreed to, and the meeting adjourned at 2.40 p.m.

KOREAN NEWS.

Concerning the new Korean Cabinet, the Söul correspondents of the Japanese newspapers seem on the whole satisfied with its composition, which is as follows:—Kim Kashu, Minister President of State; Kim Inshoku, Minister of Foreign Affairs; Boku Teiyo, Minister of Home Affairs; An Keiju, Minister of War; Chin Sokun, Minister of Finance; Jo Kohan, Minister of Justice; Li Konyo, Minister of Education; and Kim Kachin, Minister of Agriculture and Commerce. Li Inyo has been appointed Police Inspector-General, while Gyo Inchu, former Minister of Finance, has been transferred to the Vice-Presidency of the Privy Council. Kim Koshu's appointment has not yet been gazetted, because he is prevented from attending the Court by the death of his daughter. His fitness for the Premiership is not unquestioned. He is not particularly liked either by the King or the Queen; on the contrary, he seems to be feared and disliked by their Majesties. The new Minister of Finance, Chin Sokun, is stated to be a partisan of the Queen, whose confidence he enjoys to a great extent. The new Cabinet is thus regarded as a coalition between the Ming faction and the Independent faction, of which Kim is regarded as the representative. Some correspondents doubt the durability of such a Cabinet, but those of the *Nichi Nichi* and the *Fiji* seem to think otherwise. They say that it is a mistake to suppose that the so-called factions of Söul are divided on account of political opinions. From this point of view, it is more correct to say that there is no party or faction in Korea. To say that one party is pledged to progress and that another is in favour of reverting to the old *régime*, and so forth, would be to attribute to Korean politicians ideas which have never entered their heads. Their sole object in life is said to be the promotion of their personal interests and ambitions, so that one faction is exactly the same as another so far as political questions are concerned. It will not do, say these correspondents, for the Japanese to make nice distinctions between the different factions and to favour one more than another. In their opinion, Count Inouye is believed to have grasped this truth, and acted in conformity with it in arranging with the King the composition of the new Ministry.

The release of Li Shun-yo from imprisonment by the special grace of the King is the subject of diverse speculations. As usual, absurd rumours are said to be current in Söul. One of these is that the King was moved to this act of benevolence on account of the annoyance which His Majesty had of late been subject to every night by the appearance of spirits demanding the pardon of the Royal captive. Such supernatural occurrences have not been uncommon in the Korean palace, and the King's troubled conscience may have been played upon by some rascals in ecclesiastical robes. A more probable explanation is that the piteous supplication of the captive's grandmother, the aged lady of the Tai Wön-kun, moved the hearts of the King and Queen. The latter, it should be remembered, owes much to the this lady as her instructor in girlhood and her principal supporter in her candidacy to the Queenship. This explanation seems sufficient, though some of the Japanese correspondents are not satisfied with it, but attach great political importance to the incident. Kim Koshu and Yu Kitsuei, say they, recommended the step to the King, because they thought that the release of his grandson would induce the Tai Wön-kun to once more enter the political stage and keep the Queen's influence

under restraint. The Queen, on her part, is reported to have penetrated the motive of these politicians, but, instead of trying to frustrate their design, she resolved to turn their weapons against themselves as a means of accomplishing her own political scheme, namely, the recall of Ming Yong-ik and other partisans of her family who are in exile in China and elsewhere. She is already stated to have ordered four of her most trusted courtiers to proceed to China to bring her relatives back to Söul.

Whatever may have been the nature of the forces at work to obtain his pardon, Li Shun-yo is now a free man. He is said to have returned to his grandfather's villa at Kong-tök-ri on the evening of the 6th instant. The event was celebrated by the delighted grandparents by a banquet which lasted the whole night. Ascribing the release of his grandson to the representation of Count Inouye, the Tai Wön-kun is said to have sent a messenger to the Japanese Legation, acquainting the Count with the safe return of Li Shun-yo and thanking him for his kind intercession. The Japanese Minister at once dispatched Mr. Kokubu, translator of the Legation, to the Tai Wön-kun's villa, to tell the latter that his grandson's release was the spontaneous act of the King, and that he, the Count, had no reason to receive thanks. Still the ex-Regent refuses to think that the happy event would have come about but for the influence of the Japanese Minister, whom he is said to be never tired of praising as a just and high-minded man.

The work of reform seems to be making slow but steady progress. It has already been stated in these columns that a system of local government was recently promulgated. The newly appointed local officials, who had been staying in Söul pending the completion of the estimates of the local governments, are said to have left the capital for their respective posts at the beginning of the present month. A few days previous to their departure they were assembled in the Department of Home Affairs, and received from the acting Minister of Home Affairs, Mr. Yu Kitsuei, and the Japanese adviser, Mr. Saito Shuichiro, minute instructions about the method of conducting local affairs.

The *Fiji's* correspondent states that the King recently asked Count Inouye as to the position occupied by the Emperor of Japan in the political world. The Japanese Minister drew up a long memorandum on the subject and presented it to the King at the time of his audience on the 6th instant. After perusing the document, His Majesty is reported to have said that he would have nothing to complain of were he permitted to maintain towards his Cabinet the position which the Japanese Emperor occupied with regard to his Ministers. The Korean King, it should be borne in mind, has of late been complaining of the encroachment of his Ministers upon the royal prerogative. The Ministers really seem to have been guilty of this. Pak, for instance, used, it is said, to affix the Royal Seal to State papers without any reference to the King.

Count Inouye is said to have on one occasion discussed with the King the question of the Korean students in Japan. He explained to His Majesty the situation occupied by the Keio Gijuku in the educational world, and described the personality of its celebrated originator and head, Mr. Fukuzawa. His Majesty is said to have expressed great confidence in Mr. Fukuzawa.

The vicinity of the capital is said to have been visited by great storms at the beginning of the present month. The river Han-gang rose so high that houses at Yongsan, which are usually fifteen feet above the level of the water, were in danger of being washed away.

The Korean Government recently addressed a note to the foreign Ministers, informing them that, Chöl-yöng-do (Deer Island) at Fusan, being a place of great importance as a position of defence, no foreigner would be allowed either to own land on it or live there. The foreign Representatives assembled at the Japanese Legation, and after some deliberation decided to reject the note on the ground that a portion of the island in question was within a radius of

10 Korean miles from the foreign settlement, the space within which by virtue of the Anglo-Korean treaty foreigners may own real property. Moreover, the Ministers decided to demand the enlargement of the settlements at Fusan and Gensan.

FORMOSA NEWS.

Detailed accounts of the operations which for a second time were undertaken for clearing the Hakka villages of the insurgents, have just been received in Tokyo. The Naito Detachment left Haishankow on the 29th ultimo, and advanced in the direction of Shin-chuh by the right, namely, the seaward side of the railway. The Yamane Detachment moved out of Takoham on the 31st ult., and marched along by the left of the railway to Hsin-pu, a flourishing village about three miles east of Shin-chuh. The Naito detachment seems to have met with little opposition, but the Yamane detachment had several hard village fights. The detachment marched in two columns, the right, about 1,500 strong, under Major-General Yamane, and the left, about 800 strong, under Major Bojo. The left column had to advance over hills and valleys, fighting all the while with most determined parties of insurgents who opened fire from rifle pits on the hills. About 1.30 p.m., the two columns came in sight of Yung-tan-pe, a small town containing from 400 to 500 houses. The town itself had been burned on the former occasion, and the insurgents had, consequently, taken up their positions on the hillsides in the vicinity. They were attacked from three directions, and in the course of about an hour were put to rout, having sustained a heavy loss. That night the detachment bivouacked in the neighbourhood of Dolaken. The number of the enemy killed that day was over 100, the loss on the Japanese side being 1 killed and 4 wounded.

On the 1st instant toward evening the Yamane detachment arrived in the vicinity of Hsin-pu, after having driven several bodies of the enemy before them on the way there. The heat was intense, and the march of the troops over hill and dale is said to have been very trying, several men dropping out of the ranks. When the head of the column reached Hsin-pu, the gates of the town were all closed. A private of the first class climbed over one of the gates and opened it, but no sooner had he achieved this feat than he was shot dead by an insurgent firing from a house near by. Two of his comrades who rushed in to rescue his body were also wounded, so that they had to return without attaining their object. A body of Japanese troops, who had taken up a position on an eminence in the vicinity poured a volley into the town. But night drawing near, the attack on the place was deferred till the following day, and the detachment, retiring a little distance, encamped in the open, as on the preceding night.

On the 2nd instant, a battery planted on high ground at a suitable distance from the town opened fire at about 9 a.m. and shelled the place, beginning with its eastern extremity. Meanwhile, a company of infantry engaged a party of insurgents stationed outside the village. As the cannonade proceeded, the insurgents, who had been keeping up a fusillade from the houses, began to fly and make for the mountains in the south, and the greater number of them were shot by the Japanese. At 11.30 a.m., the Yamane detachment was joined by the Naito detachment, which at once began to shell the place from the opposite direction. A little past noon the cannonading ceased, and two parties of infantry were ordered to enter the town. The gates had to be broken down, and when the Japanese got inside they were greeted with a shower of bullets from the houses, and three men were wounded. The insurgents being determined to hold the place to the last, the Japanese set fire to some houses, when about fifty Chinese rushed out and were either shot or cut down by the Imperial troops. It was 4 p.m. before the place was entirely occupied by the Japanese. The number of insurgents who took part in its defence is

put at 600, of whom at least 150 were killed. The casualties on the Japanese side were 3 killed and 6 wounded. In one of the houses, was discovered the salted head of the brave soldier who had been killed on the preceding day immediately after opening one of the gates. It was buried with ceremony. Hsin-pu is a small town of about 400 brick houses, very neat in appearance. The Japanese correspondents were much struck by the evident marks of comparative opulence in a small mountain town like this.

While the operation of clearing the district of the insurgents was going forward, H.I.H. Prince Kitashirakawa, Commander of the Imperial Guards, and his staff, escorted by a body of troops, advanced to Shin-chuh, leaving Taipei on the 29th and reaching the above mentioned place on the 31st ultimo. On His Highness's arrival at the station, he was welcomed by about 100 of the principal citizens of Shin-chuh, clad in their finest clothing and carrying several Japanese flags. Several of them had afterward the honour of being presented to the Prince at head-quarters. For a few days after his arrival at the place, Prince Kitashirakawa is said to have been slightly indisposed, but by the date of the letter from which we are quoting—namely the 5th instant—he had completely recovered and was personally superintending the affairs of the army under his command.

Shin-chuh is said to be a very prosperous commercial centre, being in this respect second only to Taipei-fu in the north of the island. According to the investigations conducted by the officials of the civil Government of the place, the population is put at 5,932, consisting of 3,360 males and 2,572 females. The gallant defence of the place by the Sakai Battalion against the repeated attacks of the insurgents, seems to have inspired the inhabitants with a wholesome sense of security and confidence under Japanese protection. The streets are said to be kept clean, and perfect order maintained in the place, under the energetic efforts of Mr. Matsumura, the head of the civil administration. The place has some interesting historical associations for the Japanese, for it is believed that it was in this vicinity that Koxinga—the celebrated Japano-Chinese who upheld the cause of the fallen Ming dynasty—first landed in Formosa. It is stated that a family living by the side of a shrine dedicated to him claims descent from him.

The *Nichi Nichi Shimbun* states that the staff of the Governor-General of Formosa consists of the following officers:—Major-General Oshima (Chief), Captain Tsunoda, I.J.N., Lieut.-Colonel Ito, Captains Kawai, Fujii, Hashimoto, and Matsuishi. His *Aides-de-Camp* are Lieut.-Colonel Tanabe, Major Hiraiwa, Captain Ogawa, and Captain Takishita.

The latest letters from Formosa, dated the 9th instant, describe the march of the Imperial Guards southward of Shinchuh. The ranges of hills to the south of that prefectural town, as far as T sienpi-shan, had been guarded by a large force of insurgents, who made repeated though unsuccessful attempts to recover the possession of the place. Of these hills, T sienpi-shan is said to be a position of great strategical importance, a small body of determined men being sufficient to hold in check a large army. The villages between Shinchuh and Taipei-fu having been cleared of the armed aborigines who had given endless trouble to scouting parties and provision trains, Prince Kitashirakawa thought it safe to push southward and dislodge the insurgents from the strategical positions on the hills alluded to above. But previous to a general attack on these strongholds, it was advisable to drive the enemy from the hills to the east of Shinchuh. Accordingly, Major-General Yamane's detachment, which had been staying at Hsin-pu, was ordered to push forward to Peipu on the 6th inst., to attack the insurgents in the vicinity of Sinsienling the following day, and, thus advancing on the right flank of the enemy, take part in the general attack which was fixed for the 8th instant. At the same time, Major Isaki was instructed to leave Shinchuh on the 6th at the head of his battalion and maintain communication between that place and the

Yamane detachment. These orders were executed without any hitch, and everything was ready for a general advance at the appointed date.

On the night of the 7th, the artillery were busily engaged in planting batteries in proper positions, and the bulk of the army began to move out of Shinchuh at 3 a.m. on the 8th. The army was divided into three bodies, the right and left wings and reserves. The right wing, under Major-General Kawamura, consisted of two regiments (minus two companies) of infantry, a squadron of cavalry, mountain artillery (6 pieces), machine guns, and a company of engineers. The left wing, under Colonel Naito, was composed of a regiment (minus a battalion) of infantry, half a squadron of cavalry, mountain artillery, machine guns, and a company of engineers. The reserves consisted of three companies of infantry, a squadron of cavalry, artillery, and medical corps. A company of infantry and a party with machine guns were left at Shinchuh under the command of Captain Sawasaki. The left wing was to be assisted by the Yamane detachment, which had advanced along the mountains to the east of Shinchuh, as stated above.

With the dawn of the 8th, fire was opened simultaneously by both wings of the Imperial army, the right wing against the insurgents at Chintoshan and the left against those at Keilanmen. The artillery duel lasted for some time, the insurgents working a number of mountain pieces which had been planted on extremely advantageous positions. Major Mayeda charged at the head of two companies of infantry, and driving before him about 500 insurgents, he easily took possession of the stronghold of the enemy's left wing; while a battery, consisting of two mountain pieces, was captured by 16 men under Sergeant Toyoda, the enemy leaving behind him, besides the two mountain pieces, 5 dead and a quantity of small arms and ammunition. The forts at Chintoshan having thus easily fallen into Japanese hands, they were at once destroyed, while the barracks and other combustible works were burnt down, the flames extending over two and a half miles.

Meanwhile, the Naito detachment took possession of Keilanmen, and the whole army soon advanced to the top of a range of hills opposite T sienpi-shan, the most formidable barrier to the southward progress of the Japanese forces. There the army bivouacked that night.

On the 9th at 5.30 a.m. an attack was commenced upon the enemy on T sienpi-shan. The insurgents, who seem to have lost heart from the way in which they had been handled on the preceding day, fled pell-mell in the direction of Miaoli, without offering any resistance worth speaking of. The bulk of the division then pushed on to the village of Chang-kong, while the Kawamura column advanced to the fort of Chang-kong, which lies a short distance further south. The Yamane detachment took up its quarters at Taofun, the Naito detachment being stationed between that place and Chang-kong village. During the operations of the 8th and 9th, two men of war bombarded the enemy. Throughout the engagements of the two days, the Japanese did not meet with any casualty except the death of a Lieutenant; and the loss of the Chinese was only 30 to 40 in killed, which shows the nature of resistance offered by the latter.

It is stated that of the insurgents who held this region, variously estimated at between 1,000 and 4,000, a large proportion were the regular Chinese troops, a circumstance which, in the opinion of the Japanese correspondents, accounts for the promptitude with which they took to their heels. One writer is inclined to think that the volunteers may venture to stay at Miaoli and try once more the chances of war, but that the regulars will not rally until they reach Chang-hua or Taiwan-fu.

During the five days ended the 5th inst. 10 Japanese residents (8 males and 2 females) were attacked by cholera at Ninsen, Korea, where 6 deaths were reported during the same week; 3 patients have recovered.

JAPAN AND SPAIN.

THE DELIMITATION OF BOUNDARIES.

As the result of the conferences that have recently been held between the acting Japanese Minister of Foreign Affairs and the newly arrived Minister of Spain, a Declaration has been agreed upon defining the limits of the boundaries between the territories of Japan and Spain in the Western Pacific. The Declaration, published in the *Official Gazette* of Saturday, runs as follows:—

The Governments of His Majesty the Emperor of Japan and of His Majesty the King of Spain, being equally desirous of promoting the cordial relations existing between the two countries, and believing it conducive to the attainment of the aforesaid object to make a clear definition of the boundary line between the territories of the two countries in the western part of the Pacific; the undersigned, Marquis Saionji Kimmochi, His Imperial Japanese Majesty's Minister of State for Education and acting Minister of State for Foreign Affairs, and Don Jose de la Rica y Calvo, His Royal Spanish Majesty's Envoy Extraordinary and Minister Plenipotentiary, deputed by their respective Governments, do hereby agree upon and determine the following Declaration:—

First, a line, parallel to a latitude, passing through the middle of the navigable part of the Bashee Channel, shall, under the present declaration, mark the boundary between the territories of Japan and Spain in the western part of the Pacific.

Secondly, the Government of Spain declares that it shall never lay claim to the islands lying to the north and north-east of the above mentioned boundary line.

Thirdly, the Government of Japan declares that it shall never lay claim to the islands lying to the south and south east of the above-mentioned boundary line.

In witness whereof we make, and put our names to two copies of the declaration, in Tokyo, this 7th day of the 8th month, of the 28th year of Meiji, or the 7th August, 1895.

(Signed) Marquis SAIONJI KIMMOCHI.
Don JOSE DE LA RICA Y CALVO.

Some of the Japanese journals express discontent with the Declaration recently concluded between the Japanese Minister of Foreign Affairs and the Representative of Spain, delimiting the boundary between the dominions of the two countries in the Western Pacific. The reasons for their dissatisfaction are not unanimous. The *Mainichi Shimbun*, for instance, states that "the Japanese cannot but be displeased with this Declaration, not because they regard it as an impediment to their policy of southward development, but because they perceive that the Spanish Government is incapable of understanding them." The Spanish Government, writes our contemporary, has shown much eagerness to conclude the diplomatic arrangement in question, because it had a misgiving that Japan might encroach upon its dominions. "Japan," continues the same paper, "will not be guilty of such a proceeding without due and urgent reason; though she will not hesitate to take up arms against any Power that disturbs the peace of the East and injures her interests. If the Spanish Government is really so solicitous about the safety of the Philippine Islands, the best course for it to pursue would be to join Japan in opposing such Powers as may be inclined to disturb the peace of the East. Japan's ambition is to preserve the peace of the East and of the world. Instead of wasting time in the conclusion of a useless agreement like the one under review, we are disposed to think that the statesmen of Madrid would be better employed in reforming the administration of the Philippine Islands, where things are in a state of considerable confusion, and in restoring order in the much harassed island of Cuba, where anarchy prevails."

The *Kokumin Shimbun* is even more outspoken. It writes in the following strain:—"The occupation of Formosa is not the termination but the commencement of Japan development in the South. Is not the enterprising spirit of our people already hovering over the region beyond the Bashee Channel? Believing that a time will soon come when Formosa will be too small to receive the surplus of the Japanese population, we did not doubt

but that our Government has some great scheme in contemplation against that contingency. We are astonished to hear that a curious covenant has just been entered into defining the boundaries between the two countries. Spain is simply like a fox which assumes airs under the protection of a tiger. Alarmed by the southward march of Japan, she applied to the assistance of Russia, France, and Germany in order to prevent the occupation of Formosa by this country. She then changed her front, and demanded delimitation of boundaries. For a small and weak State like Spain, such conduct is impertinent, to say the least. Whether or not a declaration like the one just concluded is of any necessity to Spain, we do not know. But so far as Japan is concerned, there is not the slightest necessity for such an agreement. On the contrary, it hampers the freedom of our expansion in the South, and impedes the carrying out of our great policy of national development. The relative position of Japan and Spain is not directly affected by this Declaration, but it places Japan under a sort of a moral obligation to the rest of the world, and one which cannot but restrict her freedom of action. It is our earnest wish that this compact should be rescinded on a suitable opportunity occurring. However, we must be understood as advocating the expansion of Japan toward the south by force of arms; our idea is that the national movement in that direction should be allowed to take its natural course, and that anything that impedes that course ought to be removed."

The effervescing silliness of some of the metropolitan papers on the subject of the declaration about the boundary line between the territories of Japan and Spain in the Western Pacific, has called forth well deserved ridicule and a rebuke from the *Nichi Nichi Shimbun*. That Spain has shown needless anxiety and excitement in taking a precipitate step to secure the delimitation of the boundaries between her colonial possessions and Japan's newly acquired territory, is fully acknowledged by our contemporary, which also refers to the unreasonable alarm caused in Madrid in 1891 by the news that Japan had annexed three little islands in the neighbourhood of the Ogasawara-jima (Bonin) group. The Spanish Government hastily concluded that the islands in question belonged to Marianne group. That Government's action on the present occasion was caused by some irresponsible writings in the columns of an obscure Japanese newspaper. Had it been England or Russia, the utterances of such journals would have remained unnoticed. But the Spaniards, possessing the hot blood of the Latin race, their easily excitable nature would not permit them to assume an attitude of calm dignity. Indeed, their sensitiveness, in the *Nichi Nichi's* opinion, borders on a definite disorder of mental balance. Thus, so far as the conduct of Spain herself is concerned, our contemporary has little to admire; but at the same time it maintains that there is no reason why Japan should not sympathise with the fears or foibles of her friendly neighbour and treat her with consideration, especially when by so doing she is in no danger of impairing her own interests in the slightest degree. The *Nichi Nichi*, therefore, fails to understand why, as one journal states, the Japanese should feel displeased on account of the hasty conduct of the Spanish Government. Still more difficult to comprehend is the extraordinary statement made by another paper, that the declaration in question restrains the freedom of Japan's expansion in the south. "If," says our contemporary, "if by expansion he meant encroachment by force, it would be better to carry out the design at once without giving Spain time for preparation. But if the phrase be used in the sense of the promotion of our interests and increase of our influence by peaceful intercourse and commerce, then nothing is more urgent than that a new treaty should be concluded with Spain so that our countrymen may obtain the right of free access to her possessions. Would it not then be the height of folly to refuse a harmless agreement to her, and thus retard the consummation of the object of peaceful expansion in the South?" The *Nichi Nichi*, in conclusion, strongly con-

demns the ignorant and irresponsible ebullitions in which some of its contemporaries are too prone to indulge on international questions.

"CHINESE CHARACTERS."

Looking back over the long series of years that commenced with the publication of Sir E. Satow's *Kaiwa Hen*, and ended with the appearance of Mr. Gubbins' "Dictionary of Chinese-Japanese Words," we are confronted by the fact that the works emanating from officials of the British Legation and Consular Service on the Japanese language, constitute a veritable library, and bring within the student's reach everything essential to the acquisition of that most difficult tongue. If we go a little farther afield and add Mr. Chamberlain's books on the same topic, we may fairly say that Englishmen have made Japanese known to the world. It is true that a high place still belongs to Dr. Hepburn's Dictionary, and that the gratitude of students must ever be given to that indefatigable worker. Dr. Hepburn's Dictionary, however, is on the eve of being supplanted by a work three times as full, in the compilation of which only one foreigner, an Englishman, has taken part. Thus we may justly claim for our countrymen something like a monopoly of the useful work done in this line. A valuable addition has now been made in the form of a work on "Chinese characters." The author is Mr. Arthur Hyde Lay, of H.B.M.'s Consular Service. It is remarkable that, after a residence of only eight years in Japan, Mr. Lay should have been able to produce such a work: he must have applied himself with very exceptional ability. The object of the book is to place before the student a selection from the twenty thousand ideographs that form the script of the Japanese language. Think what is involved in the attempt to master the ideographs *en bloc*, without any means of sifting the useful from the little used. Such a task might well break a man's heart. The writer of this paragraph well remembers his own experience in the days before any differentiating aids were available. Submitting blindly to the guidance of an over-erudite Japanese, he discovered, at the end of eighteen months' hard toil, that he had been plodding steadily through the Radicals, learning the greater part of the ideographs belonging to each in order, without any reference to the frequency or infrequency of their occurrence in every-day literature. A dozen years of steady application might give some serviceable scholarship under such a system, but might also, and very probably would, reduce the student to imbecility. Nearly two decades subsequently, the Rev. Mr. White published a work introducing students to a thousand of the commonest characters. It was a great boon, but as its publication preceded the days of the Diet and of the political discussions that grew up under constitutional institutions, its scope soon proved insufficient. Mr. Lay has now stepped into the breach with four thousand ideographs. He seems to have derived the idea in part from the *Hochi Shimbun*, which journal, three or four years ago, published a supplement containing three thousand characters, to the use of which the editors promised to limit themselves except on very special occasions. These Mr. Lay has taken, and adding another thousand carefully selected ideographs, has published the whole in a handy little dictionary, with good paper, beautifully clear type, and a method of spacing that confers an immense boon on the eyes. We need scarcely say that the Radical basis of arrangement has been adopted; that was almost inevitable. An appendix containing personal and local names is added, and will be found very useful. Mr. Lay has conferred an incalculable boon to students, many generations of whom will call him blessed. His selection, so far as we can judge, is admirable, and in the "Shueisha" he has found a firm of printers thoroughly qualified to fulfill the typographical requirements that count for so much in a book of the kind. The only regret we feel is that the author did not add the running, as well as the square, forms of the ideographs, and also tables of the *Kana*.

IJIN.

We observe that correspondents of the *Kobe Chronicle* have been discussing the significance of the term "*Ijin*," so commonly used by the lower orders in Japan to designate foreigners. Is the word intended to convey an insult or is it not? That is the question—a question that began to be considered, within our own memory, 27 years ago and seems to be still as perplexing as ever. A writer in the *Kobe Chronicle*, signing himself "Common Sense," says:—

As there appears to be an impression prevalent among many foreign residents that the word *ijin* is employed by the Japanese as an offensive epithet, permit me to say that I am unable to agree with this opinion.

Ijin as applied to foreigners as a generic term is always written 異人, the Japanese reading being *kotonaru hito*, and the meaning merely *stranger, alien, different person, foreign person*. This is clearly shown by the following examples:—異同 *i-do*="difference and similarity;" 異言 *i-gen*="different or foreign language;" 異時 *i-ji*="different time, or another time;" 異見 *i-ken*="different opinion, or different views;" 異國 *i-koku*="foreign, strange, different, or alien countries."

I-jin is always written in books and newspapers as 異人, and every Japanese will naturally write it that way.

Some of your correspondents endeavour to show that *I*, even when written 異, has a bad sense, but this is easily explained; 異 sometimes conveys the idea of *false*, as in 異心 *i-shin*, which is translated "treason," "treachery," "disloyal heart," &c., but this meaning has only come into existence by a process of perverted ratiocination. *I-shin* 異心 should be more correctly stated as "different sentiments or views"—it has not the harsh sense of *false, disloyal, or treacherous*.

The character *i-jin* 夷人 is never employed except when writing about *barbarians*, and is used in the same way and place as we would use the words *savage* or *barbarian* in describing the natives of Central Africa.

It must be remembered that custom has almost as much to do with the sense of a word as mere etymology. In our own English language there are numerous examples to be found of several meanings attached to one word, and yet no educated man mistakes the sense in which such words are used because *custom* has assigned a clear significance to them according to *position, employment, and accent*.

To merely dig up an etymon and argue from that alone would place a man in such a dilemma that he would be unable to converse with his fellows and would be a fit candidate for a position on the building staff tower of a modern Babel.

The only distinction between the two words for foreigner—viz., *Ijin* 異人 and *Gwai-koku-jin* 外國人—sometimes abbreviated as *Gwai-jin* 外人—is that *Ijin* is the popular current word for "foreigner," while *Gwai-koku-jin* is the formal word employed by the better classes.

I claim that *Ijin* as applied to foreigners in conversation means merely "foreigner" pure and simple, that it has absolutely no hidden meaning or *double entendre* in it whatsoever. I speak Japanese easily and fluently, and have travelled in nearly every part of Japan, and have had during ten years most intimate relations with all classes of the Japanese people, so I can instantly detect how a word is used; and yet I am certain that *Ijin* as used every day by Japanese is *not* intended to convey an insult.

To these comments may be added the fact that *i*, as constantly used in parliamentary language, has simply the significance "different." When the President of either House asks whether there is any objection to a certain course, the assenting members answer "*igi nashi*" "(there is no objection;)" "agreed"), and a speaker refers to the argument of an opponent as "*go iron*." We take it to be quite certain, nevertheless, that when an educated Japanese applies the term "*Ijin*" to foreigners, he is at least guilty of a solecism. It is precisely as though an educated foreigner were to speak to a Japanese of a Japanese as a "native." There is, indeed, a difference between the histories of the words *Ijin* and "native," for whereas the former used certainly to be employed by the Japanese in a more or less opprobrious sense, it has lost that significance by familiarity, whereas the term

"native," though originally quite inoffensive, has acquired an objectionable import by being applied almost exclusively to semi-civilized peoples. An Englishman would experience a shock did he hear a Frenchman or a German say, "On landing at Portsmouth I saw a number of natives mending their nets," and there is no doubt that the Japanese equally dislike to have the term "natives" applied to their people, though it must be confessed that their very natural prejudice in this respect receives little consideration at foreign hands. As for "*Ijin*," we should say that its exact equivalent in the ears of educated Japanese is "alien," a decidedly undesirable form of speech in polite intercourse. But just as the uneducated classes in England do not include the word "alien" in their every-day vocabulary, so the uneducated classes in Japan attach no such significance to "*Ijin*." They use it in frank good faith to designate foreigners, and they even, on occasion, add an honorific "*san*," or "*sama*," thereby clearly demonstrating their wish to be polite. It must have fallen within the experience of many of our readers to hear a Japanese gentleman rebuke a labourer or tea-house waitress for employing the term "*Ijin*," when obviously neither the coolie nor the girl had the slightest intention of being impolite, but was simply ignorant of the value of the expression in educated ears.

THE NATIONAL UNIONISTS.

The National Unionists have issued a circular to the members of the party explaining their attitude on current political questions. The document shatters whatever hope may have been entertained by the Extremists of gaining the support of the National Unionists in their programme for attacking the Cabinet on the question of the Liaotung Peninsula. The circular is for the most part a narration of the share which a few prominent members of the party had in the frequent meetings convened by the Opposition politicians just after it was known that the Government had yielded to the pressure brought to bear upon it by the three allied European Powers. This part of the document is of special interest, as it affords us a glimpse into the green-room of the political stage in Tokyo. It would be tedious to follow the narrative into the details of each successive conference. It will be sufficient for our purpose to notice one or two circumstances connected with these meetings. The first thing with which one is struck in perusing the paper is that, in bringing about these conferences, the most active agents were the Progressionists. Another circumstance worth notice is that at these meetings the Progressionists strenuously endeavoured to commit all present to an attitude of uncompromising opposition to the Ministry on the Liaotung question, while, on the other hand, such an attempt was as persistently thwarted by the Radicals, the National Unionists, and a section of the Constitutional Reformists. A third point is that the proceedings at these meetings, as given in the document before us, wear an aspect essentially different from that ascribed to them in the newspaper accounts published at the time. In the latter, care was always taken to have it understood by the public that unanimity of views prevailed at these conferences and that those assembled represented their respective parties. But according to the circular under review there was no such concurrence of opinion; neither did those present—at least the National Unionists—represent their parties. Finally, the National Unionists altogether ceased to attend these meetings, as did also the Radicals. In short, judging from the circular, the National Unionists never seem to have given the least indication that they were disposed to join the Extremists in their anti-Cabinet agitation. On the contrary, they adopted a declaration on the 24th of May last, making it clear beyond doubt that, while disapproving of the conduct of the Ministry in connection with the return of the Liaotung Peninsula, they were opposed to creating any internal dissension on this question, for

the reason that questions of far greater importance demanded the undivided attention of the nation, namely, those relating to the development of the Army and the Navy. In conclusion, the circular says:—"It is now time to encourage and promote the development of industry and trade by abolishing duties on exports, extending the routes of our mercantile marine, and increasing railway facilities. Should either the Government or any of the parties dare to impede the progress of the Empire by its wanton love of political disputes, the National Unionists will never hesitate to condemn such a conduct." From the above *résumé*, it will be seen that the National Unionists have assumed an attitude of decided antagonism to the Progressionists and other Extremists on the question of ministerial responsibility for the return of Liaotung. On the basis of the calculations recently given by the *Nippon-jin*, the situation in the coming session of the Diet will be as follows:—

EXTREMISTS.	
Progressionists	53
Constitutional Reformists.....	40
Chugoku Shimpō-to	5
Ote Club	15
Jitsugyo Club	6
Economical Reformists	5
Doshi-kai	1
Non party members	3
Total.....	128
MODERATES.	
Radicals	107
National Unionists.....	31
Kishu Members	5
Choshu Members	3
Pure Ministerialists	13
Total	159
Neutrals	13

In the above table, the whole of the Constitutional Reformists are placed in the camp of the Extremists, but the circular just issued by the National Unionist party makes it plain that a section of them, led by Mr. Kawashima Jun, is inclined to a moderate course of action. At least such was its attitude until very recently. As to the Neutrals, they are described to be men who have not yet made up their minds as to the line of action they will pursue. Most of them are likely to cast in their lot with the winning side, so that it will be safe to put the majority of the Moderates at 40 at least.

THE SZECHUEN RIOTS.

Mr. Alfred Cunningham, sub-editor of the *Shanghai Mercury*, has collected and published in pamphlet form "A History of the Szechuen (or Szechuan) Riots." It is an excellent record of this most serious affair. We are somewhat surprised to find that Mr. Cunningham repeats the misapprehension originally circulated by some of the foreign journals in Shanghai, namely, that after receipt of the first intelligence relating to the riots the Foreign Representatives in Peking, with the exception of M. Gérard, "were relying, after years of similar experience, on the faith of the Emperor to keep his promise and his ability to enforce his orders if so desired." It must have been well known at the time when this pamphlet was compiled that nearly the whole diplomatic labour connected with the outrages devolved upon the shoulders of Sir Nicholas O'Connor and Colonel Denby, and that M. Gérard's share in the business was comparatively small. It is impossible to deprecate in too strong terms the immoderate criticism penned by local journalists in the Far East with reference to the conduct of British officials whenever anything unusual occurs. If a tithe of the excitement and want of mental equilibrium displayed by these writers were suffered to sway the counsels of their country's diplomats, Great Britain would never enjoy a year's peace. Demos of the Press is as illogical an outcome of the nineteenth century as is that other Demos into whose uneducated, untaught, and unwashed hands political power is unhappily drifting. Reading the "cock-sure" comments of boy editors

upon the whole science of statecraft and diplomacy, we cannot but recall the Laureate's immortal definition, "Blind and naked ignorance delivering brawling judgments all day long on all things unabashed." To return to the pamphlet, however. Inserted among the pages we find a loose leaflet with the following information:—"On Page 6, it is stated that the telegram of the U.S. Consul-General at Shanghai was refused. This is true, but that officer resented the refusal and forced his telegram through by an explicit and positive demand on the Taotai, saying that he would not allow an inquiry as to the condition of American citizens to be refused." This is conclusive as to the cause of telegraphic communication being suspended. At first the refusal of the Chinese operators to send messages was attributed to official instructions. Then a Shanghai journal published a paragraph saying that the difficulty must really be attributed to the state of the lines. But it is now plain that official obstruction was to blame, for if the United States Consul-General got his telegram through, it is evident that no mechanical obstruction existed. A terrible episode of the ten days passed in the Yamén is described by Dr. Stevenson. "Several of the ladies were quite sick, and we had but little medicine. One lady was completely prostrated, and a life was lost and its body gave us some anxiety. For what if they should find it? As a doctor I was asked to get rid of it, and I did? Shanghai friends may say this is disagreeable to write about. In the name of High Heaven, think what it is to bear these trials." The same writer describes the journey down the river:—

We were escorted out on the pre-arranged lucky day, Sunday morning, at two o'clock, by the official and a crowd of yamen runners and soldiers, and we got into our boats a tired out but rejoicing set. Let me describe the boat we had. The other boat was more crowded. We had three rooms in which three families and our servants had to live. The sick lady could not be expected to move, yet the floor of her room had to be raised often to have the old craft baled out. In the room which I had, my wife, twins and baby, and a woman servant helping one of the other families, six in all, had to move, sleep, and have our being with a temperature often above ninety. I measured the room with a chopstick; it was seven chopsticks long by six wide—about the size of a Shanghai bed. In this room the meals for the boat had to be served, and the dishes, *pu kais*, and clothes had to be stored. Water had to be cooled here and syrup was often spilled on the floor. We had orders not to show our noses outside, or at windows or door. The whole front of our room had to be nailed and bolstered up because they carelessly ran into the other boat. This also caused a dish of hot cabbage to be spilled over the legs of our three children, which burnt them badly. One (the same which was dropped on the street) did not get well for nearly a month, as all the the skin was taken off the top of the foot. She was very nervous often after that. We had to keep strictly to our rooms, for if the children had been allowed to mix there would have been a constant howl. They were riot children. Poor babes, they were sick nearly all the time.

Yet Dr. Stevenson adds, "But there have been others tried more than we. A house-boat arrived at Hankow about the time we did in which it was said everybody was sick with dysentery. Two children soon died. These might have been living now in their happy Szechuan homes had it not been for the riot." Think of that! A boat full of ladies, men, and children, "packed like sardines," for ten days, and all sick with dysentery! One bright page in the cruel history is the conduct of the missionaries' Chinese servants. They seem to have shown remarkable fidelity and courage throughout. In some places the officials, also, did everything that could have been expected. Such was notably the case at Paoning-fu and Suifu. With regard to the latter place we read:—

Dr. C. H. Finch, of the American Baptist Missionary Union stationed at Suifu, relates the story of the riot at Suifu. The missionaries at Suifu heard on Sunday, June 2nd, that their brethren at Chengtu had been attacked by the mob, and their premises destroyed. On June 3rd, the streets of Suifu were placarded to the effect that the following day the missionaries were to be attacked and their residences destroyed. The first placards were very poorly written, and contained four characters, meaning: "The foreigners are to be destroyed on 13th day of the 6th moon" (Wednesday, June 5th). The Roman Catholic priests were the first to see the placards, and they at once communicated with the Yamén, with the request that the Yamén magistrate should suppress the publication of placards and take precautions.

The *Chikien* magistrate, Kweh by name, at once doubled his forces of Chinese runners, and had all the placards they could find pulled down. On Tuesday, early in the morning, the French priests found more placards, and they again reported the matter to the Yamén. The head magistrate at once reprimanded his officials for allowing further placards to be posted and took up the matter him-

self. He ordered his men to patrol the city and arrest any suspicious characters.

On Tuesday evening, under cover of darkness, the *Chihien*, and military magistrates patrolled the streets at the head of their forces and visited all the opium dens, closing the places early, and arresting suspicious-looking individuals. The gates, both of the city and streets, were closed early. On Wednesday the result of this vigilance and action was evident. There was no demonstration by the rioters as proclaimed. More placards were, however, posted postponing the attack till examination time—the prolific period of all riots.

On Thursday night, however, the house of Mr. Warner—another American missionary—was entered. This house was situated outside the West Gate. It was entered by about a dozen men armed with knives, who commanded the servants to retire and keep quiet. The robbers took only a few articles and left. They were unaccompanied by either crowd or mob. Some time on Friday, the ladies' house next door to that of Mr. Warner's was broken into, but nothing serious resulted, the rioters being evidently afraid of the officials. On Friday afternoon, while Dr. Finch's servant was removing a few articles, the people on the street observed him, and knowing he was attached to the mission thought the missionaries were preparing to escape. A large number of people immediately collected and entered the house by the front door, and said they wanted to look around. Having obtained admittance, they commenced to lay their hands on various articles and smash the windows, and destroy the flowers. A servant was at once dispatched to the *Yamen*, and the magistrate, Kweh, immediately arrived, supported by the "and the military magistrate.

The magistrates at once stopped the riot and the *Chihien* personally chastised and arrested some of the rioters. In fact, every man found in the house and touching articles was immediately arrested and put in chains. About forty or fifty of the mob were put in chains. Whilst the arrests were proceeding the crowd hooted the magistrates, but, the ringleaders secured, the mob was soon dispersed. The *Chihien* immediately sealed up Mr. Finch's house with own seal and left several of his officers to watch and protect the premises, having previously taken an inventory of everything contained in the building. On Tuesday the following week the magistrate issued a proclamation that, as the foreigners had gone and left their property, he must protect it, and he asked the people to help him do his duty. Such was the beginning and the end of the riot at Suifu, and so far as the missionaries know their property there is in as good a condition as when they left it, they not hearing of any further attacks.

They were staying at a summer-house about five miles from the city, having removed their valuables thence, when the town was again posted. In consequence they got together their valuables and boarded two house-boats, intending to lay on the river below the city until the trouble was over. They got information on the Friday, however, from the magistrate that they were watched by robbers, and in consequence they left for Shanghai. Whilst at Chungking they heard from a native teacher that the people had threatened to take the life of the *Chihien* Kweh, who had protected the missionaries.

The missionaries' faith is certainly not to be measured by the proverbial grain of mustard seed. Dr. Stevenson writes:—"Our riot might have proved unbearable if our servants and native Christians had not under great trial proved true. We all feel that China ought yet to be the Germany of the East. Superstitions will by and by be driven away. All we ask for the great west province is that she may have more light. Our confidence is yet in Him who rules the nations." But when is the light to commence glimmering? Was the darkness ever more intense than it is now?

DISTINGUISHED SERVICE REWARDS.

The following honours were conferred at the Court yesterday by His Majesty the Emperor:—
Viscount MUTSU, Minister of Foreign Affairs.—Decorated with the Grand Cordon of the Order of the Rising Sun, and promoted to the rank of Count.

Mr. WATANABE, Minister of Communications.—Decorated with the First Class of the Order of the Mirror, and promoted to the rank of Viscount.

Mr. NISHI, Japanese Minister to Russia.—Decorated with the First Class of the Order of the Mirror, and promoted to the rank of Baron.

Lieut.-General Baron YAMAJI.—Decorated with the Third Class of the Order of the Golden Kite and the Grand Cordon of the Rising Sun, and promoted to the rank of Viscount.

Lieut.-General Baron SAKUMA.—Decorated with the First Class of the Order of the Mirror, the Grand Cordon of the Order of the Rising Sun, and promoted to the rank of Viscount.

Lieut.-General KATSURA.—Decorated with the Third Class of the Order of the Golden Kite and First Class of the Order of the Mirror, and promoted to the rank of Viscount.

Vice-Admiral IRO, Vice-Minister of the Navy.—Decorated with the Third Class of the Order of the Golden Kite and the Rising Sun, and promoted to the rank of Baron.

Lieut.-General OKAZAWA.—Decorated with the First Class of the Order of the Mirror, and promoted to the rank of Baron.

Lieut.-General Baron NOZAKI.—Decorated with the First Class of the Order of the Mirror.

Lieut.-General Baron SHIGENO.—Same as above.

Vice-Admiral HAYASHI.—Same as above.

Major-General KODAMA, Vice-Minister of War.—Decorated with Third Class of the Order of the Golden Kite and the Double Rising Sun, and promoted to the rank of Baron.

Lieut.-General KUROKI.—Same as above.

Lieut.-General OKU.—Same as above.

Vice-Admiral AIURA.—Same as above.

Lieut.-General NOGI.—Same as above.

Major-General HASEGAWA.—Same as above.

Major-General NISHI.—Same as above.

Major-General OGAWA.—Same as above.

Rear-Admiral TSUBOI.—Decorated with the Third Class of the Order of the Golden Kite and Medium Cordon of the Rising Sun, and promoted to the rank of Baron.

Major-General KURODA.—Decorated with the Third Class of the Order of the Golden Kite and the Double Rising Sun, and promoted to the rank of Baron.

Surgeon-General ISHIGURO.—Same as above.

Comptroller-General NODA.—Same as above.

Major-General OSHIMA YOSHIMASA.—Same as above.

Major-General OSHIMA HISANAO.—Same as above.

Major-General OSEKO.—Same as above.

Major-General TACHIMI.—Decorated with the Third Class of the Order of the Golden Kite and Medium Cordon of the Rising Sun, and promoted to the rank of Baron.

Rear-Admiral SHIBAYAMA.—Decorated with the Third Class of the Order of the Golden Kite and Medium Cordon of the Rising Sun.

Major-General TERAUCHI.—Same as above.

Major-General SHIOYA.—Decorated with the Third Class of the Order of the Golden Kite and the Second Class of the Order of the Mirror.

Major-General INOUE.—Same as above.

Rear-Admiral SAMEJIMA.—Decorated with the Third Class of the Order of the Golden Kite, and the Medium Cordon of the Rising Sun.

Rear-Admiral YABUKI.—Same as above.

Major-General NAGAYAMA.—Decorated with the Double Rising Sun.

Major-General YAMAGUCHI.—Decorated with the Double Rising Sun and promoted to the rank of Baron.

Comptroller-General YOSHIZAWA.—Decorated with the Second Order of the Merit and the Double Rising Sun.

Paymaster-General KAWAGUCHI.—Decorated with the Second Order of Merit and the Double Rising Sun, and promoted to the rank of Baron.

Comptroller-General NAKAMURA.—Decorated with the Second Order of Merit and the Double Rising Sun.

Surgeon-General ISHIZAKA.—Same as above.

Major-General IBARAKI.—Decorated with the Second Order of the Merit and the Double Rising Sun, and promoted to the rank of Baron.

Surgeon-General DOKI.—Decorated with the Second Order of Merit and the Double Rising Sun.

Inspector-General of Hospitals and Fleets SAN-YOSHI.—Same as above.

Major-General TSUCHIYA.—Decorated with the Second Class of the Order of the Mirror.

Major-General ATAKE.—Same as above.

Major-General ONUMA.—Same as above.

Major-General BOTSUYAKU.—Same as above.

Major-General KATSUTA.—Decorated with the Fourth Class of the Order of the Golden Kite and the Second Class of the Order of the Mirror.

Major-General OKIHARA.—Same as above.

Surgeon-General SATO.—Decorated with the Second Class of the Order of the Mirror.

Major-General ISEJI.—Decorated with the Fourth Class of the Order of the Golden Kite and the Second Class of the Order of the Mirror.

Major-General KUROSE.—Decorated with the Fourth Class of the Order of the Golden Kite and the Medium Cordon of the Rising Sun.

Rear-Admiral TOGO.—Decorated with the Fourth Class of the Order of the Golden Kite, and the Minimum Cordon of the Rising Sun.

Rear-Admiral YAMAMOTO.—Decorated with the Fourth Class of the Order of the Golden Kite and the Double Rising Sun.

Count KURODA.—Decorated with the Grand Cordon of the Rising Sun.

Mr. ITO MIYOJI.—Decorated with the First Class of the Order of the Mirror, and promoted to the rank of Baron.

THE DEATH OF MR. BROCKBANK.

Mr. Geo. Kircher, Usher of H.B.M. Court for Japan, returned from Shoji on Monday afternoon, bearing with him the exhumed body of the late Mr. Herbert W. Brockbank, whose death occurred a few days ago at an hotel at Shoji under peculiar circumstances. Mr. J. Carey Hall, the Acting Assistant Judge, in the capacity of Coroner, at once had a jury summoned to inquire into the circumstances attending the death, and the following gentlemen were empanelled, Messrs. A. C. Read, J. W. Cain, W. J. Robinson, Geo. Sale, and A. Le Prevost. The jury at once proceeded to view the body, which lay at the mortuary chambers of Mr. Hellendaal. They found that decomposition had wrought a terrible change, the features being almost unrecognisable. Drs. Wheeler, Munro, and Swan not having finished the autopsy, the inquiry was adjourned till ten o'clock Tuesday morning.

The deceased gentleman, who was about 38 years of age, came to Japan about two years and a half ago, having previously paid a flying visit to this country. He came of a family long and honourably associated with Manchester, and at once time was a partner in the firm of Carrick, Brockbank & Co., a mercantile house with a history extending back quite two hundred years. When Mr. H. W. Brockbank retired from the firm a circular was issued to its clients announcing the fact, and further stating that he was going to live abroad for the benefit of his health. Soon after arriving in Japan, Mr. Brockbank went to reside in the Miyanoshta district, but latterly he had removed to Shoji, to an hotel built near the ice-caves on the flanks of Fuji, by a naturalized Japanese named Hoshino. At the beginning of last week a medical man attended Mr. Brockbank and left him in an apparently reasonable state of health, but this same gentleman while on the way back to Yokohama was overtaken by a messenger from Hoshino, requesting him to give a certificate of death, Mr. Brockbank having just expired. This request appeared so strange that the doctor hurried on to Yokohama, with the result that the British Court took steps to bring the body into this port, and to institute a Coroner's enquiry into the circumstances attending the sad affair.

The remains were interred in Yokohama Cemetery at 8 o'clock this morning, the Rev. E. Champneys Irwine conducting the last sad rites, and Mr. C. D. Moss being the chief mourner. Two beautiful wreaths, sent as expressions of love and sympathy, were laid upon the coffin ere it was deposited in the ground.

FUNERAL OF MRS. J. H. BROOKE.

In the calm, mellow brightness of an early August morning, and amid general expressions of pure esteem and deep affection, all that was mortal of the late Mrs. J. H. Brooke was borne to its last long rest, the pretty hill-side cemetery which overlooks the busy town and bustling harbour of Yokohama. Seldom has a more impressive and affecting scene been witnessed within the precincts of the little fane of Christ Church than that which took place on Friday morning when the service was opened by the Rector, the Rev. E. Champneys Irwine: and later on in the Cemetery itself—flooded with the rich sunshine of late summer, and bright with butterflies and flowers—the grief of the many gathered around the grave was most profound. The chief mourners were the husband, Mr. J. H. Brooke, the son, Mr. E. W. Brooke, and the sons-in-law Mr. R. N. St. John and Mr. R. Home Cook. The pall-bearers were Mr. Justice Mowat, Mr. E. Whittall, Mr. J. A. Fraser, Mr. W. R. Bennett, Mr. Consul J. Carey Hall, Mr. Jas. Walter, Mr. A. J. Wilkin, Mr. J. Rickett, and Mr. J. P. Reid. As the cortège formed for the sad journey to the Cemetery, Mr. H. I. Chope played the Dead March in *Saul*. The procession, which comprised representatives from nearly every class of the community, then took its way along the Motomachi to the lower entrance to the Cemetery. The Rev. E. C. Irwine, who was deeply moved, spoke a few words at the graveside. He said—I wish to say a few words ere we close this service for the dear friend whom we are laying in the ground to-day. In doing so, I desire to offer a word of comfort to those whose feelings are surcharged with grief this morning, and to assure them that there is not one of us here, nor of those who assembled just now at Church but felt this loss as a personal loss to himself or herself; and it may comfort Mr. Brooke and his family to know that every one here feels they have lost a dear and kind friend, who to them all, in sickness and trouble, was always ready to sympathise and comfort. They re-echoed that loving sympathy which she shed upon them for so many years, and felt that they were suffering a loss in common with those who were bound by closer ties. Turning away from that sad scene, let them lift their eyes to where they trusted He who had called her away would keep her in light, peace, and rest, and where we also hope one day to see her face again. Thinking of one who was very dear to him, and who had filled a place in her circle, similar to that held by Harriet Brooke among her friends, these words came to his mind, and they applied with equal force to her whose loss they mourned that day:—

She, whom Thy voice has called away
Shall rise at breaking of Thy day,
A rose, reflecting but a ray
Of Christ alone.

Sixty-five floral tributes were sent, among them being the following:—The Journalists of the Yokohama Daily Press, "With sincere sympathy;" Mr. Andreis, Mr. and Mrs. Budd, Mr. and Mrs. Bull, Mr. and Mrs. Blad, Mr. and Mrs. Baker, Mr. Baehr, Mrs. Paul and Mr. Boag, Mr. and Mrs. Bramhall, Mr. and Mrs. Bennett, Messrs. Black, Reid, Murray, and Dickinson, Mr. J. Colomb, Mr. Collins, Mr. and Mrs. Colomb, Mr. and Mrs. Alfred Dare, Mr. Daniel, Dr. and Mrs. Eldridge, Mr. Dumelin, Mr. and Mrs. Engert, Mr. Gordon, Mr. and Mrs. Hartland, Mr. Hunt, Mr. and Mrs. Hutchison, Mr. and Mrs. Carey Hall, Mrs. Hegt, Mr. and Mrs. Healing, Messrs. Harris and Philip, Mr. and Mrs. How, Mr. and Mrs. Jackson, Mrs. Jarman, the Messrs. Kingdon, Mr. Kauffman, Mr. and Mrs. Keswick, Mr. Keil, Mr. and Mrs. Klobukowski, Mr. and Mrs. Kirkwood, Mr. Leopold, Mrs. Lowder, the Marquis and Marquise Nembrini, Mr. Edward Morriss, Mr. and Mrs. Mollison, Mr. and Mrs. Mcier, Mr. and Mrs. J. Martin, Mr. and Mrs. Mitchell, Mr. and Mrs. Mendelson, Mrs. Mason, Mr. and Mrs. Pearson, Mr. and Mrs. Parsons, Mr. and Mrs. Pereira, Mr. Pigott, Mr. Reiffinger, Mr. and Mrs.

Retz, Mr. and Mrs. J. P. Reid, Messrs. Watson, Pollard, Fraser, and Ross, Mr. and Mrs. Carter Read, Mr. and Mrs. Rickett, Mr. M. Russell, Mrs. Salabelle, Mr. and Mrs. Strähler, Mr. and Mrs. Strome, Mr. and Mrs. Thomas, Dr. and Mrs. Tripler, Mr. and Mrs. Watson, Mr. and Mrs. Whittall, Dr. and Mrs. Wheeler, the Yokohama Nursery Co., Ltd., *un Ami*, and tributes of affection from the family.

TRADE RETURNS FOR JULY.

The returns of the foreign trade of the country for the month of July last, as compared with the corresponding month of the preceding year, are as follow:—

MERCHANDISE.			
	July, 1895. Yen.	July, 1894. Yen.	
Exports	10,564,333	8,355,051	
Imports	9,396,601	9,883,227	
Total	19,960,934	18,238,278	
Exports in excess	1,167,732	—	
Imports in excess	—	1,528,176	

SPECIE AND BULLION.			
	July, 1895. Yen.	July, 1894. Yen.	
Exports	557,875	7,291,756	
Imports	175,665	3,383,037	
Exports in excess	382,210	3,908,713	

CUSTOMS DUTIES.			
	July, 1895. Yen.	July, 1894. Yen.	
1895	557,552	1894	458,708

There was thus an increase of 1,722,656 yen as compared with the trade for July last year. The total trade for the seven months of the present year amounts to 139,432,573 yen, the figures for the corresponding period of last year being 124,990,584 yen.

The quantity and value of the principal articles of Export and Import during the month of July last were as follow:—

EXPORTS.			
	July, 1895. Quantity. Value. Yen.	July, 1894. Quantity. Value. Yen.	
Raw Silk (catty)	411,866 3,507,797...	322,027 2,165,086

* Increase. † Decrease.

THE "KOKUMIN SHIMBUN."

Want of space has prevented us from referring to the *Kokumin's* latest article in answer to our comments, but we now proceed to rectify the omission. Our contemporary writes thus:—"If ever an opportunity presented itself for England to form an alliance with Japan, the Liaotung problem was certainly such an opportunity. But England remained as indifferent about the question as if she had nothing to do with it. Is such a country worthy of confidence and reliance as an ally? Has anything transpired since then to prove that she has changed for the better? That is the question that awaits solution. We do not insist that England is intrinsically a Power to be despised. What we mean is that England, as she has been and as she is, cannot be depended upon as an ally. Such is the general boundary within which we consider the present question. Diplomatic friendship or alienation is an affair of only an evening's memory. But a nation's destiny ought not to be hazarded for the sake of one or two honeyed words. If it ever becomes necessary for Japan to seek an ally among the Powers of the World, she will do so only on a footing of equality. She will never stoop to go begging for their favour. That is what we meant. Is not our position clear and unequivocal? But what did the *Mail* say? It replied to us in this strain:—"Do you speak of equality? Your spirit is excellent, but what is equality? Does the *Kokumin* seriously and honestly believe that Japan is qualified to enter into a compact of alliance with England on a footing of equality. Equality is a fine word; it signifies much when the party in question is a world-wide Empire. Is Japan prepared to fight for England in return for the latter's share in her wars? If not, there can never be equality between the two." It is evident from the above that the *Mail* does not place Japan on the same level with England. If there is to be an alliance, our contemporary maintains that Japan ought to bow her head before

England and implore the latter's charity. We are not unwilling to discuss the question when an alliance between the two countries is really on the tapis, but we do not think it worth while to continue the contest after our contemporary has confessed itself an advocate of making Japan beg for England's mercy. Our position was plain from the beginning. A consummate master of style as well as of argument, the *Mail* tries to conceal the absurdity of its own position by charging us with misunderstanding, nay wilfully misunderstanding the argument. How can our contemporary be so unmindful of the responsibility attaching to a journalistic discussion? The *Mail* says that it would object to an alliance between England and a Japan represented by the *Kokumin*. Our contemporary must, then, be considered as having surrendered to our flag. Yet, after surrendering to us, it still endeavours to convict us of being unreasonable. Is that a true specimen of English character?"

This discussion has been plunged into a morass from which we scarcely feel sufficient energy to extricate it. We have stated in the most unequivocal terms that no idea of Japan's coming cap in hand to solicit an alliance with Great Britain was ever intentionally suggested by us. The controversy had its origin in an article of the *Kokumin's* belittling England and declaring her neither sufficiently trustworthy nor sufficiently enterprising to be Japan's ally. That seemed to us a humorous assertion, but we treated it seriously, and observed that, despite such tall talk, Japan might be a little perplexed were she invited to form an offensive and defensive alliance on equal terms with an empire whose dominions are found in every part of the habitable globe. Thereat the *Kokumin* indignantly declared that we wanted Japan to humble herself before England and solicit as a mercy what she could not propose as a mutual advantage. What is one to say to such a school-girlish inference? As well assert that because a man has not the resources or the leisure to travel all round the world with a friend, therefore there can be no equal companionship between the two for a part of the way. We affirm without hesitation that in putting into our mouth words never used by us, and in deducing from our language a meaning repeatedly disavowed by us, the *Kokumin* is simply seeking to create a false prejudice against an English alliance by showing that it would involve national humiliation for Japan. We have said, and we repeat, that if such devices were endorsed by the Japanese nation, we should be sorry to see an Anglo-Japanese alliance at all. That avowal the *Kokumin Shimbun*, by some process of reasoning incomprehensible to us, construes as an admission of defeat on our part. We have no objection. The whole thing is too nebulous to distress practical folk. We find only one tangible argument in the *Kokumin's* article. It is that because England did not espouse Japan's cause against Russia, Germany, and France in the matter of Liaotung, therefore Great Britain can not be trusted or relied on as an ally. But there is another way of stating that proposition:—Because Russia conspired to rob Japan of the fruits of her victory and because England did not join that conspiracy, therefore Japan should seek an alliance with Russia and eschew one with England. How does the *Kokumin* find that view of the situation? Let us be pardoned if we remind our sensitive contemporary of one thing, namely, that Great Britain alone among European Great Powers displayed a really friendly attitude toward Japan in connection with the Liaotung Peninsula. But apparently her friendship counts for nothing with the *Kokumin* because she did not immediately strike in as an armed partizan. Is that the *Kokumin's* notion of international methods? And has it forgotten, conveniently forgotten, the kind of mien displayed by the Japanese towards England up to the moment of the Liaotung crux? Has it forgotten how every petty journalist in this country thought it a fine thing to aim his shafts of rancour against Great Britain, and has it also forgotten that its own columns were among the chief sources of that campaign

of ill-will? Where are we to search for a state that will voluntarily rush into the arena, and accept the risks of a terrible war, merely to secure the possession of conquered territory to a nation whose newspapers make a habit of belittling and traducing it? We trust that our contemporary is a typical advocate of a Russian alliance. The project will never make much progress in such hands. In conclusion we place this on emphatic record:—Never at any time in these columns has there been published anything intended to suggest, or capable of being justly construed as suggesting, that to obtain an alliance with England Japan would have to assume the attitude of a suppliant, or to humble herself in the most infinitesimal degree. What we assert is that such an alliance—supposing it to be possible, which we greatly doubt—would have to be partial; that is to say, would have to be limited to a specific purpose. The ties that connect the Dreibund in Europe are strictly limited, yet no one dreams of imagining that the three high contracting parties are not allies on an equal footing. If, after this explicit disavowal, the *Kokumin Shimbun* persists in representing us as asserting or suggesting that Japan must bow her head to seek a British alliance, we shall be compelled to conclude that it is wilfully insincere.

CHINA NEWS.

According to the latest accounts, the demarcation work of the Sikkim-Tibet frontier is still practically at a standstill, as the Chinese Commissioner does not seem to have convinced the Lhasa Lamas that their hostile attitude is indefensible. Meanwhile, the British party can only do local survey work about the passes in the intervals of the heavy rainfall.

The *N.-C. Daily News* says that the unfortunate steamer *Catterthun* had a general cargo for Hongkong and Japan, and 1,200 tons of coal on board at the time of the disaster.

The premature death at the age of thirty of a first-rate man of business, an excellent companion, and a keen sportsman, Mr. Henri Hegnauer, Manager of Messrs. E. Bavier & Co., is announced in China papers. Mr. Hegnauer was only taken ill on the 8th inst., and his death, greatly lamented by many friends, occurred within about twenty-four hours.

At the first meeting of the newly elected general committee of the Eastern Bimetallic League, the following gentlemen were chosen as office-bearers for the ensuing year, viz.:—Mr. W. S. Wetmore, President; Mr. W. H. Talbot, Vice-President; Mr. E. B. Skottowe, Hon. Treasurer, and an Executive Committee was appointed, composed of the above gentlemen as *ex officio* members, and Messrs. Geo. Jamieson, H. Kopsch, E. A. Probst, and J. L. Scott. It was decided to prosecute the work with unabated vigour, and the accession of a considerable number of new subscribers is an earnest that public interest in the cause is on the increase and that the Committee can count upon the cordial support of residents generally in their efforts.

The *China Gazette* is informed that at the request of Mr. Hippisley, Commissioner of Customs, the Shanghai Municipal Council has sent up 12 Martini-Henry rifles and 1,200 rounds of ammunition to Chinkiang for the use of the Customs Staff at that port, as there is rather an uneasy feeling there.

Sheng Taotai, the notorious Customs Taotai of Tientsin, has resigned that position and in September will take charge at Shanghai of the Imperial Chinese Telegraphs and the China Merchants' S.N. Company.

The *N.-C. Daily News* prints two letters, one from the Rev. G. B. Smyth, the other from the Rev. J. R. Hypes, upon which it asks its readers to suspend judgment, both epistles bringing serious charges against the British Consul, Mr. Mansfield. The writers assert that Mr. Mansfield was upon the point of starting for Kuliang on a two days' holiday when the news of the Kucheng Massacre reached him, but despite this he went out to Kuliang and took no steps in the matter of the massacre beyond

writing to the native officials asking for an appointment on the Wednesday following.

The French war vessels at Chefoo are to leave that port in a day or two under sealed orders.

It is reported in the *N.-C. Daily News* that the French gunboat *Lutin* has left Hankow for farther up river. Though only a small vessel she is prepared to land 100 men armed with Gatling guns, this being more than the number she can ordinarily land. It looks as if she had been re-inforced before she left Shanghai and that she means business, the more as some forty Roman Catholic stations have been destroyed recently.

It is not known what influences have moved him, but it is known, says the leading journal of Shanghai, that Colonel Denby, the U.S. Minister to Peking, has withdrawn from the Chêngtu Commission as formerly constituted by himself and the British Minister.

The prospects of getting the *Birkhall* up appear more favourable, and the attempt is now being made to lift her by means of lorchas, the pumping-out plan not having been a success.

The native papers of Shanghai report a curious case of suicide in the French Concession. A carrying coolie after placing his pole across the mouth of a well in the yard of the premises where he worked, fastened a rope to it and passed it round his neck. He then let himself down and was hanged.

A private letter of the 1st of August from Chungking mentions that Mr. Davis of the China Inland Mission at Wanshien (on the Yangtse, below Chungking) had been badly beaten. The local mandarin refused to give either of the missionaries there an audience, and was encouraging a riot. But Mr. Tratman had an interview with the Taotai at Chungking, on receipt of the news and the result was that the Taotai sent such instructions by wire as brought the Wanshien official to his senses. The examinations, remarks the *Daily News*, are in full swing at Chungking just now, but the officials are watchful and everything is quiet.

The days of hair-raising adventure are not yet passed so far as the China Sea is concerned. The light-keeper at the Saddles, according to the Shanghai papers, saw an exciting incident about a week ago. It is, of course, known that the Saddles are the hunting-ground of tribes of men who are fishermen by profession and pirates by practice. What appeared to be a big salt junk came sailing slowly along with one man at the helm and two or three sailors loafing on the deck. Two fast boats put off from the Saddles, with about ten armed men in each. The junk saw them and yawed about, trying vainly to escape. The boats pulled alongside and made fast one on each side of the junk. Instantly the junk's decks bristled with soldiers, who poured a volley from their rifles into the boats, then jumped down, killed all whom the bullets had spared, and threw the bodies overboard, after cutting off the heads of the two leaders. The apparently harmless salt junk had been chartered by a mandarin who was out pirate-hunting.

The following letter from Mr. C. F. Reid appears in the *N.-C. Daily News* under date the 12th August:—Sir,—Passing along the Rue de l'Administration this morning, not far from the Old North Gate, I saw posted in a barber's shop, in full view from the street, one of the foulest of Chou Han's pictorial placards. It was about fourteen inches square and was done up in striking colours. In the centre was a crucified pig marked with the Chinese characters for Jesus; kneeling in a semicircle around were a number of foreigners and natives of both sexes worshipping. In the foreground were several pictures of men and women too utterly indecent to be described. At the top of the placard were the characters, "Squeak of the heavenly pig-picture," but which, read aloud, have the same sound as "Church of the Lord of Heaven picture." The appearance of the placard indicates that it has been hanging in the same place a long time, and no doubt its vile meaning has soaked into the minds of many of our Chinese fellow-townsmen while they have been undergoing the manipulations of the tonsorial artist.

Cholera is making great ravages in many parts of China just at present. In Peking it is very bad, while during the past fourteen days or so, no less than fifty natives have died in one village at Yangtzepoo. The Chefoo correspondent of the *N.-C. Daily News* says it was a terrible shock to the foreign community to learn that cholera had broken out aboard the two Russian warship, *Zabjaka* and *Bobre*; and that four patients had been taken to the General Hospital, three of them in a dying condition. The ships were quickly taken across to the Lighthouse Island where the sick were landed, and the ships disinfected. Fifty men in all were affected, but only four or five died, a rate of mortality too low for genuine cholera; and though the Russians were at first inclined to fix the blame on their contractor's beef, they were ultimately satisfied to ascribe it to the bumboats; particularly when the contractor demonstrated to them that a bumboatman, rigidly restricted to supplying eggs only to the sailors, was sending aboard large numbers of peaches, etc., wrapped up in white paper! A large number of cattle throughout the province, as well as at Chefoo, have died; the supply of milk has been short, and most of people have abjured beef also; the men-of-war ceased getting beef from ashore, falling back on their own stores of preserved meats; but by now most of them have returned to the ordinary routine, satisfied that the contractor's cattle, which are brought 14 days' march from inland and herded apart in the hills behind the town, are healthy.

From a telegram appearing in the Shanghai morning journal we gather that an indignation meeting has been held at Tientsin with Mr. Dickinson in the chair. The telegraphic résumé says:—An Indignation Meeting in reference to recent outrages was held here on Saturday, and the following telegrams were sent yesterday to the Press in London and America:—"The foreign community express their sympathy with the friends of the Kucheng victims. They consider the Chinese officials guilty. Both British and Americans blame the continued apathy of their governments for the situation. They regard England's demands in reference to the Kucheng massacre as useless. As before, the officials will buy innocent heads as substitutes for the actual criminals. The community protests against the Szechuan commission and the implicated officials thereon. England and America must send an ultimatum to Peking and threaten reprisals; to trust to diplomacy is useless. The attention of the Press to the matter is implored." Messages were also sent to President Cleveland and Lord Salisbury, requesting their attention to the telegrams sent the Press.

It is reported in Chinese native official circles that an expectant *chehsien* of Hupeh, named Huang Chien-p'an has been appointed by the Wuchang high authorities to become provisional manager of the proposed Railway for the province Hupeh and that a Railway Bureau will soon be established either at Hanyang or Hankow.

The *Kiangfoo* arrived at Shanghai on Aug. 13th from Hankow having completed 600 round trips. The *Kiangfoo* was built on the old Ningpo Wharf in 1873 for the S.S.N. Co. by Mr. Coryell and was originally called the *Nanking*. Captain Bassett has been in command of the vessel since 1883, and Mr. Frank Prevost, her chief engineer, has made 540 trips in her.

Telegrams were received in Shanghai on the 13th instant announcing the wreck of the *Soochow* on the N.E. promontory. A correspondent writing to the *N.-C. Daily News* tells a story which may have some connection with this accident. He says:—On the morning of the 11th instant, signals were made from the lighthouse at the N.E. Promontory that an English man-of-war was reported ashore on the S.E. Promontory. The *Idsumi Kan*, just out from Weihaiwei, stopped and read the signal, made no answer, and then went on her way towards Japan. The *Feiching* examined the land for thirty miles down to the S.E. Promontory and past it, but saw no sign of any accident. No signals were made from the S.E. Promontory lighthouse, so they evidently knew nothing about it.

On 6th August a gloom was cast over the

whole Settlement at Chefoo by the melancholy news of the death of Capt. S. Parkhill, the much respected and universally liked Harbour-master; he had been 35 years in the Customs, and nearly six years in Chefoo.

Telegraphic news was received at Shanghai on August 11th of the sudden death of Captain Shaw, of the China Navigation Co.'s steamer *Hunan*, at Chefoo. The deceased was one of the best known navigators on the coast, and last year he was President of the Mercantile Marine Officers' Association.

Writing on the proposed grand railway from Hupeh to Peking, the *Hupao* states that Governor T'an Chi-hsün, acting Viceroy of the Hukwang provinces, received on the 29th ultimo an Imperial edict ordering him to report upon the best route for the proposed railway running through the province of Hupeh northwards, a month being given by the Emperor for the work. There are two highways to Peking used by the Imperial couriers starting from Wuchang, one passing through the districts of Hanyang, Huangpo, and Hsiaokan, and touching at Hsin-yang, the border city of Honan on the Hupeh frontier—a distance of 450 *li*, or about 150 miles. The other route, starting from Wuchang, passes also through the district of Hanyang, then to Hanch'uan, Yingch'eng, Chingshan, Chungsiang, Yich'eng, Hsiangyang, and Fanch'eng to the Honan border, a distance of 790 *li*, or about 260 miles. These two grand highways pass through mountainous districts which it would be necessary in some places to avoid. Two deputies have since been sent by Governor T'an to visit the various officials of the above named districts who are to furnish the deputies with all necessary information of the districts to be traversed in order to prepare a proper map to be sent to Peking for the Emperor's inspection. A Honan despatch also reports that Governor Liu Shu-tang of that Province has received similar instructions to prepare a map and plans for the railway that is to pass through his province.

News comes through a Soochow correspondent of a Shanghai paper that in the neighbourhood of U Kiang, the soldiers of the official who is in command of the military for the suppression of salt smuggling, have rather met their match. It seems that some of those braves, finding their own occupation neither exciting nor particularly profitable, undertook something that they thought would be; so they forthwith proceeded to lay hold upon and take by force a lot of silk belonging to the villagers of the district, whereupon a great hue and cry was raised, gongs were beaten, and the whole country-side came to the rescue with a will; with the result that in the struggle that ensued twenty-seven of the Imperialists were killed.

The *Peking Gazette* of the 22nd June, contains the following decree:—"Liu K'un-yi, Imperial High Commissioner and Generalissimo of the Imperial armies within and without the Great Wall, reports that General Ho Ying-ming, Commander-in-chief of the foreign-drilled battalions from Shansi, has been found guilty of having filled his regiments with weakly and sickly men, utterly useless for practical purposes in time of war, and also when ordered to weed his ranks of these useless characters the dismissed men made a disturbance demanding the arrears which the said General owed them. In consequence of this sixty-five rifles were secreted and could not be found. Ho Ying-ming has proved himself an incompetent and dishonest officer, utterly unfit for the high post of trust hitherto confided to him. He is therefore to be cashiered at once and to make good the value of the missing rifles. The proper Boards are to take note of the above." Verily does this seem another case of straining at the gnat while the camel is swallowed unblushingly.

The International Cotton Manufacturing Company was successfully floated in Shanghai on 15th. At a meeting of the Directors, Mr. Brand was elected chairman.

In response to a communication from the American Consul at Ningpo, the high provincial authorities at Hangchow have issued a proclamation in favour of missionary work and enjoining

all good citizens to do their best to prevent the mischievous influence of loafers and rioters.

From Peking comes the report, says the Shanghai morning journal, that the high military authorities recommended to the Throne the building of a number of huge forts encircling Peking to be armed and fortified after the latest Western pattern. This plan is said to have been suggested by a certain ex-officer in the French army.

The steamer *Soochow*, which was wrecked during a dense fog on the N.E. Promontory, while on a voyage from Woosung to Tientsin, was built in 1885 at Greenock, by Scott & Co., and engined by A. and J. Inglis of Glasgow. She was an iron screw steamer of 1,572 tons gross and 180 h.p. and was 259.7 ft. long, 33.1 ft. broad, with 25.2 ft. depth of hold. She is a total loss, and one of the insurance companies has risks on her cargo to the extent of Tls. 25,000. No lives were lost.

The Chinese native papers, according to the *China Gazette*, are quite triumphant in tone over what they term the satisfactory progress of the investigations into the Szechuen outrages. They record that the new Viceroy Liu Chuan-lin has been working at the business with the greatest energy ever since he took over the seals of office. He has deputed seven or eight officials to travel into the interior in different directions and enquire into the riots at the various places where they occurred. It has been decided that Tls. 1,000 will be sufficient to pay for the Kia-tung outrages, and something under Tls. 100 for those at Weichow. The damage done to missionary property at Chengtu has not yet been assessed, but it is estimated the amount will be somewhere within one million taels. Some of the rioters have been arrested and locked up at the prison of the Viceroy.

Cholera is still prevalent in Nanking, but seems to be slightly abating. Affairs are quiet, but much illness prevails amongst the foreigners, many of whom have been compelled to leave. Altogether the abnormal summer has had a disastrous effect in the north of China, and Shanghai according to the *Mercury*, has proportionately suffered less than the interior cities.

THE WRECK OF THE "CATTER-THUN."

We received a telegram on Monday giving details of the loss of life at the wreck of the *Catterthun*, which show that among those drowned are Captain Shannon, the first mate, the third mate, all four engineers, the doctor, and the steward. Among the passengers five Europeans were lost, three males and two females, and only four Europeans were saved—the second mate and three passengers. Thirty-two Chinese were saved, probably passengers and crew. The names of those drowned as well as the saved will be found under the head "Telegrams."

KUCHENG.

A private telegram received in Shanghai late in the afternoon of August 9th states that the entire Kwangtung province is in a state of excitement and turbulence, and grave fears are entertained that there may be further disturbance.

The following is a copy of the telegram which American citizens in Shanghai sent on August 9th to the President of the United States. It was unanimously signed by all Americans who could be found, except by those in official positions:—

PRESIDENT CLEVELAND, WASHINGTON.

Americans Shanghai unanimously protest against action Minister Denby consenting British Consul represent Americans Szechuan enquiry. Recommend reconstruction Commission with American official adequate rank, excluding implicated Chinese officials; also recommend marine escort accompany Commission.

HYKES,

Committee.

CÆSAR AND CHRIST.

TO the student of the origins of modern European civilization the two most interesting figures in history are those of JULIUS CÆSAR, the founder of the Roman Empire, and JESUS CHRIST, the founder of the Christian religion. At the first glance, the contrast between the two men is singularly instructive. CÆSAR, the Roman patrician, was before all things a man of the world; he passed his life in camps and assemblies; he was at once perhaps the greatest general and the greatest statesman that ever lived. CHRIST, the Jewish peasant, was an ascetic enthusiast; during the short period for which, at the conclusion of his life, he emerged from his native obscurity, he showed a conspicuous inability to grasp the significance of many of the most elementary relations of practical life; and though he had that singular charm of manner which inspires great personal affection in those that come immediately in contact with it, he had not a sufficiently commanding influence over even his most intimate adherents to make them trust and support him in the hour of trial. And yet, so much does the lasting influence of a man's work depend on the soil receiving it, that the importance of CHRIST can hardly be regarded as second to that of CÆSAR in opening the way along which men were to march towards the existing type of civilization.

In truth, the work of the visionary and the work of the man of action were necessary complements of each other. This is an interesting historical fact; one indeed the importance of which cannot be overrated so long as we view the matter with the clear eyes of science, and do not obscure our vision with the spectacles of theological mysticism. There are few topics in history on which more learned nonsense has been written than on the growth of the Roman Empire viewed as a "preparation in history" for the spread of Christianity. To the theologian, the simplest, most every-day occurrence appears miraculous when regarded through the mists of prejudice that the religious mind inevitably disseminates around everything connected with the origin of a cherished creed. We are told that since it is clear that but for the pre-existence of the Roman Empire Christianity would have had far more difficulty in taking possession of the western world, therefore the establishment of the Roman Empire was miraculously ordained by GOD to pave the way for Christianity. The only defect about this pretty train of reasoning is that it proves too much, for it proves that every occurrence without exception is miraculous, and thus utterly destroys the importance of any particular miracle. For of everything, however important or however insignificant, that exists at the pre-

sent time, it is true that it exists only in virtue of the pre-existence in time of a long train of antecedent conditions (commonly called causes) which, as it were, brought it into being. Had any one of those indispensable antecedent conditions failed to appear, the thing the present existence of which depends on the pre-existence of that condition would likewise have failed to appear. Therefore, by parity of reasoning with the time-worn theological argument about the Roman Empire and Christianity, that pre-existent indispensable condition was miraculously fulfilled by the special intervention of GOD's divine grace. In this sense the extension of the slave system of labour to some of the North American colonies was a miracle worked by the divine grace to lead to the American war of Secession; in this sense the coming of PERRY to Japan was a miracle worked by the divine grace to hasten the fall of the TOKUGAWA Shogunate; in this sense the adding of yeast to dough in all the bakeries of the world is a miracle daily worked by the divine will through the instrumentality of the bakers, whereby bread is made to rise and its consumers are saved from indigestion. If these things are miracles, then the growth of the Roman Empire is a miracle. If these things are not miracles, then the growth of the Roman Empire is what these things are, a condition shown on investigation to have been a necessary antecedent of the subsequent appearance of certain phenomena. Just as physical science only becomes possible by the conception of the interaction of certain inalterable physical forces, so it is only after we have eliminated from our minds these childish thaumaturgical notions that we can fruitfully proceed to the study of history.

It is only then that the interest of the mutual and collateral effects of Roman Imperialism and of Christianity becomes fully apparent. The ordinary Christian considers one side of the question only, the importance of Roman Imperialism to Christianity. He would be unwilling to change the point of view, and to regard Christianity merely as an instrument, serving a necessary place in history by its maintenance of the Roman tradition. Yet such an instrument it was. The ancient European world had two great things to hand down to us, two things that have now had their day, but were both indispensable at a certain stage in the growth of European civilization. The importance of Christianity in this respect is universally understood, and, indeed, almost universally overrated. The importance of the Roman Law and of other heritages of Roman Imperialism is known only to the few that have made a special study of the subject, but it was in no wise inferior to that of Christianity. It is well known how the Roman Empire paved the way for Christianity; but how did Christianity re-

turn this obligation by preserving for us the best fruits of the Roman Empire? Shortly, in this wise. Rome, as a physical fact, was attacked by wave after wave of barbarian invasion, and, as a physical fact, it disappeared beneath the waters. But before Roman Imperialism had been seriously imperilled by the barbarian onslaught, Roman Christianity had begun to take its place. And barbarism, though it triumphed over physical Rome, was itself subdued by the spiritual power of Christianity. Thus it came to pass that Christianity as a spiritual fact held the world together through the dark ages, and kept alive the Roman tradition, without which it would probably have been utterly extinguished. This is among the greatest of the not inconsiderable benefits that the world owes to Christianity—a benefit that alone might suffice to outweigh, as the other benefits certainly would not, the serious evils that Christianity brought in its train. We can forgive much darkening of counsel when we remember that the religion of CHRIST was indirectly instrumental in handing down to us all that was best in the statecraft of CÆSAR.

"SHOCKING AU JAPON."

MONSIEUR FERNAND GANESCO'S brochure, bearing the above somewhat bizarre title, re-opens a discussion long familiar. What path should Japanese artists resolve to tread? Ought they to adhere to the traditions and methods of their old schools, or should they seek to enter the routes of Occidental painting? These are the questions that M. GANESCO undertakes to consider and to answer. He has a charming pen. A literary artist, he may justly claim the right to criticise everything artistic. He has also another quality: that of arriving at very definite conclusions. Not the faintest shadow of doubt obscures his vision in this case. He holds that Japanese art must remain essentially Japanese or cease to possess any title to public esteem. In order to prove the correctness of this verdict he examines in detail the oil paintings shown at the Kyoto Exhibition, condemning them one and all in merciless terms. It is a field for the exercise of humour and sarcasm, and M. GANESCO exploits it to the full. One can not but laugh with him. It is his purpose to make every one laugh at these parodies of painting, and he succeeds. But we are conscious all the while that M. GANESCO touches only the very surface of his subject. What is this ancient art of Japan? What are the traditions and methods that its disciples should guard jealously against any intrusion of Occidental ideas? It is easy to ridicule the ridiculous daubs of Japanese painters in oils. It is easy to show how entirely such efforts lack any evidence of high inspiration or skilled technique. It is easy,

in their presence, to recall with reverence the charming conceptions of OKYO, of HOKUSAI, of TANYU, of MOTONOBU, and so forth. But we must know where the line of division lies between the two schools before we venture to predict the impossibility of their coalescence. M. GANESCO tells us nothing of all that. He simply sneers at the new in detail and sighs for the old *en bloc*. Once only does he give us an insight into his ideas in the form of a quotation from "Things Japanese"—"The Japanese are undoubtedly RAPHAËLS of fishes, and insects, and flowers, and bamboo-stems swaying in the breeze; and they have given us charming fragments of idealized scenery. But they have never succeeded in adequately transferring to canvas the human form divine; they have never made grand historical scenes live again before the eyes of posterity; they have never, like the early Italian masters, drawn away men's hearts from earth to heaven in an ecstasy of adoration." That is perfectly true. We endorse every word of it, though by the author of "Things Japanese"—who does not always take the trouble to be just before he is satirical—it is based on a wholly false representation of our own views. It is also endorsed by M. GANESCO. "I should not wish," he says, "to add a single word to these lines so just. They comprise admirably, in my opinion, the observations I have made on the artistic evolution in modern Japan." But surely M. GANESCO must detect the dilemma in which he places himself by endorsing, on the one hand, this analysis of Japanese pictorial art, and insisting, on the other, that the old Japanese school must be kept free from all Occidental admixtures. Does he not perceive that under the pretence of preserving for Japan the admiration accorded—as he alleges—by the Western world to her ancient art, he is condemning her to a level of marked inferiority? We have so often discussed this subject that we refrain from again setting down our views as to the excellent features and conspicuous failures of undiluted Japanese art. But this we shall say, that we could never appreciate the logic of forbidding the Japanese to strive after the better lest, in the effort, they should lose the good. No, they must challenge destiny; they must determine whether their doom is to remain sketchers and decorators, or whether they may hope to rise to the rank of painters and artists. Meanwhile, robust criticism like that of M. GANESCO is wholesome and useful. We confess that his scalpel hurts even us, his fellow-thinkers, a little. He seems so ignorant of the terrible struggle amid which these poor pictures were produced; of the painful efforts, without patrons to encourage, without purchasers to reward, without opportunities to learn, that evolved even such worthless works. Had he

known of these things, his laughter might have been less hearty.

"But what," we can fancy the reader saying, "what has all this to do with 'Shocking au Japon'?" Nothing in sooth. The fact is that M. GANESCO has chosen for his work a title borrowed from one little section of it—the section devoted to Mr. KURODA'S picture of a nude female, concerning which so much has been said. We should like to find an appropriate adjective for that picture, but the task defies us. Let the thing remain a nameless horror. How it obtained entry into the Art Gallery of the Kyoto Exhibition we can not conceive. Probably the most beautiful contours in nature are those of the human form, especially the female form. That painters and decorators should have large recourse to them is very reasonable, though nothing could possibly be less artistic than the riotous abuse of the nude perpetrated now-a-days in the field of Western art. We have nothing to say, therefore, against the principle of admitting pictures of the nude into any gallery of art, but certainly such pictures, to be admissible, must be so far idealized that the fact of nudity shall not be the only thing portrayed by them, and that to parade indecency shall not be their sole apparent purpose, as is the case in Mr. KURODA'S picture. It is not with the picture itself, however, but with M. GANESCO'S comments that we are concerned. He appears quite unable to understand why objections were raised by certain Japanese to a display of the nude in a gallery of fine arts, when the nude is everywhere to be publicly seen in Japan, in bath-houses, in the streets during rain or wind, and beside farm-houses in the country. Truly, it seems singular that misconceptions upon this score should exist in so many minds. The nude is seen in Japan, but is not looked at. Because a coolie strips himself to work with greater ease, or because a woman, taking her bath, does not court the privacy considered essential to such acts in the West, does it follow that the Japanese should find nothing shocking in the exhibition of nude figures in an art gallery? It is a question of system. In the Occident concealment is carried to excess; in Japan there is a degree of "frankness" at least equally striking. Yet in Japan the nude figure has invariably been excluded from the realm of art, because nudity is associated with vulgarity, with labour, with the life of plebeians whom necessity compels to be natural. A lady does not go to a public bath-house, any more than a gentleman takes off his shirt to toil. It is precisely because the nude has always been relegated to the ranks of the proletariat that its introduction into the realm of fine art astonishes and shocks the Japanese connoisseur.

We should like, without further comment, to take leave of this delightfully written

and wholesomely inspired brochure, but truth compels us to say that despite the note of true art instinct sounded throughout the work, despite the general justice of the criticisms and the undoubted excellence of the literary style, the book is one of the most inartistic productions it has ever been our misfortune to examine. Why did M. GANESCO associate himself with Monsieur BIGOT? M. BIGOT, when he undertakes to portray Japanese types, sees everything through an atmosphere of inexpressible coarseness. His craft—we cannot call it art—has not the smallest grain of refinement. His pictures are caricatures suggested by rancour and elaborated by spleen. All that, however, might be pardoned in its place. We could even stop to laugh at such sketches were they limned upon a hoarding or scratched upon the blank wall of an alley. But see to what the man's proclivities have betrayed him. M. GANESCO writes thus:—

The Japanese, who, out of a polite desire not to produce a painful impression, tell you with a smile upon their lips of the death of a father, a mother, a child, or a friend, weep very seldom." (Does M. GANESCO really believe this?) "In fact, I have not, for my own part seen a man or a woman shed tears in this country. The wife just widowed by war, conceals her grief. She is stoical, as have been, for the rest, all Japanese women throughout the war. Let us pay them homage. Since the days of Rome and her matrons we had lost the habit of finding among women similar examples of civic courage. I have often had occasion to read in the course of the campaign letters that astonished me by the greatness of the sentiments expressed, by the energy that they showed in their writers. 'A soldier that fights for his country,' wrote a wife to her husband, 'ought never to expect to return to his home.' 'Do not think of your promise,' said a mother to her son. 'You are now affianced to death.' 'Conquer or die,' wrote a grandmother to her grand-child. The Japanese woman—I wish to insist upon this—is energetic and strong. She has, in the highest degree, a respect for and a sense of her duties, and she forgets willingly that she is a wife, a betrothed, or a mother, in order to remember that she owes to her country everything she possesses, including the treasures of her affection and her tenderness. Under an exterior very frail, she hides great valour.

How does M. BIGOT illustrate this fine eulogy, this honest tribute to one of the noblest traits of human nature? By a sketch of a revoltingly ugly imbecile, kneeling before a half-written scroll and grinning a grin of vacant idiocy! Again, M. GANESCO speaks with genuine admiration of the motive of a picture representing the attitudes of a wife and her two children on receipt of the news that the husband and father has been killed in battle. The mother, holding the fatal letter in her hand, and the brave little lad, do not weep: the one is too patriotic; the other thinks only of the sword that lies before him and that will help him to avenge his father: but the little girl cries bitterly. How does M. BIGOT illustrate this touching and nobly conceived scene? By a picture of a little girl crying over a broken doll that lies at her feet, a doll dressed as a soldier! Any man of artistic feeling and humane sentiment must hold that the title, "Shocking au Japon," applies to M. BIGOT'S illustrations rather than to Mr. KURODA'S abominable picture. M. BIGOT has spoiled the book. He has perverted a grave and useful critique into a coarse caricature. As for M. VILLETARD DE LAGUERIE, whose name stands at the foot of the preface, he is unintentionally comical. He thinks that to tell

the truth in Japan will set the rivers on fire, and that it was reserved to MM. GANESCO and BIGOT to discover facts that have been laid before the Japanese over and over again within the past fifteen years. M. DE LAGUERIE is a Professor of History in the University of France. We advise him to collect a little more information before he undertakes to tell the history of modern Japan.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

PERSONAL REMINISCENCES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Would it be an indiscretion to ask the age of that venerable pianist, the Chevalier de Koutski? Your issue of this date says . . . "whose association with Mozart and the other musical stars of seventy years ago, has made him a veritable *répertoire* of anecdote and entrancing personal reminiscences."

Is not your musical reviewer a little wrong in his chronology? It is well known that Mozart died on the 5th of December, 1791; Weber in 1826; and Beethoven in 1827 (after a quarter of a century of ill-health and deafness).

Yours faithfully, OMEGA.
Yokohama, August 19th, 1895.

A QUESTION FOR INVESTORS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Banks having reduced interest on fixed deposits to 4 per cent., do I understand the following calculation to be correct?—H. & S. Banks are selling, say at 100 per cent. premium, that is \$362.50 per share; the dividend due on 31 December, 1895, will be £1.10.0 per share.

The rate of exchange we will assume to be 2/1 $\frac{1}{2}$, equals \$13.98 or 3.85 per cent., say, per annum 7.70 per cent.

Is not this the best investment that can at present be found? Is there any reason why the premium does not rise to the basis of 4 per cent. per annum?

Yours faithfully, INVESTOR.
August 16th, 1895.

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND ITALY.

SIGNED AT ROME, 1ST DAY OF THE 12TH MONTH, 27TH YEAR OF MEIJI.

His Majesty the Emperor of Japan, and His Majesty the King of Italy, being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending and increasing the intercourse between their respective States, and being convinced that this object cannot better be accomplished than by revising the Treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and, for that purpose, have named as their Plenipotentiaries, that is to say:

His Majesty the Emperor of Japan, M. Takahira Kogoro, Jushii, Fifth Class of the Imperial Order of the Sacred Treasure, His Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of His Majesty the King of Italy;

And His Majesty the King of Italy, His Excellency, Baron Albert Blanc, Senator of the Italian Kingdom, Knight Grand Cross of the Italian Orders of St. Maurice and Lazarus and of the Crown of Italy, His Majesty's Minister for Foreign Affairs;

Who, after having communicated to each other their Full Powers, found to be in good and due form, have agreed upon and concluded the following Articles:—

ARTICLE 1.—The subjects of each of the two High Contracting Parties shall have full liberty to enter, travel, or reside in any part of the dominions and possessions of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free and easy access to the

Courts of Justice in pursuit and defence of their rights; they shall be at liberty equally with native subjects to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort in any manner whatsoever which they may lawfully acquire, the subjects of each Contracting Party shall enjoy in the dominions and possessions of the other the same privileges, liberties, and rights, and shall be subject to no higher imposts or charge in these respects than native subjects, or subjects or citizens of the most favoured nation. The subjects of each of the Contracting Parties shall enjoy in the dominions and possessions of the other entire liberty of conscience, and, subject to the Laws, Ordinances, and Regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen, according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever, to pay any charges or taxes other or higher than those that are, or may be, paid by native subjects, or subjects or citizens of the most favoured nation.

ARTICLE 2.—The subjects of the Contracting Parties residing in the dominions and possessions of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, National Guard, or militia; from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

ARTICLE 3.—There shall be reciprocal freedom of commerce and navigation between the dominions and possessions of the two High Contracting Parties.

The subjects of each of the High Contracting Parties may trade in any part of the dominions and possessions of the other by wholesale or retail in all kinds of produce, manufactures, and merchandize of lawful commerce, either in person or by agents, singly, or in partnerships with foreigners or native subjects; and they may there own or hire and occupy the houses, manufactories, warehouses, shops, and premises which may be necessary for them, and lease land for residential and commercial purposes, conforming themselves to the Laws, Police, and Customs Regulations of the country like native subjects.

They shall have liberty freely to come with their ships and cargoes to all places, ports, and rivers in the dominions and possessions of the other which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects, or subjects or citizens of the most favoured nation, without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, Corporations, or establishments of any kind, other or greater than those paid by native subjects or subjects or citizens of the most favoured nation, subject always to the Laws, Ordinances, and Regulations of each country.

ARTICLE 4.—The dwellings, manufactories, warehouses, and shops of the subjects of each of the High Contracting Parties in the dominions and possessions of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to, such dwellings and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the Laws, Ordinances, and Regulations for subjects of the country.

ARTICLE 5.—No other or higher duties shall be imposed on the importation into the dominions and possessions of His Royal Italian Majesty of any article, the produce or manufacture of the dominions and possessions of His Majesty the Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the Emperor of Japan of any article, the produce or manufacture of the dominions and possessions of His Royal Italian Majesty, from whatever place arriving, than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of the dominions and

possessions of either of the High Contracting Parties, into the dominions and possessions of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

ARTICLE 6.—No other or higher duties or charges shall be imposed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article to the dominions and possessions of the other than such as are, or may, be payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two Contracting Parties to the dominions and possessions of the other which shall not equally extend to the exportation of the like article to any other country.

ARTICLE 7.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other exemption from all transit duties, and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities, and drawbacks.

ARTICLE 8.—All articles which are or may be legally imported into the ports of the dominions and possessions of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in Italian vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and, reciprocally, all articles which are or may be legally imported into the ports of the dominions and possessions of His Royal Italian Majesty in Italian vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Italian vessels. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid and the same bounties and drawbacks allowed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese or in Italian vessels, and whatever may be the place of destination, whether a port of either of the Contracting Parties or of any third Powers.

ARTICLE 9.—No duties of tonnage, harbour, pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public functionaries, private individuals, Corporations, or establishments of any kind, shall be imposed in the ports of the dominions and possessions of either country upon the vessels of the other country which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

ARTICLE 10.—In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the dominions and possessions of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

ARTICLE 11.—The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the Laws, Ordinances, and Regulations of Japan and of Italy respectively. It is, however, understood that Japanese subjects in the dominions and possessions of His Royal Italian Majesty; and Italian subjects in the dominions and possessions of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are or may be granted under such Laws, Ordinances, and Regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Royal Italian Majesty, and an Italian vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Majesty the

the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the Laws and Custom-house Regulations of the two countries.

The Japanese Government, however, agrees to allow Italian vessels to continue, as heretofore, for the period of the duration of the present Treaty, to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata, and Ebisuminato.

ARTICLE 12.—Any ship of war or merchant vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, he shall be bound to conform to the Regulations and Tariffs of the place to which he may have come.

If any ship of war or merchant vessel of one of the Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the district of the occurrence, or if there be no such Consular officer, they shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of His Royal Italian Majesty shall take place in accordance with the Laws, Ordinances, and Regulations of Italy, and reciprocally, all measures of salvage relative to Italian vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan shall take place in accordance with the Laws, Ordinances, and Regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furnishings and appurtenances belonging thereunto, and all goods and merchandize saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents, when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls, or Consular Agents upon being claimed by them within the period fixed by the laws of the country, and such Consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of the wreck of a national vessel.

The goods and merchandize saved from the wreck shall be exempt from all the duties of the Customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects of one of the Contracting Parties is stranded or wrecked in the territories of the other, the respective Consuls-General, Consuls, Vice-Consuls, and Consular Agents shall be authorized, in case the owner or master, or other agents of the owner, is not present, to lend their official assistance in order to afford the necessary assistance to the subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

ARTICLE 13.—All vessels which, according to Japanese Law, are to be deemed Japanese vessels, and all vessels which, according to Italian Law, are to be deemed Italian vessels, shall, for the purpose of this Treaty, be deemed Japanese and Italian vessels respectively.

ARTICLE 14.—The Consuls-General, Consuls, Vice-Consuls, and Consular Agents of each of the Contracting Parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects of the country where the desertion takes place.

ARTICLE 15.—The High Contracting Parties agree that, in all that concerns commerce and navigation, any privilege, favour, or immunity which either Contracting Party has actually granted, or may hereafter grant, to the Government, ships, subjects, or citizens of any other State, shall be extended immediately and unconditionally

to the Government, ships, subjects, or citizens of the other Contracting Party, it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

ARTICLE 16.—Each of the High Contracting Parties may appoint Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents in all the ports, cities, and places of the other, except in those where it may not be convenient to recognize such officers.

This exception, however, shall not be made in regard to one of the Contracting Parties without being made likewise in regard to every other Power.

The Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions, and immunities which are, or may hereafter be, granted to Consular officers of the most favoured nation.

ARTICLE 17.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other the same protection as native subjects in regard to patents, trade-marks, and designs, upon fulfilment of the formalities prescribed by law.

ARTICLE 18.—His Royal Italian Majesty's Government, so far as they are concerned, give their consent to the following arrangement:—

The several foreign Settlements in Japan shall be incorporated with the respective Japanese communes, and shall thenceforth form part of the general municipal system of Japan.

The competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such Settlements, shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place the existing leases in perpetuity under which property is now held in the said Settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property. It is, however, understood that the Consular authorities mentioned in the same are in all cases to be replaced by the Japanese authorities.

All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said Settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

ARTICLE 19.—The present Treaty shall, from the date it comes into force, be substituted in place of the Treaty of Amity and Commerce of the sixteenth day of the seventh month of the second year of Keiou, corresponding to the twenty-fifth day of August one thousand eight hundred and sixty-six, and the additional Convention of the same date, and all Arrangements and Agreements subsidiary thereto concluded or existing between the High Contracting Parties; and from the same date such Treaty, Convention, Arrangements, and Agreements shall cease to be binding, and in consequence, the jurisdiction then exercised by Italian Courts in Japan, and all the exceptional privileges, exemptions, and immunities then enjoyed by Italian subjects as a part of or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

ARTICLE 20.—The present Treaty shall not take effect until the sixteenth day of the seventh month of the thirty-second year of Meiji, the sixteenth day of July one thousand eight hundred and ninety-nine. It shall come into force one year after His Imperial Japanese Majesty's Government shall have given notice to His Royal Italian Majesty's Government of its wish to have the same brought into operation. Such notice may be given at any time after the sixteenth day of the seventh month of the thirty-first year of Meiji, the sixteenth July, one thousand eight hundred and ninety-eight. The Treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same and at the expiration of twelve months after such notice is given this Treaty shall wholly cease and determine.

ARTICLE 21.—The present Treaty is written in six copies, viz.: two in the Japanese, two in the Italian, and two in the English language, and in case of dispute, the English text shall be considered as the original one.

ARTICLE 22.—The present Treaty shall be ratified, and the ratifications thereof shall be ex-

changed at Tokio as soon as possible, and not later than six months from the present date.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seal of their arms.

Done at Rome, this first day of the twelfth month of the twenty-seventh year of Meiji.

[L.S.] TAKAHIRA KOGORO. [L.S.] BLANC.

PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of His Majesty the King of Italy, deeming it advisable in the interests of both Countries to regulate certain special matters of mutual concern, apart from the Treaty of Commerce and Navigation signed this day, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

1.—It is agreed by the Contracting Parties, that one month after the exchange of the ratifications of the Treaty of Commerce and Navigation signed this day, the Import Tariff now in operation in Japan in respect of goods and merchandize imported into Japan by the subjects of His Majesty the King of Italy shall cease to be binding. From the same date, the General Statutory Tariff of Japan for the time being in force shall, subject to the provisions of Article nineteen of the Treaty of one thousand eight hundred and sixty-six at present subsisting between the Contracting Parties as long as the said Treaty remains in force and thereafter, subject to the provisions of Articles five and fifteen of the Treaty signed this day, be applicable to the goods and merchandize, being the growth, produce, or manufacture of the dominions and possessions of His Royal Italian Majesty, upon importation into Japan. But nothing contained in this Protocol shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food, or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs, or any other indecent or obscene articles; articles in violation of patent, trade-mark, or copyright laws of Japan; or any other article which for sanitary reasons, or in view of public security or morals, might offer any danger.

It is, however, understood that in the event the application of the most favoured nation principles regarding customs duties which are guaranteed by the treaty signed this day as well as by this Protocol should be found unsatisfactory in actual practice, the two Governments will agree to substitute conventional tariffs in respect of those articles in the export of which they are each especially interested.

In all other respects the stipulations of the existing Treaty and Convention shall be maintained unconditionally until the time when the Treaty of Commerce and Navigation signed this day comes into force.

2.—The Japanese Government, pending the opening of the country to Italian subjects, agrees to extend the existing passport system in such a manner as to allow Italian subjects, on the production of a certificate of recommendation from the Italian Representative in Tokio, or from any of His Majesty's Consuls at the open ports in Japan, to obtain upon application passports available for any part of the country, and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tokio, or from the chief authorities in the Prefecture in which an open port is situated; it being understood that the existing Rules and Regulations governing Italian subjects who visit the interior of the Empire are to be maintained.

3.—The Japanese Government undertakes, before the cessation of Italian Consular jurisdiction in Japan, to join the International Conventions for the Protection of Industrial Property and Copyright.

4.—The present Protocol is written in six copies, viz.: two in the Japanese, two in the Italian, two in the English language, and in case of dispute, the English text shall be considered as the original one.

5.—The undersigned Plenipotentiaries have agreed that this Protocol shall be submitted to the two High Contracting Parties at the same time as the Treaty of Commerce and Navigation signed this day, and that when the said Treaty is ratified the agreements contained in the Protocol shall also equally be considered as approved, without the necessity of a further formal ratification.

It is also agreed that this Protocol shall terminate at the same time the said Treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Rome, this first day of the twelfth month of the twenty-seventh year of Meiji.

BISHOP HENDRIX VISITS JAPAN.

By the action of the College of Bishops of the Methodist Episcopal Church, South (U.S.A.), the Rev. Bishop Eugene R. Hendrix, D.D., LL.D., has been assigned to Episcopal supervision of the Mission Conferences of his Church in Japan and China. The Bishop has just arrived in Japan, coming as one of the passengers in the *Empress of India*, and is to preside over the Japan Mission Conference to be convened August 29th, in Kobe. Bishop Hendrix was educated in New England, being an alumnus of the Wesleyan University at Middletown. He pursued his theological course in Union Seminary, New York City, of which he is a graduate. Rising early to a prominent position in his communion, he was for several years the president of Central College in Missouri, and is now one of the trustees of Vanderbilt University. About ten years ago he was elevated to the Episcopacy, and as the representative of progress, as a preacher and platform speaker, and as a wise Chief Pastor in administration, he exerts a strong influence in the Episcopal College and throughout his Church. Besides progressive culture and extensive travel throughout the world, he is a man of affairs. Descended from an old Maryland family, his father was prominent in business circles, and as a friend of education, his brother, the Hon. Joseph Hendrix, recently a member of Congress from New York, is the president of a leading banking house in New York City. About twenty years ago, with the lamented Bishop Enoch Marvin, he made a tour of the world for the study of Foreign Missions, including among other fields Japan and China; since which time he has followed closely the course of events in the East and the rapid march of progress of the Japanese nation. Though so well conversant with the great national and commercial problems of the Eastern Nations, he is none the less deeply interested in their evangelization. For many years he has been personally concerned in the cause of Foreign Missions, and indeed so strong was his zeal that he became financially responsible for the support of the first Missionary sent to China after the civil war by the Missionary Society of his Church. The friends of the "Mission of the Inland Sea" are to be congratulated upon the coming of Bishop Hendrix, for doubtless his visitation will bring much and varied good. We are sure he can but mark the great change that has taken place in Japan since his former visit twenty years ago.

THE KARUIZAWA CONFERENCE.

Karuzawa continues to be a favourite summer resort. The present season witnesses perhaps a still larger number of visitors than usual. Several new houses have been built, and these, with the houses already erected, and those for rent in the village, are all occupied, while the new Mampei Hotel has its full complement of guests. The weather here in July, as elsewhere throughout Japan, was anything but favourable, but August has brought a happy change, and a more lovely time for excursions, tennis, conference, and so forth, could scarcely be desired.

The Annual Conference was opened on the 12th inst., and continued on alternate days during the week, holding morning and evening sessions.

Dr. MacGregor, of Amoy, presided at the opening session on Monday morning, the subject being "Mission Work in China and Formosa." After the opening exercises, the Chairman addressed the meeting on the general topic of Formosa. He compared the physical character of the island with that of South America, having a long mountain chain running through it from end to end. On the west was a great plain, the best part of the island. Formosa was first made known to the world by the Dutch traders and by missionaries. The first occupation of the island by the Chinese took place during the Ming Dynasty. They settled on the west plain, driving back the aborigines into the mountains. The present inhabitants are: 1st, the Chinese living on the plain; 2nd, natives who have assimilated the Chinese civilization and live in the foot hills; and 3rd, the natives who still exist in their primitive savage condition in the mountains. Work in Formosa is carried on entirely by the English Presbyterians, who have made quite a good beginning in the island. In reference to the proposal made by the Synod of the Church of Christ in Japan to bring the Church in Formosa into organic union with the same body here, he thought the question of a different language was the chief difficulty.

The next speaker was Rev. Mr. Stanley, of the American Board Mission in Tientsin, who went to China in 1862. After referring to the history of the opening up of mission work in that part of China by the French and English wars, and of his

own arrival in Tientsin, he mentioned that the first convert in that place was a blind man who was baptized on Christmas Eve, 1862, and afterward proved an earnest Christian worker—"the blind leading the blind." Seven stations are connected with their mission, and a native membership of about 1,800, all the societies working in that region having a total membership of about 10,000. Physically no field could be more discouraging than Tientsin on account of the floods which repeatedly deluge the whole region round about. The present outlook of Christian work is good, never better: the war affected the work very little.

Mid-China was represented in the Conference by Dr. Parker of the Methodist Mission, who, going to China in 1875, was located at Soochow. Soochow is a large city, 4 by 2 miles, surrounded by a large wall of brick and stone, and having a population of 500,000. The history of the city begins 519 B.C., and was founded by a son of the Emperor Chow. It is a hard part of China to work in, converts being less than in other parts. Four denominations occupy the city. All forms of work are carried on, education, evangelistic, and medical. Ten to fifteen thousand patients are treated in the hospitals every year. Dr. Parker himself is engaged chiefly in school work, and spoke in detail of that work, its grade, and method of carrying it on.

Following this, the Rev. G. Hartwell, of the Canadian Methodist Mission at Chengtu, spoke for west China. After describing the journey up the river from Shanghai, which occupies about three months, he gave a glowing description of the city of Chengtu and the province of Szechuan in which he had been working for about three years. The province is a broad, beautiful, and fertile plain, well irrigated, and the chief productions are rice, wheat, and opium. The city itself is one of the finest in China, well laid out, with broad and well-kept streets, and surrounded by a wall 40 ft. high and 40 ft. thick. It is in this city that the recent riots occurred, and Mr. Hartwell's description of them was so vivid that one could almost imagine oneself to have witnessed them.

The last speaker of the morning was Dr. Hart, of the London Mission, located in Hankow, who spoke for Central China. He remarked that Hankow was the heart of China, a city of 1,250,000 dirty, filthy residents, and celebrated for "smells, pigs, and people." It promised to become the great railroad centre of China. The speaker, among other things, referred to the great good accomplished by tracts, which were always sold, and gave a remarkable instance in which a whole village was converted mainly by the reading of Christian books.

At the Monday evening session, the Rev. E. S. Booth, of Yokohama, presided, and after the opening exercises, introduced Dr. Ashmore, of the Baptist Mission, located at Swatow, Canton Province, who spoke as the representative of South China. Dr. Ashmore delighted his audience with his stirring and enthusiastic address, lasting an hour and a half. He is one of the oldest missionaries in China, having been in the service about 45 years. After a few reminiscences of his first impressions as a missionary and his earlier associations with such men as Burns, Goodslough, Happer, and others, he went on to say that the work in South China was not so progressive as in other parts, and the reason was the strong anti-foreign sentiment that existed among the people of that section. He affirmed that the people had a reason for their prejudice against foreigners, remembering the days of the infamous opium traffic and the even more iniquitous coolie traffic, of which he himself was an eye-witness in the earlier days of his missionary life; but although the field of South China was a difficult one, it was not so difficult as it used to be. The people are coming to give a more favourable hearing to the Gospel, and Christians are not so much persecuted. He urged upon his fellow-labourers the necessity of not allowing themselves to grow discouraged if results were not visible. The duty of the Christian worker was to bear witness to the truth and it was God's part to give the fruitage. The policy of his mission in training native workers was to get a class of men who would go out and preach, not to the *literati*, but to the multitudes. The speaker regarded the past religious history of China as specially providential to the introduction of the Christian faith. He thought the Almighty had allowed China to try all the devices of human wisdom before bringing to them the divine wisdom in order to teach them the insufficiency of the former and the necessity of the latter. The next point upon which the speaker touched was God's answer to prayer in opening up China. All these wars, English, French, Japanese, marked a stage of progress in favour of Christian missions, and, he believed, were God's means of answering the prayers of Christian people to open China to the

Gospel. Speaking in particular of the late war, he said that for the last 10 or 15 years China had been on the back track, more or less. A national conspiracy had gradually been taking shape to crowd the foreigner out, and especially the missionary; who had penetrated the farthest into the interior. Had the war been with some western nation, very few of the missionaries would have escaped with their lives. But God chose his time and nation; He had been preparing a nation that had no missionaries in China to deal another blow at the hard conservatism of that country. He believed that the religious results of the war would issue in favour of Christian missions, notwithstanding the recent outbreaks and the sad stories lately come to us of the loss of missionary life. By this war a tremendous blow has been struck at the system of Confucianism and at the *literati* party of China. China was now beginning to see the necessity of a new system of education, and when she once breaks away from the old fetters it will mean new life to Christian missions. Dr. Ashmore closed his most interesting and eloquent address with an account of what he had recently seen of the movement of the Young People's Society of Christian Endeavour in the United States, and especially as manifested at the Cleveland Convention last year. He regarded this movement as one of the greatest encouragements to the success of mission work in modern times.

SECOND DAY.

The Sessions of this day were devoted to Ladies' Work. The morning session was taken up with the subject of China and Formosa.

Mrs. W. J. White was in the chair, and after a few introductory remarks relative to the interest of the work in China and expressing grief at the sad loss of life at the recent massacre near Foochow, introduced Miss Stewart, who spoke for the Women's and Girls' Work in Formosa. The head-quarters of the Missionaries are in Taiwanfu, the capital, a city of 150,000 inhabitants, where they have established schools, book and printing rooms, hospitals, and so on. Miss Stewart gave an interesting account of the work as carried on both among believers and unbelievers. Traveling is perfectly safe in the island, and tours frequently undertaken lasting from one to two months. A recent revival has given great encouragement to missionaries. Following this, Mrs. Drummond, of Nanking, spoke on the subject of foot-binding. She began by saying that it was a perplexing question on account of the different views held regarding it. Practically all the women in China, except dancing girls and prostitutes practice it to a greater or less extent. The origin of the custom is unknown. One tradition says that a former emperor's concubine, who bound her club-feet in order to straighten them, was the originator of this practice, and upon her liege expressing his admiration upon the result, it speedily became the fashion. Another account is that it was forced upon the women by the men in order to keep them at home. Suffice it to say it effectually prevents them from walking. The speaker next gave a vivid account of the manner of binding the feet; of the great suffering accompanying it, and compared the appearance of bound feet to a donkey's hoof. The present policy of their school is to compel the girls to unbind their feet as a condition of entrance.

The next speaker was Miss Latimore, also of Nanking, who spoke on women's work generally. The two great difficulties that met them were, firstly, that the people did not want them and that they were merely "foreign devils" who were there in some way to injure them. Secondly, to convince the people that they were really human beings and not spirits, as their white skin caused them to believe. Missionaries had first to convince the people that they were one kith and kin, with the same troubles, sorrows, sickness, and so forth, and that they had not come to injure but to help.

Mrs. Hart, of Hankow, was to have spoken, but was prevented by the sad news of the death of one of her relatives, a missionary in China.

The evening session was presided over by Miss Gundry, of the "Friends" Mission, Tokyo.

Miss Winn, American Presbyterian Mission, was the first speaker. She read a paper on "Evangelistic work in the Interior of Japan." Miss Winn's work has been for a number of years in Morioka, in the north. She had been seven years in school work before going into the interior, and found on beginning her new work that several months had to be spent in learning and unlearning lessons, to prevent making mistakes. Put in a nutshell, her duties as an evangelistic worker in the interior consist of visiting and receiving visits, holding Sunday-schools, training Sunday-school teachers, and teaching English. Sunday-schools

are not confined to Sundays, but are opened on week-days after school, when boys and girls, grandmothers and babies, are gathered into little groups and taught the way of life. Great difficulty is found in getting Christians to keep the Sabbath. In connection with contributions for church purposes, Miss Wina tries to teach the Christians to consider giving a part of their Sunday worship as well as singing or praying. The above is the barest outline of a very interesting paper.

Miss Whiteman, of the American Baptist Mission, gave an account of evangelistic work in the neighbourhood of Tokyo. The leading features of her work have been tract distribution, children's meetings, talking to people by the wayside, and holding meetings in the inns.

Miss Claggett, of the same Mission, gave an address which dealt with work in the Asakusa district of Tokyo. The work began with house to house calling, giving tracts and conversing with the people. Then children's meetings were opened. The work has gone on for five or six years. The steps of the Christian workers have been dogged by the Buddhist priests. Often the lady missionary has met the priest coming out of a house as she went in, or entering as she came out. Evil results have followed these exertions of the priests. Sundry threats on the part of the priests, notably the threat to neglect the graves of their children have been effectual in keeping many of the women from meetings which they had once gladly attended. Asakusa is a priest-ridden district and the centre of heathenism in Tokyo.

Miss Spencer, of the Methodist Episcopal Mission, gave some information about Bible-women's work. The work of their church includes nine districts, from Hokkaido to the Loo Choo Islands. In all there are thirty Bible-women scattered through these nine districts. In each district a lady missionary—either an unmarried lady under the Women's Society, or the wife of a missionary under the general Society—superintends the work of the Bible-women. Statistical blanks are issued which the Bible-women pass in every month, recording the number of visits made, times when religious conversation was held, prayers offered, etc. The magic lantern is used frequently, and is found to be a wonderful help in educating the people in scriptural things and dispelling grotesque and mischievous ideas about Christianity. The Christians sometimes assist in paying the salaries of the Bible-women.

At this point in the meeting a duet, "The Master stood in His Garden," was sweetly sung by Mrs. G. W. Taft and Miss Belton.

The balance of the evening was given to questions, relating chiefly to women's work and girls' school work. In answering these questions a number of short, but excellent and instructive, addresses were given by ladies connected with various missions.

At the close of the meetings, a committee of ladies was appointed to draft a letter of sympathy to Dr. and Mrs. Hart, of the London Missionary Society, Hankow, at present in Kaniizawa, who had just received news of the death of Mrs. Hart, their sister-in-law, in Central China.

THE DEATH OF MR. BROCKBANK.

INQUEST.

Mr. J. Carey Hall, acting as Coroner, opened the inquiry into the circumstances attending the death of the late Mr. Herbert William Brockbank—who died at Shoji last Wednesday—at the British Court on Tuesday morning. The Jury were Messrs. A. C. Read, Geo. Sale, W. J. Robinson, A. Le Prevost, and W. J. Cain.

Dr. Edwin Wheeler, sworn, deposed—I knew the deceased while he was alive, and I identified the body by two tattoo-marks on his left forearm. I performed the post mortem examination last evening, assisted by Dr. Munro, Dr. Swann, and Dr. Rokkaku. The body was in such a highly putrescent state that very little could be made out of a post mortem examination. Signs of external violence could not be made out properly. I will state the portions of the body which we found diseased. The right side of the heart was dilated and the walls atrophied. The walls of the left side of the heart were also affected: the valves were intact, but there was fatty degeneration of the walls. The liver was enlarged. The kidneys were slightly enlarged and flattened. The brain was semi-fluid, much decomposed, and in parts unrecognisable. I removed the stomach and contents, also portions of the liver and kidneys, in order that they might be sent to Dr. Divers in Tokyo, for further examination. I

could not state the cause of death satisfactorily from the evidence adduced by the post mortem examination. Several of the organs were diseased. Decomposition had advanced to such a degree that I could not satisfactorily state the cause of death. I could only surmise it. I was surprised at the state of the body, not expecting to see decomposition so far advanced. In my opinion death must have taken place six days ago, although it must be allowed that in this hot weather decomposition quickly sets in. The deceased, too, had been in a delicate state of health for some time, and the tissues of the body were poor and much exhausted.

Dr. Niel Gordon Munro, sworn, deposed—I assisted Dr. Wheeler in his post mortem examination of the body of the late Mr. Brockbank. I have heard Dr. Wheeler's statement, and I think there is a little to add to it. The question of the time that has elapsed since death occurred is of course merely a matter of opinion, but I don't think it should be placed at six days. So many things have to be taken into consideration—whether the body has been interred in the earth, left in a current of air, etc.—and I think it is really impossible to state how long deceased has been dead. I quite agree with Dr. Wheeler that the state of decomposition was such that no opinion can be definitely formed as to the cause of death. The sudden withdrawal of all stimulants may have induced heart failure, but this is merely conjecture.

To Mr. Sale—There were no external marks of violence to be seen, except two bruises on the knees, which had been treated with Friar's Balsam; but decomposition had been too rapid to allow of tracing any marks of violence externally.

To the Coroner—I can form no opinion as to the cause of death—none at all. The body may have been dead from four days to two weeks, beyond that I cannot go.

The Coroner—Do you think that death could have been due to natural causes?

Dr. Munro—I could form no absolute opinion on the matter. The causes which might have induced death in this case may have been heart disease, on kidney disease, though personally I think from the result of the post mortem examination that deceased might have still been living, as the diseases were not far advanced. But the state of decomposition was such that it is impossible from my own observation and judgment to state what was the cause of death.

The Coroner—Do you think there could have been foul play. Could you see anything of that description?

Dr. Munro—No: it is quite impossible to say anything beyond what we have said, the state of decomposition was too advanced. There were no external marks of violence beyond the two bruises I have mentioned, while as to the state of the organs we must await the results of the chemical analysis.

Dr. J. H. Swann, sworn, deposed—I am a medical practitioner, and professionally visited the late Mr. Brockbank at Shoji. I was asked by Dr. Munro, on Saturday week last, the 10th inst., if I would go out to attend the deceased at Shoji. I left at 10.45 at night, and arrived at Shoji about 4.15 or 4.30 p.m. on Sunday. After arriving I had a conversation with Mr. Hoshino. He told me that Mr. Brockbank had been up to Miyanoshita and had got "on the spree"—drinking heavily—and that he, Hoshino, had brought him to his own place at Shoji. Hoshino said that a Doctor at Miyanoshita had told him that unless deceased was taken away from Miyanoshita, he would soon drink himself to death. Hoshino said he had great trouble in bringing the deceased to Shoji, and that he (deceased) had nearly died on the way. Hoshino then described to me the condition in which Brockbank was then lying. I then went and saw deceased. When I arrived at the deceased's room I found that the door was locked. Hoshino explained this by saying that he had locked the door so as to prevent the Japanese seeing Brockbank in his present condition. On the door being opened, the stench coming from the room was something awful. The deceased was lying naked on the bare floor, quite delirious. No covering of any sort was near. The lower extremities of his body were covered with the man's own excrement. There were two abrasions on both elbow joints and also on the knees. Hoshino then asked me if I had ever seen such a sight as this before. I said, "Certainly not, except among lunatics or imbecile patients." Hoshino and myself then placed the deceased on a mattress. I examined deceased and found that he was suffering from, I think, acute delirium tremens. He had all the symptoms of a man who was really dying. On physical examination, I found that the heart was affected; also that he had enlargement of the liver. The lungs I found were healthy, but as to the kidneys I could not really say, as I had not an instrument with me to examine the urine. I

then told Hoshino, that Mr. Brockbank was really very ill, and to stop all stimulants, and to give him plenty of nourishing soups and beef-tea. He said, Certainly, he would give deceased everything he wanted. After leaving the room, I made up a draught, which deceased took and then went to sleep. In the morning I found my patient a good deal better, and the delirium partly gone. I then administered another draught. I saw him again in the middle of the day (Monday). In the evening I saw deceased again, and he was now quite rational. The dropsy had disappeared from the body, with the exception of the ankles. That same night I gave deceased another draught, and found next (Tuesday) morning, more or less to my surprise, that Mr. Brockbank was quite rational and I might say convalescent. I examined him again, and the only thing I could find wrong was the heart, which was slightly affected, and the liver enlarged. I then had a long talk with Mr. Brockbank, and warned him that if he did not give up drinking, it would kill him. I don't think I saw him after this conversation, which took place on Tuesday night. I left him then, in my opinion, quite recovered. I got up about half-past five o'clock on Wednesday morning. Mr. Hoshino came to my room and told me that he had word that there were two bicyclists coming along to his place. I told him then that I had to get away, as the ship I was on, the *Hankow*, was to leave on Saturday. I asked him how Mr. Brockbank was then, and he told me that he was all right, going along the same as usual, and that there was no necessity for me to see him that morning. Then Hoshino mentioned my account, and told me that he thought Mr. Brockbank was too shaky to sign a cheque. I told him that it really did not matter, as Dr. Munro would settle with me, and Hoshino said, Yes, that would be the best way to settle matters. I had my breakfast and left the hotel. This was about 10 o'clock, I think. Hoshino gave me instructions as to the nearest route home, advising me to go down the rapids. I climbed the hill to do so, but finding it very hot, came down again, and in passing the house saw Mr. Hoshino. He asked me to come in, but I declined as I wanted to be getting on. I stopped at a little village over night. Next morning, about half-past eight, as I was passing through a small village, Kameida I think you call it, where one takes the tram on the Shoji side, I was resting myself, when I saw a waggon and horse galloping toward me. The driver stopped when he saw me, and handed me a letter from Hoshino. This letter stated that Mr. Brockbank died at eight o'clock the night of the day I left. The following is the letter:—

DEAR DR. SWANN,—Please come back. Mr. Brockbank died to-night at 8.00 p.m., so I must have a death certificate and also arrange about your account.

Yours sincerely, Y. HOSHINO.

I replied to the letter as follows:—

DEAR MR. HOSHINO,—I cannot possibly go back. Will write from Yokohama. Must see Dr. Munro. I am awfully surprised to hear of Mr. B's death, as he was nearly well when I left.

Sincerely yours, H. J. SWANN.

P.S.—I would not sign death certificate without seeing Dr. Munro first.

Then I proceeded on my journey, and got to Yokohama about five o'clock, and next morning made a report to the Consul, in which I stated that the death was shocking, sudden, and suspicious.

To Mr. Read—I certainly thought that the death was suspicious. As far as I saw, I think Hoshino did all that a friend could do for deceased.

To Mr. Robinson—I know all stimulants were stopped after I gave the order. It was more or less impossible for me to see if my order was carried out, the room being locked; I was a stranger in the house.

To Mr. Le Prevost—The man was under lock and key until the delirium left him, and until such time as I had cleaned him. The day before I left he was sitting up in a dressing-gown and was then not locked up.

To Mr. Sale—I don't think the stopping of the stimulants would have killed him so suddenly.

To Mr. Robinson—The deceased's heart was affected, but he had recovered from the delirium tremens when I saw him last. He was never a strong man, and disease of the heart was present.

To Mr. Read—Hoshino told me himself that he had stopped supplying the deceased with stimulants before I arrived. I found one empty whiskey bottle and a liqueur bottle.

To the Coroner—In my opinion Shoji was not a proper place to take a man suffering from delirium tremens. There was no nurse to attend him, while the danger of pneumonia was very great, the man being naked and the floor of his room quite bare. Shoji, the village, is two and a half miles away from the place where the hotel is situated. Hoshino had

a large medicine chest in the hotel, among which was a bottle of pure chloroform.

To Mr. Cain—I don't think any Japanese doctor had been called in to attend on deceased. The medicine chest would have been accessible to Mr. Brockbank if he desired to get at it.

To Mr. Moss, who appeared on behalf of the family—Hoshino told me that he always kept a medicine chest. He asked me about the effects of tincture of digitalis, likewise strychnine. Hoshino was not a man qualified to take care of a man in deceased's condition. He was not qualified to look after such a case. Hoshino himself was attending Brockbank, so far as I could see, when I arrived. Hoshino was perfectly sober. There was a large supply of wines and liquors on the premises. So far as I know, the door of the place where the wines, etc., were kept, was always locked. My observations did not lead me to suppose that Hoshino treated the deceased with roughness, unkindness, or cruelty. He told me that he locked deceased in the room to prevent the Japanese from seeing a foreigner in such a condition. There were besides Hoshino's family and servants, carpenters and painters working about the house. Hoshino's letter says that deceased died at 8 o'clock on Wednesday. There was one other foreigner in the place besides myself, a Mr. Voight, a German gentleman from Yokohama. He was there when I left.

To the Coroner—The place where deceased was living is an hotel, which Hoshino was just arranging.

To Mr. Le Prevost—I thought the death suspicious, because deceased had picked up so quickly when I attended him. He may have died of heart disease, or kidney disease, but my suspicions have not been removed.

To the Coroner—I don't think it is possible to state the cause of death until after the chemical analysis is made.

To Mr. Cain—I don't think Hoshino wished to keep me away from deceased. He made no attempt to do so.

To Mr. Sale—The questions about the chemicals were put to me because I was using them in my treatment of deceased. There was nothing in deceased's manner to suggest that he might commit suicide from intense mental depression.

To the Coroner—The strychnine belonged to me, the digitalis also; Hoshino had belladonna in his chest. I advised Hoshino to obtain some tincture of cayenne, a harmless but very useful stomachic drug. This was in the course of the conversation. The conversation was but of an ordinary description—the names of drugs and what they were used for. Hoshino's treatment of deceased could have been a great deal better.

The inquiry was then adjourned till 2 p.m.

Mr. C. D. Moss asked the Court whether the full report of the inquest could be withheld until the whole inquiry was finished.

The Coroner thought that such a course lay entirely within the discretion of the members of the Press.

The first witness called after the adjournment for tiffin was Geo. Kircher, of H.B.M. Court. Sworn, he deposed—I received orders on Friday last to go into the country to Shoji, and bring in the body of the late Mr. Brockbank. I left at 3.20 in the afternoon, and was accompanied by a Japanese police inspector and a detective. I arrived at Suzukawa at 7.50. Left there at about four o'clock next morning, and arrived at Shoji about 5.15 in the afternoon. I saw Hoshino and inquired of him where the body of Mr. Brockbank lay. He informed me that it had been buried the day before (Friday) in the village cemetery. I communicated with the police at once, and asked them if I could disinter the body that night. They said no, it could be done better the following day. With the assistance of the police we commenced the exhumation of the body about seven o'clock next morning, and disintered it about nine o'clock. I transferred the body to a shell that I had taken out with me. I commenced the return journey about 5.30 p.m., arriving at Yokohama about 3 o'clock yesterday afternoon.

To the Coroner—There was one Japanese doctor and his assistant at the grave. Hoshino was not present at the disinterment; he would not go. The grave was about one mile away from Hoshino's house. Mr. Brockbank's grave was pointed out to me by the Japanese police. I had some conversation with Hoshino. He asked me why I had come out to Shoji, and I said that I was sent to remove the body to Yokohama as there was to be a *post mortem* examination. Hoshino said he would be in Yokohama as soon as I was, in order to give information regarding the death. I do not know whether he has come in or not. Hoshino explained to me about the visit of Dr. Swann, after he had sent for Dr. Munro. Dr. Swann had treated the deceased, and he was almost well when Dr. Swann

left. Hoshino then stated that soon after Dr. Swann left deceased was taken ill. Hoshino said he went into deceased's room and found that Mr. Brockbank was dying: Mr. Voight was present when deceased died.

To Mr. Read—I found the body in a roughly made box, square in shape. In the bottom of the box was a Japanese *futon*; and a bundle of straw was placed under the head for a pillow. The body was clothed in the short shirt in which deceased died, and the rest of the body was covered with an old overcoat, a newspaper being laid over the face.

To Mr. Sale—I had no conversation with Mr. Voight.

To Mr. Moss—There was no jewellery upon the corpse. The police gave me every assistance they possibly could. I examined the room in which deceased died. I found it to have a plain, ordinary, wooden, painted floor. The room was clean. Hoshino afforded me every facility for making enquiries. The box I found the body in was about 2 feet high, 6 feet long, and about 2½ to 3 feet broad. I searched the effects of the deceased, in company with the Inspector, and brought into Yokohama all letters and papers I could find. I could find no jewellery. I asked Hoshino if there was any money, and he answered, "No, not a cent."

Mr. Charles Davis Moss, Chief Clerk of H.B.M. Court, sworn, deposed—I have known the late Mr. Brockbank for the last five years. I know he drank very heavily at times. I know that he lent sums of money to Mr. Hoshino—comparatively large sums. But latterly deceased and Hoshino frequently quarrelled over money matters. I am aware that deceased was in receipt of £25 a month, and sundry other sums—£100 at a time. He was a man of invalid health. At the beginning of this month Hoshino took the deceased from Miyanoshita to Shoji when the latter was in a bad state of health, and against the doctor's orders. Shortly before this I had written to Dr. Baelz asking if something could not be done whereby the deceased could be better looked after. In answer, I received the following, dated 18th August, which evidently had been written by Dr. Baelz before he was aware of the death of Mr. Brockbank. It reads:—

Tokyo, Aug. 18th, 1895.
Dear Mr. Moss,—M. Brockbank is in a very dangerous way in consequence of hard drinking. He is half paralyzed, and when I saw him last, about 12 days ago, I told Mr. Hoshino expressly that he should not carry him off to Shoji before I had seen him again, as the thing seemed too risky, a hospital being the right place for the man. But in spite of all my warnings, Mr. Hoshino took him over to Shoji, where apparently he got worse and where, for all I know, he may die if he is not carefully looked after.

As you know the poor fellow's family, I must say I do not like the way in which Mr. Hoshino takes charge of all money matters of Mr. Brockbank. The latter has lent Mr. Hoshino 4,000 yen, and he may, in his present helpless and utterly irresponsible state be induced to give more money for things which he does not in the least understand.

I wish the Consul could get hold of Brockbank and place him under guardianship. But I do not know whether this can be done.

Yours very truly, E. BAELZ.
Further, I am informed—this may be confirmed or not—Hoshino took away deceased money and jewellery and left him to travel alone for nine hours, entirely without food or help; this was while he was taking him to Shoji. I had been up to Miyanoshita the Saturday before last an account of Mr. Brockbank, and there learnt that Mr. Brockbank, though in a very weak state of health, had left Miyanoshita, in company with Mr. Hoshino, for Shoji. Fears were expressed by many people who saw them as to the result of such a long journey upon the deceased. I wish to put in evidence a letter which I have received from Mr. Hoshino, it is dated 8th August, but this is clearly a mistake, as the postmark shows that the letter was posted on the 15th inst.

Shoji-ko, August 8th.
Dear Mr. Moss,—I am sorry to have to inform you of the death of poor Brockbank. He came here from Miyanoshita some 10 days ago: he had been on a heavy drinking bout and was in a very bad state. At first he began to mend, but 3 days after his arrival got D.T.'s. The doctor came and pulled him through as he thought, but at 6.30 last night he had a fit and died at eight. As he is now very far gone I am making arrangements to bury him here this evening as it would take too long to bring him down. As soon as I get things fixed up I shall come down to see you.

Trusting you are well, I am, dear Sir, yours faithfully, V. HOSHINO.
Prof. Chamberlain, Mr. Chambers, and Mr. Voight are here, and Dr. Munro can tell you all.

After my visit to Miyanoshita I received a letter from Mr. Brockbank's house-keeper, in which she tells me about the state of Mr. Brockbank's health.

Mr. Read thought there was a discrepancy in the statement made by Hoshino in his letter to Mr. Moss, and the statement he made to Dr. Swann, as to the drinking bout.

To the Coroner—The relations between Hoshi-

no and Brockbank have subsisted for about five years, though part of this time was spent by the deceased in England. Hoshino is a naturalized Japanese, though of English birth. Ten years ago he was a seal-hunter, after that he kept an hotel at Kowakadani, up till October last. The house at Shoji was of the nature of an hotel, and was built by money supplied by the deceased. Here are the stubs of some cheques drawn by deceased for \$300, \$2,500, \$1,000, \$340, and \$100. These cheques were drawn for land, for Y. Hoshino at Shoji, etc. Hoshino's original name was Solomon. The relations between the two men were partly that of friends and partly partners in an hotel, at least I take it to be so. I do not think that Hoshino had any funds apart from those supplied by deceased. The cheques drawn in January of this year, which I have put in, I feel sure are drawn up in the handwriting of deceased.

Matsumoto Komoto, cautioned, said—I knew, Mr. Brockbank well, having been acquainted with him from the 5th October of last year, though I have known him by sight since the July of that year. I last saw him on the 3rd of this month at Miyanoshita at the *besso* of Yamaguchi. He left Miyanoshita that afternoon and went to the Tamanoju at Tonosawa. Deceased, I heard, left Miyanoshita at the recommendation of Dr. Baelz, who said that deceased should go into a hospital in Tokyo. Dr. Baelz recommended Tonosawa as a quiet place, and Hoshino took him down there. The coolies on their return from Tonosawa said that deceased had quite broken down. Deceased stayed at Tonosawa till the morning of the 5th. She heard that after this he went to Kodzu in a *jinyikisha*. Hoshino spent the whole of the 4th at Fujiya, not at Tonosawa, leaving Brockbank down alone. I did not accompany Brockbank to Tonosawa, because deceased advised me to stay behind as I was not on good terms with Hoshino. Hoshino used to beat me. Hoshino accused me of making a fool of deceased and inducing him to drink, and used to say that if he remained in my company he would die. When Brockbank asked Hoshino to return him his money, there were quarrels. On one occasion they had a very violent quarrel. It occurred about the end of April, when two men came to Yokohama. The expenses of their amusement amounted to yen 122.80. Hoshino returned first and left Brockbank alone, and he was very surprised at the size of the bill, for eight days' amusement. Hoshino encouraged Brockbank to drink. I have seen deceased drunk. Hoshino also drank. At times Hoshino would deceive Brockbank, filling up Brockbank's glass of whiskey and leaving him to do all the drinking. I saw this at Fujiya's *besso* and also at the hotel. When Brockbank drank he would do anything. After three days of drinking he used generally to get very ill. On the 4th of this month a letter came from Dr. Baelz to Brockbank. Hoshino told Mr. Chamberlain that day that he and Brockbank were going to Shoji, and the letter came afterwards.

To Mr. Read—The quarrels between Hoshino and deceased were violent, but only once did Hoshino make as if to strike Brockbank. Deceased then took refuge in my room.

To the Coroner—I understand a little English. The Coroner said that this was all the evidence he had to lay before the jury that day. The evidence of Dr. Divers would be required, and as the chemical analysis must necessarily take some little time he proposed to adjourn the inquiry until that day week, at 10 o'clock, when Dr. Divers' evidence as well as any other that might be forthcoming would be produced.

The inquest then stood adjourned.

THE KUCHENG MASSACRE AND SZECHUAN RIOTS.

IMPERIAL EDICT.

The *Hupao* has received the following decree by wire from Peking, dated the 9th inst., which the *N.-C. Daily News* translates:—

Since the opening of international commerce with Western countries foreigners have always resided in the inland districts at peace and harmony with their native neighbours, and we in our impartial love for both native and foreigner alike have time and again commanded our high provincial authorities to pay extra heed at all times to protect the latter from harm. Judge of our extreme indignation then upon hearing recently, first of the riots in the capital of Szechuan, where chapels have been destroyed and burned down by the rioters, thereby fanning the flames of destruction far and wide, insomuch that a number of sub-prefectures and districts simultaneously followed in the footsteps of Chengtu, and now to receive the news from Fukien reporting that evil characters have murdered and wounded

a very large number of foreigners at Kutien, going so far in their ruthless ferocity as to murder even women and infants. With reference to the Szechuan riots, a number of the rioters have already been arrested and will undergo trial, but the chiefs and heads of the Fukien murderers are still at large, and we command Pien Pao-ch'uan and Ch'ing Yü (Tartar General of Foochow) to set to work without delay at the head of the military and district officials and speedily arrest these wicked characters, nor shall any be allowed to escape the meshes of the law. Indeed, it is the manifest duty of the local mandarins throughout the empire to be always on the alert and prevent such worthless characters from manufacturing scurrilous tales and exciting the populace; they should crush all incipient risings at the slightest sign. What sort of frivolity and indifference to duty is this when that has brought about all these recent serious outrages? We would also, therefore, command the various Tartar Generals, Viceroy, and Governors of the empire to impress upon all their subordinates the necessity of granting thorough protection to all the chapels, etc., in their districts. They are also to issue proclamations exhorting the people to abstain from listening to scurrilous tales which excite unfounded suspicions in the breasts of all. If there be any who shall dare to raise disturbances in the future they shall be at once punished with the utmost severity of the law, and as to such of the local officials as may use subterfuge and craft to avoid their duties, they are to be most severely punished, and no leniency shall be exercised in their cases. Let these commands be made known to all within his empire.

PORT ARTHUR AGAIN.

We reproduce below a letter of Colonel Cockrell's to the *New York Herald*. Our readers doubtless remember what recently passed about Lieut. O'Brien—how, because we did not attach any importance to a grossly falsified extract from a letter of his, the whole of which letter had been published by ourselves 24 days previously, and because we declined to construe his evidence as confirmatory of Mr. Creelman's exaggerations, when in point of fact Lieut. O'Brien's testimony was on precisely the opposite side; because we did not do these things, we were denounced as incapable of crediting a statement even of the Recording Angel if it were hostile to the Japanese.

Tokyo, Japan, June 19th, 1895.

The "atrocities" business has broken out afresh, I believe, in some parts of the United States. The publication of Minister Dun's despatch to the State Department, in which he very justly denounced the Creelman report of the Port Arthur affair as a gross exaggeration, has brought upon him an assault from the discredited correspondent, which is neither fair nor just. It is true that Mr. Dun was once in the service of the Japanese government and that his deceased wife was a Japanese lady, but to denounce him as "a subaltern to the Japanese Foreign Office" because he did not indorse a purely false and malicious account of the Port Arthur affair is quite unjustifiable.

Mr. Dun sent to the State Department all the facts he could gather about the so-called atrocities of the Japanese troops at Port Arthur, and said that their conduct "could not be justified by any rules covering the usual usages of modern warfare." He had no proof that a four or five days' slaughter had taken place there, because there was none obtainable. Colonel Taylor, the British surgical attaché, a gentleman of the highest standing, who saw, I have reason to believe, more of the actual fighting in the late campaign than all the newspaper correspondents put together, tells me that he saw the killing of the fugitive Chinese in Port Arthur on the day of November 21st, but he saw nothing of the kind on subsequent days, when, according to Mr. Creelman, the hideous work was going merrily on. He was in and out of the town all the while, and would have known if there had been any such alleged performance. Colonel Taylor says the first day's affair was deplorable, but he offers in palliation the horrible atrocities to which Japanese captives were subjected by the barbaric, throat-cutting, torturing, head-chopping Chinese. The incensed Japanese soldiers overcame all restraint and did kill a few hundreds of the citizens and masquerading soldiers on the first day. The same thing having occurred in all modern wars, he regrets for the good name of Japan, and excuses.

He does not, nor will any of the men who were at Port Arthur, and with whom I have conversed, confirm the exaggerated reports sent out by Mr. Creelman; but, then he was not interested in defeating treaty revision, and did not feel called upon to denounce the Japanese race as barbarians

because a few of their soldiers were guilty of such an offence as stains the records of modern Germany, England, and the United States in warfare. To charge Minister Dun with being an employé of the Japanese Foreign Office because he feels it his duty to preserve amicable relations between the United States and Japan is simply to indulge in cheap vituperation. He is not here to play the swashbuckler or slander the people to whom he is accredited. That may be left to newspaper correspondents who touch the shores of Japan with a view to an early retirement therefrom. Mr. Dun has influence in Tokyo, which he uses in the interest of his countrymen when required to do so, and he is much respected by the Japanese government, but when a pugnacious newspaper writer comes along and demands an audience with the Emperor he does not exert himself to secure the same, for he knows that the proposition is preposterous and without precedent.

Mr. Dun's despatches to his government are indorsed by all the intelligent people here, and are only such as he could conscientiously make with the facts before him.

I may add that Lieutenant O'Brien discredits the statements made by Creelman as to a four days' butchery at Port Arthur, and denies emphatically that he ever said that he would seek recall because of the savagery he was compelled to contemplate. He said at Port Arthur that he was sent to the war to make note of the effect of small calibre arms and to observe new tactics, and as no small bore weapons were in use, and the Chinese were making no fight, he might as well be called home. Because Lieutenant O'Brien did not bear out the raw head and bloody bones stories of Mr. Creelman, that individual sneeringly says of him, "He had seen Dun." The facts are that as soon as Mr. Dun heard of the alleged atrocities at Port Arthur he wrote to his military attaché in the field—Lieutenant O'Brien—asking him if there was any foundation for them. Under date of December 28, 1894, at which time he had neither seen what Creelman had written nor was aware of what had been reported, he wrote to the Minister. In this he frankly said that on the first day's fighting he saw a number of Chinamen who had been unnecessarily killed. The Japanese, he said, had expected hard fighting after passing the town, and in clearing the way they got out of hand, and, being naturally incensed by the sight of the heads of some of their comrades suspended from trees at the edge of the place, they fell to shooting and stabbing such Chinamen as came in their way with little or no discrimination. In this letter Lieutenant O'Brien deplored the occurrence, because the Japanese troops up to that time had behaved so kindly and nobly under all provocation.

Upon the elaborate facts furnished him in this letter, Minister Dun based his report to the State Department, and he could not help denouncing the Creelman newspaper "coup" as exaggeration of the highest type, for Lieutenant O'Brien's report convinced him that order had been restored at the end of the first day's fighting, when all lawlessness ceased.

Lieutenant O'Brien insists now that there was no killing of Chinamen on the second or third day, as alleged. He himself attended a Chinese theatre in Port Arthur three days after the assault upon the town, the same having been opened to the public on the second day, at which time, according to Creelman, the fur was still flying. Lieutenant O'Brien informs me that the first day to the fifth he was in and about the town and on all the points fought over, and that there could have been no such occurrences as Mr. Creelman recorded without his being cognizant of the same. He is prepared to show that both during and after the fighting Mr. Creelman was not in the places he claimed to be in, and could not have described, as an eye witness, the mythical scenes which moved him so profoundly. He denounces Mr. Creelman in terms more severe than those employed by Judge Ridley, of Indiana, when he remarked that Jethro Rogers, the chief Ananias of his neighbourhood, had "a most remarkable memory for things that never happened."

As to Mr. Creelman, the truth may be easily written. He was sadly disgruntled upon his arrival in Japan because of a lack of official courtesies and attentions which he regarded as his due. He had not learned of the exceeding slow growth of the weed known as confidence in Japan. He was induced to believe by the merchants and traders of Yokohama that if a new treaty were made with Japan which recognized justice and right and which deprived foreigners of the blessings of extra-territoriality they would have to quit the country. In the field the jealousies of a rival Mordecai sitting at the king's gate embittered him, and when Japanese soldiers at Port Arthur, exasperated and maddened, committed an inexcusable breach of discipline, he saw an opening as he thought, to

defeat the revised treaty with Japan, then pending in the United States Senate. He denounced the Japanese as barbarians, declared that their government was dominated by the bloodthirsty Satsuma men and the fierce swordsmen of three centuries ago. "Barbarism" was rampant, there was Hades to "pay," in marine vernacular, and no superheated pitch convenient. He left the plane of the war correspondent and entered the realm of the statesman. He would defeat the treaty. Chinamen had been slaughtered at Port Arthur. Ergo, the Japanese were barbarians. Therefore their treaty in Washington should be repudiated. But the treaty was agreed to. The soldiers of Port Arthur went to Weihaiwei through Siberian cold, experiencing hardships which few European troops could have endured, and after driving out the Mongol cravens put there to defend the almost impregnable works, they did not so much as harm a dejected queue.

It is shameful the way in which these wonderful, if not always admirable, people have been maligned. But the truths about their achievements have been burned into the pages of this century's history. Let those who would rub them out proceed. Menaced as Japan is to-day and temporarily deprived of her right to civilize, uplift, and improve the Eastern world, her destiny cannot be well foreseen, but the record of her intrepidity, her quickened intelligence, her self-reliance and her courage, made in the past year is ineffaceable.

But there will doubtless be more of this "atrocities" business. Down in Formosa there are bands of Chinese marauders looting towns, murdering citizens, and resisting, after a fashion, Japanese occupancy. The disorder there will not continue long. The Japanese have won Formosa, and they mean to have it. They will kill every Chinese brigand and every belligerent native savage on the island if necessary. The Japanese are not humorists. They are a very serious and earnest people when confronted with responsibility. We shall soon have accounts of their "atrocities" down there, for there are several of the professional sensation mongers of the press hanging on their rear. The frightful condition of things in Formosa requires a little prompt "atrocities" on the part of the Japanese. Pillagers, house burners, cut-throats and assassins are not usually accorded the courtesies due to honorable soldiers, and it would not surprise me at all if some of the Black Flag picknickers in Formosa found themselves greatly disturbed in their personal relations before they were much older.

CELEBRITIES AT HOME.

SIR EDWIN ARNOLD, K.C.I.E., C.S.I., AT CROMWELL MANSIONS.

Poet, *littérateur*, journalist, traveller though he be, the handsome flat wherein Sir Edwin Arnold finds a *pied à terre* bears few indications of his eventful life or of his long residence in India and wanderings over the Land of the Rising Sun, whose people he learned to love so well. A large square anteroom leads into what is naturally the most interesting portion of his home—the bright, cheerful study so characteristic of the man. A tiny despatch-box—the companion of many journeys—stands on a small table, and is quite large enough for one who, with such orderly, methodical habits, knows where to put his hand on any paper required, and "can write on the top of a hat as well as anywhere else." The bookcases contain only a few relics of a once vast library, for Sir Edwin dislikes accumulations, and considers that portable property is a great nuisance. Wherefore he has twice dispersed his books and household gods among his children, so as to be free of effects: nevertheless, there are some little possessions of interest which he retains, "only for the present," he remarks significantly. "Those who see my flat know I live elsewhere; and though I make books, I never keep them." Among the pictures on the walls there is one of the Emperor of Japan on horseback, another of Prince Siddhartha drawing the curtain over the couch of his sleeping wife before he went forth on his act of renunciation, and a fine proof-before-letters engraving of Noël Paton's "Oberon and Titania." There are plenty of deep, comfortable lounging-chairs, presumably for the use of his friends; for Sir Edwin himself, with perfect physical health, never knows what it is to be tired or to have had even one headache, and attributes it to the fact that he never frets, never hurries, and looks upon life as a fine art, and that it is as reasonable to study to preserve a healthy body for the soul as it is for a good soldier to keep his scabbard in order for the useful blade. And yet in a career so chequered, so full of incident, adventure, and unceasing work, it can only be the bright, optimistic spirit within that enables

Sir Edwin Arnold to declare that, having done everything, seen everything, known most people, and had a vast experience of the world, he has a contented mind, and that to him to-morrow is always better than to-day. If asked when he is happiest, he would say on the present occasion, and he works simply because he loves work. Hence it is that his *entourage* is of slight importance; and though he laughingly assures you that he feels somewhat as Dr. Johnson felt when Boswell told him he was going to write his life, and could almost answer in the same words, "I will take your life if you do," he yields "for auld acquaintance sake, and a wish to please."

A born poet and a student from childhood, Edwin Arnold simply was weaned on books, and remembers well, when he was five years old, his father, who always did things on a large scale, sending up to his room a washing-basket full of quartos and folios, among which those of *Damier* and *La Prouse* first fired his imagination with a love of history, of geography, and of travel; while Pope's *Iliad* he would devour in bed, turning his shoulder to the window to catch the last glimpses of the waning light. His schooldays were passed at King's School, Rochester, and King's College, London, after which he was elected to a scholarship at University College, Oxford, where he won the Newdigate prize for his English poem on *The Feast of Belshazzar*, and the following year was chosen to give the Address to the Prime Minister, Lord Derby, on the occasion of his being installed Chancellor of the University. Leaving Oxford with high honours, he was elected Second Master in the English Division of King Edward VI.'s School at Birmingham, and later, turning his footsteps towards the East, he was appointed Principal of the Government Sanskrit College at Poona, and Fellow of the Bombay University. The young Principal's quick mastery of Oriental languages and keen insight into the complex Oriental character, together with an innate tact in dealing alike with the native princes, the heads of departments, and the students, enabled him to be of considerable use in educational affairs, and he was twice thanked by the Governor in Council for his services. Nor was he distinguished in official and social life only. With the physical vigour and activity which do not generally go with powerful intellects, he was an ardent sportsman, and had many thrilling adventures while in pursuit of "big game" and out pig-sticking. Neither was his pen idle during those years. He contributed constantly on subjects of natural history to various journals, and poetry, as well as more abstruse subjects, also occupied his attention. An early work of his was *Education in India*—a question in which he was deeply interested—followed by *Griselda*; a *Drama* and *Poems, Narrative and Lyrical*; after which followed *The Euterpe of Herodotus* (which he translated from the Greek text, with vocabulary in English, Sanskrit, and Marathi) and *The Book of Good Counsel*—a metrical translation of a celebrated Sanskrit classical work. Following these came a history of the Administration of India under the late Lord Dalhousie. Among other productions were *The Poets of Greece, Hero and Leander*, and *The Indian Song of Songs*; by-and-by the famous and delightful epic poem upon the life and teaching of Buddha, *The Light of Asia*, charmed all the world, and passed through more than sixty editions in England and eighty in America.

Among some of Sir Edwin Arnold's earlier works, which are as widely read to-day as when they were first issued, are volumes respectively entitled *Indian Poetry, In an Indian Temple, The Song Celestial, Poems National and Non-Oriental, The Secret of Death, Death—and Afterwards, and Pearls of the Faith, or Islam's Rosary*, the "Pearls" being the ninety-nine beautiful names of Allah (Asmâel-Husnâ), with comments in verse from various Oriental sources. In later years he has published *Indian Idylls, In My Lady's Prate, Lotus and Jewel, Potiphar's Wife and other Poems, Japonica, &c.* With *The Light of Asia*, and *With Sadi in the Garden*, must be bracketed one of his most successful works, *The Light of the World*, which has lately been reissued in an *édition de luxe*, profusely illustrated with special designs by Mr. Holman Hunt, and which is dedicated to the Queen. A new volume of poetry is just published, entitled *The Tenth Muse*, which is "Ephemerâ, the Muse of Journalism," and is dedicated by invitation to the Duchess of York. In prose, two deeply interesting books have a fascination of their own, called *Seas and Lands* and *India Revisited*. He has also written a play in four acts, entitled *Adsuma, or the Japanese Wife*, and a prose work, *East and West*, is now in the press.

In 1861, when peace was restored, Sir Edwin Arnold quitted India for a brief rest after the harassing fatigues and anxieties of the Mutiny,

and returned to England. It was then that his long and close connection with the *Daily Telegraph* began, almost, it may be said, by accident. He gives you a vivid account of how he was sitting alone in a punt in one of the most picturesque nooks of the river Dart, with fishing-rod in hand, basking in the quiet sunshine, with a copy of the paper beside him. His eye lighted on an advertisement in the journal for a leader-writer, and in a moment the current of his thoughts was changed. Should he or should he not answer it? On the one hand, he must resign the freedom of his official position, and give up his beloved India; on the other, a residence in London, but the companionship of his children. It was a momentous question. Slowly and deliberately, he tells you, did he weigh the merits of each course, with the result that he decided to apply for the post; to resign his appointments abroad, and to cast in his lot with the new mission of the popular press. It was a great change to one who had been practically his own master in the luxurious Eastern world, whether in the bustle of official position or in the solitude of the jungle, to consign himself to a town life and to the directorship of others. The brilliant young leader-writer soon found himself at home and happy in Fleet Street with congenial spirits, and ran up the scale so rapidly that it was not long before he joined the editorial staff. From that never-to-be-forgotten summer day in the punt to the present, he has contributed between nine and ten thousand leading articles to the columns of the *Daily Telegraph*, besides a long series of letters written during his residence in Japan, and when India was "revisited." He describes in characteristic words the fascination the Japanese people have for him. "They are so polite, cheerful, and clean," he says, "so simple in mode of life. They love old people, they respect their fathers and mothers, and are free from avarice."

It was Sir Edwin Arnold who suggested to the proprietors of the *Daily Telegraph* and who organised the first expedition of Mr. George Smith to Assyria; he was also largely associated with the arrangements made on both occasions for sending out Mr. H. M. Stanley by that journal, in connection with the *New York Herald*, to follow up the work of David Livingstone, and he relates an anecdote *à propos* of these expeditions. When Mr. Stanley was consulting him about a code of laws, to be drawn up in dealing with the people, Sir Edwin suggested that it should contain "death to any man who killed an elephant—noble, useful animal—for the sake of getting a paper-knife made out of its tusks," and, jokingly, death to any one who called his own river and mountain in Africa (the Edwin Arnold river which runs up into the Congo, and Mount Edwin Arnold, between Victoria and Albert Nyanza) by any other names. That geographical immortality has to be strictly defended is proved by the recent conduct of the Intelligence Department of the War Office, for in one of its late maps the name of Mount Edwin Arnold had been omitted, and that of Lobaba substituted—an error that has since been corrected.

With a mind attuned to all that is lofty alike in ideas and in aims and full of the imagery of poetry, Sir Edwin Arnold possesses a peculiar simplicity of character, together with a magnetic power of sympathy and a detestation of all uncharitableness. His conversation is full, now of sparkling anecdote, anon of thrilling pathos, as may suit the subject, while the gentle, courteous manner has a charm all its own. His brightness is infectious; it seems to brace and invigorate even the most depressed of those with whom he comes in contact, and to cause them to look upon life through his own rose-coloured glasses, as he quotes, in low, earnest tones from *The Light of the World*:

Our worst of woes
Is like the foolish anguish of the babe,
Whereat the mother, loving most, smiles most.

Sir Edwin Arnold's foreign Orders alone are a collection of curiosities. *The Light of Asia* brought him the decoration of White Elephant from the King of Siam; the Order of the Lion and Sun came from the Shah of Persia on the production of another fascinating volume, *With Sadi in the Garden*; or, *the Book of Love*, a poem founded on a single chapter of the work of the Persian poet Sadi. In later years, during his visit to Japan, the Emperor conferred on him the Order of the Rising Sun, which carries with it the dignity of *Chokunin* of the Empire; not to speak of the Imperial Order of the Medjidieh from the Sultan, and the Imperial Order of Osmanie. The decoration Companion of the Star of India he received on the occasion of the proclamation of the Queen as Empress of India; and eleven years after he was created Knight Commander of the Indian Empire. He is likewise a Fellow of the Royal Asiatic and other societies, and Honorary Correspondent of the Geographical Society of Marseilles. —World.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 21.

The House of Commons has voted the Address to the Throne in reply to the Queen's Speech.

London, August 22.

The Porte has again rejected the demands of the Powers for the foreign control of the reforms in Armenia.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hakodate, August, 7.

The following are the most recent movements of the men-of-war in the north:—

The *Peacock* arrived here on the 7th inst.; the *Pigmy* left this for Copper Island on the 10th; the *Caroline* arrived here on the 11th; the *Nicolai* arrived here on the 13th and left for Vladivostock on the 15th; the *Katsuragi Kan* arrived here on the 14th; the *Kaiser, Princess Wilhelm, Irene, and Arcona* arrived here on the 14th; the *Alacrity* arrived here on the 15th; the *Centurion, Undaunted, Edgar, and Spartan* arrived here on the afternoon of the 16th.

On the morning of the 16th the troopship *Tamar* arrived here bringing new crews for certain of Her Majesty's ships, and when the transfers have been effected the *Tamar* will leave for Hongkong with the time-expired men.

(FROM THE "KOBÉ CHRONICLE.")

The following are the names of the officers and passengers who lost their lives by the wreck of the *Catterthun*:—

Nagasaki, Aug. 19, 10.10 a.m.

In the wreck of the *Catterthun* the following were drowned:—

Captain Shannon.
Mr. Pinney, 1st mate.
Mr. Leffier, 3rd mate.
Mr. J. Harper, 1st engineer.
Mr. F. Wilson, 2nd engineer.
Mr. Adams, 3rd engineer.
Mr. Wolstenholm, 4th engineer.
Dr. Anderson.
Mr. Manning, steward.

Passengers:—

Mrs. Mathias (wife of the Captain of the *Cam*).
Mrs. Loring.
Miss Loring.
Mr. Fraser.
Mr. Smith.

Four Europeans were saved, their names being as follows:—

Mr. Lanfear, 2nd mate.
Mr. Fawkes.
Mr. Crane.
Mr. Copeman.

(The three last-named are presumably passengers.)

Twenty-two Chinese were saved.

[FROM "N.-C. DAILY NEWS."]

London, August 10.

The four British ironclads which left Gibraltar under sealed orders about the 8th inst. have arrived at Tangier; and the official reason of their visit is the presence there of men-of-war of other nations.

Foochow, Aug. 11, 8.45 p.m.

H.M.S. *Rainbow* and the U.S.S. *Detroit* are expected here. The report of arrests having been made at Kucheng is confirmed. Mr. Mansfield, British Consul, goes to Kucheng on Thursday, the 15th instant. The composition of his escort is not yet settled.

Support is also hoped for from Germany, as a strong anti-English current of feeling is displayed in the German Press, England being accused of frustrating German colonial aspirations.

Foochow, Aug. 12, 9.20 p.m.

Forty arrests have been made at Kucheng, but as far as known they are of doubtful importance.

The U.S.S. *Detroit* has arrived.

Peking, August 10, 12 m.

The Tsung-li Yamên and British Minister hold daily conferences; result, so far, unknown, but in response to Viceroy Pien's memorial the Emperor has degraded the Kucheng Magistrate for inability to prevent massacre, but retained him to prosecute arrest of murderers. Viceroy Pien is ordered to exterminate the Vegetarians at all costs, and special edicts have been sent to the Fukien Commander-in-Chief Huang, and Admiral Yang, at Amoy to send all available troops to assist the Viceroy at Foochow. The Censorate has somehow got reliable news that *Kolao Hui* Centres have sent representatives to meet the White Lily chiefs in Fukien and Kiangsi to organise alliance to oppose Imperial government. The Vegetarians are said to belong to latter society. It is likely that some Censors will use this news to denounce certain Viceroys and Governors whose provinces are the hotbeds of these secret societies.

Peking, 11th August, 3 p.m.

The Imperial government appears to be in thorough earnest about the construction of the projected Railway between Peking and Yangtze ports. All preliminaries have already been arranged, and work of laying the first rails will begin as soon as possible. The Assistant Grand Secretary and President of the Board of Civil Appointments, Hsü T'ung, has been appointed Comptroller-General of Railways, with special department at Peking attached to Board of Revenue, and the Viceroys and Governors through whose provinces the railway is to pass are to have the title of Coadjutors, with two Taotais in each province to be working Directors or Managers. Most of these appointments have already been made by the Throne.

Foochow, August 13, noon.

British Consuls Mansfield and Allen, the Rev. W. Banister, the Rev. L. H. Star, U.S. Consul Hixson, a Lieutenant from the U.S.S. *Detroit*, and Dr. Gregory, are leaving Foochow at 4 p.m. to-day with Chinese escort, for Kucheng.

London, August 13.

The British Squadron has left Tangier.

An expedition consisting of four hundred bluejackets and native auxiliaries is proceeding to Mombasa to attack the Mymil tribe.

Foochow, Aug. 15, 8.45 p.m.

Consul Mansfield and party arrived at Suikou at noon to-day, *en route* for Kucheng.

London, August 16.

In his speech in the House of Lords, Lord Salisbury stated that the Sultan will be guilty of a grave error if he declines to aid the Powers to extirpate anarchy and cruelty in Armenia; and he defended the retention of Chitral.

(FROM THE "SHANGHAI MERCURY.")

Hongkong, Aug. 9th, 7.35 p.m.

His Excellency the Governor of Hongkong has refused to forward to Lord Salisbury the Resolution passed by the meeting held here, demanding swift, drastic measures, and censuring the apathy of the British Government.

Hongkong, Aug. 10, 6.54 p.m.

His Excellency the Governor of Hongkong denies that he has refused to forward the Resolution of the Hongkong Indignation Meeting to Lord Salisbury.

At the Meeting of the Hongkong and Shanghai Bank twenty-five shillings dividend was unanimously agreed to.

Foochow, August 10, 5.25 p.m.

Baby Stewart died to-day.

Foochow, August 12, 12.30 p.m.

Last night at 8 o'clock two stones were thrown into the Foochow Club.

The Foreign Cemetery has been broken into and some iron railings stolen.

Foochow, August 12, 8.25 p.m.

The United States flagship *Baltimore* and the *Detroit* have arrived at the Pagoda Anchorage.

(FROM THE "BANGKOK TIMES.")

London, July 26.

Baron Blanc, the Italian Minister for Foreign Affairs, speaking in the House of Deputies, stated that he had received from Russia an in-

formation that her interests in Abyssinia were purely of a religious character. The Chamber subsequently discussed the prospect of a war with King Menelik.

London, July 29.

The anti-British feeling in Egypt is assuming grave aspects. A native mob at Cairo has hooted and stoned a British military funeral party. Excitement is intense. The Governor of Cairo has apologised to the British authorities.

A great demonstration has taken place in Sofia at the funeral of the Bulgarian soldiers killed while fighting along with the insurgents in Macedonia.

London, July 29.

The Lyons Chamber of Commerce is appealing to the other French Chambers to unite for the purposes of the commercial mission which is to be sent out to China. M. Rocher, Consul at Malta, has been appointed chief of the commission.

The National Bank of Russia has taken up six millions of the Chinese loan and the rest will be found by France.

Simla, July 29.

The British Pamir Commission has arrived at Bozai Gumbaz, on a tributary of the Pamir river and just within the Chinese boundary. It was met here by the Russian Commission, and the combined party then set off for Lake Victoria, about 30 miles north-west, where they are expected to arrive by the 23rd.

London, July 31.

The *Times* publishes a telegram from Madagascar stating that the Hovas are secretly suing for peace, but, fearing a revolution should the fact become known, are massing troops outside the capital.

The anti-European feeling is increasing, and the British Consul has enjoined all British subjects in the capital to make an exodus to the coast.

(FROM TONKIN PAPERS.)

Paris, August 2.

Japan having undertaken to evacuate the Liaotung Peninsula unconditionally, France and Russia are pressing her to evacuate accordingly, irrespective of the indemnity demanded from China on that account, the indemnity being, moreover, considered excessive.

Paris, August 4.

An Anarchist outrage has been committed at the Aniches mines. A miner wounded M. Vuillemin, manager, with a revolver. A bomb exploded while it was being prepared, killing an Anarchist and seriously wounding ten other persons.

Paris, August 6.

The Aniches affair was a matter of private vengeance.

Paris, August 6.

The Czar has decorated M. Lagarde and several officials at Obock.

(FROM THE "SIAM OBSERVER.")

London, July 31.

The whole of the Mymie tribe, in East Africa, have risen in revolt.

A meeting is to be held at Chester on Tuesday next in connection with the Armenian question. The Duke of Westminster is to preside, and the speakers will include Mr. Gladstone and Lord Salisbury.

(FROM JAPANESE PAPERS.)

Shimonoseki, August 19.

The *Shibata Maru* collided with the British steamer *Quintus* (?) while putting into this port with 200 soldiers on board this morning. The British steamer is slightly injured, and as there is danger of water getting into the vessel her cargo is now being discharged. The *Shibata* sustained no injury.

The *Hashidate Kan* passed here bound west this morning.

Takamatsu, August 19.

The Prefectural Assembly, which has been suspended for passing a vote of no confidence in the Governor and Secretary, has been dissolved.

Söul, August 19.

Li Ko-shoku, Grand Master of Services to

the Queen, has been appointed to be Minister of the Royal Household, and Li Han-shin, Manager of the Finance Department, to be Vice-Minister of the Royal Household.

Okayama, August 19.

Over one hundred cases of cholera were reported here yesterday.

Osaka, August 21.

A Peking correspondent, writing on the 10th inst., states that the newly appointed Chinese Minister to Japan leaves there on the 12th inst. for his mission, *via* Tientsin and Shanghai, and he will reach Japan at the end of this month or the beginning of next.

Moji, August 21.

With a view to develop the industries in Kiushu, the Chinzei Kyokai has established an office for Formosa trade, and a deputy is to proceed to Formosa to inspect the condition of business there.

Aomori, August 21.

The election of half the members of the Prefectural Assembly took place yesterday, at which 13 *Kakushin* and 2 *Kaishin* candidates were returned.

The *Shibata Maru* left for the south yesterday.

The British steamer which was slightly damaged by the *Shibata Maru* left here this morning.

Nagasaki, August 21.

The *Atago Kan* has left for Port Arthur.

Söul, August 21.

Thirty leading officials of the Imperial Household Department and other officers have been nominated by the King to proceed to Japan to study at the Keio-gijuku, Tokyo.

Fukui, August 21.

The damage caused to the Tsuruga Railway section by the late severe storm is estimated to cost *yen* 350,000 to repair.

Shimonoseki, August 21.

A workman at the *Bakan Mainichi Shimbun* office has been attacked by cholera, and the paper has been stopped for five days.

Osaka, August 22.

At 11.30 p.m. yesterday, a destructive fire broke out at Nichome, Tachiuribori, Nishiku, by which 78 dwellings and a school building were reduced to ashes. The celebrated brothels, Yoshida-ya and Kasagi-ya, were also burnt.

The Naniwa Railway was opened for traffic to-day.

A telegram dispatched by the Japanese Minister to China and received by the Government yesterday states:—

The Chinese prisoners were handed over to the Chinese commissioners on the 18th instant at Sancheng, near Taku, in the most satisfactory manner. The Viceroy Li entertained the Japanese officers on the 20th inst. at Tientsin.

Kyoto, August 22.

The Exhibition rooms, which have been opened for the sale of articles remaining unpurchased, were closed yesterday.

Takamatsu, August 22.

A violent storm has been raging since last night.

Nara, August 22.

High winds and heavy rain visited this place last night, but no great damage was caused to the crops.

Kyoto, August 22.

A severe storm prevailed here last night, but it abated considerably this forenoon.

Tokushima, August 22.

Rain commenced to fall last night, and was succeeded by violent blasts of wind and then by heavy rain this morning. The gale attained great force at one time, but it is now (1 p.m.) subsiding.

Okayama, August 22.

Strong winds and heavy rains prevail, and many rivers were now very full. The residents are panic-stricken.

The following telegram, dispatched by Mr. Futatsubashi, Japanese Commercial Agent at Vladivostok, on the 20th inst., has been received by the Government.

Cholera has broken out here, but it is said that the type is not of a serious nature.

Shanghai, August 23.
The *Saiyen-go*, formerly *Tsi-yuen*, arrived here yesterday from Weihaiwei.

Nagasaki, August 22.
The latest dispatch from Shanghai states that the British and American Consuls and their escorts arrived at Kucheng on the 16th inst., and some of the leading rioters were arrested. The people are quiet, and appear to be frightened at the arrival of the commissioners.

Osaka, August 23.
Three thousand soldiers belonging to the Fourth Division leave here in two days' time for Formosa.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 190.

- | WHITE. | BLACK. |

PROBLEM No. 192.

By FOTHERGILL.

White to play and mate in two moves.

BARDELEBEN-TEICHMANN.

Curt von Bardeleben after his drawn match with Blackburne proceeded to a contest with Teichmann, in which he proved the victor. The games are not specially interesting, most of them ending in draws. We give one below which Teichmann succeeded in winning.

GAME No. 322.

GAME No. 323.

A fine specimen of Mr. Shipley's play at a recent Club match in the United States.

PETROFF DEFENCE.

- | WHITE. | BLACK. |
|-----------------------------|----------------------------------|
| Mr. S. Rocamora, Manhattan. | Mr. W. P. Shipley, Philadelphia. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to K B 3 |
| 3—Kt takes P (a) | 3—P to Q 3 (b) |
| 4—Kt to K B 3 | 4—Kt takes P |
| 5—P to Q 4 | 5—P to Q 4 |
| 6—B to Q 3 | 6—B to R 2 |
| 7—Castles | 7—Q Kt to B 3 |
| 8—R to K sq. | 8—B to K Kt 5 |
| 9—P to B 3 (c) | 9—P to B 4 |
| 10—Q Kt to Q 2 | 10—Castles |
| 11—Kt to B sq. | 11—K to R sq. |
| 12—Kt to Kt 3 | 12—B to R 5 (d) |
| 13—B to K B 4 | 13—P to K Kt 4 |
| 14—B to Q B sq. (e) | 14—Kt takes K B P |
| 15—K takes Kt | 15—P to B 5 |
| 16—R to R sq. (f) | 16—Q to Q 3 |
| 17—P to K R 3 | 17—P takes Kt ch. |
| 18—K to Kt sq. | 18—B takes Kt |
| 19—P takes B | 19—P to Kt 7 (g) |
| 20—R to R 2 | 20—Q R to K sq. |
| 21—B to Q 2 | 21—B to B 7 ch. |
| 22—K takes P | 22—Q to Kt 6 ch. |
| 23—K to R sq. | 23—R to K 8 ch. |

- and wins.
- (a) Kt to Q B 3 or P to Q 4 may also be played according to inclination.
- (b) Kt takes P at once is inferior, on account of White's reply Q to K 2.
- (c) It turned out that B takes Kt at once was better, that piece being evidently a source of danger, especially after it became more fully supported on Black's next move.
- (d) With an eye to the charming sacrifice, Kt takes B P, followed by P to B 5, regaining the piece with a splendid attack. See move 14.
- (e) White had in any case a bad congested game; but having gone to B 4, the next best was to ch at K 5.
- (f) This would give White some attack if now Black played immediately P takes Kt ch, but he will not be so accommodating.
- (g) Splendidly played. If now K takes P, Q to Kt 6 ch, followed by B takes P ch easily wins, and any other course is, it will be seen, equally unsatisfactory. This game has much to suit all tastes, the finish being of a high order.

GAME No. 324.

The following interesting game, between two members of the Nottingham Chess Club, was completed one evening recently. It commenced as a correspondence match, with the peculiar condition that Mr. Marriott was to play *sans voir*; but on the 21st move the players became impatient and agreed to finish it over the board in the usual way.

MUZIO GAMBIT.

- | WHITE. | BLACK. |
|--------------------|--------------------|
| T. Marriott. | D. Adams. |
| 1—P to K 4 | 1—P to K 4 |
| 2—P to K B 4 | 2—P takes P |
| 3—Kt to K B 3 | 3—P to K Kt 4 |
| 4—B to B 4 | 4—P to Kt 5 |
| 5—Castles | 5—P takes Kt |
| 6—Q takes P | 6—Q to B 3 |
| 7—P to K 5 | 7—Q takes P |
| 8—P to Q 3 | 8—B to R 3 |
| 9—B to Q 2 | 9—Kt to K 2 |
| 10—Kt to B 3 (a) | 10—P to Q B 3 |
| 11—Q R to K sq. | 11—Q to Q B 4 ch. |
| 12—K to R sq. | 12—P to Q 4 |
| 13—Q B takes P (b) | 13—B takes B |
| 14—Q takes B | 14—B to K 3 (c) |
| 15—Q to K 5 (d) | 15—Kt to Kt 3 |
| 16—Q to Kt 7 | 16—R to B sq. |
| 17—P to K R 4 (e) | 17—Kt to Q 2 |
| 18—P to R 5 | 18—Kt to K 2 |
| 19—P to Q Kt 4 | 19—Q to Q 3 |
| 20—Q to Q 4 | 20—P to K B 4 (f) |
| 21—R to K 2 | 21—R to B 3 |
| 22—K R to K sq. | 22—P to Kt 3 |
| 23—B to R 6 | 23—R to Q sq. |
| 24—P to Kt 4 (g) | 24—P to B 4 |
| 25—Kt to Kt 5 | 25—Q to Kt 6 |
| 26—P takes P | 26—P takes P |
| 27—Q to K 3 | 27—Q to Kt sq. (h) |
| 28—P to Kt 5 | 28—P to K B 5 |
| 29—Q to B 3 | 29—R to B 4 |
| 30—R takes B | 30—Kt to K 4 |
| 31—Q to R 3 | 31—R takes P |
| 32—Q to R 4 | 32—P to R 3 |

- | | |
|-----------------------|------------------|
| 33—R (K sq.) takes Kt | 33—Q takes R |
| 34—R takes Q | 34—R takes R |
| 35—Q takes P (i) | 35—R takes P ch. |
| and draws (k) | |
- (a) Purposely avoiding the "book" continuation, 20 B to B 3, Q to B 4 ch, 11 K to R sq, Castles, which is theoretically a lost game for White.
- (b) 13 Q to R 5 or R to K 5, postponing the exchange of pieces, would perhaps answer better.
- (c) Not 11...P takes B on account of 12 Kt to K 4.
- (d) If 15 Q to B 6 Black seems to get a safe position by 15...R to Kt sq, followed by Kt to Q 2. White's attack, almost all through the game, is paralysed by his being unable to get his Kt to K 4.
- (e) He might play 17 Q takes R P, threatening 18 R takes B ch, but Black could reply 17...Q to K 2, eventually develop a counter attack on the K R file. The text moves would lead to some pretty play if Black ventured to take the Pawn—e.g., 17...Kt takes P, 18 R takes P (not R takes B, which is unsound), R takes R, 19 R takes B ch, K to K 2, 20 P to Q 4, and Black must give up Q for R.
- (f) To prevent at Kt to K 4, but in closing one weak spot he opens another, allowing White to concentrate his forces against the Q B.
- (g) A powerful move, threatening to win a piece by 25 P to K Kt 5, &c.; and if Black avoids this by P takes P, then 25 Kt to K 4 wins the R. White would probably lose by 24 Q takes R, Q takes Q, 25 R takes B, Q takes P.
- (h) 27...Q takes Q is decidedly preferable, though it would not save the piece. Black keeps on this diagonal to prevent the Kt checking.
- (i) This hasty move throws away a won game.
- (k) Very curious that White can only get out of perpetual check by sacrificing the Queen.

WONDERFUL COINCIDENCE.

GAME No. 325.

Played by correspondence, *Dublin Mail* tourney (Evans Gambit, Compromised Defence).

- | WHITE. | BLACK. |
|-----------------------------|--------------------------|
| P. Sanford, (Dr. Tarrasch.) | W. Brunton, (Herr Keiz.) |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—B to B 4 |
| 4—P to Q Kt 4 | 4—B takes P |
| 5—P to Q B 3 | 5—B to R 4 |
| 6—P to Q 4 | 6—P takes P |
| 7—Castles | 7—P takes P |
| 8—Q to Kt 3 | 8—Q to B 3 |
| 9—P to K 5 | 9—Q to Kt 3 |
| 10—Kt takes P | 10—K Kt to K 2 |
| 11—B to R 3 | 11—R to Q Kt sq. |
| 12—Kt to Q 5 | 12—Kt takes Kt |
| 13—B takes Kt | 13—P to Q Kt 4 |
| 14—P to K 6 | 14—B P takes P |
| 15—B takes Kt | 15—P takes B |
| 16—Kt to K 5 | 16—Q to K 5 |
| 17—Q to K Kt 3 | 17—P to K Kt 3 |
| 18—Q to Kt 5 | 18—P to Q Kt 5 |
| 19—Q R to Q sq. | 19—Castles |
| 20—B to Kt 2 | 20—R to Q Kt 4 |
| 21—Kt to B 7 (a) | 21—P to K 4 |
| 22—Q to B 6 and wins (b). | |

- (a) White's 21st move is splendid, and wins whether R or K takes Kt. The Q is also prettily en prise at the same time.
- (b) Dr. Tarrasch has pointed out the marvellous coincidence that this game is identical up to move 21 with No. 185 in his *Dreihundert Schachpartien*. Dr. Tarrasch continued 22, Kt to R 6 ch, K to R sq; 23, R to Q 5, K to Kt 2; 24, R takes R, K takes R; 25, Q to B 6 ch, K to K sq; 26, Kt to Kt 8, and easily wins.

GAME No. 326.

An extraordinary game, played recently in Vienna:—

IRREGULAR OPENING.

- | WHITE. | BLACK. |
|-------------------|---------------------|
| Herr B. Fleissig. | Herr C. Schlechter. |
| 1—P to Q Kt 4 | 1—P to K 3 |
| 2—B to Kt 2 | 2—K Kt to B 3 |
| 3—P to Q R 3 | 3—P to Q B 4 |
| 4—P to Kt 5 | 4—P to Q 4 |
| 5—P to Q 4 | 5—Q to R 4 ch. |
| 6—Kt to Q B 3 | 6—Kt to K 5 |
| 7—Q to Q 3 | 7—P takes P |
| 8—Q takes P | 8—B to B 4 |
| 9—Q takes Kt P | 9—B takes P ch. |
| 10—K to Q sq. | 10—P to Q 5 |
| 11—Q takes R ch. | 11—K to K 2 |
| 12—Q takes B | 12—P takes Kt |
| 13—B to B sq. | 13—Kt to Q 2 |

| 16—K to B sq. | 16—B to K 6 ch. |
| 17—B takes B | 17—Kt to K B 7 |

Black easily forces mate.

HASTINGS TOURNAMENT.

This has now been going on for a fortnight but as yet we have heard no results. We anticipate that a series of masterpieces will be the outcome of this renowned meeting, and shall not fail to publish some of the best games when they reach us.

A CHESS-PLAYER'S "MOVE."

A characteristic story is being told concerning Steinitz, the famous chess-player. Steinitz is said to sometimes stand quite still in the midst of a crowded thoroughfare while he mentally considers some opening or end-game in all its bearings. "Move on," said a policeman to him on one occasion. "I beg your pardon, but it is your move," said Steinitz courteously, but with firmness.

No. 20s, Bombay	—
No. 16s, Bombay	—

METALS.

Market unchanged. Some small sundries are taken daily at quotations, but the trade generally is not large.

	PER PICUL.
Flat Bars, 1 inch	\$3.20 to 3.25
Flat Bars, 1 inch	3.25 to 3.30
Round and square up to 2 inch	3.20 to 3.30
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	8.50 to 8.75
Wire Nails, assorted	5.60 to 6.00
Lin Plates, per box	5.20 to 5.40
Pig Iron, No. 3	1.70 to 1.75

KEROSENE.

Quotations unaltered. There are signs in the air of a better demand, and holders will not be sorry to see more trade with better prices.

American	\$2.15 to 2.20
Russian	2.05 to 2.10
Langkat	1.90 to 1.95

SUGAR.

Brown—Fair business at unchanged prices, although at the moment the market seems inclined to go in holders' favour. White—Steady trade at late rates.

	PER PICUL.
Brown Takao	\$3.70 to 3.75
Brown Manila	4.30 to 4.50
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.20 to 3.70
White Java and Penang	6.10 to 6.20
White Refined	6.00 to 9.25

EXPORTS.

RAW SILK.

The trade increases daily, principal demand coming now from Europe and prices have again advanced. Recent mail-steamer have taken very large shipments and it looks as though some of the buyers for America will get "left" (at any rate on price) unless they fill their orders without delay.

QUOTATIONS.—(NEW SILK.)

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY,
Annual Subscription, post free, 25s., in the United
Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds,
and swindles.

"MONEY" is the Journal for Investors, Speculators and
Business men.

"MONEY" is a thoroughly up-to-date Record of all Financial
and Business Matters.

"MONEY" is not subsidised by any financial association,
clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

August 3, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the
World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPTOMISED
DEBATES, Translations of the Bills dis-
cussed, Budgets, Speeches of the Ministers of
State in full, Questions put and the answers of
the Government, and the Legislative Work of
the Session.

PRICE \$1.

To be obtained at the Office of the *Japan*
Mail, No. 51, Main Street.

THAMES ELECTRIC & STEAM LAUNCH CO⁹

ELECTRIC LAUNCH "GLOW-WORM," 58ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings
and Specifications for Launches in Wood, Steel,
Delta Metal, or Composite, either with Steam or
Electric Power—Speed from 6 to 20 miles per hour;
—also Tugs, and Stern Wheelers, which, if required,
will be prepared and constructed in Sections.

Launches of specially Light Draught constructed
for Shallow Waters.

Electric and Steam Pinnaces for Harbour or
Ferry purposes.

Builders of Electric Charging Stations, Floating
or Stationary; and makers of all required fittings
and equipments.

A selection of Electric Launches always ready
for prompt delivery, of which particulars will be
forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID

BRAND

CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

September 8th, 1894.

YOKOHAMA: SATURDAY, AUG. 31ST, 1895.

SUMMARY OF NEWS.

THE condition of the Prince Imperial has much improved.

A GERMAN sailor died of cholera on board the British steamer *Ashdown*.

MR. UCHIDA, the new Secretary of Legation in Peking, has gone to China.

COUNT INOUE's successor as Minister to Korea, Lieut-General Viscount Miura, has reached Korea.

THE water-frolics of the Yokohama Amateur Rowing Club passed off right merrily on Wednesday afternoon.

SEVERAL cases of cholera have been reported in Yokohama during the week, but on one day no fresh case occurred.

MR. ODA HANSUKE, M.P. for the Fifth District of Yamaguchi Prefecture, has resigned his seat owing to bad health.

AN electric tramway has been sanctioned for Tokyo; it will probably have to be run on the "elevated" system.

MAJOR-GENERAL INOUE, Commander-in-Chief of the Sixth Brigade, has been appointed Chief

Staff Officer of the Army Inspection Bureau, his late post being given to Major-General Miyoshi.

H.I.M. THE EMPEROR commemorated on the 27th instant the twenty-seventh year of his accession to the Throne.

THE boiler of a sulphur factory at Yoneko-mura, Nagano, burst on the 26th inst., and several persons were injured.

MR. TAKAHASHI KOREKIYO, of the Bank of Japan, succeeds the late Mr. Koizumi, as manager of the Yokohama Specie Bank.

THE Nippon Yusen Kaisha has petitioned the Authorities for permission to open steamship communication with Formosa.

RUMOURS of further anti-missionary riots in China were circulated on Thursday and Friday, but they lack confirmation.

A SMALL fire broke out in a godown at the back of Main Street on Thursday; but a few pails of water extinguished the flames.

THE P.M. *China* brought the mails from San Francisco to Yokohama in the short space of 13 days 3 hours on her last trip.

AZUMA-YAMA, in Fukushima Prefecture, has been causing some uneasiness to residents in the vicinity by reason of renewed rumblings.

MR. OKAYAMA TERUHIKO, who has been absent in England in connection with the *Chishima-Ravenna* Appeal, returned to Tokyo on Friday.

LIEUT.-GENERAL VISCOUNT TAKASHIMA, the newly appointed Vice-Governor-General of Formosa, leaves Tokyo on the 31st instant for his mission.

ABOUT 3,000 soldiers belonging to the Second Army Division (Sendai) left Tokyo on the 27th inst. for Ujina, whence they will proceed to Formosa.

MR. HASHIGUCHI, formerly Consul-General for Japan at New York, has just returned to Japan, preparatory to taking up an appointment in Formosa.

IT is stated that the Committee appointed for the distribution of spoils obtained during the war has decided to distribute some articles among the elementary schools.

SEVERAL minor railway accidents, consisting mostly of derailments, have occurred on the Tokaido, Kansei, and Kiushu railways during the week. No loss of life resulted.

CAPTAIN MACKENZIE, of the *Himeji Maru*, has been exonerated of all blame in connection with the running of that vessel on some uncharted rocks at the Pescadores on the 1st June.

THE organization of the Yokohama Chamber of Commerce, which has been interrupted by the continued bickering of the petty merchants, is now making progress towards settlement.

DURING a destructive fire, which occurred in Osaka on the 21st inst., two firemen were seriously, and about fifty others slightly, wounded; a fourteen year-old boy was burnt to death.

THE Coroner's jury which inquired into the circumstances surrounding the death at Shoji on August 14th, of Mr. H. W. Brockbank, returned a verdict of "death from natural causes accelerated by intemperate habits."

EIGHT armed steamers were attached to the Navy since the outbreak of the war. They are the *Famashiro Maru*, *Sagami Maru*, *Saikio Maru*, *Genkai Maru*, *Kanazawa Maru*, *Edo*

Maru, and *Akashi Maru*, of which the *Famashiro* and *Sagami* are now removing their armament.

COUNT MATSUKATA has resigned the portfolio of Finance, and left the capital. For the present, Viscount Watanabe holds the office in conjunction with that of Minister of Communications.

A RAILWAY corps lately proceeded to Formosa, to construct a railway between Shinchu and Chang-hua, a distance of 26 or 27 *ri* (one *ri* = $2\frac{1}{2}$ miles). This will afterwards be extended to Tainan.

MR. OZAKI, a Public Procurator of the Yokohama Local Court, has been appointed to the Tokyo Local Court, and Mr. Miyagoshi, a Public Procurator of the Tokyo Local Court, to the Yokohama Local Court.

THE Tokyo City Assembly will not allow the Japanese Cast Iron Foundry Company to break its contract in regard to the supply of water-pipes, unless the Company takes the consequences of its breach of good faith.

REUTER telegraphs:—It is reported that the situation in Madagascar is of the gloomiest description, and that there are 5,000 French troops in hospital, amongst whom there is great mortality. The French have captured Andribo almost without opposition, the Hovas evacuating the place in a demoralized state. The French loss was trifling. Speaking in the House of Commons, the Hon. Geo. N. Curzon stated that it would be impolitic to raise the question of indemnity to be made to the families of the missionaries murdered at Kucheng, until the murderers had been punished, which was of primary importance. Lord Salisbury stated in the House of Lords that if China was neglectful or lukewarm in punishing the offenders in the recent outrages, further action will be necessary. *The Times* regards Lord Salisbury's statement with regard to Armenia as an emphatic warning to the Sultan that, unless reforms are introduced, it is improbable that the Powers will continue to guarantee the autonomy of Turkey.

THERE is a distinct improvement in the Import trade, both in present and future business. In Yarns and Grey Goods a fair amount of transactions are recorded, and Fancy Cottons are in better demand than for some time past, while Woollens are in request for forward delivery. In the Metal trade there is about as much doing as is usual at the time of year. Contrary to expectation, holders of Kerosene have given way, and a few transactions have been done at lower quotations. This has encouraged buyers to hold off for a further reduction, which will probably be effected before any great amount of Oil changes hands. The Sugar market is weak, small sales and heavy arrivals with only a light demand tending to lower quotations for Brown sorts; Whites are fairly active at late rates. Great activity continues in the Silk trade and keen competition among buyers has forced up prices, though holders declare they could take less money in a dead market. These remarks refer only to Raw Silk, for in Waste there is nothing whatever moving. The Tea trade continues active, and late rates are fully maintained, though the end of the season proper is approaching. Leaf costing from \$20 to \$25 per picul is most in request, and as suitable parcels are no longer abundant holders get the price they ask. Settlement and export figures now bear comparison with those of previous years, and if the quantity is forthcoming will probably exceed those of last season when the end comes. Exchange has been fairly steady, with only slight alterations in rates, the latest move being a rise of one-eighth on the enhanced value of silver.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Count Matsukata's resignation has been the most prominent subject of discussion in the vernacular press during the week. Various rumours are circulated about the probable effect of the incident upon the position of the Cabinet. But they are for the most part mere conjectures without the least foundation. So far as we can make out, the incident is not likely to affect the political situation in any way. Of course, one or more changes of *personnel* may take place in the course of a month or so, but that can not produce any change in the situation. As has always happened in the past, the retiring Minister has been made a hero by the majority of the metropolitan papers, whether they like him or not. He is held up as a statesman who knows what is meant by political responsibility, and as an example which the present Ministers of State would do well to imitate. A man of sterling integrity and disinterested patriotism, the ex-Minister of Finance has hitherto abstained from meddling with parties, and his political influence outside the official circle is comparatively small. The only quarter in which he is supposed to possess some influence is among a certain class of business men. As to his supposed connection with the National Unionists, he has never been regarded as their leader; neither does he seem to have exercised any direct influence over the policy of that party. The circumstances that the *Kokumin Shimbun*, which is almost regarded as the organ of the Progressionists, was the first to announce his resignation, and that the Progressionist journals have generally manifested sympathy for him, seem to have some meaning, but on this subject we shall not hazard any opinion.

We have already reproduced the comments of the Tokyo papers upon this incident, but we may now offer one or two general observations upon the attitude of the papers. The *Fiji Shimpō* keeps strict silence upon the subject, not paying any attention to the controversy that is going on in regard to it. The *Kokkai* and *Nippon*, assisted by the *Kokumin* and the Progressionist organs, have taken up the Count's cause by extolling him at the expense of the Premier and other Ministers of State. The *Chuo Shimbun*, the National Unionist organ, criticises the conduct of both the ex-Minister of Finance and that of the Military authorities. Our contemporary cannot agree with the views enunciated by the Count in the memorial which he recently presented to the Cabinet on financial matters; neither does it think that he acted quite deliberately in laying down his Ministerial portfolio. But, on the other hand, it is disposed to think that the Military authorities have not been sufficiently prompt in drawing up the measures for the increase of the army. This article shows in what relationship Count Matsukata stands towards the National Unionist party.

Count Matsukata's resignation has furnished opportunity for the discussion of the questions of an extraordinary Diet and the increase of the Army and the Navy. It is now generally taken for granted that an extraordinary session will not be convened. If it be not convened, the reason must be sought in the fact that the military measures had not been completed in time. But the Opposition papers are not satisfied with this obvious explanation, and try to find some ulterior political motive for the course pursued by the Cabinet. The *Mainichi Shimbun*, for instance, observes that the Premier is opposed to an extraordinary session, because he is conscious of the disadvantages of confronting the Opposition while the Cabinet's position is far from strong. So far as the expenditures for the increase of the Army and the Navy are concerned, the Diet, says our contemporary, will be as ready to approve them as when it voted the War Loan in the Hiroshima session of last year. But, in the *Mainichi's* opinion, the passage of the ordinary Budget depends upon the degree of confidence enjoyed by the Cabinet. Appre-

hensive of this danger, the Premier has decided to incorporate in the Budget those expenditures which are required for the increase of the Army and the Navy, and to bring it before the Diet at its ordinary winter session. This, says the Progressionist organ, is the reason why the Minister President is opposed to the convocation of an extraordinary Diet.

The absurdity of the views expressed by the above mentioned journal has been exposed in a ruthless fashion by the *Nichi Nichi Shimbun*. Should the Cabinet Ministers purposely delay the preparation of the Military measures from such motives as those ascribed to them by the *Mainichi*, the *Nichi Nichi* would be the first to demand the dismissal of such unpatriotic Advisers of the Crown. But as a matter of fact, the Government is taking every possible step to expedite the conclusion of the task, the officers concerned being hard at work almost day and night. Moreover, there is no necessity for the Cabinet to be afraid of the opposition of the parties, for the Constitution provides the Government with ample means to carry out important measures of State, notwithstanding the objection of irresponsible politicians. But is it possible, as the Opposition journals seem to think, to separate the expenditure necessary for the increase of the Army and the Navy from the ordinary Budget? The *Nichi Nichi* answers decidedly in the negative. It is true that, of these expenditures, those which are to be defrayed during the current fiscal year are to be put together in the form of a Supplementary Budget, and might very properly be discussed in an extraordinary Diet. In case an extraordinary session is not convened, the Supplementary Budget will have to be introduced in the next ordinary session, separate and distinct from the Budget for the next fiscal year. The Opposition politicians seem to think that they will be free from blame in opposing the increase of the Army and the Navy, if they only voted the Supplementary Budget. They forget the important fact that the Supplementary Budget covers only a small fraction of the expenses required for the Military and Naval augmentation, and that the ordinary Budget has to contain the expenses caused by the increase of the country's fighting capacity. Therefore, in order to be logical, every member of the Diet who approves the Supplementary Budget will have to vote also the Military and Naval expenses in the ordinary Budget. Thus no advantage would be gained by the Cabinet by introducing the Military and Naval measures in the coming winter session of the Diet. Neither would the Opposition be released from the trouble of voting the ordinary Budget in that session by giving their consent to the supplementary Budget in an extraordinary session.

Concerning the increase of the Army and the Navy, the *Mainichi* draws the attention of the Government to the importance of deciding the national policy before setting about the discussion of this question. If the national policy be fixed upon a career of continental expansion, it will be necessary to have a large army, whereas the army will be of secondary importance if it be decided to pursue a policy of colonial and commercial expansion toward the south. Which of these courses does the Government intend to pursue? This is the point to which our contemporary calls the Cabinet's earnest attention.

The *Fiji Shimpō* severely blames the authorities for their want of diligence and courage in connection with the question of the increase of the Army and the Navy. Five months have already passed away since the restoration of peace; but no step has been carried out in practice for the augmentation of the country's fighting capacity. The Army measures may take time to complete, but why should the Government delay the commencement of the work of Naval increase on which investigations have long since been completed? In the *Fiji's* opinion, the Government ought to have at once ordered the construction of warships, without waiting for a

session of the Diet. Should this necessary step be disapproved by the Diet at the next session, the Ministers would have simply to resign, in which event they would have on their side the sympathy of the whole nation. But if they were afraid of the consequences of such a course, they might have convened an extraordinary Diet, when, in the *Fiji's* opinion, their proposal would have been unanimously voted. But instead of pursuing either of these courses the Government, our contemporary observes with regret, seems determined to pursue the worst possible policy, that of waiting for the next ordinary session of the Diet. "A country," it remarks in conclusion, "can only hope to maintain peace with other states in this age of so-called civilization by being prepared at any time to take up arms. But our Government is negligent in matters of warlike preparation. We are disappointed to find that it is so wanting in courage and so hopelessly untrustworthy."

The Liaotung question is never forgotten by the Japanese press. Alluding to a Vienna telegram which says that Russia is sending out fresh warships to the East for the purpose of demanding an immediate evacuation of Liaotung, the *Kokumin Shimbun* writes as follows:—"We do not know about the truth of this report; but should it be true, we advise Russia that such conduct on her part is inconsistent with a peaceful state of things; Japan's feelings toward her will become still more unfriendly, and not only the Japanese but all the world will condemn her conduct. We do hope that Russia will not be guilty of such a mistake."

The *Chuo Shimbun* says:—"The return of Liaotung has been announced by the Emperor, and the three Powers will never be allowed to meddle with the question any further. We shall return the territory when, and only when, we think it advisable."

The *Kokkai* repeats, what has already been pointed out over and over again by the Tokyo journals, that, Japan having never bound herself as to the time and manner of returning Liaotung, she is perfectly free to do as she pleases in these respects. Our contemporary cannot believe that the Japanese Government has demanded a paltry sum of 50 million *yen* in return for the receded territory, but it hints that a Cabinet which pursues a weak policy in Korea may be equally weak elsewhere.

The other topics discussed by the papers are the railway problem, the encouragement of marine business, rewarding the services rendered in the war, the settlement and colonization of Formosa, and so forth.

EDITORIAL NOTES.

A NEW EXCHANGE.

A FEW weeks ago, writes the Paris correspondent of a London journal, I beheld for the first time a spectacle which is possibly peculiar to Paris,—at least I have never heard of the existence of a similar institution in London, though it may exist in Vienna. I had occasion to cross the Champs Elysées one Sunday afternoon. I passed through a compact crowd of people, mostly adults, who were watching with intense amusement the puppet shows, but when I had left the marionettes behind me, I found myself again in a crowd. It was composed chiefly of quiet, respectable-looking men, but there were also some boys, and even young girls in short dresses. They all had the same pre-occupied, business-like air, and it was evident they were engaged in work of some sort, and had not come there merely to enjoy themselves by strolling about under the trees. Some of the men were plainly brokers or dealers in a large way. Each had a big book under his arm, to which he ever and anon referred, and sometimes he would examine "samples" through a magnifying glass. I peeped over the shoulders

of some of these brokers, and found that I had lighted upon the "Stamp Exchange." I watched several transactions which were conducted with as much method and circumspection as if they had been important commissions on the Bourse. Perhaps there are regular "account days," "ticket days," and "carrying over" on this curious little market. Perhaps one of these little girls in a short frock was a noted operator—a philatelic Jay Gould,—and had just made a successful "straddle" in "four-penny Capes" and "two-penny Vancouvers." Possibly—as every business has its organ in the present day—there is a journal which gives all the latest quotations of the Stamp Exchange, and informs its readers that "nine-penny blues were dull on a falling market," and advises subscribers to hold on to some particular stock, "which is sure to recover when the bears have finished." Joking apart, however, it is very convenient for the amateur and professional philatelists of Paris to be able to meet together once a week, or perhaps oftener, and sell, purchase, or exchange any stamps they may require. I noticed, too, that some of the dealers gave a good deal of information to youthful applicants who had become possessed of some stamps with which they had hitherto been unacquainted.

THE "HENRIETTA" ASHORE.

THE Kobe evening journal says that advice was received there on Monday afternoon that the American ship *Henrietta*, bound in from Yokohama, is ashore. Advice of the disaster was received by the Agents, Messrs. Delacamp & Co., Captain Ross having wired:—"Henrietta ashore Satoura—nine feet water in hold." The *Henrietta* is a ship of 1,203 tons nett, under the command of Captain Ross. She sailed from Yokohama for Kobe on the 19th inst., and evidently made a good run down to the mouth of Kii Channel. She was passed by the Blue Funnel steamer *Diomed* off Hino Misaki on Friday, and it is said she was afterwards seen to put out to sea in view of the threatening weather. In the absence of advice it is reasonable to assume that there was no loss of life. Satoura, the place mentioned in the Captain's message to his Agents, is at the north-eastern corner of the island of Shikoku and close to the entrance to Naruto Passage. We understand that Mr. Ellerton, Lloyds' Surveyor, has already left for the scene to see if anything can be done for the vessel.

THE OBSERVANCE OF SUNDAY.

THE answers given by the Rev. Frederick Peake, LL.D., Secretary of the Lord's Day Observance Society, when questioned by the Lord's Day Observance Committee of the House of Lords, are worth quoting:—

Lord Thring:—What do you mean by secularising the Sunday?—Turning it into a common day of the week, instead of consecrating it to works of holiness.

Suppose I skate on Sunday, does that make the day a common day?—It would be difficult to draw the exact line, and, therefore, an Act of Parliament deals with facts of a broad type.

You speak of the public-house-frequenting classes; do you mean to tell me, with regard to the higher artisan and small shopkeeper, that there is any wrong in going into a public-house?—I am not a total abstainer myself, and therefore I do not use the expression in an offensive sense, but the persons referred to are known to me, as a parish clergyman as men who spend an undue amount of time and money in public-houses.

Then it is the quantity they take that makes them public house frequenters?—I say regular haunters of such places.

What reason have you for saying that if people engage in innocent recreation on Sunday it is not calculated to keep them out of the public-house?—Experience and the testimony of others.

Then what do you wish men to do on Sunday?—God has told them.

I ask you. Do not invoke the name of the Deity in this way.—In public worship, the instruction of the young, visitation of the sick, helping people in difficulty, and showing acts of kindness to one another. I find abundance of occupation for Lord's Day.

Suppose the case of a labourer who has worked hard all the six days of the week. Do you mean to tell me that his whole occupation on Sunday is to be going to church and visiting the sick?—I find men who take great delight in these things.

I ask you, is it rational to suppose that a man who works hard six days a week is to spend all Sunday in going to church and visiting the sick?—Yes; I should say it is his duty to remember the Sabbath day.

Do you consider that an innocent joke on Sunday is wrong?—It would very much depend on the nature of the joke. I should not consider it a wrong thing in itself.

Then you may laugh on Sunday; may you whistle on Sunday?—I have never considered the question.

Here is Johnson's definition of "to amuse"—"to entertain with tranquillity, to fill with thoughts that engage the mind without distracting it." Therefore, if that definition is correct, amusement is the correct thing on Sunday, is it not?—You are not, among other things, "to seek your own pleasure."

If you seek your own pleasure you are wicked, are you?—You are not to seek your own pleasure, according to the law of God.

May you tricycle on Sunday, which I happen to do?—I should look to the whole drift of a man's life; and if his cycling was a substitute for religious duties, I should say it is wrong. It I were going to take a distant service for a sick neighbour, and the only way of reaching the place was to have a tricycle, then—though I should own it was open to misrepresentation—I should not think it was wrong.

Suppose a man cannot walk and uses a tricycle, is that wrong?—I should not say so, if your life was a religious one as a whole, and that was simply one of the things that tended to keep you in health.

Questioned by Lord Hobhouse with reference to some of the lecturers and their views, and asked whether he had not heard learned and excellent men speaking of phenomena without approaching the awful problem of the origin of things, witness replied:—Imperfectly informed scientific men do. I am a believer in a far greater Astronomer Royal than Sir Robert Ball, even one who speaks of the heavens declaring the glory of God.

THE COLLISION AT MOJI.

FURTHER particulars to hand regarding the collision of the transport *Shibata Maru* with the British steamer *Quantock* on August 7th, show that the *Shibata* was making for an anchorage when she collided, and the *Quantock* was lying at anchor with a full cargo of rice. The *Shibata Maru* struck the *Quantock* on the port side, fore part of the bridge, and knocked a hole in her, extending from the water-line upwards, carrying away the main deck and lower bridge rails. At first the *Quantock* was making water, and signals were flying that they intended to beach her, but after getting a sail over the hole, the pumps were able to keep the water under. Her cargo had to be discharged. The *Shibata* is very slightly damaged; she had 800 soldiers on board at the time. The collision is said to have occurred through a mistake made by the engineer; orders were telegraphed from the bridge to the engine-room for half-speed ahead, and instead, the engineers put her half-speed astern and she struck the *Quantock* with her stern.

SILK IMPORTS TO THE STATES.

THE imports of Raw Silk at New York and San Francisco in July, 1895, were:—

	bis.	lbs.	\$ Value.
New York	510	106,764	386,928
San Francisco ...	803	98,613	299,838

1,313 ... 205,377 ... 686,766

The imports of Waste, Noils, and Cocoons in the same period were:—

New York 132 | 44,400 | 11,413 |

The imports of Japanese Piece-goods and Handkerchiefs, were from January 1st to June 27th, 1895:—

Silk Piece-goods	300,255	Pieces.
Silk Handkerchiefs	345,951	Pieces.

PRESENTATION.

A NUMBER of ship-masters belonging to the chartered ships of the Nippon Yusen Kaisha, have presented Capt. W. H. Forbes, the Company's Captain-Superintendent, with a handsome and novel time-piece, as an expression of their regard. The dinner at which the presentation was made, took place at the Club Hotel, and was of an enjoyable character.

AN AGED CABINET.

THE *Westminster Gazette* describes the new British Cabinet as essentially a Cabinet of old men. Indeed, it is decidedly the most aged Cabinet of recent times. Even the last Cabinet, with its octogenarian head, was young beside it. Its average age (at the time of appointment) was 56, or, without Mr. Gladstone himself, less than 53. The average age of Lord Salisbury's last Cabinet was 55. That of the present one is 58. It contains two members of three-score years and ten—Lord Cross, 72, and Lord Halsbury, 70; four between sixty and seventy—Sir H. James, 67, Lord Salisbury, 65, Mr. Goschen, 64, the Duke of Devonshire, 62. Next come: Mr. Chamberlain, 59; Lord Ashbourne and Sir M. Hicks-Beach, 58; Mr. Ritchie, 57; Lord Cadogan and Mr. Chaplin, 55; Sir M. White Ridley, 53; Lord Lansdowne and Lord George

Hamilton, 50; Mr. Balfour is 47; and Lord Balfour, the youngest member, is 46. In this respect the New Cabinet is very unlike its predecessor, which contained five young men (as youth counts nowadays in politics)—Mr. Acland, 46, Lord Rosebery, 45, Lord Tweedmouth, 45, Mr. Arnold Morley, 43, and Mr. Asquith, 42. The figures refer in all cases to the ages of Ministers at the time of their admission to the Cabinet.

KING DAVID'S STRATEGY.

WE take the following from the *Literary Digest*:—

A very interesting study on the subject of King David as a general was recently laid before the French Académie des Inscriptions et Belles Lettres by the explorer and archeologist, M. Dieulafoy, as we learn from *Biblia* (a journal of Oriental research in archeology, religion, etc.). In reviewing the tactics employed by David in his warfare against the Philistines, the learned scholar gives King David highest praise. He calls him not only the greatest strategist among the Israelites, who successfully kept the enemies of the kingdom at bay, but he considers that David invented and employed tactics against the Philistines which have been imitated by modern warriors with marked success. *Biblia* says:

"M. Dieulafoy has discovered the scene of King David's operations in the Valley of Rephaim, when by his rapid change of movements, as described in the Bible, he completely upset all the calculations of the Philistines, and not only gained victory over them for that day, but compelled them to accept very hard terms of peace. His tactics were the following: He brought forward his flank, then made a rapid change of front, and so entirely shut in the left side of the Philistine ranks that they fell an easy prey to his men. These, says M. Dieulafoy, were precisely the same movements as were used in the year 1714 by Frederick II., at Mollwitz, and again in 1757 at Rossbach, and they were again employed with such signal success against the Austrians at Austerlitz. The manœuvres employed at Rephaim were, so far as we have any record of military display, entirely new, and we must, therefore, give the whole credit of their ingenuity to David.

The shepherd king here displayed not only remarkable powers of thinking out his plans, but he must have possessed great skill in the training of troops, to have brought them to the required stage of obedience and promptitude of action. We need not wonder, in the light of these extraordinary gifts, that he should have succeeded in his campaigns and in establishing the kingdom of Israel firmly in the midst of its enemies. In examining the district, M. Dieulafoy has come to the conclusion that David used every natural advantage which the country afforded, and lost no point which could have proved of help to him in his position."

SAMPLES AND PATTERNS.

THE Director of the Yokohama Post Office requests us to draw attention to the regulations affecting samples and patterns of merchandise sent through the domestic post, which were issued in a notification of Nov. 2, 1891, but which seem to be misunderstood, as they are constantly violated. The following is the portion of the notification referred to which it is desired to bring to the notice of the public:—

Transmission of samples and patterns of merchandise, by the domestic mail service, is only allowed between the dealers in such merchandise, or at least one of parties must be dealer in such articles. On the cover or wrapper of such mail matter the words "Samples or Patterns of Merchandise" must be written; also the names of the sender and receiver and signifying his or their occupation. When the above named requirements are not complied with the matter will be treated as first class mail matter and charged accordingly.

DAYLIGHT ROBBERY AT KOBE STATION.

A NOTORIOUS pickpocket named Watanabe Asakichi, of Osaka, fell in with a country gentleman at Kobe Station on Tuesday, who had a leather trunk with him. The pickpocket, perceiving how jealously the gentleman was taking care of the trunk, dexterously opened it and took out a bundle of paper money amounting to one hundred yen. A Japanese lady near by detected the theft and informed the gentleman, who started at once in pursuit of the thief. Seeing the impossibility of escape, the thief threw back the bundle and ran as fast as he could, but he was caught by some coolies, and handed over to a policeman.—*Chronicle*.

"THE LITTLE ELECTRIC MAGNET."

WE quote the title to this paragraph from a circular in reference to Miss Annie May Abbott,

a young lady described as "The Eighth Wonder of the World." What electricity and magnetism have to do with the powers said to be possessed by Miss Abbott we fail to understand, and have not followed the performances in Europe and America close enough to give any opinion on the subject. Two performances are to be given next week in the Public Hall, when the public will see for themselves. The following is extracted from the circular:—

She can lay her open hands on your head and lift you in mid-air.—A stick laid on her open hands adheres so persistently that four men cannot pull it off though she does not grasp it.—She stands on one heel and four men cannot move her, push and pull as they will. She stands as firm as the Rock of Gibraltar.—An ordinary chair laid on her open hands cannot be removed by the strongest men. Little children by touching her become so charged with her powers that they cannot be lifted.—When such men as Sullivan, Muldoon, Kilrain, Jefferson, Mitchell, Sandow, and Sampson of England, Carl Abs, of Germany, the late Czar of Russia (perhaps the strongest non-professional in Europe) and thousands of others failed to lift her, it is pretty safe to say there is not a man on earth that can raise her. On the scales she weighs normally ninety-eight pounds.—During her performance her pulse and temperature assume an alarmingly abnormal condition.—She lifts with her open hands six or seven men at one time (you can put your hands between her's and the object upon which the men are placed and not the slightest pressure is felt, demonstrating that her power is not physical strength).—A pole may be held down by six or eight men and another seated on top. She lifts and carries the centre mass across the stage with her open hands laid against the pole.—Resists the strength of the strongest horse in town. Holds men in mid-air.

THE CORNELL DEFEAT AT HENLEY.

WE take from the *Literary Digest* the following interesting résumé of American opinion with regard to Cornell's defeat at the Henley regatta:—

The Cornell "stroke" and general style of rowing seems to be doomed. The bad defeat of the Cornell crew by the Trinity Hall (Cambridge) crew at Henley is regarded as having settled the controversy as to the respective merits of the short stroke practised by Cornell and the long, slow stroke in favour of England. There were two races. In the first Cornell won on a technical ruling against the Leander crew, which failed to start when the signal was given and was declared out of the race. The second race, however, afforded a fair test, and the Cornell men were overwhelmingly beaten. Some claim that the Cornell men were over-trained, as some of them fainted at their posts and dropped the oars, but the predominant view is that "the stroke did it." The American sporting editors, in commenting upon the result, console themselves with the reflection that the defeat of the "vicious" stroke will insure its abandonment by American colleges and establish American supremacy on a sounder basis.

A DESERVED DEFEAT.—"We sympathize with the Cornell men. Their ambition soared to the top of the mountain at the first flight, but it failed to raise it owners after it. They defied all comers on the waters where the best rowing in the world is seen, but without success. Now that it is all over, however, we are free to say that it would have been a scientific calamity if Cornell had won. It would have been a contradiction of all the principles which experience had laid down as sound if the rapid, choppy, exhausting stroke developed in America, and practised particularly by Cornell, had beaten the long-drawn-out sweep of the oarsmen of England. Years of study by the best masters have reached the conclusion that the longer, slower stroke with a fiercer, more concentrated attack on the beginning, and less violent and less frequent swinging of the body, drags the lungs and muscles less and covers more ground than the quicker, shorter, and jerkier movement that springs more from impatience than from well-reasoned theory. It has always been so, and it is not unsafe to say it always will be so; and no doubt it will be better so."

"The first great revelation of this for American oarsmen was when the spasmodic fifty-a-minute stoker, James Hamill, was almost lost to sight by that most elegant of English scullers, Henry Kelly. It was so when the Harvard four oar of 1869 came in behind the Oxford men on the Thames. It has been so for years past in the races between Harvard and Yale, when Yale has pulled long and Harvard has pulled short."

"American oars will sigh for the trailing of American colours at Henley; but they will find no little content in reflecting that so far as the art of rowing is concerned the result is as it should be. Cornell's defeat may be highly beneficial in its effect on American rowing."—*The Sun*, New York.

LET US PROFIT BY THE EXPERIENCE.—"One of the prime advantages of these international trials is the experience gained. If the American stroke, as repre-

sented by Cornell, needs modification, as seems possible from the result, it should be changed. No false pride or prejudice should be allowed to obstruct needed reforms. By taking advantage of the information gained from the victors, the latter may in the next contest be converted into the vanquished. The Englishmen said over and over again that, if Cornell won at Henley with that stroke, English crews would have to revolutionize their style of rowing, and they probably meant what they said. The English are brusque and cross-grained almost to the extent of brutality in their treatment of rivals in sporting matters, but they appear to be anxious to be fair, and to be ready to adopt anything that occurs to them as an improvement. The Americans are, as a rule, more courteous and hospitable in their treatment of Englishmen who come to this country, and they should be as ready to profit by any experience thus furnished."—*The American*, Baltimore.

"The gonfalon of American Amateur rowing droops limply from the cross-yard this morning, its streamers are inscribed 'Henley was our Waterloo,' 'We came, we were conquered,' and 'We have met the enemy and we are theirs.' Our latest aquatic expedition has been a sad failure. Each of the two Canadian scullers was beaten in his trial heat, while the eight of Cornell University, after rowing over alone in a preliminary trial, through bungling and a misunderstanding at the start, were easily beaten in their first race, the crew collapsing in the final half-mile."—*Spirit of the Times*, New York.

MISSION WORK IN JAPAN.

AT one of the Sessions of the International Missionary Union at Clifton Springs, N.Y., June 12-19 inclusive, the following resolution was passed:—

Since it has pleased God in the order of His providence to bring the Empire of Japan into such a position of prominence as she occupies to-day, this International Missionary Union deems it advisable to urge upon all the Evangelical Churches the necessity of taking advantage of the present crisis in the history of Missionary effort in eastern Asia, and would beg especially to emphasize the following points:—

- 1.—That no pains be spared in the development of an efficient native ministry.
- 2.—That the present staff of foreign Missionaries be not only continued, but increased when necessary.
- 3.—That those who are sent out to Japan as missionaries should be persons of superior equipment, and that they should go with a determination to acquire the language and give their lives to the work.
- 4.—That increased attention be given to Christian educational work.

RAILWAY ACCIDENT.

OWING to a luggage train being derailed near Hiratsuka station early on Monday morning the passenger traffic on the Tokaido line was much delayed. Some Yokohama residents who are sojourning at Kamakura took the usual morning train expecting to arrive here at 9 o'clock. At Ofuna they heard of the breakdown, and some at once decided to take *jinrickshas*. Those who decided to stop until connection was restored had three hours to wait, it being twelve o'clock ere they arrived in Yokohama. The *jinrickshas* were in long before.

CHENG TU.

IT is reported from Chengtu, says the *N.-C. Daily News*, that the ex-Viceroy Liu Ping-chang, who is charged with originating the riots there, has been appointed by the Throne "Joint Imperial Commissioner to investigate the Missionary Riots." This does not seem possible, but the news comes on good authority.

THE MINISTRY OF FINANCE.

THE *Nichi Nichi Shimbun* states that the resignation of Count Matsukata, Minister of Finance, was accepted by the Emperor yesterday, and Viscount Watanabe, Minister of Communications, received the additional appointment of Minister of Finance.

CAUGHT RED-HANDED.

A JAPANESE coolie was arrested by the police on Sunday, while in the act of selling 17 large brass nuts at Matsukagecho, Yokohama, for yen 6.75. The articles are supposed to have been stolen from some vessel in harbour or from the Custom House.

CRICKET AT KOBE.

THE Willard Opera Company, assisted by three members of the K.C.C., only managed to knock up 40 runs on Saturday, while Kobe made 182 for six wickets.

THE FORMOSAN SLANDERS.

The *Japan Gazette* is compelled to plunge into a morass of falsehood in the hope of eluding the responsibility of its original slanders against the Japanese troops in Korea. "The Mail," writes the *Gazette*, "says we charged the Japanese with being more bloodthirsty and inhuman than the Kurds. We said nothing of the kind. Indeed we expressly omitted all reference to the Kurds." The *Gazette* actually makes such an allegation, though the second sentence of its article of the 3rd instant runs thus:—"The shrieks of the massacred Armenians have roused European indignation, yet Japan in Formosa is repeating the Port Arthur atrocities with cold-blooded resolution and not a voice is lifted in condemnation." It was the Kurds that massacred the Armenians. Nevertheless the *Japan Gazette* pretends that "it expressly omitted all reference to the Kurds!!" Then our incomparable contemporary shows that even this marvellously audacious falsehood has not exhausted its courage. "Nor did we say," it adds, "that the Japanese were worse than the Huns." It did not say that the Japanese were worse than the Huns!! What did it say then? "This sickening massacre of the innocents is not war. Before this hideous sacrifice of life the atrocities of a Herod seem inoffensive. We can recollect nothing like it in history unless we go back to the days of the Huns and even they sometimes spared the women." Yet the *Gazette* did not say that the Japanese were worse than the Huns!! It merely said that history furnished no example of soldiers so savage and cruel as the Japanese except the Huns, and even the Huns sometimes spared women, whereas the Japanese "ruthlessly butcher men, women, and children." Yet it did not say that the Japanese were worse than the Huns!!! We have never had to deal with such dementia as that of the *Japan Gazette*. There is nothing like it in journalistic history, even though we go back to the days of the Huns.

FORMOSA NEWS.

The following telegram from Rear-Admiral Tsunoda, Staff Officer, dated Taipeifu 22nd instant, has been received at the Imperial Military Head-quarters in Tokyo:—

"On the 22nd instant, the *Yoshino Kan* returned to Tamsui. She had left Kelung early on the morning of the 13th instant, and, cruising off Chang-kong, gave assistance to the troops on shore. On the following day, she lowered boats and landed a party at Ta-an. On landing, the party met with resistance, but defeating the enemy, they burnt the barracks. There were about 1,000 insurgents at Ta-an and Tatiao, but they all fled in the direction of Chang-hua, by way of Geomatao. On the 16th, the Kawamura detachment occupied Tong-sian without meeting any resistance. The state of affairs remains unchanged in the vicinity of Miaoli. On the afternoon of the 17th, a scouting party came to Ta-an and effected a junction with the fleet. The Imperial Guards Division will occupy Tatiao on the 23rd instant and then advance towards Taiwan-fu."

The following telegram from Governor-General Count Kabayama, dated Taipeifu 23rd instant, has been received at the Imperial Military Head-quarters in Tokyo:—

"The Imperial Guards Division occupied Miaoli without opposition on the 14th instant, whence the van advanced as far as Tong-sian, and the left wing as far as the vicinity of Oulan, so as to cover the roads from Taiwan and Chang-hua. On the 22nd a party of the advance guard moved from Tai-kia to Geomatao, and the left wing reached the former place on the same day. The head-quarters of the Division have also been moved to Tai-kia to-day. The bulk of the troops are pushing southward slowly and gradually, the programme being that the rear reserves shall reach Tai-kia on the 25th or 26th instant."

CURRENT TOPICS.

Rumours of Cabinet changes are again circulated in Tokyo. Attention now centres upon the movements of Count Matsukata, Minister of Finance, who left the Capital for Osaka on Sunday evening. It seems true that, on the eve of his departure, he tendered his resignation, but the circumstances that led him to take that course are not definitely known. Some persons, however, take it for granted that he was influenced by the Cabinet's decision not to convene an extraordinary session of the Diet. It is understood that the calling of such a session at the earliest possible opportunity was one of the conditions upon which he had consented to withdraw his resignation two months ago. At that time the Ministry was in favour of such a course, and every possible effort was made to expedite the completion of the Military and Naval Bills. The latter have already been finished and forwarded to the Cabinet, but the former are still in the hands of the authorities of the War Office, and rumour says that it has been found impossible to complete them in time for an extraordinary session. The Minister of Finance then conceived the idea of drawing up financial bills independently of those relating to the increase of the Army, and of submitting them to an extraordinary session, so that the new rate of tax on *saké* might be put into force from the 1st of October, the date on which the *saké* tax begins to be collected in the ordinary routine. But that course is said to have failed to receive the endorsement of his colleagues, who are in favour of presenting the financial bills in the form of Estimates, conjointly with the military and Naval measures, in the next ordinary session of the Diet. That, according to some persons, is stated to have been the cause of Count Matsukata's resignation. But it may be taken for granted that the Count's action is connected with circumstances not known to the general public and likely to essentially modify the aspect of the situation when they come to be known.

Besides the rumours about Count Matsukata, it is reported that Count Inouye, on his return from Korea, will be re-appointed Minister of Home Affairs; that Baron Ito, Secretary General of the Cabinet, will receive the portfolio of Agriculture and Commerce; that Baron Nishi, Japanese Minister to Russia will be Count Mutsu's successor at the Foreign Office; and that Viscount Nomura, the present Minister of Home Affairs, will be transferred to the Department of Communications. How far these predictions are well founded, we do not venture to say. It seems probable, however, that some changes in the Cabinet will take place before long.

Commenting on the *Fiji's* strong pleading that some orders for war-ships should be given to America builders, the *Nichi Nichi* observes that, according to Lord Brassey's Naval Annual for the current year, it seems a dangerous experiment to test the skill of the naval architects in the United States. Instead of incurring such a risk, the *Nichi Nichi* would advise the Government to order ships from constructors of proved competence in Europe, and, at the same time, to take steps for the development of Japanese shipbuilding business, so that in future all war-vessels may be constructed in home dockyards.

The *Chugai Shogyo Shimpō* stands at the head of the commercial papers in Japan. It possesses exceptionally good sources of information, not only commercial but political, and it often beats the political papers in their own special department. Its circulation having greatly increased of late, our contemporary has just extended its space, so that the new series contains at least eight pages instead of six as heretofore. The office has also been removed to spacious brick buildings in Kitajima-cho, Nihonbashi District, where new printing machines just received from France have been set up. The rapidly increasing prosperity of this well edited journal may be regarded as a sign of intellectual progress in business circles.

Count Matsukata, who left Tokyo on the evening of the 25th instant, instead of going straight to Kyoto, passed the night of the 26th at Tsu, in Ise, and after staying a day at Kyoto proceeded on the 28th to his villa at Mikage, where he will remain for the present. Concerning his position in the business world, it is stated that the influence he possesses is immense, especially in Osaka and its vicinity. Of all the business men, the *saké* brewers in the neighbourhood of his villa are said to regard him with the greatest respect and trust, which will not be diminished now that it is known that one of the principal reasons why he urged the convocation of an extraordinary session of the Diet was to protect them against an unexpected increase of their burdens. Concerning his resignation, it is also rumoured that the incident has given no small satisfaction to Count Okuma. The Progressionist leader is reported to be a great admirer of the ex-Minister of Finance. But we cannot vouch for the truth of this rumour.

The *Kokumin Shimbun* was the medium through which Count Matsukata's resignation and the circumstances that had immediate connection with it were first announced to the public. But the paper which has taken up the ex-Finance Minister's cause with the greatest zeal is the *Kokkai*, whose proprietor and editor are believed to be intimate with him. Our contemporary published a lengthy statement, the object of which is to contradict the *Nichi Nichi's* account of the incident and its causes, already reproduced in these columns. There are two points in the *Kokkai's* statement which are worth noticing. The one is that Viscount Kawakami, Vice-President of the General Staff Office, heedless of his promise to Count Matsukata to complete the military measures by the end of June, delayed their conclusion week after week on various pretexts. Taking this statement on trust, some other paper has been rash enough to charge the Premier with having caused Viscount Kawakami to postpone the completion of the military measures for the sole purpose of preventing the convocation of an extraordinary Diet. Such an imputation is entirely unfounded, and does not deserve the attention of any sober-minded person. Another point to which the *Kokkai* draws attention with particular emphasis is, that at the Cabinet meeting of the 15th instant Count Matsukata had obtained the agreement of not only the Premier but the rest of his colleagues to draw up fiscal measures on the basis of the approximate estimates of the expenditure required for the increase of the Army. Had such agreement been really secured by the ex-Minister of Finance, there ought to have arisen no difficulty at all about the question, neither would it have been necessary for him to resign his office. It is a question of fact, but the statement is so improbable on the face of it that it is impossible to accept it, especially on the second hand authority of the *Kokkai*.

Count Matsukata's resignation, as already stated, is regarded by the press as the last blow to the hope of an extraordinary session of the Diet. The news has been a disappointment to the Opposition politicians, who, according to a certain paper, had agreed to devote themselves in the extraordinary session to the passage of the Military and Naval measures and other bills of economical and industrial importance, and backed by the popularity thus obtained, to attack the Cabinet in the ordinary winter session on the question of the Liaotung peninsula.

The *Doshi-kai* was to issue its manifesto on the 27th, but owing to same unexplained circumstance its publication has been delayed. But its general purport is announced by the *Yomiuri Shimbun*. The *Doshi-kai* advocates a strong foreign policy, and will not show any indulgence to the Ministers of State whenever their conduct is open to censure. In short, it aims at being the centre of the political camp opposed to the Cabinet on the question of the Liaotung peninsula. The *Doshi-kai* politicians also regret the division of the political world

into so many separate parties, and announce it to be their object to promote the amalgamation of these various political bodies into one great party.

The Korean students in Tokyo, who number nearly two hundred, recently organized an association with head-quarters at the Legation of their country, with a view to the maintenance of harmony and union among themselves and to the publication of a periodical to be sent home and distributed among their countrymen. The first number of the journal will come out on the 10th of September. The contents will be in the popular style, with Korean letters interspersed between Chinese ideographs exactly in the fashion of the style in common use in this country. The articles will be written by the Korean students and will cover all varieties of subjects coming under observation. It is expected that the periodical will prove a very useful means of infusing the spirit of progress and reform into Korean minds. The printing will be undertaken at the Shu-ei-sha, one of the two establishments where Korean type is used, the other being the Tsukiji Type Foundry. Mr. Fukagawa has contributed 300 yen to the fund for the publication of the magazine, while the Korean Minister is expected to assist the undertaking by a monthly subscription of 20 yen.

COUNT MATSUKATA.

Count Matsukata's resignation has been granted by the Emperor, and the portfolio of Finance laid down by him has been given to Viscount Watanabe in addition to his office of Minister of Communications. Rumour has it that Count Inouye, who will return home before long, will be appointed Minister of Home Affairs, Viscount Nomura, the present occupant of that post, being transferred to Communications, which in turn will be vacated by Viscount Watanabe, whose combination of two portfolios is regarded as a temporary measure. Some people, however, seem to believe that Count Inouye will not be inclined to accept a Ministerial position, his wish being to resign office altogether and take his seat in the House of Peers. He has a large number of friends and followers in that House, and he can easily become leader of a the majority. But it is impossible to predict what course he will pursue on his return from Korea, for, a man of intensely chivalric sentiments, he may find it impossible to reject the request of his friends and lifelong colleagues to share power with them. Digression aside, we will notice the comments of the vernacular press upon Count Matsukata's retirement.

The *Nichi Nichi Shimbun* regrets that Count Matsukata in resigning office has acted in a precipitate and irresponsible manner. Had he any confidence in the wisdom or justice of the course proposed by him, he ought to have exhausted every means to bring his colleagues to his own way of thinking. At all events, he ought to have waited until a final and definite decision should have been arrived at by the Cabinet upon his proposals, before making up his mind to resign an office which he had accepted only a few months ago in grateful deference to the special trust which His Majesty had condescended to repose in his loyalty to the Throne and his financial ability. To tender his resignation and leave the capital at once before the question brought forward by him had been definitely settled, is conduct that shows want of respect to the Sovereign and lack of regard for himself as a responsible statesman.

The *Choya Shimbun* writes in a similar strain. It considers that Count Matsukata has been rash and inconsiderate, but our contemporary goes on to remark that he is not the only statesman who has behaved in a similarly blameworthy manner under similar circumstances. "There is," says the *Choya*, "a tendency among the Ministers of State to act in this irresponsible fashion, and we think this a fitting opportunity to draw their attention to the fact, so that they may avoid such grievous errors in future."

The *Kokumin Shimbun*, far from thinking that Count Matsukata has acted precipitately,

regrets that he did not resign sooner. In our contemporary's opinion, the proper time for convening an extraordinary session of the Diet was immediately after the conclusion of peace at Shimonoseki, the Cabinet being, in the Tokyo journal's opinion, morally bound to take the people so far into its confidence as to inform them of the course of diplomatic affairs since the opening of the war. Such a step, says the *Kokumin*, would have been the natural sequence to the course adopted by the Cabinet at the commencement of war, when the Premier reported to the Diet at the memorable session at Hiroshima what had passed between the governments of the two countries previous to the declaration of hostilities. Instead of wondering at the uncommon zeal shown by Count Matsukata for the convocation of an extraordinary Diet, our contemporary regards it as singular that the Premier should have been so incomprehensibly indifferent in regard to it. The *Kokumin* does not hesitate to say that the objections raised against the course recommended by the ex-Minister of Finance are mere subterfuges having no value at all. "We strongly regret," says our contemporary, "that Count Matsukata did not leave the Government sooner. But when it is remembered that he has endured an unpleasant position so long purely out regard to his Majesty's commands and for the sake of carrying out important fiscal measures, we may apply to him the old saying that 'virtues may be revealed by errors.' However, we are concerned less with his resignation than with the fact that with his retirement has vanished all hope of an extraordinary session."

The *Mainichi Shimbun* undertakes to discuss the effect which Count Matsukata's resignation will have upon the situation of the National Unionists, with whom he is generally regarded as in close relationship. Our contemporary's opinion is that his retirement will not materially affect the position of that body of politicians. The party owed its origin to the powerful support of some high officials while he was at the head of the Cabinet. But his connection with it was more nominal and real. Ostensibly Marquis Saigo was its leader, but it was practically under the control of Viscount Shinagawa and Mr. Shirane, Minister and Vice-Minister of Home Affairs respectively. A part of the party is now under the influence of Marquis Yamagata, while the rest still follow the lead of Viscount Shinagawa and Mr. Shirane. Viscount Shinagawa has shown some sympathy with the Cabinet and is opposed to the Extremists. As to Marquis Yamagata, he sometimes differs from the Premier in political opinion, but the two statesmen are bound together by indissoluble ties. So the National Unionists will continue to support the Ministry, notwithstanding the resignation of Count Matsukata. It was this circumstance that enabled the Premier to part so easily with a Minister whom he had but a few months ago persuaded with honeyed words to accept office. Such is the exposition of the situation offered by the Progressionist organ. It cannot be expected to be just when speaking of Marquis Ito, but its remarks upon the position of the National Unionists may be of some service for the proper understanding of the situation.

THE DEVELOPMENT OF THE MERCANTILE MARINE.

The Tokyo Chamber of Commerce recently addressed to the Ministers of State for Finance, Agriculture and Commerce, and Communications a Memorial on the development of the Japanese mercantile marine. The document being extremely lengthy, we cannot do more than give a résumé of the principal points discussed. The subject is considered under three headings, the Education of Seamen, Shipbuilding, and Marine Transport Business.

The question of the education of seamen is subdivided into the education of officers and the training of common sailors. Concerning the education of officers, the memorialists, in the first place, recommend enlargement of the Com-

mercial Navigation School (Shosen Gakko) of Tokyo. At present, the number of students at that institution is 160, equally divided between the courses of Navigation and Engineering. The graduates number 30 in both courses combined. The memorialists recommend that the students be increased to twice their present number. They also urge an increase of two more sailing vessels as training ships, there being at present only one training ship for the school. The training vessels should be placed under the management of a competent merchant or a firm having extensive business connections with foreign ports, so that the expenses of voyages made by these ships may, in part at least, be recovered by the freight they earn. Thirdly, it is recommended that the Government take steps to direct national attention to marine business and to marine education. Fourthly and lastly, steps should be taken to impart adequate instruction to ordinary sailors of experience so as to fit them for becoming officers. As to the training of ordinary sailors, the memorialists advise that the State should give a special subsidy to the Japan Seamen's Relief Society (*Nippon Kai-in Ehsai Kai*), to enable that association to extend the scope of the work now carried on by it, and that, conditional upon the grant of money, the society should be required to give scientific instruction to such ordinary seamen as may be judged capable of becoming officers.

With regard to shipbuilding business, the Tokyo Chamber of Commerce recommends State subsidies to shipbuilders. So far as the skill and experience of architects and artisans are concerned, a great improvement is said to have been made by the Japanese, so that it is now possible to build first class ships in this country. But owing to the fact that two-thirds of the material necessary for shipbuilding must at present be imported from abroad, the Japanese cannot compete with foreign builders in point of expense. It is, consequently, urged as necessary that, until the circumstances disappear that contribute to make shipbuilding expensive in this country, subsidies should be granted to builders to enable them to develop their business. As to these subsidies, it is suggested that they be granted only for iron or steel steamships of 1,000 tons and upwards. Sailing vessels and wooden steamers are rapidly falling out of fashion, and their construction need not be encouraged. The smaller types of steamers are likewise excluded from the benefits of State aid, because, in their case, the comparative costliness of navigating them to this country from the place of their construction in the West is sufficient to prevent their being ordered from abroad. The rates of subsidy recommended are 20 yen per ton displacement, and 6 yen per horse power. These rates are based upon the experience of practical men engaged in the shipbuilding business, and are determined on a basis such as shall render it possible to have all steamships above 1,000 tons built in Japan more cheaply than they could be procured by ordering them from foreign countries. Some persons suggest that materials imported from abroad be exempted from duties, but the memorialists think it unwise to take such a course, since there is no possibility of clearly distinguishing material used for shipbuilding from that intended for other purposes. The period for which subsidies are granted should be fixed for ten years, at the expiration of which time the rates should be changed in accordance with circumstances. In the course of that time it is believed that much of the material now obtained from abroad will be procurable in Japan. If, before the expiration of the ten years, import duties on building material be increased, the rates of subsidies should be proportionately raised. The memorialists further recommend that subsidized shipbuilding yards should be favoured with orders for the construction of war-ships. It may be too much for the present to expect that private shipbuilders should construct steel battleships, but cruisers and coast-defence vessels may be ordered from them. Such a step is considered useful as a means not only of encouraging private ship-builders, but also of securing the independence of the country in

matters of warlike preparations. Lastly, it is recommended that building regulations should be enacted, and that no ship should be deemed qualified either for a subsidy or for registration as a Japanese vessel, unless these regulations have been rigidly complied with in its construction.

Concerning the marine transport business, the Tokyo Chamber of Commerce recommends the granting of subsidies to ships plying between Japan and foreign parts situated from 110° to 150° of East longitude and north of the Equator, and also on account of special routes to foreign countries. As to subsidies of the former class, they are to be given only to steamers of and above 1,000 tons, and are to be in proportion to tonnage, speed, and length of voyage. Their classification should be as follows:—

- 1.—For steamers of and above 3,500 tons (gross), with a speed of 15 knots or up. Sen-wards; per ton per 1,000 miles 65
- 2.—For steamers of and above 2,000 tons (gross), with a speed of between 12 and 15 knots; per ton per 1,000 miles 35
- 3.—For steamers of and above 1,000 tons (gross) with a speed of 10 to 12 miles; per ton per 1,000 miles 25

The rates mentioned in this table are to be given in full to steamers for five years from the date of their construction. After five years, the subsidies should be decreased each year by 5 per cent., and should altogether cease on the completion of the twentieth year after the ship's construction. As to ships built abroad, they should not be entitled to subsidies until after three years from the date of their registration in Japan. Ships employed on specially subsidized routes (referred to presently) should be excluded from the benefit of the subsidies under consideration. In return for subsidies, shipowners are to be under the obligation of placing their vessels at the disposal of the Government in times of emergency, the rate of remuneration to be fixed beforehand. The memorialists recommend that the system of subsidies thus far described should continue in operation for ten years, at the end of which period it should be renewed with such modifications as may have been suggested by experience. Besides the method of encouragement considered above, the authorities are urged to give special subsidies to large steamships constructed under the superintendence of the Admiralty with a view to fitting them out as cruisers in time of war. It is also recommended that fees charged on ships clearing for foreign waters should be either entirely abolished or largely diminished.

With reference to the subsidizing of special routes, the memorialists dilate on the importance of extending the steam service of this country to America, Europe, Australia, and other foreign parts. Seven such lines are mentioned. First, the Tientsin line, to connect Japan with the ports of Korea and North China. This should be immediately opened as a mail line with one vessel every week. Secondly, the Shanghai line. This, too, should be a mail line with weekly service. Thirdly, the Vladivostok line. This is to touch Korean ports *en route*, and to be a mail line with weekly service. Fourthly, the China Sea line, touching at ports in South China, and extending as far as Tonkin, Saigon, and Siam. This, too, is a mail line with fortnightly service. Fifthly, the European line connecting Japan and London or Liverpool. This should be opened gradually; the first step being to convert the Nippon Yusen Kaisha's present Bombay service into a mail line and to arrange that the company shall establish a periodical freight service to Europe by way of trial. Sixthly, the American line. This should be run as a mail service at least once per month, by large steamers capable of being converted into cruisers in time of war. Seventhly and lastly, the Australian line. This is to have either Melbourne or Adelaide as its objective point, and its immediate opening as a monthly mail line is recommended.

The Memorial is accompanied by a financial statement showing the amount of money required for carrying out the measures recommended in most cases. But the memorialists do not think it either possible or necessary to give an estimate

of the sum needed to subsidize the seven routes to foreign ports. They leave the matter to the authorities, observing merely that the allowance must necessarily vary according to the articles of contract. With the exception of this heading, the total estimated annual outlays required are as follow:—

	Yen.
Education of Seamen	70,000
Encouragement of Shipbuilding	260,000
Encouragement of Navigation.....	639,025
Total	969,025

A further sum of 200,000 yen will be required at the outset for the purchase of two training ships.

ECONOMICAL AND INDUSTRIAL.

The following table shows the amount of specie that flowed out of the country since the commencement of the war, that is to say, during twelve months ending June last:—

	Exports. Yen.	Imports. Yen.	Excess of Imports. Yen.	Excess of Exports. Yen.
July, 1894.....	7,392,756.35	3,383,037.52	—	3,908,718.83
August, 1894.....	2,582,307.13	832,655.08	—	749,652.50
September, 1894.....	5,492,143.33	2,629,979.93	—	2,862,163.40
October, 1894.....	1,368,925.82	2,393,080.44	—	1,024,154.62
Nov., 1894.....	5,487,282.70	2,755,707.97	—	3,731,574.73
December, 1894.....	2,833,444.34	709,660.97	—	2,123,783.37
January, 1895.....	2,335,968.35	449,772.09	—	1,886,196.26
February, 1895.....	4,038,056.25	1,136,616.26	—	2,901,440.06
March, 1895.....	3,059,175.25	289,381.13	—	3,669,794.75
April, 1895.....	3,471,822.69	84,918.29	—	3,386,904.40
May, 1895.....	1,799,547.87	203,102.76	—	1,596,445.11
June, 1895.....	2,051,259.88	705,717.46	—	1,345,542.42
Total Excess of Exports.....				23,682,130.86

The long expected steamship competition seems to have already commenced. According to the *Chugai Shogyo Shimpō*, a certain ship-owner recently agreed to carry coal from Otaru to Yokohama at the rate of 1 yen 20 sen per ton; while another owner is stated to have shipped goods from Hokkaido at half the usual rate of freight. Other circumstances, says our contemporary, indicate that a ruinous competition is just beginning.

As already noticed in these columns, the dockyards in Japan have been found entirely insufficient for performing the repairs of the ships now being released from service as Government transports. The Nippon Yusen Kaisha has decided to have its vessels repaired in Shanghai.

Keen competition is going on among the warehouse companies of Tokyo. These companies have their head-quarters mostly at Fukagawa, and rice is the principal commodity entering their warehouses. Some time ago, nearly 500,000 koku of the cereal were collected at Fukagawa, and the companies drove a roaring trade, but the quantity has now diminished to a little over 200,000 koku; and, as a result, sharp competition is taking place. The rates of interest per diem per 100 yen, on articles deposited in the warehouses are as follow:—The Tokyo Soko Kaisha, 2 sen 5 rin to 2 sen 7 rin; the Mitsui Soko Kaisha, 2 sen 4 rin to 2 sen 6 rin; and the Tokyo Beisoko Kaisha, 2 sen 6 rin to 2 sen 8 rin. The tendency is to reduce the rates still lower.

The extension of the city line of the Kobu Railway from Misaki-cho to the Megane Bridge has been approved by the Tokyo City Improvement Committee, on condition that the line be elevated so that it may ultimately be connected with the elevated railway to be laid through the heart of the city, connecting Shimbashi and Ueno.

News comes from Okayama that Mr. Kagawa Shinichi and a few other prominent men of the place have under contemplation a project for organizing a silk-spinning factory with a capital of 500,000 yen.

The Japanese army in Formosa has advanced to the central part of the island, and things being quiet through the whole of the northern districts, it has been decided by the Government to permit voyages by private ships and travel by private individuals to the island, under the provisions of the Regulations promulgated in the *Official Gazette* of the 17th of January last. This step will in a measure quiet the complaints

recently formulated by the press against the veto imposed upon visiting the island.

There are men who fear that, the harvest prospect being unsatisfactory, a disastrous depression of trade may result. But the *Chugai Shogyo Shimpō* is disposed to take a more cheerful view of the situation. Our contemporary even mentions that a decided improvement has taken place in the tone of business, for, contrary to expectation, large orders have come from the provincial localities for commodities of luxury which the farmers are in the habit of purchasing at the *bon* summer holiday. Unless unforeseen circumstances turn the current the other way, our contemporary seems to be convinced that the revival of trade will go on steadily and without interruption.

It was understood that a large amount of money had been advanced to the Government by the Bank of Japan during the war. From the statement of account laid before the recent general meeting of shareholders, the following figures have been extracted by the *Chugai Shogyo*:—

Balance against the Government as carried over from the latter half of last year	yen 37,500,000
Advanced to the Government during the first half of the present year	5,000,000
Total	42,500,000

Of the above sum, yen 8,000,000 were repaid during the period in question, that so the actual amount due to the bank at present is yen 34,500,000, which, it is understood, will be cleared off when the first instalment of indemnity is received from China.

The deposits in the Bank of Japan have of late greatly diminished. They are at present as follow:—

DEPOSITS FOR FIXED PERIODS.	
Head Office	yen 14,000
Osaka Branch	3,000
Total	yen 17,000
CURRENT DEPOSITS.	
Head Office	yen 1,287,921.961
Osaka Branch	4,410.577
Sapporo Branch.....	4,606.553
Hakodate Branch.....	348.978
Nemuro Branch.....	31.470
Total	yen 1,297,313.539

This increase is to be ascribed to the fact that the Bank of Japan has ceased to pay interest on current deposits.

The actual advances and notes discounted by the Bank of Japan amount altogether to yen 40,049,932.855:—

ADVANCES FOR FIXED PERIODS.	
Brought over from the latter half of last year	yen 10,599,788.000
Advanced during the first half of the present year	41,308,619.500
Total	yen 51,908,407.500
Amount paid back	30,248,078.500
Amount remaining.....	21,660,329.000
CURRENT ADVANCES.	
Brought over from preceding period	yen 5,964,824.272
Advanced during the current period	66,890,222.531
Total	yen 72,855,046.803
Amount paid back	69,324,595.668
Amount remaining.....	3,530,451.135

NOTES DISCOUNTED.	
Brought over from preceding period	yen 14,987,302.284
Discounted during the current period	43,445,249.906
Total	yen 58,432,552.190
Amount redeemed	43,573,399.470
Amount remaining.....	14,859,152.720

Count Matsukata's resignation is said to have been felt at the Stock Exchange, shares having

gone down considerably as soon as the news reached there. The War Loan went down 30 sen, the Ryomo Railway 1 yen 30 sen, the Tanko Railway 80 sen, the Boso Railway 40 sen, and so on. It is a fact that the ex-Minister of Finance enjoys the confidence of a large section of business men, but it is a question whether he monopolizes their confidence to the extent of causing a feeling of uncertainty at the Exchange on the receipt of news of his resignation. The incident may possibly have been utilized by speculators, but it seems to be an exaggeration of facts to ascribe the recent fall in shares to the Count's retirement.

The extraordinary increase of insurance companies during the past few years, and the nature of many of the latest additions, are beginning to attract the attention of men who have the development of sound business at heart. Five or six years ago, insurance companies could be counted on the fingers of a single hand, but there are now more than fifty. This enormous increase has been almost exclusively in the department of life insurance, marine and fire insurance companies being still very few. Many of the smaller and later companies are said to be so intent upon enhancing the market value of their shares as to declare all the profits as dividend without setting aside anything in the form of reserves. Moreover, so keen is the competition going on between these companies, that people fear that it will lead to disastrous consequences. The *Chugai Shogyo*, from which these facts are quoted, urges the authorities to exercise a judicious control over these companies.

The national banks, whose charters are to expire in the course of a year or so, are reported to be taking steps to present a petition to the Diet next session for the renewal of their charters. The Government, it is said, will not grant the renewal, even if both Houses of the Diet may recommend such a course; and it is doubtful whether their petitions will be approved by the Diet.

The scheme for the construction of a harbour in Tokyo is engaging the attention of the City Improvement Committee. The matter has also been taken up by the Tokyo Chamber of Commerce which recently appointed a committee to investigate the subject. The first meeting of the committee took place on the 26th inst., there being present Messrs. Shibusawa Eiichi, Watanabe Hiromoto, Sakuma Teiichi, Umemura Seiichi, Yamanaka Rinnosuke, Kato Masanosuke, Gimbayashi Tsunao, and Nonaka Mansuke. The meeting was also attended by an expert, Mr. Furuichi, and Mr. Nambu, a secretary of the Home Department. Mr. Watanabe was appointed chairman of the committee. Mr. Furuichi, at the request of the committee, explained at length the various engineering schemes thus far proposed since the matter was mooted in 1881. He also alluded to the investigations that are being conducted by the City Improvement Committee, of which he is a member. At the conclusion of Mr. Furuichi's remarks, the Chamber's committee decided to confine its researches to the commercial and economical aspects of the subject, leaving the engineering side to the City Improvement Committee.

The Railway Council resumed its sittings on the 26th instant, after a long vacation. The number of companies applying for charters is said to exceed seventy. The Council is reported to be in favour of granting charters as far as possible.

THE CROWN PRINCE.

On Tuesday's *Official Gazette* has the following report concerning the condition of the Crown Prince:—On the 24th: temperature, between 37.15° C. and 38.0° C.; pulse, between 76 and 92; respiration, between 29 and 36; on the 25th: temperature, between 36.8° C. and 38.0° C.; pulse, between 64 and 96, respiration; between 32 and 40. The condition of the right lung is much improved, the inflammation having gone down. The Prince's spirits and appetite are fair, while he also sleeps well.

KOREAN NEWS.

The *Hochi Shimbun's* correspondent, writing under date of the 18th instant, explains the reasons why the actual income of the Korean Government falls this year far short of the estimates. The amount of taxes collected thus far is stated to be only 230,000 *yen*. The estimated income for the current year is about 1,500,000 *yen*, and it is not to be expected that the remaining amount will be realized during the rest of the period. One of the principal causes is embezzlement by local officials. The latter are now strictly prohibited from modifying the rate of taxation arbitrarily; neither are they allowed to extort loans from wealthy people. But such is the force of their habit of making illegitimate gains, that they now steal from the State what they have hitherto forced out of the people. So instead of sending up the net residue of taxes, they pocket a large proportion of the amount as expenses of collection. The tendency to resort to such malpractice is certainly not checked by the state of uncertainty prevailing in the central Government at Söul. It is, however, a noteworthy circumstance that, if the Korean local officials are not yet free from corrupt practices, they are no longer able to rob the people directly by imposing duties at their will. This is an important achievement, of which the reformers in Söul may justly be proud. As to the embezzlement of public money by local officials, it will be stopped to a great extent, if not altogether, when the recently promulgated system of local government is in working order.

As announced in a recent telegram, Mr. Kim Koshu, President of the Privy Council, has been appointed Minister President of State, his successor at the Privy Council being Mr. Gyo Inchu. These two statesmen are believed in Korea to be first rate men. They are on very friendly terms with each other. They are not liked by the Queen; and the King, evidently at her instigation, is stated to have at first showed some hesitation in approving of their appointments, especially that of Mr. Kim. But Count Inouye's influence is believed to have smoothed over all objections.

Cholera seems to be still prevalent in Söul, the total number of new cases during the five days from 9th to 13th instant being 489.

According to the report of a clerk of the Japanese Consulate at Söul, who has travelled in the north of the peninsula, most of the villages along the road between Phyöng-yang and Wi-ju are said to be still deserted by the inhabitants. They had fled into the mountains when the Chinese troops passed through on their way to Phyöng-yang shortly before the battle at that place, and many of the villages were burnt by the Chinese. After the district fell into Japanese hands, the officers in command of the commissariat stations, working in concert with Korean local officials, did much to induce the inhabitants to return to their homes. But notwithstanding their united exertions, two-thirds of the villagers are still absent.

CHINA NEWS.

From a letter dated Ichang, 13th inst., the Shanghai papers learn that Mr. T. J. Olsen, the Local Postmaster at that port, died there after a few hours' illness.

The Chinese vernacular papers report that Tê Hsing, Governor of Kiangsi, with the district magistrates of Nanch'ang, Hsinchien, and Fêngch'eng, and civil adjutant of that Governor, have been denounced by a certain Censor on certain charges relating to the collection of the recent war loan, and that H.E. Chang Chih-tung has been deputed by the Throne to investigate the matter.

From Newchwang it is reported, says the *N.-C. Daily News*, that owing to the serious famine now raging in Manchuria the Chinese authorities are distributing charity in all the districts east of North Kinchow, and even the territory still occupied by Japanese troops, no opposition being offered by the latter to the

good work. The assistance given is 1,440 cash to each adult sufferer and half that amount to children under twelve years of age.

It is rumoured, remarks the same paper, in native official circles that the Kansu Mohammedan rebellion has received a check in its eastward tendency, but that in four western departments, viz., Hsünhua (where the rebellion originated), Hochou, Yenpêh and Titao, the rebellion is in full swing and anarchy and terrorism are rampant there. There is also a vague rumour of some rising in the eastern portion of Chinese Turkestan, near the so-called Desert of Gobi—Gobi being also the Mongol term for a desert. But according to a recent telegraphic memorial from the Governor of Turkestan, which apparently refers to it, this was merely a local disturbance against a dishonest mandarin which extended not to Mohammedans alone but to all sections of the population of the city.

"Cosmos," writing to the morning journal of Shanghai, under the caption "One side of the Missionary Question," observes, "The Kucheng Massacre brings the missionary question again very much to the front, and although no diversity of opinion exists as to the quick vengeance that should be taken on the cowardly butchers, whether the actual perpetrators of the deed or their employers, one cannot help enquiring, why were those poor women and children left to the tender mercies of savages? Because no one can dispute the fact that although the average Chinaman is the mildest and most easily governed of men, the tiger is latent there as in all other races of mankind; and it is patent to everyone that a mob (hired assassins probably in this particular case), even in the most civilised countries, under the potent influence of racial or class hatred, and that tacit sanction of, and impulsion to, all enormities committed, that each individual in the riotous concourse receives from every other, stops at nothing as long as its onward rush is unchecked, or its vengeance or lust of blood unsated. The query, 'Why were those poor women and children left to the tender mercies of savages?' may be considered at the same time as the broader one of, what is the intent and general purpose of missionary enterprise in China? For the end I have in view I am willing to accept the altruistic intent—that of bettering the temporal condition of the people and the rescue of as many as possible from eternal perdition. But another question now presents itself. Why go so far a field when so great a need of altruistic energy, wide-reaching philanthropy, beneficent succour, and soul-saving solicitude, exists at home in the great cities of Britain and America? Why expend millions sterling and jeopardise the lives and honour of our women in a country whose people does not object to trade with us, but do wish to be allowed the privilege of retaining their own religious practices; do wish their domestic life, as far as may be, to remain a sealed book to the prying eyes of the Western; a people whose social habits and customs are apparently unsusceptible of change, *i.e.*, if any judgment can be formed after an experience of upwards of half-a-century. Why then, may I ask, waste so much good feeling, so much good money, in such a fruitless task, besides incurring the certainty of a periodical horror like that of Tientsin or Kucheng—the outcome of a race hatred produced by various causes, but intensified to a white-heat by our unflagging insistence in interfering with their social institutions? Such a course persisted in must eventually lead to a bloody war of extermination or annexation of much undesirable territory. The same means and energy wasted here, employed at home, if not always securing personal gratitude as a reward, would secure to the altruist that, to him, greatest of all rewards—the consciousness of well-doing in a good cause; and would also often afford him the satisfaction of witnessing the substantial good effected amongst those of his own kith and kin, who are now, in great measure, crying out unheeded for the commonest necessities of life, while those our unsought beneficence is forced on, want it not, and even sting the hands that give. The attempt to influence public feeling at

home with regard to missionary enterprise in the Far East may be futile, but missionary societies may be induced to confine their female workers strictly to Consular districts, and even the married missionary to carry his self-abnegation a little further and forego those domestic comforts to which he has accustomed himself, when he goes further afield, in order to ensure the safety of those dear to him. The *raison d'être* for the lady missionary exists in proportion as much within as without the radius referred to, and she would, while finding ample scope for the exercise of her benevolence, infinitely lessen the chance of such blood-curdling occurrences as this now agitating the minds and harrowing the feelings of all Christian peoples, and the object for which she sacrificed herself as a voluntary exile, if attainable, be just as surely compassed."

The *China Gazette* learns that Col. Denby, U.S. Minister at Peking, only withdrew his sanction of Mr. Tratman, the British Vice-Consul at Chungkiang, taking part in the Chengtu Commission on behalf of the United States as well as Great Britain, and of the Rev. Spencer Lewis representing American Missionary interests, on receipt of the telegrams sent from the meeting of American citizens held at Shanghai last month.

The question as to Colonel Denby, U.S. Minister to Peking, consenting to the formation of the Chengtu Commission is now cleared up. On the 20th inst., the *N.-C. Daily News* printed this statement:—The following telegram, delayed in transmission owing to the Yellow River inundation, was sent by Colonel Denby, the U.S. Minister, on the 17th inst. from Peking, with the request that it should be communicated to us:—"I did not consent that British Consul should represent American interests at Chengtu. I withdrew from the proposed Commission three weeks ago. Sir Nicholas O'Connor did not telegraph Mr. Jamieson that Mr. Tratman would represent American interests at Chengtu. The announcement was a mistake." It will be seen on reference to the reply of Sir Nicholas O'Connor to the China Association, published in our columns on the 7th, that the announcement that Mr. Tratman would represent American interests does not form part of the British Minister's telegram. It was mentioned in a previous despatch to Mr. Jamieson, the gist of which the telegram gave Mr. Jamieson permission to make known, and at that time Mr. Jamieson had not been informed that Colonel Denby had withdrawn from the Commission.

Coolie faction fights are frequent in China, and the latest news from the province of Shashi is that the rival factions of Wuchang and Han-yang coolies, whose deadly feud against each other caused all the shops in that market town to close their doors for something like five weeks; have had their difficulties settled by the headman of the Szechuan traders at Shashi, backed by the moral influence of the remaining representative parties composing the various sections of the Shashi community, who threatened to combine forces to compel peace.

China evidently intends to keep some of her Treaty promises. It is reported at Hangchow that the high provincial authorities in that city intend to lay out a settlement for the Japanese for trading purpose in accordance with the recent Treaty between the two countries. The spot chosen for this purpose, says the *N.-C. Daily News*, is outside the principal Custom-house of Hangchow, beginning north of the Kungcheng bridge and having a lateral area east and west of three miles, or fifteen *li*. The people living within these limits will be allowed to sell land to the expected strangers, but the selling of any other land will be visited with punishment on the offender.

A Chunking correspondent writes to one of the Shanghai papers as follows:—

There is a Deputy Magistrate at Fut'ou-kuan, the fortified city commanding the narrow neck of land that joins Chungking to the mainland, whose duty now is to inspect every one entering the city, this precaution being one of the most useful taken by the authorities here since the riot at Chengtu. The other day he observed a suspicious

character staying at one of the many inns of which, eked out by memorial arches and monuments in the seal character, the fortress town chiefly consists. It turned out to be the son of Ue Mentze, who got up the riots at Tatson a few years ago, openly fought the soldiery sent to quell them, escaped to the mountains, and has never yet been captured. The son had a retinue of some twenty followers, and was evidently much too formidable a character for the Deputy Magistrate to tackle. However, he sent word to the Magistrate, who immediately sent a company of soldiers to assist the Deputy and his men. They surrounded the inn at night and whilst everyone slept got hold of Ue Mentze's son. The young man on being questioned said: "You have no need to torture me to find out why I am here. I will confess everything at once. It is very simple. Hearing that the foreigners at Chungking are going to be attacked and their property taken from them I am here to have a hand in it. And I am waiting four miles off for the news of the outbreak, when I am going to have a share in the plunder." He was, I hear, beaten for his impudence, and will probably be retained a prisoner in the hope that his long-sought-for father may come to seek him. But if the authorities here were not vigilant we should ere this be on our way down river, for there is a much bigger and worse set of rowdies here at any time than at Ch'engtu. The question, however, that arises in my mind is: "Is Ue Mentze's son well informed?" Some people say the spirits of the junior members of the Customs Staff have already risen in consequence. They have been firing at bottles and hitting them to the wonder and admiration of their soldiery, and are burning to show what they can do before an infuriate foe.

The proposed great railway in China is still a topic of active discussion in Peking. The local authorities are also bestirring themselves, and we gather that the Peiyang officials have appointed Mr. Chim Tien-yow, a returned American student, who formerly studied civil engineering in the Sheffield Scientific College of Yale University, U.S.A., to be Surveyor-in-Chief of the proposed railway between Yangtze ports and Peking, and a fellow student, Mr. Ch'eng Ta-ch'i, together with several foreigners will be associated with Mr. Chim in this work. The Directors of the North China Railway are to have the chief direction of the new railway only as far as the province of Chihli is concerned.

H.E. Wang Chih-chün, the Special Ambassador to Russia last year, who was shot in the left arm by a would-be assassin while driving in a carriage at Saigon on his way back to China, and who asked for and obtained from the Throne one month's leave of absence to heal his wound in Shanghai, has progressed so far as to be able to start on the morning of the 20th ult., for Peking. It is now alleged that H.E. was fired at by one of three Japanese passengers who accompanied him to Saigon, and who are presumed to have been *soshi* disgusted at the retrocession of the Liaotung Peninsula to China, an event which they attributed to the mission of H.E. to Russia.

Captain Cooke, of the *Soochow*, has been exonerated by the Naval Court of Inquiry, held at Shanghai, of all blame in connection with the loss of that vessel. The Court in its finding desired specially to direct attention to the fact that the syren attached to the N.E. Promontory light-house would appear in foggy weather to be absolutely inaudible, seeing that the *Soochow* was within a two-mile radius of the lighthouse for at least thirty minutes without hearing any sound.

Some thousand odd of General Nieh's disarmed Hupeh troops mutinied at Tientsin on the 16th because they were defrauded of their pay, and murdered a General officer and a Colonel. They were quickly surrounded, several were decapitated, and others were drowned in their stampede across the floating bridge. There was no alarm in the settlements at Tientsin. Such is the brief announcement made in a Shanghai paper: but what a flood of fight, if such were needed, does it throw upon China's military affairs.

The new Viceroy Lu has posted the following proclamation at Chungking:—

Proclamation by the Szechuan Tartar-General Kung and Viceroy Lu.

A proclamation to make known that the fo-

reigners who have established their chapels and hospitals in Szechuan do so in accord with an Imperial proclamation which has everywhere become a matter of record. Moreover, that the officials are bound to protect them, and not permit evil characters to avail themselves of rumour to make disturbances, has also become everywhere a matter of record.

On this occasion the destruction of the religious places of worship was due, in the first place, to ill-feeling on the part of the stupid people occasioned by quarrels, and because they were too ready to lend an ear to and be stirred up by evil persons. It was due, in the second place, to evil persons by talk stirring up trouble, so that, both within and without the capital, there has been widespread destruction. This, verily, is contrary to treaty and a serious offence against the laws. Already have we, the Tartar-General and Viceroy, sternly commanded the magistrates of every place to ferret out and seize those who have caused the disturbance. They must, without fail, be arrested, tried, and punished.

In our opinion, you stupid people who have been led astray by evil persons, are objects of pity, and may this once be pardoned your past transgressions; but, in order to put you on your guard in the future, we issue this sternly prohibitive proclamation. By it we trust that all magistrates and smaller officials, all Tartars and Chinese, even all classes of people, will thoroughly understand the matter. You must know that the establishment of chapels and hospitals by foreigners is permitted by the Emperor, and that the destruction which has occurred is tantamount to breaking the Emperor's laws, and that payment must be made for the losses which have been incurred.

Further, the Catholic and other religions are such as exhort to virtue, the same as do incense-burning Buddhists and others, with no purpose whatever to do people harm. You must by no means listen with believing ear to idle tales, thereby causing doubts to spring up. But if you do cherish doubts, you should make the matter known to your local magistrates who will be able to inquire and discriminate clearly for you. Why do you, on your own responsibility, join yourselves to the multitude and make a disturbance? This all comes from those idle fellows who love this sort of thing, exciting the multitude by rumours to the point of producing a riot. In the midst thereof bad men through desire for plunder take occasion to involve good people.

After the issue of this proclamation let every one attend to his own duties and not lightly believe rumours set afloat by evil men. We desire, in a word, that the Christians and the people, whether Chinese or foreigners, should be at peace, with perpetual regard for harmony. If anyone dare to fabricate rumours and collect crowds, thereby disturbing the places of worship, let the local magistrates use severity in arresting and punishing, thus putting an end to evil practices. Let all obey this!

The proclamation contains brave words, but as with its Imperial prototype issued a few days previously, foreigners place little reliance upon any good that might be effected by it. The chances are so much against either being obeyed.

The charges of supine lukewarmness brought against Mr. Mansfield, H.B.M. Consul at Foochow, are warmly repudiated by the local correspondent of the *N.-C. Daily News*. Says this writer: "Scandalous, infamous, outrageous, were some of the terms I heard applied to it (the letter) by many of the British community. The more staid among us declared that it could not be a letter of Mr. Smyth's, it was the effusion of an over-wrought and over-excited brain. I never thought it possible to make so much out of so little."

Archdeacon Wolfe has published the statement given below in an "Express":—Referring to Mr. Smyth's express of 10th instant, and his insinuation that H.M. Consul, when he heard the news of the massacre on his way to Kuliang, treated the matter lightly by continuing his way up the mountain instead of returning at once to Foochow, as I was the person who first met the Consul and communicated to him the sad news, I beg most emphatically to deny that he treated the matter either lightly or indifferently. We discussed the matter for some time, and his first impulse was to return at once to Foochow, but he was half-way up the mountain when I met him and had dismissed his coolies and sent his clothes on before him, and as he had neither sun-hat nor umbrella, it was as much as his life was worth to return to Foochow, a distance of 7 or

8 miles, in the broiling sun. It was therefore agreed that it was best under the circumstances for him to go on and send off his dispatches from Kuliang by a post messenger to the Viceroy and his telegrams to Peking and the Foreign Office, with a note of instruction to Mr. Pitzipios, and that he himself would return to Foochow at the earliest moment, which he did early the same evening.

In addition to a Concession at Tientsin, Germany is to have one at Hankow, and arrangements are already *en train* to prepare it.

China after all may be awakening to the crying nature of its needs, though great is the army of pessimists who hold that the giant is merely turning in its sleep. Among the reforms recommended to the Throne by the high authorities we learn are the doing away with the expense of the Director-Generalships of the Grand Canal and the Yellow River; the substitution of Railways for the Imperial post couriers; and the complete transformation of the territorial sedentary armies into disciplined battalions after the German system. Also, to qualify for the licentiate and *chufen* degrees, a knowledge of mathematics, international law, and foreign history will be essential in future literary examinations. These reforms, it must be observed, are still in the embryonic stage of "recommendations."

The *Shanghai Mercury* printed on the 23rd inst. the following telegrams:—

Hongkong, August 22nd, 7.10 p.m.

An armed mob looted the American Mission Chapel and Schools that are situated eight miles outside of Foochow. Four native Christians were wounded, but no foreigners. Capt. Newell, of U.S.S. *Detroit* proceeds to Kucheng to-morrow.

Foochow, August 22nd, 6.12 p.m.

An armed mob looted a building used as chapel and school, and broke up and carried away the furniture. They killed two and wounded four natives, but no foreigners. This occurred 24 li north of city.

Foochow, August 23rd, 10 a.m.

The report as to the destruction of American buildings is confirmed here.

Hongkong, August 23rd, 3.40 p.m.

Telegrams have been received here from Swatow stating that a mob attacked a Roman Catholic Mission at Kayingchow, near Hoyun, in the province of Fuhkien, and murdered two of the Fathers.

We suppose that it is in reference to this news that the *N.-C. Daily News* writes, on the 24th, that it has gathered that a dispatch from Foochow in answer to an enquiry of the local mandarins as to the truth of the statement that further disturbances had occurred at Kucheng, states that there is no foundation for the rumour, and that beyond the fact of a large number of the Vegetarian murderers having already escaped into Kiangsi, and that the common people have willingly aided the authorities to arrest the implicated parties, the country has been very quiet all around Kucheng and in cities within a couple of days' journey of the capital city of Foochow.

The *China Gazette* learns that the French claims in the sequel of the Szechuen riots have all been granted, Bishop Durand, who held the full delegated powers of the French Minister, gaining every point. The terms, as published in that journal, are said to be:—

The further degradation of the ex-Viceroy Liu Ping-chang.

The degradation and dismissal of his Secretary, who was promoted to the office of Taotai in a neighbouring city after the riots. (He has already been removed from his new office.)

The degradation and dismissal of the two Prefects who stirred up the riots by giving open credence to the slanders against foreigners.

The full reinstatement of the French Missionaries and the public recognition of their status by the Szechuen officials.

The rebuilding of all the missions, hospitals, schools, etc., belonging to the French (on a larger scale than before), at the expense of the Chinese officials.

The payment of compensation of between Tls. 700,000 and Tls. 800,000 by the ex-Viceroy, Liu Ping-chang, out of his own private hoard.

Viscount Aoki, Japanese Minister to Germany, has been permitted by the Decorations Board to accept decorations conferred on him by the German Emperor, the Regent of Bavaria, and the Sultan. Mr. Sannomiya, Grand Master of Ceremonies, and Mr. Ito Yukichi, a Master of Ceremonies, have been allowed to accept decorations conferred on them by the Grand Duke of Mecklenburg-Schewerin.

THE PROSPECT OF THE RICE CROP.

A certain specialist, quoted by the *Chugai Shogyo Shimpō*, is of opinion that the rice crop for the whole country will show a decrease of from 10 to 20 per cent. as compared with that for an average year. In the provinces of Kyushu, Chugoku, and Hokuriku, the growth of rice plants has been comparatively good. Next come the provinces of Shikoku, San-yō-dō, and those around Kyoto; while the worst reports come from Tokaido, Kwanto, and the North-East.

A writer on the *Yiji Shimpō* takes a somewhat different view. In Chugoku, namely, the provinces between Osaka and Shimonoseki, the harvest is, according to him, expected to be normal. In Kyushu, the growth of rice has been healthy, and a good crop would have been secured had it not been for the strong gales that recently visited that island. Consequently the crop in those localities will show a decrease of from 10 to 15 per cent. as compared with a normal year. While more or less decrease of yield is expected in all localities, there are two provinces in which the farmers are said to be congratulating each other upon an exceptionally good prospect of harvest. These provinces are Awa and Kazusa, which form the peninsula separating the Bay of Tokyo from the waters of the Pacific. In this region water is so scarce that a plentiful crop is only possible in a rainy year like the present. Another explanation is that the weather has been more steady there than in other parts of the country.

Such are the views expressed by the two papers enjoying the best reputation in business circles. That the crop will not be so bad as had at first been apprehended, is a generally received opinion, as may be seen from the tendency of the Rice Exchanges throughout the country. At one time, rice was quoted as high as 10 yen 30 sen per koku, but the price has rapidly fallen from 9 yen 50 sen to 9 yen 40 sen. It is believed that the price will fall below 9 yen.

DOCKYARDS IN JAPAN.

The establishment of dockyards is engaging the serious attention of the Japanese nation. At present there are two Government and nine private establishments. The former are at Yokosuka and Kure. At the latter place, a new dock capable of admitting ships of 25,000 tons capacity is in course of construction, being expected to be finished by the end of 1896. Of the private dockyards, the one at Nagasaki, owned by the Mitsubishi Company is of good dimensions, but the rest are only fit for repairing small steamers and launches. Five of them are in Osaka, one in Tokyo, one at Nagasaki, one at Toba, province of Shima, and one in the province of Mikawa. With the exception of the Mitsubishi dockyard at Nagasaki and another at Osaka, which are of stone, the rest are constructed of timber.

There is a number of projects on foot for the construction of new and large private dockyards. The first to be projected was that at Shimoda, the promoters of which include many of the leading business men Tokyo. Another project is under contemplation in Yokohama among its capitalists. A third scheme is contemplated by the principal merchants of Hakodate. The magnitude of their plan may be imagined from the fact that should it be carried into effect, the Naval Department would be under no necessity to construct a dockyard in Hokkaido. The latest project is reported from Osaka, where the shipbuilding business has of late made considerable progress. The projectors caused experts to examine the sea front in the vicinity of Osaka and Kobe, but finding no place suitable for the location of a dockyard, a search was made on the island of Awaji, where a fitting site for docks was discovered at Iwaya. The dock to be constructed there will be capable of receiving ships of 10,000 tons. The estimated cost is about 500,000 yen, while an additional outlay of from 200,000 to 300,000 yen will be required for the construction of the accessory works and plant.

SPELLING REFORM.

The Anglo-Saxon world is threatened by another spelling reform. It has been started by the Funk and Wagnalls Company of publishers, and they undertake to employ the new system of orthography in the four periodicals (*Literary Digest*, *Homiletic Review*, *Missionary Review of the World* and *the Voice*) controlled by them, provided that a reasonable number of other periodicals, writers, and business men will join the movement. The circular inviting adhesion to the scheme, gives a list of about 300 words by way of examples, of which the following are a few:—

Abreast,	Chil,	Ilness,	Saffire,
Accomplisht,	Clozure,	Intestin,	Shril,
Advertizment,	Curtesy,	Jelousy,	Skul,
Adz,	Defness,	Maiz,	Soiistry,
Altho,	Derth,	Mold,	Staf,
Amfibious,	Distil,	Orthografy,	Stedfast,
Autograf,	Docil,	Overspred,	Telegrafy,
Avalanch,	Dredful,	Paragraf,	Thro,
Aw (for awe)	Endevor,	Parafernalia,	Thred,
Beutiful,	Enrol,	Parlament,	Thret,
Bedsted,	Lufony,	Pedler,	Thru,
Betrend,	Favorit,	Pel-mel,	Thruout,
Bewich,	Feminin,	Perquisit,	Trechery,
Bluf,	Forgivness,	Fantom,	Treatis,
Blunderhed,	Gaf,	Farmacy,	Tressel,
Bodygard,	Gaus,	Plum, (for plumb)	Triumfant,
Brekfast,	Gasel,	Pontif,	Whisky,
Buxum,	Glimps,	Premis,	Yern.
Bygon,	Garantee,	Relm,	
Camfor,	Gard,	Receit,	
Catalog,	Handcuf,	Rime,	

Of course the proposal is variously criticized. The *New York Sun* is notably opposed to it. One of the reasons advanced depends upon the fact that our sense of humour would be outraged by some of the changes:—

This is a consideration which does not appeal strongly to some philological reformers, but it is nevertheless operative in the public mind. There is something inherently and irremediably ludicrous in aw for awe, fantom for phantom, and skul for skull. As to the last mentioned change, it will be a long time before people learn that skul means the cranium, and not the place where children are educated; inasmuch as some projects of orthographic reform have already proposed skule for school. Buxum is comic. Thret is trivial. The words belonging to the class of tho, altho, thru, and thruout, have never ceased to appear grotesque when so printed; and altho an esteemed friend, the Hon. Ellis H. Roberts, has laboured for years in the columns of *The Utica Herald* to make them familiar to the eye, he has gained few adherents, if any, in that particular specialty of reform. We do not like whiskey without the 'e' in it; and as for bluf, with one 'f,' in the words of the late Artemus Ward, "This is 2 mutch!"

MR. OZAKI YUKIO INTERVIEWED BY COLONEL COCKERILL.

In one of his recent letters to the *New York Herald*, Colonel Cockerill gives the following account of an interview with Mr. Ozaki Yukio, the well known *Kaishin-to* politician:—

"There is a some talk of a special session, Mr. Ozaki. Do you think that such a one will be convened?"

"We, the Opposition members, have petitioned for one, or rather demanded one. It is possible, however, that no session will be held before the regular date in November."

"What will be the burning topics of the coming session?"

"Ministerial incapacity, the utter injustice and scandalous nature of the revised compact with China."

"Do the Opposition members then believe that a better treaty might have been made?"

"Of course we believe this."

"But how about the Triple Coalition?"

"Japan should have presented a bold front, in which case neither Germany nor France would have carried matters to extremes. We should have had only Russia to deal with."

"Then you think Japan capable of holding her own with Russia?"

"Decidedly so; the conflict has only been postponed, and must ensue before long. Had we opposed force to force at the time—before the ratification at Chefoo—we should have easily come off best."

"Do you believe that your attack on the present Premier and his Cabinet will have any effect?"

"I do. This time we believe that we shall effect the fall of the 'Camera Cabinet' (Kuro-maku naikaku). Count Kuroda is about to resign; Matsukata has already done so, while Viscount Mutsu's resignation is no less certain. He has no stomach for the coming battle royal."

"But there has always been great friction be-

tween the various parties composing the Opposition; shall you be able to work in harmony this time?"

"We shall, unquestionably. We are already entirely agreed upon our plan of action, and private or less important points of disagreement will be forgotten in our great war upon the Ministry."

"The result of such an attack has hitherto invariably been the dissolution of the Lower House; are you not apprehensive of enforced dissolution this time as well?"

"Apprehensive? No! The people are heartily tired of these frequent elections; if dissolution does ensue, a still larger Opposition majority will be promptly returned. We are quite prepared for any contingency."

"In what manner will you attack the Cabinet with regard to the revised treaty with China?"

"We shall declaim against the ministerial pusillanimity in yielding so promptly to the 'friendly advice' of Russia, Germany, and France; we shall argue that the proper precautions to prevent such an intervention should have been taken long beforehand, as the government had full warning of what was to be expected, and we shall urge that to cause His Majesty the Emperor to sign a revised treaty, with China's most important concessions omitted, after having signed another earlier treaty of wholly different tenor, was equivalent to bringing disgrace on the Emperor and consequently on the country at large."

"But could all this have been avoided?"

"Certainly; the action of the Cabinet in this matter was monstrous."

"Have you the people on your side?"

"We certainly think so."

"What is thought of Germany's share in the triple coalition?"

"The greatest indignation is expressed and felt. Germany has always professed such friendship for Japan that her action in the matter is simply inexcusable. Moreover, we well know that Germany was the instigatrix of the alliance. If it had not been for her we should have had Russia alone to deal with."

"And France?"

"Oh, that immature Republic always follows in Russia's wake. Besides, she wanted Formosa badly. But, no; Germany could have kept France from making common cause with Russia in the matter, had she so desired."

"A good deal has been said and written about dishonesty among the army contractors: does the Opposition intend to speak of this in the coming session?"

"Yes, the question will be brought up and the offenders brought before the tribunal of public justice. There was a great deal of wrong-doing."

"What is the prevailing sentiment of the Japanese people?"

"One of humiliation and bitter regret. Our victories are lost sight of in the moral defeat we have suffered at the hands of the Triple Coalition."

"How does the United States stand in popular opinion?"

"Higher than ever. We know that in that direction we have a firm, unfaltering friend and ally."

"But Mr. Foster acted as China's counsellor in all she did with regard to the treaty."

"That is so, but he acted so in the interests of peace and in order to bring a devastating war to a prompt conclusion. There is no ill will felt on that score, for, if Chinese interests in Japan were looked after by the American Minister, American officials in China did all they could in behalf of the Japanese subjects there."

"A last question then. Are the immediate prospects of Japan bright or gloomy?"

"I should say 'gloomy,' decidedly, until the end of the present year; after that the future will grow brighter."

Mr. Yufu Takesaburo, President of the Tokyo Higher Commercial School, has been released from his post, Mr. Koyama Kenzo, Private Secretary of the Minister of Education, being appointed to succeed him. Mr. Nakagawa Kojuro, an attaché in the Educational Department, has been appointed Private Secretary of the Minister of Education; Mr. Sawamura, President of the Iwate Normal School, has been transferred to the Shizuoka Normal School, and his previous position has been given to Mr. Suda, President of the Kanagawa Normal School, who has been succeeded by Mr. Nakamura Goroku, an Instructor of the Female's Higher Normal School, Tokyo.

COUNT MATSUKATA.

THE long train of circumstances leading up to Count MATSUKATA'S resignation is minutely described by the *Nichi Nichi Shimbun*, which believes that his retirement will be sanctioned by the EMPEROR. The account commences with the tender of his resignation on a former occasion some months ago, while the Court was still in Kyoto. The cause of the Count's desire to leave the Cabinet on that occasion is not stated, but we are assured that it had no connection whatever with the question of an extraordinary session of the Diet. Shortly after his appointment to the post of Minister of Finance in March last, Count MATSUKATA enunciated certain views to the Premier on important affairs of State, and it appears that his resignation at that time was a consequence of the reception given to these opinions. The Premier prevailed upon him to postpone any final step until HIS MAJESTY'S return to the Capital, which was to take place in a few days. The Minister of State for Finance then went back to Tokyo before the EMPEROR, and retiring to his private residence, refused to see any visitor, even excusing himself from going to the station to welcome the EMPEROR. By special command of the SOVEREIGN, Marquis ITO called on Count MATSUKATA on June the 7th, and in the course of a long interview strongly advised him to reconsider his resignation. On June 23rd, the Minister of Finance visited the Premier, and for the first time spoke about the desirability of convening an extraordinary session of the Diet. Marquis ITO answered that he was not in any way opposed to such a step should the Military and Naval measures then in course of compilation be completed in time. The same topic was again broached by Count MATSUKATA at a meeting with the Premier three days afterwards, when he informed his chief that, according to what he had learned from the Military and Naval officers engaged in the task, the bills would be finished ere long. He received the same answer from the Premier as on the former occasion. That evening, namely, June 26th, Marquis ITO wrote to Count MATSUKATA, requesting him to withdraw his resignation, but the Count in reply asked for time to consider the matter more deliberately. On the 28th, Marquis SAIGO visited the Count and advised him to stay in office. The following day the Minister of Finance called upon the Premier, and announced his determination to withdraw his resignation, at the same time requesting that a Cabinet Council be convened for the purpose of discussing the question of an extraordinary session. The Council took place on July 2nd, when it was decided that, so soon as the Military and Naval measures were finished, an extraordinary session should be convoked, and instruc-

tions were issued to the officers concerned to complete the drafts as soon as possible.

Thereafter great efforts were made to expedite the drafting of the Military and Naval bills, but it was found that, whatever industry were employed, the Military bills would require a long time to complete. In view of this circumstance, Count MATSUKATA presented a long memorandum to the Premier on the 15th instant, recommending the opening of an extraordinary session for the purpose of introducing projects of law relating to increased taxation, on the basis of the approximate sums that would be required for augmenting the Army and Navy. Such a proposal was impracticable on the face of it, but what surprised the Minister President and the rest of the Cabinet most was an accompanying statement to the effect that, "in spite of his having presented to his colleagues drafts of fiscal measures, and in spite of his urgent recommendation to convene an extraordinary session, the Cabinet had procrastinated and arrived at no decision." This was, indeed, astonishing news to the Ministers, for they had never until that time been favoured with any views of Count MATSUKATA'S on fiscal measures, and moreover the question of convening an extraordinary session by the Diet had been definitely settled on the 2nd of July. Hence, at the Cabinet Council of the 20th instant, the Premier demanded an explanation of the extraordinary statement just quoted, but the Minister of Finance could not offer any. On the following day Count MATSUKATA invited to his residence the Minister and Vice-Minister of War, and the Vice-Minister of Finance, and discussed with them whether it would not be possible to compile approximate army estimates without completing the details of the Military and Naval measures. The result of the discussion was that no means existed of preparing even approximate estimates without first determining the details of the measures then under consideration. Count MATSUKATA, who, it seems, was determined to demand the opening of an extraordinary session under any circumstances, then hit upon the idea of introducing the taxation bills independently of the Military and Naval measures. In compliance with his request, a conference was convened at the Premier's official residence on Saturday the 24th instant, when Marquis ITO, after pointing out several objectionable features of the course recommended by the Minister of Finance, explained at length the inexpediency of asking the Diet to vote an increase of the people's burdens without having previously determined by thorough research how much money would be needed in addition to the present revenue. Count MATSUKATA'S plan was exactly the reverse of normal financial methods: instead of increasing the revenue on the basis of an increased expenditure, he pro-

posed to fix the revenue first and then adapt the expenditure to it. The one and only point in favour of the course urged by him was that, unless such a step were taken, it would be impossible to collect the increased tax on *saké* from the commencement of the next taxation period, namely, the 1st of October. But the value of that argument disappears when we remember that the contemplated military and naval development will not involve any considerable increase in the Ordinary Expenditures during the first year. The money required during the first year will be chiefly for the purpose of granting rewards and pensions to officers and men, and for paying interest on the War Loan, items aggregating about 10,000,000 *yen*. Such amount could be very easily provided without going to the expense and trouble of convening an extraordinary session of the Diet. For these reasons, the Premier asked Count MATSUKATA to reconsider the matter. Viscount NOMURA and a few others tried to effect a compromise by proposing that it might perhaps be practicable to convene an extraordinary session, if the Minister of Finance would modify his plan in the sense that the Naval measures and the bill for the increase of the tax on *saké* be introduced to the Diet as correlated projects, the amount required for Naval increase being covered by the *saké* tax. Count MATSUKATA declined to state his views as to that proposal, and the meeting was adjourned without any decision being taken. On parting, the Count told his colleagues that he would soon request another conference to discuss the same question. But suddenly, on the following morning, he forwarded a letter of resignation to the Premier, and at the same time repaired to the Palace, where he explained to the EMPEROR his reasons for seeking to be released from office. He left the capital for Osaka by the 9.55 p.m. train the same day. Marquis ITO had gone to Oiso early that morning to visit Count MUTSU. Hence he did not open the packet from Count MATSUKATA until Monday morning. On the afternoon of that day, the Premier sought an audience with the EMPEROR, and it is understood that His Majesty will receive Count MATSUKATA'S resignation.

Such is the substance of the statement published by the *Nichi Nichi*. A strange feature of the affair, as pointed out by our contemporary, is that the *Kokumin Shimbun* of the 25th instant published an account, containing some mistakes, but on the whole tolerably correct, of what had passed at the Cabinet Council of the preceding day, with a prediction that Count MATSUKATA would resign and go to Osaka or Kyoto. It follows that the editor of that journal must have been placed in possession of the information by 6 or 7 p.m. at latest—that being the time at which the Tokyo journals usually go to press—on the 24th instant, that is

to say, almost immediately after the adjournment of the Cabinet meeting at which the Ministers were given to understand by Count MATSUKATA that the matter would be discussed more fully at a future conference. The inference is almost inevitable that, even while giving that assurance, the Count had made up his mind to resign and leave the capital. A still more significant circumstance is that, of all the papers, the *Kokumin Shim-bun*, a strong sympathizer with the Progressionists, should have been chosen as the medium for announcing Count MATSUKATA'S resignation. If the *Nippon* may be trusted, the *Kokumin* enjoys special facilities for obtaining information about Count MATSUKATA'S doings.

THE SO-CALLED "FORMOSA ATROCITIES."

ON the 5th inst., the *Japan Gazette*, in an article headed "Atrocities in Formosa," published one of the most sweeping and terrible accusations ever preferred against the troops of any country under any circumstances. The unspeakable brutalities perpetrated recently in Armenia; the awful savagery of HEROD; the wild barbarities of the Huns; the pitiless butcheries perpetrated by CROMWELL in Ireland; the mad excesses committed by WELLINGTON'S troops at the sack of towns in the Spanish peninsula—all these appalling pages of history were cited, not as parallels of the horrors occurring in Formosa, but in order to show that the annals of humanity contain nothing comparable with the ruthless bloodthirstiness of Japanese soldiers and Japanese commanders. "Japan's inhumanity in Formosa calls aloud for protest," said the article. "The shrieks of the massacred Armenians have roused European indignation, yet Japan in Formosa is repeating the Port Arthur atrocities with cold-blooded resolution. * * * The Japanese are now burning each village in which any opposition is encountered, and ruthlessly butchering men, women, and children. * * * This sickening massacre of the innocents is not war. Before this hideous sacrifice of life the atrocities of a HEROD seem inoffensive. We can recollect nothing like it in history unless we go back to the days of the Huns, and even they sometimes spared the women. CROMWELL in Drogheda made a terrible example of the garrison, but he only killed the men. * * * In the Peninsula campaign, on the capture of Badajos, the savage spirit latent in the British soldier broke beyond control, and many women and children suffered. But many of the offenders were shot and such deeds were the outcome of frenzy, not the result of deliberate instructions issued by the officers in charge. In Formosa it is part of the orders. * * * Reverse the present picture, and let us suppose

Japan has ceded Kiushu to China. * * * Imagine the Chinese soldiers burning the villages as they went, slicing to pieces helpless infants, infirm women, and mothers with child. Civilized Christianity, infuriated at the sight, would teach such a lesson to the ruthless Celestial as would cause Pekin to shudder, and men to speak in affrighted whispers in Far Turkestan of the wrath of the West. . . . The Japanese should pause. Infanticide and a craving for the blood of helpless women is (*sic*) an appalling legacy for heredity (*sic*) to transmit to posterity."

Such was the accusation formulated by the *Japan Gazette*. There was no question of troops' breaking away from control on a solitary occasion under the influence of strongly exciting circumstances. The charge was that the Japanese commanding officers, Admiral Count KABAYAMA and His Imperial Highness Prince KOMATSU, had deliberately planned and ordered a campaign of savage atrocity without parallel in the annals of the world from the time of the Huns to that of the Kurds in Armenia.

This awful charge naturally excited much surprise and comment. Nothing in the accounts hitherto received had suggested the least inkling of such fearful brutality. On the contrary, all observers had agreed in extolling the clemency of the Japanese, their admirable discipline and the kindly consideration shown by them toward the people of Formosa. Evidently the Governor-General relied upon conciliation rather than force to subjugate the islanders.

What then had occurred to suddenly transform merciful and life-protecting officers into ferocious savages, more bloodthirsty, inhuman, and passionate than HEROD, the Huns, or the Kurds? On what evidence did the *Japan Gazette* base its damning accusations? What proof could it adduce that "deliberate instructions had been issued by the Japanese officers in Formosa" for "the sickening massacre of innocents;" for "the ruthless butchery of men, women, and children;" for "the slicing to pieces of helpless infants, infirm women, and mothers with child?" These were questions that naturally presented themselves to every one; for while all civilized persons would have joined to swell the *Japan Gazette's* indignant protest had its truth been established, they would equally have joined in condemning the mad recklessness of a newspaper that could ventilate such charges without sufficient evidence of their justice. The *Japan Gazette*, however, tendered no evidence. "Private advices from the North of Formosa" were the sole testimony on which it invited the public to believe that Governor-General KABAYAMA, Prince KOMATSU, and the other commanding officers in Formosa were the most damnable and sanguinary savages ever entrusted with the control of troops,

and that the men under their orders were willing instruments of their barbarian ferocity. "Private advices from the North of Formosa!" We called upon the *Japan Gazette* to give some detailed statement as to those "private advices;" to tell what they contained, what acts they described, where and when the horrors they embodied had occurred. The *Gazette's* answer was that it declined to be judged by the *Japan Mail*. Unconscious of its responsibility toward the public whom it had invited to denounce Japanese savagery; unconscious of its responsibility toward the Japanese officers and the Japanese troops, whom it had placed below HEROD, the Huns, and the Kurds, its whole moral horizon was occupied by the shadow of the *Japan Mail*, and it hid its head behind the miserable subterfuge of an objection to its judge.

Nothing remained, then, but to wait. Since the *Japan Gazette* was content to figure as an accuser without a fragment of testimony to support its appalling charges, its readers could only suspend judgment. There was, indeed, no reason to imagine that the *Japan Gazette's* channels of information excelled those open to the general public, or that its "private advices" could anticipate the intelligence furnished to other newspapers. Still, such a possibility existed, and was certainly more conceivable than the notion that any journal, however reckless, could have formulated such accusations without conclusive evidence. But more than three weeks have elapsed since the *Japan Gazette* wrote, and we still await any proof of the truth of its indictment. Moreover, in the interval other evidence has been furnished. Mr. DAVIDSON, the one and only foreigner that actually witnessed the military operations in Formosa, has come forward and publicly declared that the *Japan Gazette's* story is wholly inconsistent with the events seen by him; that had such atrocities been perpetrated, they must have come under his notice; that, so far from behaving with needless cruelty or ferocity, the Japanese had shown a spirit of the utmost clemency and forbearance; that all the foreigners in the north of Formosa were loud in their praises of Japanese discipline and moderation, and that though driven at last to adopt more drastic measures, the Japanese were not exceeding the limits of stern necessity. Are we then to conclude that the *Japan Gazette's* damnable accusations were simply reckless vapourings, or are we still to set some store by its mysterious "private advices"? The question can now be answered conclusively. The *Japan Gazette*, forgetting apparently the wholesale indictment preferred by it on August the 5th, summed up the facts thus in its issue of August 17th:—

We then arrive at the following conclusions. Villages were burned; Mr. Davidson says the fighting-men only were exterminated; Japanese reports merely say all were exterminated, our own

advices simply state that every living soul was killed, while the *Hongkong Telegraph* adds that women and children were pitilessly butchered. There the matter rests. Mr. Davidson is a gentleman in whom we would put every confidence and we do not doubt that he states what he believes to be true. Taking all the circumstances into consideration, our readers will probably decide that the Japanese have adopted very harsh measures and a great deal of killing has been done. But it was fortunately not on such a scale as the *Hongkong* and Japanese reports, standing alone, would have led us to believe. They will also agree that with so many reports in circulation it was well that the truth should be sifted.

Before commenting on the extraordinary revelation contained in this extract, one gross misstatement must be pointed out. "The *Hongkong Telegraph*," says the *Japan Gazette*, "adds that women and children were pitilessly butchered." That is untrue. The *Hongkong Telegraph* did nothing of the kind. Its Formosan correspondent has made two references and two only to the matter. In one he mentioned "a report" that the Japanese, "as they retreated" from a crushing defeat at Tokoham, "destroyed every house they chanced to pass and killed every man, woman, and child they either got hold of or could get a shot at." Now the Japanese were never defeated at Tokoham. The retreat referred to never took place. Hence the report noted by the *Hongkong Telegraph's* correspondent is conclusively proved to be untrue. He, however, was careful to mention the tale as a mere report. It remained for the *Japan Gazette*, knowing that the defeat and the retreat were alike apocryphal, to resuscitate as credible the story based on them, and to falsely describe it as an actual statement made by the *Hongkong Telegraph*, whereas in truth it was published as a "report." The second reference made by the *Hongkong* journal was to "Chinese rumours," which, at the same time, the correspondent condemned as probable exaggerations. On which of the *Hongkong* journal's references does the *Japan Gazette* rely? On the "report" subsequently proved to be based on imaginary occurrences, or on the Chinese rumours announced by the correspondent as probable exaggerations?

But the most remarkable part of the extract is this:—"Our own advices simply state that every living soul was killed." Here, then, at last we have an explicit statement as to the nature of the "private advices," on the strength of which the *Japan Gazette* originally formulated its awful accusations. "Our own advices simply state that every living soul was killed." Such was the evidence that induced the *Japan Gazette* to charge the Japanese troops with "ruthlessly butchering men, women, and children" in "every village where any opposition was encountered"; with perpetrating "a sickening massacre of the innocents"; with "slicing to pieces helpless infants, infirm women, and mothers with child." Such was the evidence that induced the

Japan Gazette to publicly and in the most confident terms accuse the Japanese commanding officers of deliberately ordering savage atrocities more inhuman than anything recorded in history of HEROD, the Huns, or the Kurds. It is no business of ours to find terms appropriate for denouncing such conduct as that of the *Japan Gazette*, neither does it fall within the limits of permissible language to describe the procedure of a journal which, after preferring charges so terrible as those contained in the *Japan Gazette's* article of the 5th instant, now, without one word of apology or manly retractation, tacitly abandons its whole position and contents itself with this paltry subterfuge: "Taking all the circumstances into consideration, our readers will probably decide that the Japanese have adopted very harsh measures and that a great deal of killing has been done." But it is our business to ask, what has become of "the hideous sacrifice of life before which the atrocities of a HEROD seem inoffensive"? What has become of the Huns who, since "they sometimes spared women," were superior to the Japanese? What has become of the Kurds, "the shrieks of whose massacred victims have roused European indignation" whereas Japan in Formosa is doing worse things unrebuked? And what, finally, has become of the *Japan Gazette's* "private advices," for they, too, have disappeared, and in their place we have "Hongkong and Japanese reports"? That is to say, the *Japan Gazette*, having taken "private advices"—which "merely stated that every living soul had been killed"—and having, with eager credulity, made them the avowed basis of the most appalling accusations ever preferred against an army and its officers, now pretends that the whole evidence forthcoming was "Hongkong and Japanese reports; having seized upon a mere shred of general testimony to weave detailed and shocking particulars of savage brutality, and to degrade Japanese soldiers and officers to a lower level than that of HEROD the Huns, or the Kurds, this truthful and accurate journal now writes that "fortunately the killing was not on such a scale" as it had been led to suppose by reports published in Hongkong and Japanese papers. Finally, to cap this unparalleled example of journalistic recklessness, prejudice, hypocrisy, and insincerity, the *Japan Gazette* writes:—"It was well that the truth should be sifted"! To set about the process of sifting the truth by publishing a series of the grossest conceivable falsehoods is a kind of investigation with which honest people are not familiar.

THE Directors of the P. & O. Company have presented the officers of the 1st Batt. Rifle Brigade with a very handsome silver vase in recognition of the services of the battalion during the coolie strike in Hongkong.

CHINA'S RESPONSIBILITIES.

AT no time during the past thirty years have the various foreign communities in the Far East displayed such a spirit of indignant protest against the methods of their Governments as they evince in connection with the Szechuen and Kucheng outrages. The fact, thus broadly stated, is disquieting. It is not well that the proud feeling of security which enables a handful of British subjects to pursue their business placidly among millions of possibly hostile Orientals, should be disturbed. The moral force based upon that feeling is enormous, and though it is not for a moment to be contended that all the doings of Europeans and Americans in the Orient illustrate a high type of civilization, there can be no manner of doubt that the sooner this Occidental leaven permeates the whole of the Oriental lump the better for the cause of humanity. There is no need to compose a panegyric comparing the immense results that have been achieved by a few foreigners with the paltry material means at their disposal. But there is need to recall the truth that without implicit reliance on the ability and will of the home Government to enforce the treaties, and to insist upon the obligation of the Chinese Authorities to protect foreign life and property within Chinese borders, no such results would now be on record. It must therefore be regarded as most unhappy that this faith should be shaken. Even in the absence of sufficient grounds to undermine it, the bare fact that it has been undermined, must be held to indicate defective methods on the part of the home Governments. We are disposed to think that some of the mischief is due to the habitual intemperance of the local foreign press. Evidently if the extremely violent tone adopted by many foreign journals in the East in connection with every inter-racial question were fairly representative of their readers' sentiments, European and American statesmen would not be justified in attempting to shape their policy by such an index. But it is a part of the duty devolving upon responsible statesmen to be able to discount these utterances, and they can not escape blame if they suffer a want of necessary confidence to grow up among their nationals merely because some of the organs that undertake to express the latter's views are hopelessly intemperate. On the other hand, we have always to remember that there is a limit to methods compatible with the preservation of international amity. Certain crimes excite so much horror and indignation—as, for example, the Kucheng massacre—that the extremest measures seem almost inadequate to expiate them. But so long as England remains at peace with China, such measures can not be employed. Recourse must be had, in the first place, to the Chinese Authorities, and not until

breach of faith or incompetence can be unquestionably charged against them, is Great Britain at liberty to stretch out her own arm. Recognising all that, however, as well as the consequent difficulties lying in the path of British officials, who are required, on the one hand, to conform with the usages of peaceful diplomacy, and, on the other, to obtain redress for treaty-violations that seem to demand belligerent methods, we are constrained to think that the action taken by HER MAJESTY'S Government in the sequel of the Kucheng massacres falls short of the requirements of the case. An incident so exceptional, so appalling, certainly called for striking and unusual treatment, whereas the despatch of a Consul, under Chinese escort, to conduct investigations at the scene of the atrocities, is a hacknied device, such as would have been employed, and has frequently been employed, under circumstances of incomparably less gravity. It seems to us that the First Secretary of H.B.M.'s Legation in Peking might very well have been sent on such a mission; that he should have been accompanied by the Consul and by the best interpreter in the service, and that the escort should have included a strong force of British marines and blue-jackets. It was not a question merely of securing the party against Chinese violence. It was a question of proving, by an unmistakable object lesson, to the officials and people of the Middle Kingdom, that a country capable of such abominable crimes is separated by a very small interval from the horrors of war. Not having, for our own part, the smallest confidence that diplomacy will ever reconcile the masses in China to foreign intercourse, we set little store by any expiatory graces that China may be induced to display for the sake of averting the vengeance of an outraged Occident. But since a Power like Great Britain must be consistent, as far as possible, with the moral standards it professes, amicable expedients should be exhausted before the sword is drawn. None the less a Consular investigator escorted by Chinese soldiers, seems an altogether inadequate recognition of the just and burning indignation that has been roused among all foreigners in the East by the Kucheng atrocities, and is further calculated, we think, to convey to the Chinese a very false impression of the value that Great Britain sets upon the lives of her subjects.

TWO RECENT DISCOVERIES IN CHEMISTRY.

THE year 1895 will probably be noted for two important chemical discoveries, one of great theoretical importance and the other bidding fair to be of great practical importance. In August of last year it was announced, without detailed proofs, that there was a new element in the at-

mosphere so closely united with nitrogen that the separation was exceedingly difficult. This substance exists in enormous quantities all about us and yet there is no proof that its presence had been suspected before the investigations made by Lord RAYLEIGH. The history of the discovery is, briefly, as follows.

Lord RAYLEIGH has been engaged for some years in determining the densities of the permanent gases. In determining the density of nitrogen he was struck by an anomaly that had been noticed before and ascribed to the presence of impurities in the atmosphere. This anomaly was that nitrogen obtained from the air was heavier by about 0.7 of one per cent. than nitrogen obtained from various other compounds. He was so sure that all his measurements had been carefully guarded against error that he could not ascribe the discrepancy to impurities. The weight per litre of nitrogen obtained from chemical compounds was 1.2505, and that of nitrogen obtained from the air was 1.2572, so the discovery has well been called "the triumph of the last place of decimals." At the meeting of the British Association at Oxford last year, this anomaly was spoken of, and formed the subject of a paper read by Lord RAYLEIGH before the Royal Society. At that time, Prof. RAMSAY asked permission to investigate the matter, and he and Lord RAYLEIGH, working independently, succeeded in separating the new gas from the nitrogen of the air. Lord RAYLEIGH proceeded by the method of sparking with electricity, a method used by CAVENDISH in his classical experiments on air reported in 1785. CAVENDISH noted then that there was a small residue for which he could not account quite satisfactorily, and he reported: "If there is any part of the phlogisticated air of our atmosphere which differs from the rest, and cannot be reduced to nitrous acid, we may safely conclude that it is not more than $\frac{1}{120}$ th part of the whole." He was thus very near adding to the 18th century a triumph which belongs to the 19th.

Prof. RAMSAY separated the new gas by chemical processes, first taking the oxygen from the air by means of red-hot copper and then the nitrogen by means of red-hot magnesium. As to the chemical properties of the new substance, the most striking is its inertness. It has not been made to combine with any substance. It was this property that gave it the name of *argon*, from *argos* used in New Testament Greek, as in Matthew 20.6, "Why stand ye here all the day *idle*." No account is given of the choice of this name for the "lazy gas." Whether argon is an element or a compound is not yet certain. The weight of evidence is rather on the side of its being an element, but there are some difficulties. Its properties have been elaborately examined already. Professor CROOKES, in England, has examined the spectrum,

which seems to indicate that argon is a compound substance. Prof. OLSZEWSKI, at Cracow, has liquified and frozen the gas at very low temperatures. As to the amount of argon in the atmosphere, it is not so great as to make it necessary to change the rough statement that the atmosphere consists of four-fifths nitrogen and one-fifth oxygen. The new figures will probably be roughly 78 per cent. nitrogen, 21 per cent. oxygen, and 1 per cent. argon. Thus it seems that CAVENDISH slightly under-estimated the amount of his unaccounted for residue.

What practical use argon is does not yet appear. Nitrogen feeds plant life and by its inertness dilutes the too active life-giving oxygen. It may be that its unaided inertness is not sufficient to render the oxygen endurable.*

The second discovery is as essentially practical as the first is theoretical. Acetylene is a gas that has been known for a long time, and in 1836, it was obtained by WÖHLER, who made calcic carbide and from this with water produced acetylene, but the calcic carbide was too expensive to make the process of any commercial importance. Last year, Mr. T. L. WILLSON, using an electric furnace to experiment with alloys of calcium, noticed that a mixture of lime and powdered anthracite formed a substance which he threw away into a bucket containing water. Gas in large quantities was produced, with a pungent odour, and it burnt with a bright flame. He had formed calcic carbide by accident, and this with water had produced acetylene. The brightness of acetylene, bulk for bulk, is ten times that of good coal gas, and it is asserted that calcic carbide can be made so cheaply as to render the use of acetylene either alone or mixed with coal gas a commercial possibility. Already a lighting apparatus has been devised to use this gas as an illuminant. A cylinder contains a certain amount of water into which the proper amount of the solid calcic carbide is put. A very small flat-flame burner is attached, and an intensely bright light is produced for a length of time varying with the amount of calcic carbide. Such a light would be most suitable and economical for use in railway carriages. A private house in New York is lighted with acetylene, though not as a commercial venture. It is said that calcic carbide can be made at a cost of \$4 a ton, which would yield 11,000 cubic feet, and that, allowing for bye-products, would be at the rate of 6s. 4½d. per 1,000 cubic feet. Five cubic feet an hour give a light of 240 candle-power.

Gas first came into common use about 76 years ago, the electric light about ten years ago, and now it seems likely that another illuminant is to find an important

* A Japanese student imagines that as a country increases in civilization the amount of argon in the atmosphere decreases. It is laziness that is the cause of barbarism, and the lazy gas that causes that evil.

place. If so, there will be quite a cycle of changes to produce the light. Coal will be converted into mechanical power, and that into electrical power, which will bring about a chemical combination, and a second combination will evolve the gas. Since powdered carbon in any form—coal, coke, or graphite—may be used with chalk or lime to produce the calcic carbide, the material used is not costly. The costliness comes in with the necessity of the electrical furnace.

It is well known that from the by-products of coal gas manufacture various substances, such as aniline dyes and flavouring extracts, can be made. Acetylene, a hydro-carbon, lends itself even more easily to the preparation of other substances. It is easily converted into bruzol, from which the cheap aniline dyes are made. It can be made into ethyl alcohol, from which a great number of organic substances may be manufactured. It may be that this use of the old gas will exceed its use as an illuminant. The new, inactive, and apparently useless constituent of the atmosphere, and this widely useful gas, will make the discoveries of the year famous both theoretically and commercially. Since writing the above, a newspaper report of a meeting of the Chemical Society has been received, and it is probably a correct one. At that meeting Lord RAYLEIGH was presented with the FARADAY Medal for his discovery of Argon. Prof. RAMSAY read a paper announcing the discovery of a new element occurring in connection with Argon. This element, known as Helium, had by the evidence of the spectroscope been proved to be present in the sun, but heretofore its spectrum had not been seen from any substance on our planet. Prof. RAMSAY was trying to make Argon combine with some other substance, and in the course of his experiments he obtained from Cleveite, a rare substance, Argon mixed with Helium. On examination with the spectroscope by Prof. CROOKES, the Helium line of the spectrum was seen.

A FORGOTTEN CHAPTER IN THE HISTORY OF JAPAN.

THE story of the Chinese invasion of Japan in the fifth month of the fourth year of the Koan era (1281 A.D.), during the reign of the Emperor GO-UDA, is historically familiar to all. Its details are on careful record, and even to this day, although the event happened more than six centuries ago, Japanese hearts swell with pride remembering how an army of 100,000 braves, equipped by the great KUBLAI KHAN, was stoutly met and almost annihilated. That was certainly the most critical of all Japan's foreign complications, not even excluding her late war. But for the success that shone on her arms, she might have had to bow her neck under a

foreign yoke, and her civilization and prosperity might have been retarded for centuries.

That, however, was not the only foreign invasion met and repelled. Another, not indeed so formidable, but still terrible enough, marks an epoch in Japan's history. The incursion of the so-called Toi Tribe, one of the many Tartar hordes, was directed against the coast of Kyushu in the third month of the third year of the Kwanin era during the reign of the Emperor GOICHIJYO; in other words, about the year 1,000 A.D., or some two and a half centuries before KUBLAI'S attempt to subdue Japan. Happening in such ancient times, the former event has not been so carefully transmitted as the latter. Fragmentary records alone are found in several works written during the ascendancy of the FUJIWARA Family. It results that this memorable incident is but imperfectly known even by educated Japanese, if indeed it be known at all to others than those that make a special study of the nation's history.

As the signal repulse of the YUAN expedition was attributable to the decision and vigilance of HOJYO TOKIMUNE, so to the merit of FUJIWARA TAKAIYE, Governor-in-chief of Kyushu, the ignominious repulse of the earlier invaders was due. Several circumstances combine to enhance the achievement of TAKAIYE. In the first place, he was a courtier and had been educated for a purely civil career. Further, the era in which he lived differed radically from that of HOJYO TOKIMUNE, when the military influence completely overshadowed Imperialism, TOKIMUNE himself being at the head of the Regency. To complete the contrast, the invasion in the time of TAKAIYE was sudden and entirely unexpected. On the other hand, the dimensions of the hostile armament were comparatively small. It consisted of about sixty warships, but as to the exact strength of the forces they carried it is impossible to speak with any certainty. Adopting the strategy subsequently pursued by the YUAN invaders, they directed their first attack against Tsushima, the Warden of which, unable to offer any effective resistance, fled to Dazaifu in Chikuzen. Having overrun the island, the Tartars next proceeded to Iki, where they completely routed the little garrison, and killed the Warden, together with the greater part of the islanders. It is recorded that only one priest succeeded in escaping to Dazaifu to convey the alarm. On the 7th of April, that is to say, ten days after they had reached Tsushima, the invaders appeared off the coast of Ido District, in Chikuzen Province, and carried havoc and destruction into the surrounding countries. They made prisoners of some five hundred men and women and slaughtered a far larger number of the inhabitants, without distinction of sex or age. But their triumph did not

last long. Never was there a more signal example of circumstances begetting the men to deal with them. TAKAIYE, though a purely civil official, and still further incapacitated by blindness for the discharge of military duties, promptly summoned the troops from all the neighbouring districts, and organized them with a view to meeting the enemy, and, at the same time, guarding the coast. A sanguinary and stoutly contested battle ensued, in the sequel of which the Tartars had to retire. But their strength was not broken. On the very next day they made their appearance in Hakata Bay and occupied an island there as a basis of operations. Hakata itself was in great peril. On the 9th of the same month the invaders approached the town and attempted to set it on fire. They were fiercely opposed by the garrison, who at length succeeded in repulsing them and forcing them to retire to the island. On the two succeeding days, a storm prevented the invaders from renewing their attack, and this respite was turned to full account by the Japanese troops. They strengthened the defences of the coast, and temporarily repaired their ships. On the 12th, as soon as the storm subsided, TAKAIYE ordered SHONI TOMOKUNI and OKURA TANEKI to assume the offensive. About thirty Japanese ships under the command of these two men attacked the enemy's head-quarters, dislodged him, and drove him out to the open sea. But the Tartars were splendidly pertinacious: next day they appeared off the coast of Matsuura in Hizen and effected a landing. The Warden of the district marshalled all the troops at his disposal to repel the invaders, and promptly conveyed intelligence of their landing to the Central Office at Dazaifu. TAKAIYE immediately despatched strong reinforcements, and by these, acting in concert with the garrison of Matsuura, the enemy was at last routed. Repeatedly baffled in their attempt to effect a lodgment on the mainland of Kyushu, the invaders finally abandoned their intention and sailed away toward Korea, carrying with them a large number of Japanese prisoners. Meanwhile, news of the appearance of the hostile foreign flotilla had excited much anxiety at the Imperial Court in Kyoto. Delegates were promptly sent to the Shrines of Ise and the other Ten Shrines to supplicate divine aid, and the tutelary deities were thanked with equal fervour when, four days later, tidings came from Dazaifu reporting the successive repulses of the invaders.

The vessels employed by the Tartars on this occasion seem to have been of considerable dimensions—from 54 to 72 feet long with banks for 30 to 40 oars. The invaders were armed with halberds, swords, bows and arrows, and shields. The halberdiers occupied the front rank; then came the wielders of broad swords, and the bowmen brought up the rear. Each carried a shield. Their arrows measured little above

a foot in length, but so great was the strength of their bows that the shafts are said to have killed men protected by shields. It is recorded that they were great eaters, and that they consumed large quantities of water, an unusual taste among warriors nine centuries ago. Their exact numerical strength was never known. The actual combats between invaders and invaded did not last long, but the casualties on the side of the peaceful inhabitants of the district were heavy. The total killed, men and women, amounted to 471, while captives to the number of 1,280 were carried away, together with 380 head of cattle. On the other hand, a number of the invaders were made prisoners, and when examined they were found to be for the most part Koreans. They declared that the marauders belonged to the Toi tribe, which had long harassed the coasts of Korea and carried away Koreans to fight under their banners. This was corroborated by the account of a Tsushima official who, having been captured by the Tartars, made his escape when the ships reached Korea, and succeeded, not only in getting back himself, but also in rescuing his wife and children who had been carried off at the same time. In September of that year a delegate arrived from Korea, escorting 280 Japanese, of whom 60 were men and the rest women. He was richly rewarded by the Imperial Court. Such was the first foreign trouble that overtook Japan during the era of authentic history.

The Toi were one of the Tartar tribes that subsequently grew powerful enough to defeat and displace the Liao from the northern districts of China bordering Liaotung Bay, and to establish there an independent kingdom called Chin. This kingdom was afterward conquered and absorbed by the famous tribe of Tartars, who under GENGHIS KHAN, TAMERLANE, and KUBLAI, gradually subdued the whole of China and even carried terror to Europe. A few words may be added about TAKAIYE. He was the second son of FUJIWARA MICHITAKA, who held for some time the highest post in the State, that of *Kwanpakū* (Prime Minister), and his eldest sister was the consort of the Emperor ICHIJYO. But the branch of the great FUJIWARA Family of which TAKAIYE was a descendant, had gradually declined in power and prosperity, and been overshadowed by another section of the same Family, that of MICHINAGA, TAKAIYE'S uncle. Thus the relations between uncle and nephew were anything but cordial. Great and able as MICHINAGA was, he held his nephew in awe, for TAKAIYE was a man of strong mind and varied capacities. Nevertheless, the prosperity of TAKAIYE'S house could never be restored to its former state, and, despairing of rebuilding its fortunes, he applied for the position of Dazei-gon-no-sotsu, or Governor-General of Kyushu, an office generally occupied by some

high official sentenced to exile. When TAKAIYE was about 41 years old the invasion of the Toi tribe happened. A short time previously he had been attacked by eye disease and became totally blind. He died in the year 1044 A.D.

"CÆSAR AND CHRIST."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to make a few comments on the article "Cæsar and Christ" which appeared in yesterday's issue of your paper.

Though much might be said from a theological point of view about the manner in which Our Lord Jesus Christ is spoken of in your article, I shall in no wise attempt to touch upon that point. Newspapers, in my opinion, and those published in the East more especially, are not fit mediums for the discussion of theological matters, for the reason that their readers are not qualified to appreciate at their true value the arguments which might be brought forth.

But setting aside all theological discussion, I feel constrained to say that your article must have deeply wounded the feelings of all those of your readers, who, like myself, with heart and soul believe in the divinity of our Lord Jesus Christ. One is painfully surprised to find in your paper such an uncalled for offence to the most sacred feeling of the Christian public.

As to the opinion of the writer of the article regarding the relative positions occupied by the Roman Empire and Christianity in the progress of civilization, I have no desire to dispute with him. Not a jot will it influence the plans of Divine Wisdom nor the teachings of History.

I am, Sir, yours faithfully,

P. M. OSOUF,

Tokyo, Aug. 23rd, 1895. Arch. of Tokyo.

We do not understand the complaint of our correspondent. No question whatever was raised in our article as to the divinity of Christ. That matter was not touched at all. On the contrary, the supernatural side of the problem was carefully and explicitly put aside. What the writer of the article undertook to do was to draw a purely historical parallel between Christ and Cæsar in so far as concerned the influence of each upon modern European civilization. A special phase of Christ's life and teaching was considered from a purely scientific point of view, just as a meteorologist might consider the climatic influence of a chain of mountains without any reference whatever to their origin.—Ed. J.M.]

ADMIRAL BELKNAP.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My attention has just been called to a letter published in your weekly issue of the 16th March last, in which the writer, over the signature of "An Englishman," mentions "the vulgar virulence of Admiral Belknap."

Let me crave a brief space in your columns at this late day to say that what I have written for the house press concerning recent events in the Orient has been published over my own name. Whatever I may have said displeasing to that Englishman, or to any other individual of that strong and masterful race, the shelter of an anonymous or generic name was not used for such purpose.

I had the pleasure of meeting and knowing many Englishmen at Yokohama but a short time ago. They were men who seemed to have the courage of their convictions. They were neither afraid nor ashamed to come out into the open and say or write what they felt or thought, face to face, or over their own unhesitating signatures. Let me commend their spirit and fearlessness to your correspondent, so that the pluck of the true Briton may be revived in his breast, and his own honourable name and high standing be proudly revealed to all.

None may gainsay that John Bull is one of the greatest factors in the world's affairs to-day, and his sons are amply able to repel what they may deem to be assaults upon his grandeur and achievements without resort to the cover of anonymous resentment. If, sad to say, some of us Americans are "vulgar" or "sham patriots," or "micromatic," we may possibly have inherited such traits from our British ancestry. The roots of some of us, indeed, run back to men and women born in the mother isle in the days of Queen Bess—days when the amenities of life were not such as govern Anglo-Saxon Norman communities in this day of progress and enlightenment. At all events, we Americans like to have our faults flung at us, if the thing is to be done at all, in bluff old Elizabethan or Cromwellian fashion. We shrink not from any blows that may be given us, and pray that the folk in motherland may hold their tempers in the same way. In short, let clubs of known handling be used—not pens of anonymous wielding.

It must be admitted that "An Englishman" has given the public a very readable letter, though not, in every particular accurate in its statements. The venerable Lloyd Garrison alluded too died in 1879. The recent Garrisonian correspondent of the London *Times* is a son of the late eminent abolitionist. He is not regarded in this country as a very weighty exponent of general sentiment upon any public question.

British opinion had as much to do in arresting the lynching and burning of negroes in the South as public opinion in this country had to do in arresting the dealings of Governor Eyre and his subordinate officials with the negroes of Jamaica in the ridiculous scare of 1865, when, in a few brief weeks, according to the report of the Royal Commission, "four hundred and thirty-nine persons were put to death, and over six hundred, including many women, were flogged, some under circumstances of revolting cruelty. Cats made of piano-wire were in some instances used for the better effect of flagellation." These cruelties were justified in all their barbarity by such representative Englishmen as Alfred Tennyson, Charles Kingsley, John Ruskin, Thomas Carlyle, Benjamin Disraeli, and other distinguished personages. Vide McCarthy's "History of Our Own Times," or Sanderson's "History of England and the British Empire"—good English authorities.

I would be glad to answer "An Englishman's" vigorous letter in detail, but the distance is too great for effective fire, and I fear to trespass further upon your patience and space.

Your obedient servant,

GEO. E. BELKNAP.

Brookline, Mass., July 19th, 1895.

PERSONAL REMINISCENCES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 20th inst., under the heading, "Personal Reminiscences," I am requested to give the precise date of my birth, and though all anonymous attacks do not deserve any mention, I take the trouble (not in view to satisfy "Omega's" curiosity, but for the pure benefit of your readers) to state that I was born in 1816. At the end of 1824 Baron Markendorf (the private secretary of the King of Saxony, and the favourite pupil of Carl Maria von Weber) being a personal friend of my parents, and my first musical adviser, took me to Vienna and introduced me to Beethoven. In 1825 Beethoven's health became so impaired that a change of air was ordered to him. He went in the country to remain with his brother Johann. This incident interrupted my musical studies and we left Vienna; but my mentor on hearing that Mozart's son was living at that time in Lemberg, Austria, took me to him. The young Mozart (he was about 38 years old or 40) and was an employé of the Austrian Government, was anything but a great musician, still he possessed the real traditions of his father's works. He played for me nearly all of them, while before our departure he offered me one of his own sonatas. His great delight was also to relate to my mentor the numerous incidents and anecdotes connected with his father's eventful life. All those present at the reading of my Reminiscences on the 17th inst. heard distinctly that I was speaking of Mozart's son, whom I have known personally, but not of the great Mozart.

I remain, Sir, sincerely yours,

A. DE KONTSKI.

Nikko, August 24th, 1895.

"CHINESE CHARACTERS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Japan Mail* of yesterday I have read with much interest the review of "Chinese Cha-

acters for the use of Students of the Japanese Language" by Mr. Arthur Hyde Lay. The critic bestows a good deal of praise on this work, which is called "an incalculable boon to students, many generations of whom will call him (the author) blessed." Now it is not my intention to detract from the real merits of a work which gives the public for the first time a selection of 4,000 characters with their *on*, *kun*, and English translation—a selection comprising in fact the whole of the characters in daily practical use. Such a selection has long been a *desideratum*, and must prove indeed a boon to every student of the Japanese language. At the same time I think it would have been but fair if the shortcomings of the book in question had also been pointed out, for the shortcomings mentioned in the review—absence of running-hand characters and of tables of the *kana*—are scarcely to the point, as neither *sōsho* nor *kana* has anything to do with the plan of the work. Allow me therefore to draw attention to some other shortcomings of the same, which, in my opinion, must be considered real obstacles to its obvious object, to facilitate the study of Chinese characters in this country.

In the first place I have been surprised by the extraordinary number of misprints which occur almost on every page, beginning from the very first (in the preface) and continuing throughout the whole book. Nor are these misprints limited to English words, but—what is worse—they occur as frequently in the Romaji and sometimes even in the characters themselves, for example 復 (p. 14) instead of 復 which of course belongs to Radical 彳; 廠 instead of 廠 (p. 42); 采 instead of 采 (p. 54); 捐 instead of 損 (p. 55); 晴 instead of 晴 (p. 60); 稟 instead of 稟 (p. 88); 沕 instead of 沕 (p. 90); 綠 instead of 綠 (p. 94); 采 instead of 采 (p. 123); 飽 instead of 飽 (p. 135).

By the by—how on earth comes the Buddhist symbol 卐 (p. 22, placed under Rad. 十!) into the company of Chinese characters!

Now for something else. In many—although by far not in all—cases, where there exists, besides the principal form of a character, an abbreviated, or obsolete one, which I for brevity's sake will call secondary form, this latter is given below in small print. That in itself of course would be very laudable, did it not rather often happen that the secondary form is given the place of the principal, and *vice versa*. So we find the original positions exchanged between 刺 and 刺* (p. 10); 塲 and 塲 (p. 30); 岩 and 岳 (p. 39); 嶋 and 島 (p. 40—the form 島 is wanting altogether); 概 and 槩 (p. 65); 携 and 攜 (p. 57); 濫 and 濫 (p. 74); 稚 and 穉 (p. 88); 算 and 筭 (p. 91); 脇 and 脅 (p. 100); 芽 and 芽 (p. 103); the correct forms 刃垂言 and 音 are not given at all, but only their variations 刃垂言 and 音 and on.

If not only the "principal," but also the important "secondary" forms were to be included in the compass of the work, it is difficult to understand why we do not find 尊 besides 尊, 凡 besides 凡, 劍 besides 劍, 忍 besides 忍, 寧 besides 寧, 并 besides 并, 研 besides 研, 普 besides 普, 吊 besides 吊, 彙 besides 彙, 往 besides 往, 汗 besides 汗, 汚 besides 汚, 決 besides 決, 添 besides 添, 畫 or 画 besides 畫, 真 besides 真, 亂 besides 亂, 辭 besides 辭 & on & on. The principal of giving also the secondary forms as far as they are of frequent occurrence ought to have been carried through—why was it not?

The same question might also be asked with regard to the synonyms which, in some cases have been added and in others not.

The characters are arranged under their Radicals according to the number of their strokes; but unfortunately this principle is very often broken through, so that e.g. amidst characters with 8 strokes there suddenly appears a character with 9 or 10, or perhaps 7 strokes, as the case may be. There are still other drawbacks which stand in the way of making practical use of the book as a dictionary. In the first place, the Radicals do not sufficiently strike the eye, being only indicated on the margin, and not made conspicuous in the text itself, so that it is not evident at the first glance where one Radical is at an end and where a new one begins. Then the Radicals on the margin—which sometimes are not indicated at all, as 支 on p. 57, or stand not in their right place, as 儿 on p. 17 (its place being on p. 16), or 己 on p. 40, or 彳 on p. 44; the very order of which appears sometimes inverted, as in the case of Rad. No. 95 and 96 (p. 79-80), and No.

165 and 166 (p. 123)—ought to be accompanied by their number, as this number is most essential—in fact the *conditio sine qua non* for the practical use of dictionaries of this kind. Perhaps it would also have been better to employ, instead of the horizontal arrangement in squares, the usual vertical order as found in the dictionary of the Rev. Gring, of which also the distribution of the characters belonging to the same Radical under the three initial strokes — | 丿 might have been borrowed to the great advantage of the work.

Some characters occur under Radicals where, under ordinary circumstances, they are not looked for, e.g. 眞 under 乚 instead of 目, 局 under 口 instead of 尸, 染 and 渠 under 丿 instead of 木 and so on. On p. 93 the character 穀 quite unaccountably makes its appearance under the Rad. 米. To have done with the chapter of Radicals I should still mention, that it would have been very desirable if Radicals having no existence as independent characters—and the number of such is very conspicuous—had been distinguished from the other characters by some mark.

But the shortcoming which, in my opinion, is the most serious of all, has still to be pointed out. It is this. A great number of *kun* or *yomi* are given which are quite valueless because not in practical use; there would be no harm in this, provided that they were discernable from those *kun* which are in use; but unfortunately such a distinction has not been made. In some way or other the latter ought to have been distinguished from the former, which only render the meaning of the character, but are never employed when reading or pronouncing it. To give only a few examples: 座 (p. 42) is never read "idokoro," but always *za*; 嬌 (p. 35) cannot be read "tadashii" or "kimi," but only *chaku*; 德 (p. 45) is never read "megumu" nor "saiwai" either, but always *toku*, and besides—but only in names—*nori*; 灣 (p. 75) never "mizu no kuma" but always *wan*; 衙 (p. 108) never "matsurigoto-dono," but always *ga*; 譜 (p. 113) never "fuda" or "tsuzuki" but always *fu* and so on and so on. The otherwise excellent dictionary of the Rev. Gring partakes of the same inconvenience in a still higher degree and is, by its indiscriminate amassing of so-called "*yomi*," rendered comparatively useless. So it gives e.g. for the character 行 no less than 17 *yomi*, of which however only 2, *okonau* and *yuku*, are of practical value; the character 衍 is furnished with even more (21) "readings," of which not a single one is ever employed, the character being invariably read after its *on* only. It really is a great pity that the latest, just published selection of Chinese characters should not have kept itself free from this fault of making no difference between genuine *Kun* and mere expletive Japanese translations, for if it had avoided this most embarrassing ambiguity, its value for students would have been incomparably greater than it is now.

Whereas so many useless *yomi* are given which can only have the effect of puzzling the student, many a really important, genuine *yomi* has been omitted, e.g. *masu* for 先 (p. 16), *hatsu* for 初 (p. 19), *o*, *on*, *mi* for 御 (p. 45), *omote* 表 (p. 108), and others.

Also among the *on* we meet a good many which would better have been dropped, or at least put in brackets to indicate their comparative insignificance. Moreover, quite a number of the *on* given in the text are erroneous, as e.g. *shi* (*sha*!) for 差 (p. 40), *tatsu* (*shō* or *sha*!) for 姐 (p. 33), *chū* (*chō*!) for 惆 (p. 47); *kan* (*kwan*!) for 慣 (p. 49), *kai* (*gai*!) for 拐 (p. 52), *san* (*satsu*!) for 撒 (p. 56), *ha* (*han*!) for 播 (p. 56), *hō* (*bō*!) for 旁 (p. 58), *dō*, *nō* (*jō*!) for 囊 (p. 60), *shō* (*jō*!) for 牀 (p. 62), *jīn* (*shin*!) for 稔 (p. 88), *san* (*san*!) for 竈 (p. 89), *ha* (*hi*!) for 簞 (p. 92) and soon. Many errors occur also as to the length of vowels, e.g. *ko* (*kō*!) for 敲, *rio* (*riō*!) for 料, *ho* (*hō*!) for 方—all three examples taken from p. 58; *sho* (*shō*!) for 昌 (p. 59), *shū* (*shu*!) for 狩 (p. 78), and many others. Sometimes important *on* have been omitted, as *jitsu* for 十, *nitsu* for 日, *ketsu* for 欠, *motsu* for 物 and so on. Nor is there any consistency in the order of the *on*, sometimes *Kanon*, sometimes *Goon* taking the first place. Take p. 33: *jo*, *nio*; *do*, *nu*, etc., are in the *Kanon-Goon* order, but *mio*, *biō*; *sai*, *sei* are in the *Goon-Kanon* order. This inconsistency is to be regretted, for it is by no means immaterial to know which of two given *on* belongs to *Kanon* and which to *Goon*.

In cases where the meaning of a character depends on its *on*, or, perhaps more correctly, where

the *on* of a character depends on its meaning, as e.g. 易, which, when pronounced *eki* means *exchange*, but when pronounced *i*, means *easy*; or 樂 (*gaku*: music; *raku*: joy), this difference ought to have been pointed out.

But this letter has already attained such an unwarrantable length, that I now must hurry to the end. I have noticed the absence of some for the most part very common characters, as 厄, 叫, 堊, 蜜, 夸, 弊, 嬉, 寶, 惻, 戰, 捍, 構, 揣, 搭, 基, 椒, 旋, 旌, 歡, 歎, 搖, 菩 and many others. It is possible that some of these may be in the book, but certainly I did not find them under their usual Radicals. It also happened to me that I looked in vain for the very common character 減, until I discovered that it stands under the Rad. 冫 in the rather unusual form 減.

In the Appendix a list of *nanori* is given, which (in the preface) is said to be "fairly representative"; I failed, however, to find in it such well-known *nanori* as *Kiyomori*, *Yoshitsune*, *Yoritomo*, *Nobunaga*, *Ieyasu*, *Hidetada*, *Iyemitsu*, *Yoshimune* and so on.

The list of *kun*, *fu*, and *ken* would be much more serviceable, if it were arranged alphabetically, and if such common Sino-Japanese designations as *Banshū* (for *Harima*), *Bōshū* (for *Awa*), *Geishū* (for *Aki*), *Fōshū* (for *Kōsukeye*), *Kōshū* (for *Kai*) etc. had been included. The old poetical name "*Michinoku*" ought to be replaced by *Mutsu*. The second character in *Kagoshima* (兒) is wanting. The orthography is sometimes inconsistent; cf. *Bichū*, *Rikuchū*, but on the other hand *Ekichū*; *Miye*, but *Akiete*, etc.

I am, Sir, yours most sincerely,

P. EHMANN.

Mitake, August 18th, 1895.

FRANCE AND ENGLAND.

The following telegram to the *New York Herald*, dated London July 27th, discloses an uneasy state of affairs in Europe:—

Since a large Conservative majority in the House of Commons is seen to be assured, there is a resurgence of jingoism in the press and from the platform. This condition of affairs heralds a stormy time if Lord Salisbury should seek to satisfy the aspirations of his followers.

The foreign papers are all alert to the situation. The French papers are assiduously advocating the use of the Franco-Russian alliance to drive Great Britain out of Egypt and to meet her intrigues with the Porte. The Italian papers claim that the change of government here will result in a revival of the Salisbury-Crispien *entente*, while the Berlin and Vienna journals hail the restoration of a Conservative policy, declaring that it is almost tantamount to the incorporation of Great Britain into the Triple Alliance.

The Globe, a conservative paper, to-day strikes a key note, advocating the boldest attack by Great Britain on France at every point where their interests may come in collision. France, this paper says, must be made to understand that there is no hope of the evacuation of Egypt until Great Britain deems the time fitting. It adds that the ridiculous claims of France to an extension of her sphere of influence in the Soudan must be met by a British advance from Uganda and from Egypt simultaneously. The Mahdi should be suppressed by a campaign from Egypt, and Great Britain should hold sway from the Upper Nile to Alexandria. In Siam the French claims to the eastern bank of the Meikong River must not be allowed. Siam, it declares, is ripe for a British protectorate.

Continuing, the *Globe* says that Russia cannot be permitted to acquire Port Lazareff, but if she does acquire that place Great Britain must receive a *quid pro quo*.

These musts and must not fairly represent the ideas entertained by the Conservatives, and it will be seen that should the government make an attempt to carry them to their logical conclusion, there will be stormy times ahead, diplomatically, if not otherwise.

The *Statist*, commenting on the uneasy feeling in regard to European politics, says that it had led to large sales. Consols, which during the second week of July were quoted at 108, with dividend, are this week as low as 106½, and all foreign stocks are heavy.

Lord Salisbury has sent a protest to Paris and Peking against China ceding or France accepting territory that is included in the Anglo-French Buffer State agreement of 1893.

The contingency to which attention was first drawn by the European edition of the *Herald* in an editorial transmitted by Commercial Cable and

* I always give the "principal," that is the correct, or at least the more usual form first.

published in these columns on Friday last, has now, as the foregoing despatch shows, attracted the attention of the London press. As the Russian statesman who was interviewed by a special correspondent of the *Herald* in St. Petersburg said, Russia will consider herself entitled to act with France in regard to Egypt—in other words, the French government will now find itself, with a backing which Lord Salisbury will scarcely find it possible to disregard.

This Egyptian question, as all the world knows, is one upon which France feels very strongly. Ever since she withdrew from her partnership with England in regard to Egyptian affairs, thirteen years ago, she has never ceased to aim at ousting her successful rival from the land of the Pharaohs, and as the years have gone by and England's hold upon the country has grown stronger this desire on the part of France has become constantly more intense. It received emphatic expression a few weeks ago in the Presidential address delivered at the first meeting of the new "Egyptian Committee" recently formed in Paris. In the course of his address, M. Deluns-Montaud, president of the society, said:—

We have in Egypt, at Cairo, at Alexandria, all along the Nile, a prosperous colony. French capital is doing wonders; it is establishing workshops and holding in its hands a large portion of the industry and trade. By a tradition dating back more than three centuries we are by virtue of the famous Capitulations the protectors of the East. We enjoy among the Egyptians prestige and glory. Our officers have been the instructors of their armies. Our *savants*—Champollion, Mariette, Maspero, Grebaut—have revealed to the world this venerated mother of civilizations.

"Our work will consist in bringing about the military evacuation of Egypt by the free adhesion of the English to the sole solution meet for their dignity and for ours as well as for the interests of all nations. This solution is a return to the *status quo ante*. Egypt would be independent under reservation of the rights of suzerainty of the Porte and the control of its creditors. It would be fitting to place this independence under the guarantee of a neutrality analogous to that existing in Europe in the case of certain states. It is solely to shed light upon the question and to bring to an end deplorable misunderstandings that we form this committee."

The French colony in Egypt, to quote M. Octave Uzanne, in a recent letter to the Paris *Figaro*, is the Alsace-Lorraine of the East. French political power in Egypt may not be strong, but the influence of France is still everywhere apparent. The official language is still French, the clubs are French, plays and opera are given in the theatres in that language, and two newspapers, the *Journal d'Alexandrie* and the *Journal Egyptien*, represent the French press. The French colony consists of 15,700 persons, and the commerce with French is fourth in order of importance, coming after that of England, Turkey, and Russia.

The typical English view of the Egyptian question is summed up in the following sentences, taken from an editorial in a leading London weekly on the subject of the visit of the British fleet to Alexandria:—

"Nor should this superb naval demonstration be without some profit for those jealous European Powers which want to get the English out of Egypt. It signifies in the plainest possible way that the same sort of instrumentality which ousted Arabi would be employed without hesitation were due occasion to arise for the defence of Nileland against outside interference. England says to the Powers, individually and collectively, 'Je suis, j'y reste.' Her troops will embark when their work is done, but not a moment before. 'For how long?' indignantly ask our neighbours. Well, the duration of our stay mainly depends upon whether France expedites or delays the progress of our administrative programme. The less opposition it encounters the earlier will be the date of evacuation. In the meanwhile, an occasional naval demonstration off the coast may serve as a reminder that the British bulldog, although a poor hand at barking, bites to the bone."

As a symptom of French feeling in regard to Egypt we may take the acceptance by the Chamber of Deputies of a painting offered to it last month by an Egyptian journalist, Mr. Mustapha Kamel, who is shown presenting a petition to France. "The Liberator of Nations," for the deliverance of Egypt. Egypt is represented in fetter and guarded by a figure symbolical of brute force. The picture is entitled, "Appeal for help of the Egyptian People to France, the Liberator of Nations."

Besides the Egyptian question, Lord Salisbury will have another problem to solve. As stated in the foregoing cable, he has filed a protest against "China ceding or France accepting territory that

it included in the Anglo-French Buffer State agreement of 1893." This protest is directed against the convention between France and China signed last month, which convention completed the northern boundary of the French possessions in Indo-China and definitely settled all the economic and commercial questions that had arisen between France and China. Part of the territory conveyed to France under this convention consisted of the Shan State of Kiang-Hung, over which England once claimed proprietorship on the ground that the Shan chiefs were vassals of Burmah. She, however, later abandoned her rights to China, but with the proviso that "His Majesty the Chinese Emperor could not, without previously obtaining the assent of Her Britannic Majesty, cede" this territory or any fraction of it to any foreign nation.

Despite this reservation the territory in question has been ceded by China to France, and Lord Salisbury may find some difficulty in giving effect to his protest. M. Hanotaux, the French Minister of Foreign Affairs, has been highly praised by the Paris press for his success in this matter, and will not early abandon the newly acquired territory. As one Paris paper said recently:—"This constitutes for us a precious advantage which we must not allow to be lost by our indifference, timidity, or ignorance."

AQUATIC SPORTS AT YOKOHAMA.

The annual aquatic sports, or, more properly speaking, water frolics of the Yokohama Amateur Rowing Club, were favoured with perfect weather on Wednesday. At four o'clock, when the first event was supposed to start, but did not, the surface of the harbour fronting the Boat-house was as still as still could be, and so it remained throughout, not a ripple disturbing its glassy placidity. Yet the temperature of the water was not disagreeably high, allowing the competitors to remain in almost as long as they liked without sustaining the fatigue inseparable from over warm water. The polo-match was the feature of the affair, and this year the ladies, of whom there was a large assembly, were able to follow the fun more closely, the "debateable territory" being arranged closer in. The tilting tournament ended in a draw greatly in favour of H. Goldman, last year's winner, though Gibbs made a gallant fight of it. Still with the failing light—it was a quarter to seven o'clock and the moon had long been up—and an indifferent weapon, no other result could have been expected. The officials were, Mr. J. Rickett, Captain; Mr. F. J. Hall, Hon. Sec., and Mr. C. K. M. Martin, time-keeper. Details:—

BATH-TUB RACE.

G. Hood—1.
Four started, G. Hood, E. H. Irwine, W. D. Moss, and Harold Y. Irwine. The course was about forty yards, out and home. Moss was the first to hurriedly leave his tub on the paddle out, but all the others managed to turn for home. Harold Irwine led easily at this point, with Hood close up. Harold grew excited, however, as he saw the water gradually encroaching upon his sitting-room and in a short space he was completely swamped and heeled over. He managed to empty his tub of the superfluous water, but to get into it again and resume the race was a far more difficult matter. Eventually the other competitors also came to grief, leaving Hood alone to paddle in, and win at his own convenience.

TILTING TOURNAMENT.—1ST HEAT.

R. Abenheim beat P. E. Webb.
E. H. Irwine beat R. Böhlke.
H. Goddard beat L. Goetschel.
J. B. Gibbs beat H. F. Arthur.
N. J. Sargent beat H. S. Goddard.
R. Ackland beat E. A. Morphy.
H. Goldman beat W. D. Moss.
G. Hood, a bye.

The first heat passed off rather tamely, most of those "knocked out" overbalancing themselves almost before the tilting-pole touched them. The bout between Irwine and Böhlke was well fought out.

2ND HEAT.

J. B. Gibbs beat H. Goddard.
R. Abenheim beat E. H. Irwine.
N. J. Sargent beat G. Hood.
H. Goldman beat R. Ackland.

3RD HEAT.

J. B. Gibbs beat R. Abenheim.
H. Goldman beat N. J. Sargent.

Both these contests were of a keen nature, "two all" being called before the decider.

FINAL.

H. Goldman and J. B. Gibbs, a draw.

Gibbs' tilting-pole broke off at the head twice, and as the evening was drawing on, and the contest seemed most undecided, the competitors agreed to call the bout a draw.

GREASY POLE.

H. F. Arthur.

Twelve out of the fifteen entries essayed the attempt, these being R. Ackland, H. F. Arthur, W. M. Carst, J. B. Gibbs, H. Goldman, G. Hood, E. Irwine, H. Y. Irwine, W. D. Moss, N. J. Sargent, and P. E. Webb. The duck and its basket fell into the water after the second competitor had started, but this was due to the vibration of the pole. The basket was again placed in position, and at the eleventh attempt—made by Master Carst, who got a good way out—the duck escaped from the basket altogether and made tracks for the shipping. Immediately, every one on the Bathing Barge who could was in pursuit, and after a short but smart chase the quarry was caught by one of the brothers Goddard, and once more returned to its confinement. Yet again the bird effected an escape, and this time it was picked up by a gentleman on a sampan, where it remained. Arthur was eventually adjudged the winner of the event.

WATER POLE.

Red—(Tea, Silk, Curios, and Insurance).

Mr. Schellenberg, goal; K. Kingdon, A. L. Mottu, backs; H. R. Mair (Capt.), C. Abenheim, H. Goldman, half-backs; H. S. Goddard, H. F. Arthur, E. H. Irwine, forwards.

White—(The Rest).

P. E. Webb, goal; G. Hood (Capt.), H. Goddard backs; H. A. Poole, R. Ackland, half-backs; N. J. Sargent, E. A. Morphy, W. D. Moss, forwards.

Seven minutes were allowed for each end. Red opened strong, and were soon pressing their opponents' goal. White managed to clear their lines, and soon after a free throw from the line fell to the Red. Again the Whites' were hard pressed and a goal nearly resulted. H. S. Goddard finally secured the ball and by a clever throw secured the first goal for his side. In the second half Red notched two more goals, one being obtained by H. S. Goddard and the other by Mottu. The Red team thus won by three goals to *nil*.

CALITHUMPIANS.

For this time-honoured "turn-out," only three men put in an appearance and which of the lot carried away the palm it was very hard to decide. H. F. Arthur appeared as a Chinese steward; Eric Irwine was attired in parti-coloured robes and tail, which one might have taken as representing the "Wild Man of Borneo," or a Manchurian tiger; while P. E. Webb, in a chaste and simple white night-gown of antique pattern, struck an attitude suggestive of a sweet Water Nymph: only the battered silk top-hat which covered his head rather destroyed the illusion.

SAMPAN RACE.

A. L. Mottu and L. Salabelle; J. Carst, and W. M. Carst; dead heat.

Eight sampans started but only the two given above finished the course. Coming down for home these two sampans got too close together, and interfered with each other's progress so much that neither could win.

YOUTH, LOVE, AND DEATH.

Youth came to her one morn, and kissed her eyes,
With pearly kisses pale and pure.

Soft promises he sang; and subtle lies,
Most tempting sweet, and most sweetly sure.
She clasped him in her arms, and bid him stay;
He kissed her brow of snow; then fled away:
For Youth must yield to Age: Night follow Day!

But while pink youth still linger'd, Love came by:
He kissed her lips, so ripe and fair;
Red roses bloomed, and white stars lit the sky;
And Love, he languished in her hair.

She clasped him to her breast, and bid him stay;
He kissed her upturned face, then sped away:
For Passion yields to scorn,—the Sages say!

Then Death draws nigh; and, with his kisses cold,
He woos and wins that weary heart.

Her yielding form his hungry arms enfold;
"Sweetheart!" he breathes, "we ne'er must part!"

"Ah! welcome Death!" she sighs, "I bid thee stay;

Thy bride, she drinks thy rapturous kiss to-day;
Sweet Youth, rich Love, they both hence fled away!"

* * * * *
Then Death, he drew her head upon his breast,
And wafted o'er her lips the kiss of Rest!

E. M. D'A.

LETTER FROM HONGKONG.

(FROM OUR OWN CORRESPONDENT.)

Hongkong, Aug. 10.

Like all the foreign communities in the East, and indeed like all the civilised world irrespective of race or religion, Hongkong has been stung to the core with burning indignation at the Chinese atrocities in the neighbouring province of Fukien: atrocities perpetrated perhaps in the name of religion, or of colour, or of political objects, or local disputes, but none the less atrocities perpetrated upon those who should, who must, in the name of all that is human, be regarded as safe from such troubles, those whose lives are jealously guarded as sacred in every land, but China—helpless women and little children, from tiny fair-haired darlings of a few months or three and four years, to gentle ladies of good birth and noble character, all cut and hacked, and mangled, and torn with fiendish glee by a filthy mob of pestilential reptiles who did not even stop to kill their prey outright before burning the house overhead! It is a hideous story, more awful and repulsive than Rider Haggard's "Hot-pots," for the victims here are not strong men but weak women and babies in arms. And it is not the doing of a few slaves at the bidding of a monstrous despotic maniac, but it is the crime of a whole community which joined with delight in the horrid carnival of torture, a whole nation which revels in similar scenes whenever and wherever two or three helpless ones are gathered together without a strong arm to defend. It is foolish of the missionaries, it is a thousand pities that they leave women and children without a body-guard; but none the less it is a crying shame, a disgrace to humanity, that a race of brute beasts addicted to such excesses should longer be allowed to indulge its frightful passions with freedom and impunity. These are not individual crimes, they are national characteristics, developed slowly and surely by centuries of uninterrupted crystallisation since the days of Attila.

Details of the sorrowful story I need not give you now, as they have reached Shanghai first and will be in your hands before now. A meeting was held in Hongkong last Thursday, as I have already informed you by telegram, and resolutions were passed expressing sympathy with those bereaved, and indignation first at the murderers, secondly at the Chinese Government which connives, and thirdly at the British Government which could put an end to these outrages but never does. The meeting was unanimous, and cordial enough; but the circumstances under which it was held were not creditable to Hongkong. In the first place, as the only British possession in this part of the world, Hongkong should have been first in the field with a public demonstration, whereas it was last. Nobody would take the lead, nor apparently offer to follow the lead of anyone else. The Unofficial Members of the Legislative Council talked about it in a half-hearted way and finally decided that they could not call a meeting for various reasons, all satisfactory for men who do not wish to do anything. The Chamber of Commerce could not regard the matter as their affair. The officials were barred, as representatives of the British Government, from taking part in a demonstration against a "friendly" government. And those are all the leaders we have in Hongkong. We have no organisation for giving vent to public feeling. We have no public feeling to give vent to, as a general rule; every man is for himself and the devil takes the Colony. In the Hongkong Directory there is a Hongkong branch of the China Association, theoretically just the thing; practically it does not exist except in the directories. In the pigeon-holes of somebody's office desk there is a draft scheme for a Ratepayers' Association, if the rats have not nibbled it all away; it has been there two years, since it was provisionally approved by a public meeting and referred to a committee.

There are many individuals in conventional leading positions in the Colony, but they never lead. There are members of a millionaire family which takes its name from the Armenian village known to the world by the atrocities over which Britain is showing so much agitation; but these millionaires, who have made their millions under the British flag, showed only a languid kind of agitation over atrocities committed upon British women and children. There is a flourishing Armenian colony here, but it was too diffident to reciprocate by calling a meeting, or by speaking when the meeting was called. There are capitalists who sit on every directorate in the colony, but would not direct public feeling now. There are men whose names figure at the head of every movement which requires mere names, every sleepy society, church bodies, charities, subscriptions, and the rest; but this was a case for action, and they

did not think themselves required. I know some who had to be shamed into it by their wives—for the women were roused over this massacre of the Innocents, and every English mother who heard the horrible story of the infants slaughtered would have dragged her husband to the front by the coat collar if necessary; and in some cases it was almost necessary.

But it must not be supposed that Hongkong people are callous. Some are; some fear the eternal bugbear of offending the Chinese and so having the commerce of the colony injured; some think meetings useless, but offer nothing better, while willing enough to act if told what to do. All we want is a leader, and Dr. Cantlie came forward, a man always full of spirit, and only doubtful about doing what would more appropriately be done by others, for he has not their status as a leader of the community. But without him the meeting would not have been held, for he only took it up when the others had dropped it.

I need not describe the meeting, as you will of course get it through the usual channels. But there are some facts which have not appeared in the newspapers. I know of a man who wrote offering his services voluntarily in any punitive expedition that might be sent to Fukien; a man of military experience. Others there are who contemplate organising an expedition if the Government fails in its duty—an expedition not to "investigate," but to promulgate Lynch Law in Kucheng; for it is on record, proved by scores of cases, that a dozen men can lay down the law to any number of Chinese. In Canton last year a mob set to work to murder two ladies of an American medical mission for attending to plague patients; and when one man of the I.M. Customs appeared on the scene, the crowd melted away at the sight of his gun. In Chengtu only last month, the whole townful of crawling reptiles was held at bay by two men. It was not love or goodwill that made the Chinese spare their lives. In Kwangtung, too, there was a regular seige of a French mission for ten days by four thousand Chinese with cannon and 500 rifles, against a score or so; and not a soul of the defenders was hurt. In Fatshan last week it was the same. So it would not be difficult for a handful of determined Britons to do what they like in Fukien; and if, as seems likely, the British Government fails to do what all here ardently hope, perhaps there may be an amateur *vendetta*. There are few indeed in Hongkong who would not welcome the project, and there are some who would be only too glad to take part. It would not be particularly difficult to get over or round the opposition of the supine British authorities, and the rest is easy.

LETTER FROM AUSTRALIA.

(FROM OUR CORRESPONDENT.)

Healesville, Victoria, July 15th, 1895.

The speech of Mr. H. R. Reid, brother of the present premier of New South Wales, the retiring President of the Melbourne Chamber of Commerce, delivered at the Annual Meeting of the Chamber a few months ago, was of unusual interest. In a most thorough manner Mr. Reid discussed the policy which is responsible for a large amount of the existing depression in the colonies, and then proceeded to show that there are unmistakable evidences that a turn in the tide has already taken place. Australia is now suffering from the effects of wild extravagance extending over many years. The extravagance was nourished by excessive borrowing. According to Mr. Reid, the total indebtedness of the Australian Colonies to the people of the United Kingdom is not less than £300,000,000, involving an annual payment of interest of, say, £12,500,000. Of this Victoria's indebtedness does not fall short of £80,000,000. Passing on to the Bank Crisis of 1893, Mr. Reid argued that the system of banking which has prevailed in Victoria for many years requires to be entirely recast. A mixed mercantile and mortgage business cannot be carried on to the satisfaction of either borrower or lender. When assets are liquid, the banker can always satisfy the demands of depositors, but when assets consist of a class of security not realisable in a time of depression, mortgages on real estate, the old adage, safe as a bank, no longer holds good. The question of how far it is the duty of the government to render assistance to solvent banks in time of stress is one on which great variety of opinion has been expressed. Mr. Reid drew attention to the fact that during the great financial crisis in England in 1793, Mr. Pitt assisted bankers and merchants most successfully by the issue of Government bills to the extent of £2,200,000, and that of the 228 firms thus aided only two became bank-

rupt. An act authorising the issue of Treasury bills with the above object in view was passed by the New South Wales Parliament two years ago. On the enormous fall in prices which has taken place during the past few years, Mr. Reid expresses the opinion that the low rates are the result of the immense improvements effected in the modes of production and in the exchanges of commerce. Every new discovery in practical science lessens the cost of production. Where a six-furrow plough does the work in a sixth of the time that it took the single furrow plough to accomplish, the product of the soil is enormously cheapened thereby. "But if you ask me," says Mr. Reid, "What are the greatest obstacles to the Colony's progress my answer would unhesitatingly be—high freights, high interest, fiatridal tariffs." After dealing with these subjects in detail, Mr. Reid went on to discuss the diminution of population in the large cities of Victoria. Melbourne alone has during the last four years lost no less than 82,600 of her citizens. This fact Mr. Reid regarded as a hopeful sign of the times: since the majority of the men who had migrated from the city to the country had swelled the ranks of the producers. And there was no denying that upon the diligence and perseverance of the producers the future of the colonies depended. The following returns show the amount of produce imported into the United Kingdom in 1894:—

	1894.	Value of Total Imports.	From Australasia.	From Victoria.
Animals living and meat dead..	£31,823,000	£2,772,000	£167,60	
Wheat, barley, oats, flour, maize, &c.	48,223,000	1,097,000	288,355	
Butter	13,470,410	No return	833,624	
Margarine	3,044,781	Nil	—	
Cheese	3,467,137	No return	12,492	
Eggs	3,780,320	No return	312	
Raw fruit, including hops ..	6,270,824	No return	541	
Wine	5,010,007	60,120	26,008	
Leather	7,094,756	624,728	197,578	
Tallow and stearine	2,544,775	1,808,076	269,194	
Hides, dry and wet	2,232,151	105,018	555	
Flax	2,526,201	Nil	—	
Poultry and game	480,890	No return	900	
Raisins	900,977	Nil	18	
Olive oil	894,151	Nil	—	
Rape	370,153	Nil	—	
Lard	2,758,416	Nil	—	
Brandy	1,448,109	No return	7,790	
Wood and timber, of all descriptions	16,084,207	No return	998	
Oil seeds, of all kinds	653,937	Nil	—	
Oil seed cake	7,707,350	Nil	—	
Linseed and flax seed	3,941,997	Nil	—	
Milk, condensed or preserved...	1,097,425	Nil	—	
Sugar	49,149,502	Nil	—	
Tobacco	3,512,601	Nil	—	
	184,243,564	—	1,805,973	

Wool is not included in these figures.

A very warm contest has been going on for some months between Judge Molesworth, a county court judge, and the Government on the subject of judicial independence. It seems that the judges of the Supreme Court have always been free from political influence and control. Their commissions have been made, not as in former days in England, *durante bene placito*, but *quamdiu bene se gesserint*, and their salaries have been absolutely secured to them during the continuance of their commissions. But the reverse has been and still is the case with the County Court judges. In January, 1878, these judges, the police magistrates, and the coroners of Victoria were all summarily dismissed, and the Courts in which they had administered justice were closed. Now these judicial officers possess very great and extensive powers. They transact by far the greatest part of the litigious business of the colony. Fully one-half of the criminal jurisdiction of the country is dealt with by them, the insolvency law, actions both in law and equity up to £500, and by consent of parties, and in mining suits to any amount, actions against the Victorian Railway Commissioners and water supply claims for compensation, without in some instances any right of appeal from their decision. Hitherto the public has been of opinion that an Act passed in 1884 secured to these functionaries the independence enjoyed by judges of the Supreme Court. But recent disclosures have shown that these administrators of the law are still mere Cabinet Stipendiaries. They are appointed during good behaviour and can only be removed for misconduct upon an address of both Houses of Parliament, yet irrespective of their conduct, the Legislative Assembly has the power to deprive them of their salaries and the Council has no voice in the matter. Against this state of things Judge Molesworth uttered in the Insolvency Court, over which he presides, an earnest protest. He pointed out that when it was his duty to deal with the cases of friends of a Minister in power these was the constant danger that impartiality might cost him a considerable reduction in his salary. He stated that numerous cases of bankrupt members of the Legislative Assembly, involving very large amounts, had come before him; that in some of these cases illegal compounding with creditors and other devices for defrauding creditors had been resorted to, and

that to deal with such cases as they ought to be dealt with it was absolutely necessary that a judge should be both pecuniarily and judicially independent. These remarks led to a long correspondence between the Judge and the Attorney-General, without, however, resulting in any satisfactory solution of the difficulty or in any material alteration in the situation. The public is justly dissatisfied with the state of affairs. "A suitor who knows the real situation," says one writer on the subject, "must have some misgivings when he, for instance, finds himself defendant in an action in which an influential member of parliament—say, the speaker—is plaintiff, with the Minister of Justice or the Attorney-General as legal adviser or counsel. He must feel that the judge will probably be overawed and afraid to offend such powerful persons." Quite recently an application was made to one of these judges to issue an injunction against the Treasurer and another person. Shortly after the Treasurer had to decide what salary that judge was to receive the following year. These judges are under various Acts arbitrators and umpires in cases where large claims are made against the Government. Yet they are in the absolute power of one of the parties to the arbitration. They are expected to resist a temptation to which it is scandalous to expose them. It is to be hoped that the strong feeling which has been shown since the real state of affairs has been disclosed will result sooner or later in the passing of an Act the object of which will be the placing of inferior judges and other administrators of justice on the same independent footing as is accorded to judges of the Supreme Court.

Mr. D. Wilson's annual report of the export trade of the Colony contains some interesting items of information. Last year the total exports of butter were 7,315 tons, which, at a net value of 11d. per lb., gave a total value of butter exported of £761,273, 6s. 8d. This year the total exports for the season have amounted to 11,584 $\frac{1}{2}$ tons, which, at an estimated net value of 10d. per lb., give a total value for the year of £1,081,243. The export trade in butter has been gradually on the increase since 1889, as the following table shows:

Year.	Weight. Tons.	Value. £
1889-90	3,69 $\frac{1}{2}$	51,300
1890-91	759 $\frac{1}{2}$	91,200
1891-92	2,139 $\frac{1}{2}$	225,000
1892-93	3,613 $\frac{1}{2}$	404,432
1893-94	7,652 $\frac{1}{2}$	761,273
1894-95	11,584 $\frac{1}{2}$	1,081,243

It is estimated that every pound of butter requires 2 $\frac{1}{2}$ gallons of milk. So that no less than 64,874,500 gallons of milk had to be collected and separated in order to produce this enormous amount of butter. The complete return of shipments through the refrigerating depôt in Melbourne for the season is as follows:—

Produce.	Quantity.	Freight.	Net Value Estimated.
Butter, tons	11,584 $\frac{1}{2}$	94,844	1,081,243
Cheese, tons	370 $\frac{1}{2}$	3,022	16,421
Rabbits and hares, pairs	89,417	2,744	10,896
Poultry (mixed), pairs	10,338	612	3,582
Game, pairs	15,661	1,057	4,000
Lamb (3,495 carcasses), lb.	146,647	612	1,560
Eggs, doz.	12,796	123	420
Vegetables, cwt.	47	18	40
Beef, lb.	1,173	4	12
Ven, lb.	1,323	5	660
Concentrated milk, lb.	5,040	19	20
Bacon, cwt.	108	47	216
Pork, lb.	12,200	56	150
Honey, tons	15	64	450
Total		102,604 10	1,19,676

Efforts are being made to reduce the freight on all perishable articles to $\frac{1}{2}$ d. per lb., to obtain three times the present frozen storage capacity at the receiving depôt, and to insure regular weekly shipments of not less than 600 tons each during the season, say for six months in the year, and regular fortnightly shipments during the remaining months. It is pointed out that since produce has fallen quite 50 per cent. during the past 5 years, it is imperative that freights should be lowered in a corresponding ratio. In the matter of cheese Victoria is not making the progress that she might. The quality of Victoria cheese is still vastly inferior to that exported from Canada. New Zealand is bent on learning the art of success from the Canadians themselves. She has secured the services for one season of a Canadian Government cheese expert, who is now in New Zealand visiting the different factories and instructing the managers in the art of cheese-making according to the Canadian Cheddar system. The desirability of Victoria's adopting a similar course has been urged, but hitherto to no purpose. There is little sale for Australian butter in London during the summer months, say from May to September. It is these months that the Victorians need to devote to cheese-making. Otherwise the butter made during the winter in Australia is largely in

excess of the demand in London in October and November, and when placed on the market causes a glut and a consequent reduction in prices.

These is still much talk about Free-trade and Federation, though, in the opinion of some, the two things are by no means likely to go together. A general election is about to take place in New South Wales, which it is confidently predicted will give Mr. G. H. Reid a free-trade majority. But it is contended that the adoption of a free-trade policy by only one of the colonies is likely to retard rather than accelerate Imperial federation. While the oracles of the sister colonies are giving utterance to wise platitudes on the desirability of bringing New South Wales and Victoria into closer union, a most barbarous border warfare is being waged on the banks of the Murray. Before a commercial traveller can cross the bridge that joins the two colonies the brands and colour of his horse and a description of the harness and buggy must be registered. Otherwise the said traveller will be liable on his return to pay a duty of £2 10s. on the horse, about the worth of the animal in these bad times, 45 per cent. on the harness and £15 on the buggy. A poor struggling bankrupt farmer a little time ago arrived at the border with all his belongings in a trap and found that the duty on his horse, trap, and harness would amount to three times the price he gave for them. A butcher who lives on one side of the river and serves customers on the other has to keep a record of every pound of meat carried over the border and to pay 7s. duty on every 100 lb. For every gallon of wine conveyed from one colony to the other 12s. per gallon or about 2s. per bottle have to be paid. Was ever such a sorry spectacle presented under that boasted emblem of liberty, the British flag? How idle sound the perorations of the leading political orators of the two colonies respecting federation in the face of such facts as these. I may be wrong, but the impression which several years study of Australian life and institutions has left on my mind is that federation is yet a great way off. Each colony, each shire, each municipality, has its own narrow interests. To defend these interests against those of their neighbours seems to be the chief aim of life with the vast majority of colonials. Disinterested and public-spirited politicians exist, but not in sufficient numbers to carry the day against the multitude of mammon-worshippers and place-seekers with which the colonies are infested. To the theory of United Australia there is little or no public opposition, but no sooner are any steps for reducing the theory to practice proposed than there is a regular howl of opposition from the men whose coffers have been regularly filled by the heavy protective duties now in force. If New South Wales succeeds in establishing a free-trade policy and has the fortitude to sustain the losses which she will be called upon to undergo for the first few years of her new era, Victoria first, and afterwards the other colonies, will join hands with her in her efforts to remove that greatest of all barriers to federation—protective and restrictive tariffs. But the fear is that neither Mr. Reid's cabinet nor any Ministry that may follow will prove equal to the task of stemming the tide of opposition with which the self-interested section of the community will confront the new reformers. Whatever the result, the contest will be watched with keen interest by the outside world.

AUSTRALIA AND JAPAN.

Sydney, July 26th.

Japan is to have a visit from another Australian special commissioner. Mr. J. L. Parsons has been entrusted by the Government of South Australia with an honorary commission "to enquire into and report on the possibilities of establishing trade relations between Japan, China, and South Australia." Whether he will be enabled to state anything new remains to be seen. He will leave Adelaide within the next two or three weeks, taking with him shipments of various kinds of South Australian products. In South Australia, as in Queensland, the colonists are anxious that the Governments should take the initiative in the matter, but a difficulty, in the shape of the Japanese commercial treaty with Great Britain, is beginning to crop up. In the Victorian Legislative Council, the Colonial Solicitor-General was questioned respecting the participation of the Australasian colonies in the treaty by giving notice of their intention within the next twelve months. His reply was to the effect that the matter was occupying the attention of the Victorian Ministry, which was in communication with the other colonial Governments, with a view to arranging, if possible, some basis of united action. It is possible that on the return of Mr. Marks to Melbourne, he will be invited to meet the Victorian Premier on the subject.

In the meantime the results of the parliamentary elections in New South Wales will do much towards clearing the way for improved commercial relations between Australia and Japan. Although a number of side issues were raised during the contest, it was generally admitted that the real contention was whether the fiscal policy of the colony should be based on free trade or protection. Mr. Reid, the New South Wales Premier, is a thorough going free-trader, and has always been such. Sir George R. Dibbs was originally a free-trader, but, having changed his views, has become the leader of the protectionist party. Sir Henry Parkes has always declared himself a free-trader, but latterly he has preached the doctrine that the fiscal question should be placed on one side until the federation of the colonies had become an accomplished fact, when the new Federal Parliament should decide the fiscal policy of the federated colonies. This proposition gained for Sir Henry the support of large numbers of the protectionists, Sir George R. Dibbs diplomatically retiring into the background, but it also made the free-traders more determined than ever. Hence the extraordinary display of party feeling evinced in Sydney during the elections. So far as the leading speeches by Sir Henry Parkes, Mr. Reid, and their principal supporters were concerned, Sir Henry's addresses were composed largely of abuse of Mr. Reid, who was depicted in the darkest colours; while Mr. Reid, nothing loth, was ever ready with a Rowland for each Oliver. But the latter had one advantage, he had placed before the electors a clearly defined policy, while Sir Henry refused to furnish any at all, save that of federation. The results were exactly what might have been anticipated: the electors preferred the substance to the shadow and sent Mr. Reid back to parliament to fight the battle of free trade.

There is now but little question of Sydney and Newcastle becoming practically free ports within the next few months, and one effect of this will be to largely diminish the shipping business of Melbourne and other Australasian ports where heavy customs duties are imposed. Already the other colonies are taking alarm. In Western Australia a large number of articles have been struck out of the tariff, and allowed to enter duty free. In South Australia, the free trade movement is gaining ground; and in Victoria the work of tariff revision is being actively proceeded with, although the reductions fail in depriving the tariff of much of its prohibitory character. All these changes point to an approaching rapid increase of pastoral, agricultural, and mineral production in New South Wales, if not in the rest of Australia. A systematic effort is being made to establish direct communication between Manchester, Sydney, and Melbourne, with the view of enabling a fresh market for Australian meat to be opened. The British manufacturing districts can readily consume every pound of food produce shipped from Australia, but it is naturally expected that in return the colonists shall become purchasers of British manufactures. There must be reciprocity of some kind. It is the same with the direct trade now growing up between Hull, Glasgow, and other British ports, and Australia, which is rapidly becoming a leading source of food supply to the mother country. Indeed, it seems as if a new page in the commercial history of the world was on the point of being opened. Should nothing interfere with the accomplishment of Mr. Reid's intention to abolish the customs house in New South Wales, the ancient glories of Venice may become revived in the southern hemisphere, and a greater future than ever Sir Henry Parkes has dreamed of, be awaiting the Britain of the South.

JOHN PLUMMER.

KARUIZAWA CONFERENCE.

THIRD DAY.

The Rev. Mr. Stevens occupied the chair at the morning session and introduced Rev. J. B. Porter of Kyoto, who read a paper on "Christ, our Sacrifice." The speaker did not aim at discussing theories of the atonement, but taking Christ's sacrifice as a fact, endeavoured to set for the atonement of Christ as revealed in the Scriptures, and as held by the Church in all the centuries of its history. It was an able paper; very clearly setting forth the scriptural doctrine, and as nothing but the *ipsissima verba* could do justice to it, we shall not attempt to give a synopsis of it.

He was followed by the Rev. Mr. Dearing, of Yokohama, who opened the general discussion, presenting what he termed "a few additional notes" on the subject. Mr. Dearing touched upon the various theories held at different times showing the insufficiency of any but that of vicarious substitution to meet the requirements of Scripture and to satisfy the needs of man.

The discussion was continued by Dr. Ashmore, Rev. Mr. Ambler, Dr. McGregor, Rev. Messrs. Standley, Landis, MacNair, and Booth.

The Evening Session was presided over by Rev. B. Chappell, of Aoyama, the time being devoted to questions. Many interesting questions were asked in regard to the work in China and Japan, and were answered in an equally interesting manner.

Thus closed a very profitable and successful conference.

The Church building was tastefully decorated by a committee appointed for that purpose, and the choir added much to the occasion by its successful rendering of appropriate music.

During the Conference the two following resolutions were passed:—

First:—Resolved. That we, as missionaries representing various Mission Boards working in Japan, in Conference assembled at Karuizawa, in view of the various reports that have gone forth concerning the need of more foreign workers in Japan, would express it as our opinion that not only has the time not come for the withdrawal of the missionaries already on the field, but we believe that there is still a need of many more foreign workers in this land.

Second:—Resolved by the Conference of Protestant Missions met at Karuizawa, Japan, 16th August, 1895:—That we have with great pain heard of the attack made, near Foochow, in China, on our fellow-labourers in the work of the Gospel, in which so many have been cruelly murdered, and others grievously injured; and we desire to express our deep sympathy with the surviving sufferers, with the Missions who mourn the loss of faithful workers, and with the relatives and friends of the dead.

As regards those who have fallen there is no need for sorrow. They have finished their course; they have kept the faith, they have passed into the presence of the Master and received the reward of faithful servants.

But, in the present need of faithful and experienced workers on the mission field, we appreciate fully the loss sustained by the Missions who have been called to meet this trial, and our prayer is that He who can make even the wrath of man to praise Him, may, out of this sad event, bring blessing to His Church and to His work in China.

As regards the bereaved on whom this trial has most heavily fallen, we sorrow with them; but He who is the God of all comfort,—and He alone can comfort them, our prayer is that He who was made in all things like unto His brethren, and can enter with the mourner into every sorrow, may be with them in their time of trial. It is but a little while, and them also which sleep in Jesus will God bring with Him. May this blessed hope cheer the hearts of them that mourn.

It was further resolved that a copy of this resolution be forwarded to the Rev. Mr. Phillips of the C.M.S., Foochow, to be by him communicated to the Missions and friends of the sufferers.

The latter especially was adopted by an enthusiastic rising vote.

THE INQUEST ON THE LATE MR. BROCKBANK.

VERDICT—DEATH FROM NATURAL CAUSES ACCELERATED BY IMPERATE HABITS.

The adjourned inquiry into the circumstances attending the death of Mr. Herbert William Brockbank, who died at Shoji on August 14th, was resumed at the British Court on Tuesday, Mr. J. C. Hall, Acting Assistant Judge, sitting as Coroner. The jury were, Messrs. A. C. Read, Geo. Sale, W. J. Robinson, A. Le Prevost, and J. Cain.

Dr. Edward Divers was the first witness. Having been duly sworn, he said—I am Professor of Chemistry at the Imperial University of Japan, and reside at Tokyo. Before giving my evidence proper I should like to say, as a guard against any presumption that may arise as to the weight of my evidence, that all my life I have been a professional chemist. I was a lecturer on *materia medica* and therapeutics in the Medical School at Queen's Hospital, Birmingham, and also for four years a lecturer on medical jurisprudence at the Medical School of the Middlesex Hospital, London. I duly received through this Court two sealed bottles containing portions of the kidneys and stomach of the late Mr. Herbert William Brockbank. I have no desire, unless the Court wishes me to do so, to enter into minute details as to the state in which I found the contents of these two bottles, but I should like to state that the specimens were sent to me in spirit and while they were in an offensive state from decomposition, their internal contents, particularly of the stomach, were free from all signs of putrescence.

To this I will only add, that the contents of the stomach were of a very simple character—a dark brown chyle, free from particles of vegetable matter—crushed seeds or leaves, in which form poison might be presumed to have been administered. There were no signs of such substances as rice or potatoes, or any matters of that kind. The contents of the stomach were very uniform in character, consisting of fine granular fibres, in quantity about four ounces, corresponding to what one would expect to find after a person had taken mock turtle soup. Having received no special instructions from the Court, and simply bearing in mind what had been given in evidence before it, I had to keep in mind the occurrence of any of the more ordinary poisons, the number of which is rather considerable. Well, I found no evidence of poison whatever. The coats of the stomach were fairly healthy, not ulcerated. And here I should like to digress for the benefit of explaining these matters more fully to the jury. The fact that I could not discover any poison is not a proof that none was ever administered—we chemists hold that the absence of poisons in the system is merely to be taken as not absolute proof of their administration. It is an axiom of technologists that only the fact of the actual presence of poison can be taken as absolute proof. Therefore we are not qualified to assert that poison has not been administered, especially certain kinds of poison. I did my best to examine this matter thoroughly and met with no suspicious circumstances at any period of the examination; and I feel justified in stating that the deceased received no poison in the sense implied by the expression foul play. He received, as we know by the evidence of Dr. Swann, two great poisons, which were administered in the course of Dr. Swann's admirable medical treatment of deceased some few days before his death. These poisons were digitalis and strychnine: but they were given in such small particles of a grain and so many hours elapsed after their administration and the time of death, that it is not in the least strange that I did not detect them in my examination. I tried to detect the presence of digitalis and strychnine but failed. This then is the result of my chemical examination. I may, however, be permitted to speak upon the history of this case. Dr. Swann said in his evidence that when he arrived at Shoji he found the late Mr. Brockbank in a state bordering on extremis. In one or two and a half days he effected a marvellous change, the recovery of his patient to a very large extent. We may well call such a result a marvellous change. But it must be borne in mind that such a result in cases of this kind is not unusual. The deceased had been suffering from an acute attack of delirium tremens, and Dr. Swann, in my opinion, took a bold and wise course in his treatment of the case when he administered digitalis and strychnine to induce a rally. It was in no way astonishing, however, that he revived his patient from a state of almost death to one of improved health. Yet he was not prepared for the end that came so suddenly. Indeed, he says the death of the late Mr. Brockbank came upon him as sudden and unexpected. Dr. Swann described his patient as being, when he last saw him, in a state of convalescence; but one of the jury rightly understood the deceased's condition when he asked a question which elicited the reply that by convalescence the doctor meant recovery from the state of delirium tremens. It was no case of convalescence in the ordinary meaning of the word. It is a pure superstition which ascribes the wonderful agency which various vegetable alkaloids produce in their action upon the system, as renewing vital energy and restoring health; the small quantity administered acts upon the disordered state of the body and upon the shattered framework in the same manner as do the large doses. Their action is to paralyze a portion of the nervous system. In the case of delirium tremens a portion of the nervous system has suffered serious injury and ceases to act. The other portions of the nervous system are therefore to that extent uncontrolled, and the forces thus uncontrolled upset the balance of nature. Nature acts upon this balance in every thing. The action of the heart's beating is under the influence of certain nerves acting against each other. The mere action of walking is dependent on this same balance of natural forces. Well, disease causes damage to one or other portion of our nervous system and we see at once the effects of the uncontrolled nerves. Mr. Brockbank had a diseased heart, then digitalis comes in and paralyzes more or less the healthy organs which had got out of control—a balance was thus restored, though only temporarily. There still remained a most serious state of things. Dr. Baelz in a letter which has been read in this Court, said that if Mr. Brockbank was left unattended—if proper attendance was not procured

for him—he might die at any time. The deceased was a man of feeble heart and in an alcoholized condition. Under the circumstances, after digitalis had been administered he should have been kept in a recumbent position and properly nursed. He should not have been allowed for some time to come to leave his recumbent posture even to answer the calls of nature. Then he might have recovered and have been living now. The marvellous effects which Dr. Swann's able treatment effected therefore really left the patient in a serious way—it had only produced an unstable equilibrium and the patient remained in imminent danger. The death of Mr. Brockbank may be ascribed to heart failure or to sudden and serious entry of water into the ventricles. Death was due to perfectly natural causes, and was the natural end, if I can use the term, of an unnatural life. All my examination does no point to or suggest the suspicion of foul play.

The Coroner—You could find no traces of poison?

Dr. Divers—None whatever.

Hoshino Yoshitaro, formerly an Englishman, but now a naturalised Japanese, an hotel-keeper living at Shoji, Yamanashi Ken, sworn, deposed—I have had monetary transactions with the late Mr. Brockbank. How much the various sums amounted to I cannot say, as they were all mixed up. We lived together for years, spent money together, had good times together. The money I received from the late Mr. Brockbank I look upon in the light of a moral loan. I cannot state the amount of money which passed without consulting my papers. I gave Mr. Brockbank no acknowledgement for the money as it was not received on any terms at all. We understood between ourselves that we both went into the Shoji scheme. He never asked for the return of the money as the house at Shoji was built because he desired to have a quiet place to live in, and in which he could have a good time.

The Coroner—To what do you attribute the late Mr. Brockbank's death?—Whiskey.

Have you ever given him whiskey?—Yes.

Have you ever drank with him?—Yes: in moderate quantities; my policy was to keep him away from the drink.

Why did you take him away to Shoji?—This time it was not the right thing, but I have taken him there on similar occasions before. I took him out at his own request.

Was he in a fit condition for such a journey?—I do not know. But he wished to go there, although Dr. Baelz told me not to take him until he had seen him again. We went to Tonosawa from Miyanoshita. I went back up the hill again, and Dr. Baelz said he would come and see Brockbank on the second day. I heard Brockbank was drinking at Tonosawa, and on the morning of the second day I went down to him, and without waiting to see Dr. Baelz we went off to Kodzu. From Kodzu we went to Gotemba and got to Subashiri, where we stayed the night. At Subashiri I got a horse and rode on to the next halting place to prepare an hotel for Brockbank.

To the Coroner—This is the easier route. I think it is easier than by Suzukawa, there is less railway and more boat travelling.

The Coroner—Is it quicker?—Well, I think it is about the same.

Now describe the incidents of this last journey of Mr. Brockbank's.—I left Miyanoshita about the 3rd or 4th. It was on a Monday morning, and we arrived at Shoji on Tuesday night. Mr. Brockbank's legs were paralyzed, the same as they had been at Miyanoshita before he left for Tonosawa. I arranged for a long *kago* to meet us at Gotemba, and in this Mr. Brockbank travelled to Subashiri. There was no accident on the way.

The Coroner—Dr. Swann testified to the skin of the elbows and knees of deceased being abraded?—That was caused by his crawling on the floor.

Did he not use his hands in crawling?—He was too weak for that, and fell on to his elbows: he could only crawl on his elbows. I put him in bed, but he rolled out, so then I took the bed away and gave him a mattress on the floor. He was paralyzed with alcohol.

And yet you took him away to Shoji against Dr. Baelz' orders?—Not against Dr. Baelz' orders; against his advice.

What was your object?—He wished to go. He used to go there before when in this state. I used to keep all liquor away from him, and in ten or twelve days he would return a new man. This time he was going to Shoji for good, and intended not to go back to Miyanoshita.

Were there any nurses at Shoji?—I nursed him, and I also had an old carpenter to look after him. We had at Shoji a woman servant, a cook, and the carpenter; the woman was about 25 or 26 years old, and the cook between 18 and 19.

And at this place you intended to entertain fo-

reigners?—No; foreigners came there to see the scenery, and we would put them up. The village had no accommodation for them. There were about 60 to 70 people at the village, which was about a mile or so away. There was no doctor there. He lived another mile or so away. When Mr. Brockbank got worse I telegraphed to Dr. Baelz and also sent a messenger to Dr. Munro. I telegraphed saying Brockbank was much worse, and would he (Dr. Baelz) come. I wrote Dr. Baelz afterwards.

You say Brockbank was anxious to go to Shoji?—Yes.

Are you quite sure?—Yes. I think he said so in the presence of Dr. Baelz, but of that I won't be certain. I think Dr. Baelz was present. I can't be sure whether Dr. Baelz said that the proper place for Mr. Brockbank was the hospital. I heard from friends at Miyanoshta that unless Brockbank stopped drinking he would either be dead or in a lunatic asylum. I told Dr. Baelz about our money matters on this occasion, and said I was anxious about them, and him.

Why were you anxious about him?—No man likes to lose a friend.

The Coroner at this point showed witness a small leather-covered account book, and in answer to questions, witness said—I recognise the book as the cash-book of Mr. Brockbank, though I never saw him make any entries in it. I do not know how or why some leaves are torn out.

The Coroner—Now go back to Shoji. What happened after you arrived at Subashiri?—We took *kago* to Kudachi, arriving there at 2 o'clock on Tuesday. This place is within three *ri* of Shoji, and we debated whether we should stop there the night or push on. I gave Mr. Brockbank some sandwiches and some port wine and water, or brandy and water, I am not sure which. We decided to go on, and we started, I walking, he in a *kago*. We took boats across the two lakes. We left Kudachi about 3 o'clock, arriving at Shoji at 10 at night. It took us a long time to get through the forest, as it was so dark. Brockbank was about the same as he was on starting: in fact he was a little better, and sat up to dinner. Next day he did not want to get up, so I took him some beef-tea, and toast which he took as he lay in bed. All that day he was alright. He drank a great deal, being thirsty, and I gave him limejuice and water, and oatmeal and water. He also had four drinks, though Dr. Baelz said I was only to allow him three a day. These drinks were either port wine or brandy. He said he felt weak. Next day he seemed to get a little stronger, but before the day was out he began to see monkeys and other things. I had seen people in that way before, so I shut off his liquor. I gave him food myself that day. Early next morning he stripped off all his clothes and began to crawl about the passage. Then I put him into his room and locked the door, so that the Japanese passing through the house should not see him in that state. The carpenter and myself looked after him, and I did my best to keep him clean. He got worse and still crawled about: then he began to swell up, and I at once telegraphed to Dr. Baelz and sent off for Dr. Munro. Mr. Voigt arrived about the same time as Dr. Swann. Dr. Swann arrived on the Sunday afternoon and at once treated Mr. Brockbank. Brockbank was crouching behind the door when we entered the room. The stench was horrible.

Dr. Swann left on Wednesday morning. On that morning he asked how Brockbank was, and I said "Alright, he is asking for whiskey again." I refused to give him whiskey, though he said he felt low. Dr. Swann left about 10 o'clock and again passed house about 12.30 o'clock having found the pass at the back too high. It confused his head he said. He refused to come in and have refreshment when I asked him, saying that he desired to push on for Suzukawa. Everything was alright with Brockbank until the evening. At 4 o'clock I took him some tea, having previously given him some soup. He told me that he had had a "bit of a time" while I was away, and had felt "like pegging out." He died at eight or half-past, in the presence of myself and Mr. Voigt. Before this I should say, I had helped him out of bed. At 6 o'clock he first began to breathe heavily and soon after I found that he did not recognise me. He was buried on the second day after death. I waited, expecting the Doctor to return with my messenger, and the doctor not returning I made arrangements with the authorities to bury him in the village cemetery. A Japanese doctor saw him before he was buried. The weather was very hot, so I abandoned the intention of sending down to Yokohama for an undertaker and then sending the body in. We buried him on Friday morning at 9 o'clock. I attended the funeral, but I did not accompany Mr. Kircher to the disinterment.

To Mr. Sale—It was from Subashiri that I rode forward to prepare the hotel, not my hotel, but the one at Kudachi. I generally walk all the way.

Properly speaking there is no hotel there, it is a temple.

To Mr. C. D. Moss—I have received no letter from Dr. Baelz addressed to myself or Mr. Brockbank. I have a telegram sent to Mr. Brockbank by Mr. Hulse, a friend of his. A letter from Dr. Baelz may be at Shoji now, but letters take a long while in reaching there.

Mr. Moss—Have you any other letters, accounts, or photographs belonging to the deceased which you have not handed over to Mr. Kircher?—I can't say until I unpack the things. Our things are on the way out to Shoji and are all mixed up.

Did you send away the attendant who was looking after the deceased shortly before he died?—Oh, no. He might have gone away to the village on an errand, nothing else.

He was not sent away two hours before Mr. Brockbank's death?—I think he was there when he died.

What is the meaning of the only entries in the cash-book you have just identified, and the front leaves of which are torn away, though the stubs remaining show they were entered up—the entries are, Hoshino \$200, Langfeldt \$200, cash \$90, Chambers?—Those were made at Kowakidani at Christmas. That is all I know about them.

Were you sober all the time you were at Miyanoshta this last time?—I can't say I was quite sober. At Tonosawa I was sober.

Were both you and Mr. Brockbank very drunk at Tonosawa?—No, not Mr. Brockbank. He had had more than he should have had, but he was not what you might call very drunk. I had a few drinks in me, but nothing to speak about.

Knowing that he was so ill, did you feel justified in taking him on such a long and arduous journey?—He wished to go. He lay in a *kago* all the time, and in my opinion he was quite as comfortable as if he had been in bed.

You are positive it was his wish to go?—Yes.

To the Court—I have a little to say in regard to the burial. We did the best we could for him. Mr. Kircher can testify to the trouble there is at Shoji to get planks. Brockbank was pretty far gone when I put him in the only coffin I could contrive. The job made me ill. He had under his bed a little Japanese straw pillow; and was clothed in his night shirt. I put the paper over his face to prevent the dust which floated into the cracks of the green wood, from settling on his face. The mattress in his room was the only one we had left. The bed-clothes I have destroyed. We kept everything just as he died until we found the doctor was not coming back. Although Dr. Swann saw him when he was as filthy as a man could be, yet I did all I could to keep him clean. I have nothing more to add.

To Mr. Robinson—I kept him as clean as I could: it was the worst job I have ever had.

To the Court—Perhaps I ought to say that several times during his illness he wanted to make a will. He called for pen and paper, asking the Japanese about the house for them. As I knew what he wanted to do I refused to allow pen and paper to be taken to him. I told him that he would have plenty of time to make a will when he got better. After this I promised to do several little things for him if anything happened, which at that time I little expected to occur.

The Coroner—What was your motive in refusing to let him have pen and paper?—Am I obliged to answer?

Not unless you like.—Well, he wanted to make a will in my favour, and I thought that he was not responsible for his behaviour. He had told the Japanese of his intention.

This concluded the evidence.

The Coroner, who unfortunately was most indistinctly heard from the unfavourable seats occupied by the reporters, then summed up. He said that the evidence in the case was neither long nor complicated, but as a week had elapsed since the inquest was opened he would briefly refer to the leading points. The evidence of the post mortem examination might be dismissed, as owing to the advanced state of decomposition in which the body was, the doctors had been unable to state the cause of death. They could not declare that death was due to natural causes, because, although the walls of the heart were atrophied, the liver enlarged, and the kidneys affected, still there was not enough organic disease, in the opinion of the three doctors, to justify them in accounting for death within the time. The Coroner then went on to refer to the evidence of Dr. Swann, dealing with the condition in which he found the late Mr. Brockbank at Shoji, and of the measures taken by him to produce a rally. Such a rally was a necessary basis for any further measures of medical treatment. Dr. Swann had pursued, as Dr. Divers had declared, a proper course in such a case, and when on his return journey to Yokohama he heard of the death of Mr.

Brockbank he was surprised and shocked at the news. Dr. Swann left Shoji on the Wednesday, expecting his ship to sail on the Saturday—it had not yet sailed—but he expected that it would. He the Coroner, must express regret, in which the jury would no doubt agree, that Dr. Swann did not go to in to see his patient on the Wednesday morning before returning to Yokohama. If he had done so, it would have thrown additional light and carried them further into the last hours of Mr. Brockbank's life. They had only Hoshino's statement as to the condition of the deceased from the Tuesday night until the time of death. Dismissing the evidence of Mr. Kircher as purely formal, the Coroner said, before turning to Mr. Moss's statement that he would draw attention to Dr. Swann's remark, he considered that there was something suspicious about the whole case. He had been both shocked and surprised on receiving Hoshino's intimation of Brockbank's death, as from the examination he made after affecting the wonderful rally, did not lead him to fear such an immediate collapse. The evidence of Mr. Moss was to the effect that he had known Mr. Brockbank for years, and was also aware of the relations subsisting between Hoshino and Brockbank. He produced Brockbank's cheque-stubs showing that Brockbank had lent or paid various large sums, amounting to some thousands of dollars to Hoshino. Then they came to the evidence of the girl Matsumoto. She testified that she had seen Hoshino and Brockbank drinking together; that Hoshino filled up Brockbank's glass, drinking little himself but inducing Brockbank to drink much. Mr. Moss, who knows the deceased's family, became very anxious, and wrote to Dr. Baelz to see if something could not be done, and Dr. Baelz's reply throws a flood of light on the relations existing between the two men. They had heard the evidence of the man Hoshino that morning, and it was for the jury to say whether he had rebutted the suspicion aroused, when, in the face of the express warning of Dr. Baelz, he deliberately removed a weak invalid—in an *utterly irresponsible* state says Dr. Baelz—to a distant place involving a long, and arduous journey. It appeared to him, the Coroner, that from this point of view Hoshino's action in removing Brockbank while in his dangerous condition, was the direct cause of Brockbank's death. It appeared to have been done with deliberate intent; if not with malice to cause the man's death, yet with a clear perception that the effect of such a journey at this season of the year, and with Brockbank in his dangerous state, would have that result. If that was also the opinion of the jury then the verdict which they could return would be none other than one of wilful murder against Mr. Hoshino. What verdict they could return if their opinion coincided with that he had just stated, passes comprehension to perceive. Hoshino deliberately took the man by way of Gotemba to Shoji. Now careful inquiries were instituted at this Consulate before Mr. Kircher set out last week, as to the easier and quickest route to Shoji, and from all that we could gather, the way by Suzukawa was found to be the quickest and easiest. That appears to have been the conclusion arrived at by Dr. Swann, for he took it, after attempting the other. Hoshino says there is no difference either way. He put it to the jury, what could have been the intention of a man to remove an invalid in such weather as the present; what induced him to undertake a trying and exhausting journey to such a place as he described, a lonely hotel in the wilds of Fuji, two and a half miles from a village, and that a small one—what could have been his intention when he took the deceased away at that time, to such a place and under such circumstances? Might he not have anticipated what actually did take place? He, the Coroner, was not surprised to hear Dr. Divers state that no poison was to be found in the body of deceased. This did not overshadow the fact that the deceased was dangerously ill when Hoshino took it upon himself to remove him to Shoji. A man must be presumed to intend the natural and necessary consequences of his acts. The law in such a case presumes malice. If the jury thought there had been any such intention or malice in this case then they would return a verdict of wilful murder against Hoshino. A weak and defenceless man could be murdered just as easily as a strong and prepared man. It might be by the quick action of a bullet or by a longer process of poison or ill-treatment. The law allowed a year and a day from the doing of an injury to its resultant death, in cases of wilful murder: if the period passed that limit then manslaughter was designated as the nature of the crime. Murder might be encompassed in every conceivable way. After quoting the law upon murder from Jervis' "Duties

of Coroners," the Coroner allowed the jury to retire to consider their verdict.

On their return, after an absence of about twenty minutes, the foreman, Mr. A. C. Read, said—We find that the deceased, Herbert William Brockbank died, on July 14th, from natural causes accelerated by intemperate habits.

The Coroner—I agree with your verdict, but consider that it does not go far enough. I thank you for the way you have discharged your duty: you have followed the evidence with great care and ability, and have returned your verdict after a conscientious weighing of the evidence. You are thanked and dismissed.

LETTER FROM PARIS.

(FROM OUR OWN CORRESPONDENT.)

July 20, 1895.

That political crime, the murder of Stambuloff, involves the loss of the well wishers of Bulgaria, who will never accept assassination as an instrument of government. The abominable event will unite more closely the Triple Alliance. Prince Ferdinand is isolated; henceforth very little importance will be attached either to him or his mamma—his all round ambassadress. The general public think more of the deed than they express. Another unexpected consequence, and not at all to be regretted, Turkey comes now to the front for bulwark duty; there will be no more invasions of Macedonia with impunity—the Turks will be called in to keep the Bulgars in order. The struggle between Austria and Russia for the Balkans now becomes intensified, and the dénouement, cannot be very long delayed. Now is Serbia's opportunity; if she pulls straight with Austria, and all that the latter represents and has at her back, she can reap the advantages Bulgaria has so ignominiously forfeited. Stambuloff's stern patriotism will be estimated, as one is more, or not at all, Russian in their sympathies. Lucius Brutus loved first his country; and after condemning his two sons—the Panitzas and Karavelofs of their day for conspiring to restore the Tarquins—he withdrew to mourn as a father.

Perhaps Morocco may even precede Bulgaria in causing the European conflagration. The French are extremely uneasy at the turn the intervention of Germany may take. Germany has outrages to be redressed by the Sultanate, and is quite right to allow of no dictation as to the manner in which she will act to obtain satisfaction. We want more of that Palmerston-Salisbury style of dealing with the relics of barbaric states, than that existing, through fear of provoking a conflict between the Powers. If German and Dutch warships seize ports in Morocco till they be conceded reparation, there is no need for France to cross into Morocco and occupy territory. That would be the surest way of making Germany and Holland fixtures, and would instantly lead to the occupation of Tangiers by the Anglo-Italian fleets. Other countries would of course cut in—to be later cut out. To make the Powers evacuate Morocco fires would certainly be kindled elsewhere.

The "understanding" between Italy and Great Britain is an important political fact for both nations. Henceforth, Italy has a big brother at her side, and the Mediterranean ceases to be an anxiety for both nations, and can never experience a surprise. It would be folly not to recognize in that *entente* the right foot forward of England into the Triple Alliance, a result every one discounted, as the natural reply to the Franco-Russian alliance. The political situation becomes improved by the attitude of the several Powers being defined. Between all these alliances, good humoredly intended to guard the peace of Europe, the millennium, not Armageddon, ought to be nigh. The odds are in favour of the latter arriving first.

The Salisbury Cabinet, with its able members and enormous majority, has produced, not so much astonishment, as consternation, on the Continent. The era of pulling the British Lion's tail has closed; those in the habit of finding themes, only in the abuse of the Anglo-Saxons, have already put water in their wine. The best way to maintain amicable relations is to let it be clearly known that their disruption is a matter of supreme indifference. It is a relief for English ears to no longer listen to the Continental litany, that the British were about being wiped out in the Far East, and to receive marching orders to quit Egypt, with other political pimento served daily to those jealous of England's richness, vexed at her power, and envious of her rôle of go-a-head in the work of civilization. There is this curious fact to record, that on the Continent British subjects, whether Unionists or Separatists, are glad to see the foreign policy of their country directed by vigorous brains and resolute hands. The best statue to

erect to Oliver Cromwell, is to imitate his exterior programme of standing no nonsense. Even Americans concur in that patriotic unity and directness.

The government deserves chalks for its courage in accepting the resignation of the Council of the Legion of Honour. The latter decided that M. Eiffel was an honourable man, after the Court had condemned him to two years' imprisonment for scooping the Panama funds of profits as high as his own Tower and pocketing monies for the execution of works that he never existed, crimes that he confessed to; and for saying it required the unanimous vote of the Chamber of Deputies to degrade M. Eiffel, and send the Legion of Honour Council into resignation. It is to be hoped that the new Council to be entrusted with recompensing Bayards, will extirpate the abuse of conferring the decoration of the Order on individuals on the ground of "exceptional services," and make known of what these services consist—it will be news for the public and cease to be a puzzle. The search-light cannot be turned on too strongly when honour presents its claims for reward. In China, before a man can obtain the crystal button or the peacock's feather, his deeds must be detailed with the fullness of a German treatise on some kind of philosophy—presuming they exist at all.

For consummate impudence, the Mayor of Mont-de-Marsan and his coadjutors have no equals. They have resigned because the government very properly insisted upon the law being observed, that no bull-fights must take place in France. Of late the law was simply laughed at; the fights continued more briskly than ever, and more bulls were slaughtered in the arenas, than hitherto. Why even at Mont-de-Marsan no less than 12 bulls were recently put to death to delight the eyes of citizens and visitors. The Government took its bull by the horns. It expelled the toreadors, picadors, and the other "artistes," always Spaniards, for violating the laws of France; hence, bull fights have ceased for want of professional hands to kill the bulls. The Mayor, in his reply to the decree for the expulsion of the Spaniards, deploras the degeneracy of the Third Republic; is indignant at that inroad on the rights and innocent amusements of the townspeople which shows the rottenness of that classes the earwig the government and discourages the arts! As a Parthian arrow the Mayor regrets the good old times of the Second Empire, that never opposed the recreation and ennobling pleasures of bull fights—which is true, because the Empire would not tolerate any, so that there were none to oppose.

The city is rapidly thinning after the national holiday. That only renders Paris more agreeable. Each cab that rolls along with baggage and travellers constitutes a kind of relief for those who cannot imitate them. But those who remain need not take their pleasure sadly: they have the river boats to sail upon till twilight, and down and up the river is the best place to escape the abominable odours of the city sewers. If you prefer a drive, a cab will bring you till midnight among the solitary alleys of the Bois de Boulogne, where next to a seaside freshness can be enjoyed. The theatres and lyrical establishments being closed, only the concert gardens of the Champs Elysées are open to the musical, where the *pièce de resistance* is: "Do you wish any lobsters?"—that comic song is general.

Society is very much alarmed at the increase of inebriety, and above all, with the younger people. The workmen indulge in their nips just as extensively as do their employers. All classes, and apparently all ages, drink. The Academy of Medicine has just dealt with the subject; the Secretary has declared that the evil has become a social danger, and is destroying the population. On every occasion of enjoyment it is necessary to drink: he is aware of an instance where an assembly took place, of very serious persons, for the suppression of drinks, when the guests, glass in hand, toasted the downfall of liquors! Dr. Daenbergh would be content if only the beverages were freed of their chemical poisons: he hints the cognac now sold in the low pubs, is less impure, and five times cheaper, than that vended in the first-class restaurants—though both are equally dangerous. M. Rochefort has joined in the crusade for the suppression of the sale of adulterated drinks that decimate the nation more effectually than a German invasion.

Under the Second Empire, no one could establish a public house without permission of the authorities: then there were 56,000 wine shops or "rum holes," in France, to-day there are 400,000, of which 27,000 are in Paris alone. This augmentation is due to the Third Republic having abolished the obligation to obtain permission to open a dram shop. Deputy Reinach would restore what the republic repealed. M. Bergeron would prohibit the selling of brandy on credit, not only to clients, but on account for the distillers; he would

imprison all vendors who supplied cognac to applicants under 15 years of age. Any person can perceive the number of public houses that exist and still spring up; every corner shop in a street is a pub., so is the coal man's black shop, the costermonger's back parlour, the sellers of tobacco and of postage stamps. No licence is necessary to vend any drink, and the trade tax is struck, not upon what you sell, but the importance of your business and the rent value of the premises. That the drink evil is painfully serious may be judged from the fact that the Minister of Public Instruction has issued a circular directing school teachers to inculcate, during lessons, the evil consequences of drink and the duty to avoid it. This teaching has annoyed publicans and sinners. The State, say they, interferes with our business, while the sinners do not like to be let down in the eyes of their children, if they indulge in a nip or a green absinthe pick me up. The law punishes severely those who sell adulterated beverages; but France has neither hygienic inspectors nor chemists sufficiently numerous to cope with the infractions. No drunks must be admitted into a pub.—that is quite unnecessary; they are a class of clients who never have money in their pockets, so are undesirable either to retain or to admit. Another misfortune; it is on the alcohol tax that a large part of the revenue is raised.

A new idea for the 1900 Exhibition; in the different classes or groups to place wax statues of the most eminent men distinguished in the arts, industries, &c., or the domains of invention or discovery, a group dressed according to their period. In a word, a cosmopolitan wax works museum.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 26.

It is reported that the situation in Madagascar is of the gloomiest description, and that there are 5,000 French troops in Hospital amongst whom there is great mortality.

London, August 27.

The French have captured Andribo almost without opposition, the Hovas evacuating the place in a demoralized state. The French loss was trifling.

London, August 28.

It is reported that Germany has instructed her Minister at Peking and Consuls in China to protect the foreign missions to the utmost, and to summon her war-ships directly that disorder is threatened.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Kobe, August 27, 7.15 p.m.

Captain Ross has arrived here, and reports his vessel, the American ship *Henrietta*, a wreck at Satoura, in the province of Awa, after having dragged her anchors in the gale of Saturday last.

[FROM "N.C. DAILY NEWS."]

London, August 19.

Speaking in the House of Commons, the Hon. Geo. N. Curzon, Under-Secretary of State for Foreign Affairs, stated that the Government had not been informed as to the terms of the Franco-Chinese Convention, which is still unratified, but that they would take all necessary steps to prevent disregard of the Chinese engagement with Great Britain with reference to the territory affected by this Convention.

Foochow, August 19.

Consul Mansfield wires that the high Chinese official declines to allow the British and American Consuls to be present at the examination of the men arrested at Kucheng.

London, August 20.

An expedition under Rear-Admiral Rawson and General Matthews, from Zanzibar, stormed and captured Mweli on Saturday. Seven Europeans, including General Matthews, were wounded, also three porters. Two native regulars were killed and one wounded.

Lord Wolseley is to succeed H.R.H. the Duke of Cambridge as Commander-in-Chief.

Foochow, Aug. 20, 8.40 p.m.

The Rev. Mr. Star has arrived from Kucheng with despatches, and has taken them down to

the U.S.S. *Detroit*. H.M.S. *Rainbow* has arrived.

Foochow, August 19.

The Prefect of the District promises that the executions will take place at Foochow.

The Chinese soldiers, who went up from Foochow as escort to the British and American Consuls and their party, are foraging in the country round about the city for provisions, and their conduct has given rise to great fear and much anger amongst the common people throughout the district. These people are going about saying openly that if there were no foreigners in the country there would be no Christians, and if there were no Christians there would be no trouble.

The situation has assumed a more serious aspect. That is how it is regarded in Foochow.

London, August 21.

According to French accounts a Hova army, four thousand strong, is near Andribo, and is ably commanded. It is stated that the French troops are surrounded by spies.

Hankow, August 21.

The French gunboat *Lutin* arrived at Yochow on the 19th inst.

Foochow, Aug. 22, 6.40 p.m.

H.M.S. *Rainbow* left this morning for Wên-chow and Yokohama. She ought to be replaced at once.

The Rev. Mr. Star returns to Kucheng tomorrow. The captain of the U.S.S. *Detroit* goes with him.

The Hon. Geo. N. Curzon, Under-Secretary for Foreign Affairs, speaking with the fullest reserve, stated that the Government had addressed France regarding her movements on the Niger, and that they were ignorant of the French expedition to Equatoria. He also stated that the time had not yet arrived for reconsidering the evacuation of Egypt, and that the Government was not prepared to announce their policy regarding the Buffer State. Their policy as to Kinchong beyond the Meikong would be the same as Lord Rosebery's. Regarding Siam, the object of the Government was to vindicate British interests and to safeguard the integrity and autonomy of Siam.

He further stated that the Government would see that China granted to Burmah the same advantages as had been accorded to Tongking.

London, August 23.

The Right Hon. Geo. N. Curzon, Under-Secretary for Foreign Affairs, states that he agrees with Mr. Stanley as to the political and commercial advantages of the Uganda railway.

Foochow, 23rd August, 10 p.m.

The Rev. Mr. Star left at noon for Kucheng. Captain Newell of the U.S.S. *Detroit* will follow. It is understood that the examinations will commence on the return of Mr. Star, the Consuls and their *suites* being present.

(FROM JAPANESE PAPERS.)

Yamada, August 28.

Count Matsukata will remain at Futami for over two weeks.

Shimonoseki, August 28.

Mr. Uchida, the newly appointed secretary of the Japanese Legation, arrived here last night by the *Higo Maru*, and Lieut.-General Viscount Miura, the new Japanese Minister to Korea, reached here to-day by the *Yoshidagawa Maru*.

Lieut.-General Viscount Miura leaves here on the 30th inst. at 6 a.m. by the *Higo Maru* for Ninsen, where he will arrive on the 1st prox. about 6 a.m.

Moji, August 27.

A dredger captured at Port Arthur was brought here to-day.

The *Houn Maru* arrived here this morning with four 24 c.m. guns, captured in China.

The *Sankai Maru*, which struck the rocks in Korean waters the other day, sank on the 17th inst.

Kumamoto, August 28.

A violent earthquake took place at 10.44 o'clock last night. The residents ran out of their houses. Over ten after-shocks were experienced. Much anxiety prevails.

Nagano, August 28.

The locomotive of a luggage train was derail-

ed between Nagano and Sakashiro, yesterday in consequence of a landslip, which had been caused by a heavy shower.

Nagasaki, August 27.

Messrs. Okamura Teruhiko and Terao Toru have returned from Europe.

Saga, August 28.

A severe shock of earthquake was felt last night.

Aomori, August 28th.

A French man-of-war arrived here with the French Consul-General, who at once left for Tokyo. The war-ship proceeded to Hakodate.

Nagasaki, August 29.

The *Omi Maru* has left for Formosa, and the French warship *Lion* has arrived here from Chefoo.

Pekin, August 28.

The Viceroy Li arrived here to-day.

Shimonoseki, August 29.

Lieut.-General Viscount Miura, Japanese Minister to Korea, embarked to-day on board the *Higo Maru*, which is carrying Mr. Uchida, Secretary of the Japanese Legation in China, for his mission. The *Higo* will call at Ninsen on the way to China.

Otsu, August 29.

Mr. Kataoka, an Imperial Chamberlain, arrived here on the 27th inst. to inspect the condition of the devastated districts.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 191.

WHITE.	BLACK.
1—Q to K B 3	1—P takes Q
2—R to K 2	2—P takes R
3—B to K Kt 2, mate	
	1—B to B 2
2—Q to Q 3 ch.	2—P takes Q
3—B to Kt 2, mate	

if 2—K to B 3

3—R takes B, mate	1—K to B 3
	2—Anything
2—R to K 6	
3—Kt to K 7, mate.	

Correct answers from Digamma, Kr., Shogi, W.H.S., E. J. King, and J.D.

E.D.—Your solution breaks down if Black at his first move plays his B to R 2. There is something deeper in this fine problem than you imagined; study the solution given above and you will be delighted with the charming sacrifices, etc.

We congratulate our solvers on the success attained with Problem 191. It is a fine and difficult conundrum: and though some of the band had to work long and hard at the solution they have come off generally with flying colours.

PROBLEM No. 193.

By KARL MUSIL.

BLACK.

WHITE.

White to play and mate in three moves.

CHESS CHAMPIONSHIP OF AUSTRALIA.

FINAL SCORE—WALLACE, $7\frac{1}{2}$; ESING, $5\frac{1}{2}$.

The great match is at last over, and the two heroes of the struggle are not sorry. The wear and tear on the mind and body are terribly severe, and it will take victor and vanquished some time to recover from the effects of the battle. Mr. Wallace retains his title, but the closeness of the

score—seven wins to the champion, five to Mr. Esling, and four draws—indicate that there is but little difference in the chess strength of the combatants. The games have been very instructive and more interesting than those in the last championship match. Some of the games will rank high in Australian chess literature. It is a matter of regret that some of the Victorian's games should have been blemished by direct oversight. Mr. Wallace played more evenly, and avoided anything in the shape of obvious blunders.—*Sydney Mail*.

We publish below the 14th, 15th, and 16th games.

GAME (XIV.) No. 327.

QUEEN'S GAMBIT DECLINED.

WHITE. Mr. Wallace.	BLACK. Mr. Esling.
1—P to Q 4	1—P to Q 4
2—P to Q B 4	2—P to R 3
3—Kt to Q B 3	3—Kt to K B 3
4—Kt to B 3	4—B to K 2
5—P to K 3	5—Castles
6—B to Q 3	6—P to Q Kt 3
7—Castles	7—B to Q Kt 2
8—P takes P (a)	8—P takes P
9—Kt to K 5	9—P to Q B 4
10—P to K B 4	10—Kt to Q B 3
11—R to K B 3	11—Kt takes Kt
12—Q P takes Kt	12—Kt to K 5
13—R to R 3	13—P to K B 4
14—Q to K R 5	14—P to R 3
15—B takes Kt	15—Q P takes B
16—Q to Kt 6 (b)	16—Q to K sq.
17—R takes R P	17—Q takes Q
18—R takes Q	18—K to B 2
19—R to Kt 3	19—Q R to Q sq.
20—P to Q Kt 3	20—R to Q 6
21—B to Kt 2	21—K R to Q sq.
22—P to R 4	22—B takes P
23—R to R 3	23—B to K 2
24—P to K Kt 4	24—P takes P
25—R to K Kt 3	25—R to Q 7
26—R to Q Kt sq.	26—B to R 5
27—R takes P	27—B to K B 7 ch.
28—K to B sq.	28—B to R 3 ch. (c)
29—K to Kt 2	29—B takes P dis. ch.
30—K to Kt 3	30—B to B 7 ch.

And Mr. Wallace resigned.

(a) White exchanges this P somewhat prematurely.
(b) The whole attack is too much rushed to be sound. Here he should have played R to Kt 3.
(c) The undeveloped Q side now falls an easy prey to Mr. Esling's skilful stroke.

GAME (XV) No. 328.

RUY LOPEZ.

WHITE. Mr. Esling.	BLACK. Mr. Wallace.
1—P to K 4	1—P to K 4
2—K Kt to B 3	2—Q Kt to B 3
3—B to Kt 5	3—Kt to B 3
4—P to Q 3	4—B to B 4 (a)
5—Castles	5—P to Q 3
6—P to Q B 3	6—Castles
7—B to R 4 (b)	7—Kt to K 2
8—B to K 3	8—B to Kt 3
9—B to B 2	9—Kt to Kt 3
10—P to Q 4	10—B to Kt 5
11—P to K R 3	11—B to R 4
12—Q Kt to Q 2	12—Q to Q 2
13—K to R 2	13—Kt to K R 5
14—R to K Kt sq.	14—P takes P
15—P takes P	15—Q R to K sq.
16—Q to K B sq.	16—Kt takes Kt ch.
17—P takes Kt	17—B to Kt 3
18—P to K B 4 (c)	18—Kt takes K P
19—Kt takes Kt	19—B takes Kt
20—B takes B	20—R takes B
21—R takes P ch.	21—K takes R
22—Q to Kt 2 ch.	22—K to R sq.
23—Q takes R	23—P to Q 4
24—Q to K B 3	24—P to K B 4
25—R to K Kt sq.	25—P to B 3
26—R to Kt 3	26—Q to K 3
27—Q to Q sq.	27—K to K Kt sq. (d)
28—Q to Q 2	28—B to Q sq.
29—P to R 3	29—B to K R 5
30—R takes R ch.	30—K takes R
31—Q to Q R 5	31—P to Q R 3
32—Q to Q B 7	32—Q to K B 2

And the game, by mutual consent, was declared a draw.

(a) Theorists unanimously pronounce against 4—B to B 4, but in practical play it takes a lot of beating.
(b) This seems to lose time.
(c) White has now the better game, but the text move equalises matters. 18—Q to Kt a was the right move.
(d) It is obvious that neither player can win in this position; that is, with the best moves on each side.

GAME (XVI) No. 329.

PHILIDOR'S DEFENCE.

WHITE. Mr. Wallace.	BLACK. Mr. Esling.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—P to Q 3 (a)
3—P to Q 4	3—Kt to Q 2 (b)
4—B to Q B 4	4—B to K 2

- | | |
|-------------------|----------------------|
| 5—Kt to Q B 3 (c) | 5—P to Q B 3 |
| 6—Castles | 6—Kt to K B 3 |
| 7—B to K 3 | 7—Castles |
| 8—B to Q Kt 3 | 8—Q to Q B 2 (d) |
| 9—Kt to Q 2 | 9—P takes P |
| 10—B takes P | 10—P to Q Kt 3 |
| 11—P to K B 4 | 11—Kt to B 4 |
| 12—P to K 5 (e) | 12—Kt takes B |
| 13—R P takes Kt | 13—Kt to K sq. |
| 14—Q to K 2 | 14—P to K B 4 |
| 15—R to B 3 | 15—P takes P |
| 16—B takes P | 16—B to B 4 (ch.) |
| 17—K to R sq. | 17—Q to K 2 |
| 18—Kt to R 4 | 18—B to K 3 |
| 19—Kt takes B | 19—P takes Kt |
| 20—R to K 3 | 20—Q to Q 2 |
| 21—B to B 3 | 21—B to Q 4 |
| 22—Kt to B 4 | 22—Q to Q B 2 |
| 23—B to K 5 | 23—Q to Q sq. (f) |
| 24—R to Kt 3 | 24—R to B 2 |
| 25—B to B 3 | 25—R to K 2 |
| 26—Q to B 2 | 26—B to K 5 |
| 27—Q takes P | 27—B takes Q B P (g) |
| 28—Kt to K 5 | 28—B to K 5 |
| 29—B to Kt 4 (h) | 29—P to R 4 |

The position at this stage is shown in the accompanying diagram.

- | | |
|-----------------------|---------------|
| 30—Q takes R | 30—P takes B |
| 31—Q to B 7 ch. | 31—K to R sq. |
| 32—Q to B 8, mate (i) | |

Winning this game made Mr. Wallace the winner of the match by 7½ points to Mr. Esling's 5½ points. It may be noted that according to the conditions the winner was to score seven points, and drawn games after the first three were to count as half a point to each player. Now, assuming absolute equality in their chess skill, each player would have scored seven points by playing 17 drawn games. This is the maximum number also. The total number of games actually fought out was 16, and the comparison of 16 with 17 is an effective numerical measure of the severity of the Wallace and Esling contest.

- (a) A defence now obsolete; its adoption by Mr. Esling was one of the surprises of the match.
 (b) Known as Lord's variation.
 (c) Much stronger was 5—P takes P.
 (d) A queer sort of position to be in when the other man requires but a draw to win the match.
 (e) White now takes the initiative, and plays with faultless precision.
 (f) He can only potter about and wait for trouble.
 (g) A mistake which loses quickly.
 (h) A neat rejoinder which at once scores.
 (i) A fitting termination to a great match.

The following reviews of the play in the late match are from the Melbourne chess press, the first from the *Leader* and the second from the *Australasian*:—"In reviewing the play of the two champions, we cannot but admit that in their present form the result is what might have been expected. While Mr. Esling has shown greater forcing power, there can be no doubt that Mr. Wallace has played the more correct chess, and has shown his superiority in that most important part, the end game. As soon as he obtained the slightest advantage, he continued to improve it, till it resulted in victory. Mr. Esling, on the other hand, after gaining a winning position, allowed the game to slip through his fingers. Thus he ought to have won the first and fifth games, which he only drew, and the third game, which he lost, while he should have drawn the eighth game. The second game was also absolutely thrown away by an obvious blunder in the opening. It is manifest that no player can afford to handicap himself in this fashion. Had these games resulted as they naturally should have done in a contest between experts, the match would have terminated with the thirteenth game; and the final score would have been—Esling seven, Wallace four, drawn two. Mr. Esling has paid the penalty of not having trained himself for so important a contest by practice against strong opponents, which alone can harden the play, give precision in the conduct of the end game, and secure immunity from blunders. If he

takes this lesson to heart, it will stand him in good stead in any future encounter with his present opponent, whom no doubt he will not allow to remain long in quiet possession of honours gained on this occasion. It is to be noted as an evidence of the severity of the contest that it has extended to within one of the maximum number of games which could have been played under the conditions of the match. Had every game terminated in a draw, the score at the end of the seventeenth game would have been seven all and three draws. It only remains for us to record with pleasure that the relations between the principals have throughout been of the most cordial character, and Mr. Wallace by his demeanour succeeded in making a friend of every member of the Melbourne club. That this feeling is reciprocal is shown by the letter from the champion, which is conceived in the most generous spirit, and will do much to promote harmonious relations in the future between the chess-players of the two colonies."

"A correspondent, who is an excellent judge of quality in chess play, and who has carefully examined the whole of the games of the match, writes to us as follows:—"On their respective forms the best man has won. It is easy to go over the games and say that Mr. Esling ought to have won this game or that game. The fact remains that he did not. The blunders which cost him certainly two games are part of his present form. On the other hand, Mr. Wallace having obtained a strong lead, instead of playing tamely for draws, as he might justifiably have done, opened some games with exceeding rashness. This he would scarcely have done had the score not been greatly in his favour. The great test of a chessplayer is the end play, and in this part of the game Mr. Wallace excels. In the conduct of some games Mr. Esling came out distinctly best. In the actual result there is not much difference between the two. Though defeated, Mr. Esling is not disgraced. Another encounter between the same players might quite possibly end differently, but on present form the actual result attained seems to be according to merit. It may be doubted whether in the whole course of the match Mr. Esling made any greater mistake than in adopting the Philidor Defence in the last game. At best that opening means a draw, and a draw would have been equivalent to a loss for him. Also, in close games Mr. Esling had not appeared to advantage; he seemed to be at his best in free open games. The adoption of that line of defence in the sixteenth and last game gave his friends a premonition of defeat. The coming event cast its shadow before. Mr. Wallace is to be congratulated on a well-earned victory. He is careful and accurate, and at the same time very quick. He made no gross blunders. Of course some of his calculations proved unsound, and he is, perhaps, overbold in attack. This is a good fault, and chess would never be dull and uninteresting if played in his style. On the whole he consumed much less time than his adversary. Being very young, it may be assumed that he has not yet reached his best form, and Australian chess should benefit largely from the accession to its ranks of so strong, and I trust still improving, a player."

GAME No. 330.

The following highly interesting game is a specimen of Steinitz's play in his early days (Dufresne's *Handbuch des Schachspiels*):—

- | WHITE.
Dubois. | BLACK.
Steinitz. |
|-------------------|------------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—B to B 4 |
| 4—Castles | 4—Kt to B 3 |
| 5—P to Q 3 | 5—P to Q 3 |
| 6—B to K Kt 5 | 6—P to K R 3 |

| 20—R to Kt 5 and wins. | |

GAME No. 332.

CHESS IN ROME.

Specimens of play in the Eternal City have become, from unexplained reasons, unhappily very rare, so that we are the more indebted to a correspondent for one or two recent specimens. The following is one of these:—

EVANS GAMBIT.

- | WHITE.
Guglielmetti. | BLACK.
Sacerdoti. |
|-------------------------|----------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—B to B 4 |
| 4—P to Q Kt 4 | 4—B takes P |
| 5—P to Q B 3 | 5—B to Q B 4 |
| 6—P to Q 4 | 6—P takes P |
| 7—Castles | 7—P to Q 3 |
| 8—P takes P | 8—B to Q Kt 3 |
| 9—Kt to Q B 3 | 9—B to K Kt 5 |
| 10—Q to Q R 4 (a) | 10—B to Q 2 |
| 11—Q to Q Kt 3 | 11—Kt to R 4 |
| 12—B takes P ch. | 12—K to B sq. |
| 13—Q to B 2 | 13—K takes B |
| 14—P to K 5 (b) | 14—P to K R 3 |
| 15—P to Q 5 | 15—K to B sq. |
| 16—P to K 6 | 16—B to Q B sq. |
| 17—K R to K sq. | 17—Q to B 3 |
| 18—B to Q Kt 2 | 18—Kt to K 2 (c) |
| 19—Kt to K 4 | 19—Q to Kt 3 |
| 20—Kt to K R 4 | 20—Q to K R 4 |
| 21—Q to B 3 (d) | 21—R to K Kt sq. |
| 22—Q R to Q sq. | 22—Q takes Kt |
| 23—Q to K B 3 ch. | 23—K to K sq. |
| 24—Q to B 7 ch. | 24—K to Q sq. |
| 25—B takes K Kt P | 25—R to K sq. |
| 26—B to K B 6 | 26—Q to Kt 5 |

White mates in four moves.

- (a) Hardly sound, as Black can play B takes Kt followed by B takes Q P. B to Q Kt 5 is good instead, or even B to K 3.
 (b) The sacrifice, necessitated by Q to Kt 3, is hardly sound, but it must be admitted White has now a good and promising game.
 (c) It was very desirable to develop the Kt early; but it is not so easy to suggest the exact point.
 (d) A very good and sufficient reply to a somewhat troublesome move.
 (e) A too venturesome capture; but there was little opening left for defence, and none for attack. Now White finishes the game excellently well.—*Weekly Times*.

THE HASTINGS TOURNAMENT.

The *China* brought us the first news. Play was duly commenced on 5th August and three rounds had been played when the mail left San Francisco.

Of the thirty-eight claimants for admission to the Hastings International Congress only twenty-two succeeded in obtaining the necessary permit from the selection committee. Baird, Davison, Hanham, Lee, Locock, Loman, Metger, Mortimer, Rumball, Van Lennep, and Van Vliet were among the unsuccessful candidates, the fortunate ones being Steinitz and Pillsbury, representing the United States; Albin, Gunsberg, Marco and Schlechter, Austria; Blackburne, Bird, Burn, Mason, Pollock and Tinsley, England; Lasker, Bardeleben, Mieses, Tarrasch, Teichmann and Walbrodt, Germany; Viagari, Italy; Janowski, Poland; and Schiffers and Tschigorin, Russia.

SCORE AT THE END OF THE THIRD ROUND.

Albin	1½	Pillsbury	2
Bardeleben	2½	Pollock	1½
Bird	2	Schiffers	2½
Blackburne	2	Schlechter	1½
Burn	1	Steinitz	2½
Gunsberg	1½	Tarrasch	1
Janowski	2	Teichmann	1½
Lasker	1	Tinsley	1
Marco	1	Tschigorin	2
Mason	1	Viagari	0
Mieses	2	Walbrodt	1

Pig Iron, No. 3	1.70 to 1.75

KEROSENE.

Holders have (quite unexpectedly) been pressing sales, and have lowered quotations again. Some few transactions have been done on the new basis, but buyers now hold off expecting a further decline!

American	\$2.05 to 2.10
Russian	2.00 to 2.05
Langkat	Nom.

SUGAR.

Brown—Market tending downwards owing to heavy arrivals of Manila sorts, with very small sales. White—Moderate trade at last quotations.

	PER PICUL.
Brown Takao	\$3.70 to 3.75
Brown Manila	4.30 to 4.50
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.20 to 3.70
White Java and Penang	6.10 to 6.20
White Refined	6.00 to 9.25

EXPORTS.

RAW SILK.

The market booms along merrily, and sellers declare that they have to put up quotations owing to the strong competition among shippers; although they (the sellers) would be quite content with former rates! Any way the business goes on to a great time, and the Mail steamers both East and West bound get plenty of Silk freight.

QUOTATIONS.—(NEW SILK.)

Reels—Extra 9/11, 10/12 deniers	\$930 to 940
Reels—Extra 13/15, 14/16 deniers	930 to 940

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

Yokohama.

THAMES ELECTRIC & STEAM LAUNCH CO⁹

ELECTRIC LAUNCH "GLOW-WORM," 53 ft. by 7 ft. 3 in.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

September 8th, 1894.

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT

And see that each Jar bears Justus von Liebig's Signature in Blue Ink across the Label.

FINEST AND CHEAPEST
MEAT-FLAVOURING
STOCK FOR SOUPS,
MADE DISHES AND SAUCES.

Invaluable as an Efficient
Tonic in all cases of
Weakness.

Keeps good in the hottest
Climates, and for any
length of time.

To be had of all Storekeepers and Dealers.

The Company's NEW COOKERY BOOK sent free on application to

LIEBIG'S EXTRACT OF MEAT CO., Ltd., 9, Fenchurch Avenue, London, England.

Cookery Books on Application to Office of this Paper.

June 14th, 1894.

DINNEFORD'S

The Universal Remedy for Acidity of the Stomach, Headache, Heartburn, Indigestion, Sour Eructations, Bilious Affections.

Sold Throughout the World.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 7TH, 1895.

SUMMARY OF NEWS.

THE CROWN PRINCE is steadily improving in health.

DYSENTERY is still very prevalent in many parts of the country.

H.I.H. THE CROWN PRINCE was sixteen years of age on the 31st ult.

ONE or two cholera cases a day are being reported in Yokohama.

SURGEON KONDA NOBUCHIKA has been decorated by the Emperor of China.

THE establishment of the Yokohama Japanese Chamber of Commerce has been sanctioned.

SHANGHAI will send a cricket team over to Yokohama in the autumn to play the local club.

MISS ANNIE ABBOTT, "the little electric magnet," drew a crowded house at the Public Hall on her opening night.

A SOSHI threw a stone at H.I.H. Prince Komatsu, as the latter was driving through Tokyo on Wednesday.

GASSED-YARN spinning mills are being promoted at Aichi, Osaka Awaji, Tamba, and Fukuchiyama.

THE members of the Press were requested to

retire from the half-yearly meeting of shareholders of Messrs. Brett and Company, Limited, held on Monday last.

MR. QUIN, H.B.M. Consul at Nagasaki, has gone to Shanghai for a trip, for the benefit of his health.

THE Japan Edible Seaweed Company lost yen 57,165.523 last year, and yen 487,122.709 the year before.

THE promoters of the Takasaki Chamber of Commerce received a charter from the Government on the 24th ult.

A DETACHMENT of the Salvation Army, all officers, arrived at Yokohama on Wednesday by the German mail steamer.

LIEUT.-GENERAL VISCOUNT TAKASHIMA, Vice-Governor-General of Formosa, left the capital on the 1st inst. for Formosa.

A FOUR-YEAR-OLD boy was drowned in a pond at Suyeyoshicho, Yokohama, on the 2nd inst., while pursuing dragon flies.

IT is expected that Count Mutsu, Minister of Foreign Affairs, will resign that portfolio should Count Inouye be induced to accept it.

COUNTESS INOUE has had a long audience with the Queen of Korea: she is greatly impressed with the Queen's intellectual capacity.

THE abandonment of the boycott against Chinese firms in Yokohama has led to the withdrawal of the *soshi* from the Chinamen's doors.

MR. UYEDA NOFU, ex-M.P. for Iwate Prefecture, who has been suffering from mental disease, committed suicide on the 29th ult.

THE officers of the Japan Railway Co. have presented 20,000 towels and 20,000 fans to the Japanese soldiers and seamen in Formosa.

MR. KAMIYA, who lately returned from America, proposes to establish a beer brewery in Kiushu to supply the demands of Kiushu consumers.

IT is stated that Mr. Suyematsu, Chief of the Legislative Bureau, was assaulted by a Fukuoka *soshi* on the 1st inst. while on the way to Oiso.

THE investigations of the Kucheng Commission are now proceeding apace, and more prison accommodation has been demanded of the Viceroy.

THE General Guild of Yokohama Dealers is to be dissolved, and various Guilds, each representing a particular trade or industry, will take its place.

COLONEL KOJIMA, Commandant of the First Infantry Regiment of the Imperial Guards Division, succumbed to cholera in Formosa on the 31st ult.

LIEUT.-GENERAL VISCOUNT MIURA having reached Söul and had an audience with the King, it is reported that Count Inouye will return to Japan within the next two weeks.

THE Privy Council in London have sustained the appeal in the case of Tsune Kijima *versus* the P. & O. Company. The whole of the costs are to be borne by Tsune Kijima and the 60 other plaintiffs in the action.

THE Minister of Agriculture and Commerce granted a charter on the 31st ult. to the promoters of the Yayeyama Sugar Manufacturing Co., promoted by Messrs. Shibusawa Eiichi, Oye Taku, and other capitalists.

THE tramway between Odawara and Yumoto has been sold to Messrs. Watanabe Chiyemon,

Imamura Seinosuke, Wakao Ippei, and a few other capitalists of Tokyo and Yokohama, who propose to change it into an electric railway.

THE depth of a boring which has been made in the compound of the Imperial University in Tokyo for the purpose of earthquake investigation is now 1,200 feet.

A FATAL landslip took place at Kawabe, Shin-to-gun, Hyogo Prefecture, on the 24th ult., two persons being crushed to death and five others seriously wounded.

OVER thirty Korean students, specially selected by the King left Ninsen, arrived on the 1st inst. by the *Asahi Maru* to pursue their studies at the Keio Gijuku, Tokyo.

THE total tonnage of the Government transports was 187,830.37 tons on July 10th; it decreased to 165,832.40 tons on the 1st inst. These figures do not include ships below 1,000 tons.

A STRONG shock of earthquake was felt at Kumamoto on the night of the 27th ultimo. No lives were lost nor buildings overthrown, but three houses were burnt, the fires being caused by lamps upset by the earthquake.

REUTER telegraphs—A packet containing explosives has been addressed to Baron Alphonse Rothschild in Paris, whose secretary, on opening it, had his fingers and one eye shattered. Lord Lansdowne, Secretary of State for War, has brought forward the military scheme, which is based mainly on the conclusions arrived at by the Hartington Commission. Lord Wolseley, as Commander of the Forces at home and abroad, will be the principal adviser of the Secretary of State for War. The Commander of the Forces and the other heads of departments will act as a Board to discuss matters referred to them by the Secretary of State for War. Forty per centum of the French troops in Madagascar are unfit for duty. The anniversary of Sedan has been celebrated with immense enthusiasm in Germany. Russia has presented a large quantity of war material to Montenegro.

THE improvement in the Import trade continues, and the prospect is once more bright. Yarns have advanced in Manchester, and a good business has been done here for better prices, which will probably further harden. Grey goods are still in request, and more money is asked, Velvets and Turkey Reds being also in demand at higher figures. The Woollen trade is beginning to improve, and enquiries are better than for some time past. In the Metal trade there has been more business, and slightly lower values have induced bargains in Iron, principally Pig and manufactured. Wire Nails move fairly well at late rates, and the stock is rather light, while Galvanised Sheets and Tin Plates are taken at an advance. In the Kerosene trade there is more inclination to buy, and deliveries of late sales are good. Sugar is generally dull, a small demand and heavy stock having depressed Java and Manila sorts. Whites are in better odour, and prices tend upward. After two months of heavy transactions in the principal Export, demand has slackened, which is not surprising when the extent of recent shipments is considered, and prices for all descriptions of Raw Silk are for the moment nominal. New Waste has at length come to hand in considerable quantities, but the prices asked for it preclude all chances of business at present. There is still a steady trade in the Tea market, and the stock of leaf is down to 7,000 piculs, while shipments show a million pounds over those of the same date last year. Rates of Exchange have varied very little during the week, and remain about the same.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Count Matsukata's resignation still continues to engage the attention of a certain section of the metropolitan press. Anonymous correspondence and articles signed by fictitious names are published by some papers in which anything seems to be welcome that tends to injure the reputation of the Premier. Of the Sat-cho statesmen, the ex-Minister of Finance has always been well thought of by the politicians outside the Government, who, even while attacking him as a political opponent, did not refuse to give full credit to his disinterested zeal for the good of the country. Much of the strong sympathy shown for him at the present juncture by the organs of the Extremist parties, may, consequently, been taken as the expression of their genuine sentiments. But there is no gainsaying the fact that their object is not so much to defend him as to attack Marquis Ito. As usual, personalities are so freely indulged in, that the controversy is no longer worth any attention in these columns.

* * *

A favourite theme of discussion by the *Fiji Shimpō* during the past few months, has been, as already noticed in these columns, to advocate the formation of a coalition Cabinet by inviting into the present Ministry such statesmen as Count Okuma, Count Itagaki, and so forth. Such a combination, impracticable under ordinary circumstances, can be easily effected, in the *Fiji's* opinion, at a juncture like the present, when all true lovers of the country ought to be united in order to carry out certain measures which are of paramount national importance. Our contemporary is genuinely sorry to perceive that those in power do not seem to be in the least disposed to act upon the advice so repeatedly and earnestly offered by it. It is still more concerned to notice that the elder men in the Cabinet are not only lacking in decision to join hands with the distinguished statesmen out of power, but are equally deficient in courage to conduct important affairs of State in a bold and energetic manner. Their attention, continues the *Fiji*, seems to be wholly absorbed in the petty question about the management of the Diet. Such a state of affairs is unendurable to our contemporary, which, consequently, once more offers advice to the Ministers. If they are unable either to share power with Counts Okuma and Itagaki, and so forth, or to pursue a strong and definite policy, they are advised to resign their posts in favour of men of the younger generation, for they are no longer entitled to steer the ship of State through the dangerous sea on which it is now floating. They may say that to leave the direction of affairs in the hands of younger men is a dangerous experiment; but they are reminded that it is only a piece of vanity to think so. Our contemporary is convinced that the country will be much safer in the hands of younger men than in those of the present Ministers; for among the younger generation there is a large number of men perfectly qualified to be entrusted with the most important affairs of State. Looking at the matter from the view of their own personal convenience, the present is the best time for the elder statesmen to resign, for, as the result of the recent war, they have now attained the highest honours they can hope for; in other words, they stand at the zenith of their political fame. They may think that as their new honours add to their prestige, their power may be prolonged. They are, however, told that they will be grievously disappointed if they do think so. The result expected by them might have been attainable in an age long since gone by. Instead of being regarded with greater respect, they are now the objects of increased and increasing envy and dislike. Consequently, our contemporary fears that, if they remain longer in office, troubles may multiply thick and fast in their path. However, the prime object of the *Fiji* is not to urge their resignation, but nothing would give

it greater satisfaction than to see its original advice about a Coalition Cabinet adopted.

The clamour is still kept up by the Opposition journals for an extraordinary session of the Diet. In reply to these papers, the *Nichi Nichi Shimbun* points out once more that there is no necessity for such a step. According to the Constitution, the Diet, whether ordinary or extraordinary, can be convened only for the purpose of deliberating upon projects of law, the Budget, the raising of a loan, draft contracts of a nature to create liabilities over and above the Budget, and Imperial Ordinances requiring *post facto* approbation. It cannot be convened either for the declaration of war, or, by implication, for the purpose of laying before it a report upon the progress of war and the diplomatic complications that may have arisen out of a state of war. The only reason thus far advanced which is worth consideration is that in order to collect the saké tax from the next fiscal year according to the increased rate, it is advisable to effect the increase of the rate before the 1st of October. But Income and Expenditure cannot be separated from each other; and at present the details of the Military measures being still incomplete, it is impossible to compile estimates. Moreover, the amount of money that will be required during the current year for the increase of the Army and the Navy will not be great, at least not so great that the Treasury will be unable to make the required payments without having recourse to an extraordinary session of the Diet. Should any measure connected with the increase of armaments be deemed to be of exceptionally urgent necessity then it may be carried out as an urgency matter. So from every point of view, there is, in the *Nichi Nichi's* opinion, no necessity for convening an extraordinary session of the Diet.

* * *

What should be the proper degree of the increase of the Army and the Navy, is a question which engages the serious attention of the metropolitan press. There is a disposition among some of the papers to think that the Government is determined upon an increase on a scale out of proportion to the resources of the country. The *Nippon*, the *Kokkai*, and a few others belong to this category. The experience of Italy is cited by these papers as a warning to Japan. An article in the *Nichi Nichi* on the subject is well worth consideration. Our contemporary notices that some of the papers have taken much trouble in reasoning, by means of statistics, that considered in proportion to the income, Japan is already spending more than the great Powers of Europe are paying for their armaments. But the *Nichi Nichi* states that these statistics are not accurate, and that in point of fact Japan is spending less proportionally than the European Powers. The statistical data upon which it bases this assertion are reserved to a future opportunity when it promises to discuss the subject at greater length. Considering the present economical condition of the country, when foreign trade is increasing by leaps and bounds, and when the farming class as a whole is in easy circumstances, the increase of the tax on saké, the income tax, the trade tax, and so forth, so as to get about 20,000,000 yen in addition to the present revenue, is not, in the *Nichi Nichi's* opinion, sufficient to retard the economical progress of the country. As to the strength required by the Japanese Navy, our contemporary is of opinion that it should be much superior to the strongest foreign fleet in these waters. As to the Army, our contemporary remarks that attention should be directed to completing the coast defence, to the increase and improvement of cavalry and commissariat, and strengthening of the infantry to such a point that a sufficient number of troops may at any moment be ready to leave the country for the shores of the Sea of Japan and the China Sea. The question of Military and Naval augmentation is discussed by some journals in combination with the question of alliance. In our contemporary's opinion, the two questions ought to be considered independently, or rather that

the question of alliance should be dismissed altogether as being outside the sphere of practical politics. In the present state of affairs, the *Nichi Nichi* thinks that Japan ought to pursue an independent policy, for alliance with either England or Russia is impracticable. The question of alliance is more fully discussed by our contemporary in another article which will be noticed more in detail and separately.

The situation in the East is discussed in several articles. The *Kokumin Shimbun* surveys the position of China, and reminds its countrymen of the fact that the recent war has had an exactly opposite result to that which had been expected by them. While the war was in progress, the Japanese hoped that, after the conclusion of hostilities the Chinese would open their eyes to the actual state of affairs, and, recognizing the needs of their country, would be more friendly to Japan than formerly. But the result is that they are more soundly asleep than ever, and, instead of coming into closer relations with Japan, they have allowed themselves to fall into the hands of Russia. Thus, instead of increasing the security of the peace of the East, the late war has created a new danger. Japan, says the *Kokumin*, has only obtained one or two-tenths of her original object, and unless she be wise she is in danger of losing what little she has got. Other papers write in a similar strain, urging the Government not to be a mere spectator in the diplomatic game now being played in China.

THE INCREASE OF BANKS IN JAPAN.

Some time ago we quoted from the *Chugai Shogyo Shimpō* some interesting figures showing the recent extraordinary increase of banks in this country, a warning being raised by our contemporary against the evil consequences of a sudden expansion of banking business. The subject is now discussed by the *Nichi Nichi*, the latter differing from the first mentioned journal. The *Nichi Nichi* observes that the private banks to which charters have recently been given are not new institutions, but in most cases establishments which have been doing business for a long time, and which have modified their constitution and name so as to come under the scope of the Banking Regulations issued in 1890. Until that year, the Government had entirely refrained from interfering with private banking business. But perceiving the necessity of exercising a general control over these establishments, the above mentioned Regulations were promulgated and the process of converting private houses into officially recognized banks, which has been going on ever since 1890, has received a new impetus from the revival of business activity after the conclusion of peace. Such being the case, our contemporary welcomes the increase of private banks as a sign of the gradual improvement of banking business in Japan. The following figures are said to have been obtained from the most trustworthy source in the Government:—

Date.	National Banks.		Private Banks.	
	No.	Capital. Yen.	No.	Capital. Yen.
December, 1890.....	134	48,644,662	272	25,571,175
December, 1891.....	134	48,701,100	294	27,060,775
December, 1892.....	133	48,325,690	323	28,317,975
December, 1893.....	133	48,416,100	627	37,128,490
December, 1894.....	133	48,816,100	761	54,247,900
Date.	Companies akin to Banks.		Total.	
	No.	Capital. Yen.	No.	Capital. Yen.
December, 1890.....	70	14,512,616	2,108	88,728,453
December, 1891.....	678	13,827,431	2,106	89,580,309
December, 1892.....	680	13,944,644	2,136	90,588,219
December, 1893.....	—	—	2,161	85,544,590
December, 1894.....	—	—	894	103,064,000

Of the private banks December, 1893, the number of savings banks was 24, with the aggregate capital of 1,140,000 yen. The number of savings banks in December, 1894, was 34, with the total capital of 1,470,000 yen.

"Daddy," asked little Danny Grogan, "what is this new woman business, any-how?" "It manes," said Mr. Grogan, after a moment's thought, "that instid of a man an' his wife bein' wan anny moore, thot now he is wan man an' she is another."

EDITORIAL NOTES.

KOREAN FEMALE STUDENTS IN TOKYO.

THE arrival of two Korean female students in Tokyo has naturally excited much curiosity and attention. They are the wife and sister of Mr. In Chigo, a brother of Mr. In Chiko, a distinguished Korean official. Mrs. In Chigo, is about twenty-four or twenty-five, and Miss In about twenty years of age. It being known that they were to arrive in Tokyo on the 29th ultimo, some persons were sent to Shimbashi station by Mr. Fukuzawa to welcome them and conduct them to a house specially prepared for them in the compound of the school. Meanwhile, the train arrived and all the passengers alighted, but there were no Korean ladies, and the men sent out by the school were about to return without their guests when their attention was attracted by a party of three persons, apparently country people, two women in Japanese and a man in European clothing. They were the last to alight from the train, and as soon as they were on the platform, they opened their umbrellas. This unusual movement and certain peculiarities in their dress and manner, excited suspicion, and it was soon found that they were the party sought for, the man in European clothes being the servant of the ladies. They had travelled in their national costume as far as Ninsen, where the ladies, fearing they might be laughed at in Japan should they come in Korean garments, dressed their hair in Japanese fashion and attired themselves in Japanese *hitoyemoro*. On arriving in Tokyo, the first two days were employed by the ladies in ordering new Japanese clothing and articles of ornament and rearranging their hair in the *sokuhatsu* style. Understanding not a word of Japanese, their first business will be to study the language, for which excellent arrangements are made in the school. Their husband and brother, Mr. In Chigo, formerly a student at the Keio-gijuku, is now in Seoul, but he is expected in Japan to complete his education. As the *Fiji Shampo* observes, the fact that Korean ladies of quality, who have hitherto lived in strict seclusion from the members of the other sex, should have undertaken a voyage abroad in search of education, certainly deserves serious attention, as it indicates how strongly the influence of Japan's civilizing efforts is felt in Korea.

CHINESE IN JAPAN.

LIU UTIEN, a representative of an ancient and wealthy Ming family in Liaotung, who is now staying in Tokyo, has already been mentioned in these columns. He and his servant accompanied Marshal Oyama to Japan when His Excellency returned here in May last. Liu is now an employé of the Military Department. He intends to become naturalized and settle in Tokyo, where he will bring his whole family and many of his relatives who are now staying in Liaotung. Liu is a young man of fair complexion with a pleasing address. He is said to be under the special protection of Marshal Oyama. Of the several hundreds of other Chinese who welcomed the arrival of the Japanese troops as their deliverers from the oppression of officials, about 160 are reported to have applied to Governor-General Viscount Sakuma in Liaotung for naturalization as Japanese subjects. Their families number from 700 to 800 persons in all. It is not yet decided whether or not to grant their request, but it is believed that the Japanese Government will allow them to come over to this country, when they will be provided with land in Hokkaido.

BATTLE WORN.

ONE gets to realise in war-time, remarks a contemporary, what the human body can stand in the way of being slashed and pierced and bruised without the spark of life being actually extinguished. Among the Sepoys who received the Order of Merit for the relief of Chitral is one who had no fewer than 31 wounds, probably a record number. Another man, a Siah, furnished a splendid example of pluck and endurance. He was shot in the side at the Koragh Defile, when Ross's party were cut up. He could feel the

bullet in his body and so worked away at it with both hands, gradually pushing it outwards until he had extracted it. Then he shouldered his rifle again and did his march of 20 miles or so, in spite of loss of blood. He is alive and well, with the Order of Merit as his reward, and future promotion doubtless awaiting him.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for July, showing the foreign trade of the empire for the month:—

	1894. SILVER YEN.	1895. SILVER YEN.
Exports	8,355,051.480	10,564,333.980
Imports	9,883,227.000	9,396,601.750

Total exports and imports	19,960,935.730
Excess of imports	1,167,732.230

	CUSTOMS DUTIES.
Exports	213,214.781
Imports	328,979.767
Miscellaneous	15,358.106

Total	557,552.654
-------------	-------------

THE "VERONA" CHOLERA CASE.

COCKSURE comments were made upon the quarantine officials when their medical men declared a Chinaman on the *Verona* to be suffering from cholera and had the man removed to Nagahama. These comments, as might have been expected, are now proved to have been much "too previous," and the sequel shows that the quarantine medical staff know their business, which is not at all "inexplicable," seeing that they are experts who have studied the subject for a long series of years. The *Yomiuri Shimbun* thus refers to the case:—A Chinese fireman on board the British steamer *Verona* was attacked by vomiting and purging on the 28th ultimo. The following day the Japanese quarantine officials proceeded to the

ship, and found that the Chinaman was suffering from cholera. The steamer was at once sent to the Nagahama Quarantine Station. Strong comments, says the Tokyo paper, have been made upon the Japanese commissioners for deciding that the Chinaman was attacked by cholera, especially as the ship's doctor was not of the same opinion. Drs. Miyajima and Sasaki have now discovered comma bacilli in the excreta of the patient who is at Nagahama, and thus they verify the conclusion of the Japanese authorities.

WINES AT THE BORDEAUX EXHIBITION.

THE Philomathic Society of France has organised an exhibition which has just been opened at Bordeaux, and, naturally, wines form a very large and important portion of the exhibits. For the following interesting essay in connection with this subject we are indebted to the French Consul:—

L'Exposition des Vins à Bordeaux vient de s'ouvrir. Pourrait-il se produire, dans la capitale de l'antique Guyenne, une manifestation des forces industrielles, commerciales, scientifiques, et agricoles comme celle qu'a organisée la Société Philomathique, sans que les vins, et surtout ceux de la Gironde, y vinssent occuper une place prépondérante? Non. Le vin joue un rôle trop grand dans le monde pour ne pas figurer au premier rang des produits du sol. Au point de vue économique, ceux qui touchent à la question vinicole ne sauraient se désintéresser de ce qui leur permet d'étendre leurs connaissances sur les ressources viticoles du globe, et l'Exposition universelle qui s'ouvre à Bordeaux se prête merveilleusement à l'étude de ces ressources.

La production universelle des vins peut être évaluée actuellement à 138 millions d'hectolitres par an, soit une augmentation de quelques millions d'hectolitres sur les évaluations d'il y a quelques années, par suite de l'extension des plantations de vignes qui s'est produite un peu partout, et là même où naguère l'on ne songeait pas à faire du vin. Tel aura été l'un des effets du phylloxera, qui a révolutionné le monde viticole. Antithèse vivante, puisqu'il est destructeur en même temps que propagateur. N'a-t-il pas, en effet, en menaçant de détruire à jamais la plus riche production française, incité les autres nations à élargir le champ, jusque-là relativement restreint, réservé à la précieuse Ampélopée? L'Italie et l'Espagne arrachèrent des oliviers—ce qu'elles ont regretté depuis—pour mettre de la vigne à leur place; l'Australie et la Californie ont voulu faire en quantité du Médoc et du Bourgogne, ainsi que du Champagne; la Russie, sous ses latitudes tempérées, a multiplié les ceps; la République Argentine, le Chili, le Brésil, le Mexique, etc., et plus près de nous, le Portugal, l'Algérie, la Tunisie ont planté et plantent à profusion l'arbre de Noé; de sorte que le vin est aujourd'hui plus abondant que jamais.

Mais si la quantité existe, en est-il de même de la qualité? Sans doute, les moyens de culture et de vinification se sont perfectionnés, mais l'on a surtout visé à la quantité. C'était naturel, puisqu'à un moment on croyait que le vin allait manquer, et que le peu qui s'en récoltait était arraché à gros prix au producteur. C'est même à la faveur de cet état de choses qu'à pu prospérer la fabrication de pseudo-vins, heureusement en décroissance marquée aujourd'hui parce qu'elle est moins lucrative depuis que le vin naturel ne manque pas.

On a donc planté partout. Des cépages les plus renommés des contrées à vins fins ont été transportés sous tous les ciels, placés dans tous les terrains. Mais il est deux facteurs importants de la qualité du produit qui n'ont pu suivre cépages et méthode; ces facteurs sont le sol et le climat. De sorte que les vins d'Australie et de Californie ne sont heureusement pour la France qu'un lointain souvenir de ses produits authentiques. Et c'est pour elle une des branches de salut dans la crise viticole qu'elle traverse. Le viticulteur français intelligent le comprend si bien qu'il redouble d'efforts pour maintenir à ses produits la vieille renommée dont ils jouissent. Il n'épargne ni peine ni sacrifice d'argent pour atteindre ce but. Espérons que la réussite couronnera son œuvre.

Si la culture de la vigne s'est généralisée en dehors de la France, est-elle devenue pour les pays qui s'y sont livrés une source de richesses? Il est encore un peu trop tôt pour dire si en définitive elle a augmenté le bien-être de ces pays. Passagèrement cela s'est produit pour l'Espagne, le Portugal, et l'Italie, pendant des années de forte exportation; mais l'engouement pour l'arbre à vin qui s'en est suivi n'a-t-il pas frappé la médaille d'un triste revers en suscitant des entreprises viticoles qui ont périclité depuis? Quant à l'Australie et quelques autres contrées, il est notoire qu'à l'heure présente la vigne n'y est généralement pas une source de grands profits, que le découragement s'est emparé de plus d'un viticulteur, que dans le premier de ces pays, l'Etat a dû créer des subventions pour la viticulture, et que dans les autres on a, sur plusieurs points, arraché les plantations pour mettre autre chose à la place.

La consommation universelle du vin ne s'est peut-être pas développée, durant les vingt dernières années, autant que sa production naturelle. Naturelle est ici

un mot d'une grande valeur, car la fabrication de boissons de toutes sortes décorées du nom de vin et souvent d'étiquettes renommées, jetées sur tous les marchés du monde par de cyniques fraudeurs, fournit un fort contingent à la consommation, nuisant et aux producteurs véritables et aux consommateurs, qui s'intoxiquent à la longue.

Il est permis de croire que, malgré l'extension donnée à la viticulture, il n'y aurait pas surproduction, c'est-à-dire que les 130 millions d'hectolitres de vins produits chaque année seraient consommés si ces mélanges innombrables, qui ne redoutent ni le phylloxera, ni la gelée, ni la grêle ou autres fléaux et peuvent se vendre à bas prix, ne venaient se mêler aux bons produits.

Aussi chaque gouvernement doit-il avoir à cœur, ne fût-ce que dans l'intérêt de l'hygiène publique, de faire une guerre sans merci aux produits sophistiqués et de propager le bon vin.

Les considérations d'ordre social et économique qui militent en faveur de semblable action de la part des gouvernements sont nombreuses, et il sera bon de les examiner.

MATHESON AND GRANT'S ENGINEERING TRADES' REPORT.

THE last half-yearly report of this well-known firm is dated July 17th, 1895, from which we extract the following:—

The expected boom has not yet arrived and prices, which at the beginning of the year were still falling, seemed to have touched their lowest in January, and how then settled into a permanent stagnation. There has ever, of late been a distinct revival in the engineering trades, which, though it has as yet only slightly affected the values of coal, iron, and steel, still continues, and is likely to go further. Everywhere there is a feeling that the worst of a bad time is over, and when the Parliamentary Elections now in progress are completed a steady and improving trade may be anticipated. In the United States there is already a marked revival.

The prices of pig iron have, during the last six months, fluctuated only within a narrow range, but during the last few weeks there has been a distinct advance which gives promise of further improvement. . . . The output capacity of the large steel works, as compared with the present demand, still keeps down prices, but the demand is increasing and prices are tending upwards.

Railway Carriage and Waggon Builders still complain of insufficient work and unprofitable prices. The reduced traffic returns of the home railways restrict orders from this source for waggons, and most of the railways are able in their own workshops to meet their requirements for carriages. South America and India continue to order sparingly for current needs, but an early improvement may be looked for in both these markets. Steel under-frames for bogie cars are being made in increasing numbers of pressed steel, but so long as only passenger carriages are in this country made to run on bogies, the requirements here will never attain the importance of the system on the American lines, where most of the goods waggons are so constructed. . . . Notwithstanding the insufficient employment of the available steamers, with the consequent low freights and diminished earnings, there is a growing expenditure in vessels which, by their design and equipment, afford a better carrying and earning power. Both on the Clyde and in the principal English yards the present trade and prospects are good, though as yet not sufficient to bring back prices to the prosperous standard of 1889-90. War vessels are likely to be in increased demand; both China and Japan will probably spend as far as their means allow, and builders in this country will get their full share. The revival of competition between Great Britain and the United States, as shown in the building of Ocean steamers in the latter country, marks a new era in this trade, but it will be some time before American builders can compete in price in the open market.

The makers of bridges, buildings, and roofs, who, under the stimulus of increased demand a few years ago enlarged their works, have, as in the case of other branches of trade, found the very improvements then effected tell against them in the recent dull times. . . . The price of cement in the London district has risen slightly during the last two months. At present the export cask of cement, 400 lbs. gross is selling at about 5s. 6d., and the improvement in the demand continues. The controversy is still unsettled concerning the admixture by some makers of other material in a raw state with the calcined chalk and clay, of which English Cement is made. In conclusion, the vast accumulation of money in this country can only find employment in directions which will benefit the engineering trades. The outlet afforded by gold mining during the last few years is not nearly sufficient to compensate for the lack of other enterprise. There is no lack of sound and profitable schemes ripe for commencement but which have been put aside for more favourable times, and as there is a fashion in enterprise, so undertakings of similar kinds follow rapidly when one or two are successfully initiated. Transport by land or sea calls for the aid of steel makers as well as engineers, and will, during the next few years, tax all the powers available in this country. A revival will reveal how greatly the manufacturing skill and capacity of the country have been improved during the last few years. The

restriction of hours and other demands of workmen have encouraged every kind of labour-saving appliance which will assist greatly in the competition to be expected not only from the Continent but from the United States. The opening of new ports in China will go far towards the introduction of more British made machinery, but the Chinese policy of forbidding any occupation of the soil of the country by foreigners must be modified before railways or mines can be properly developed.

THE "EQUITABLE."

"SATISFIED," says a London journal, is the name of a very handsomely got up pamphlet just issued by Messrs. Munkittrick and Triggs, the British managers of the Equitable Life of the United States. It looks a quaint and puzzling title; but a glance at the contents of the little book discloses its appropriateness. It was our fate for years to hear of the "disappointment" felt by the tontine policy-holders of this great Society at the assumed failure of the results to realise the estimates. This pamphlet is the answer to these croakings, of which, let us hope, we have now heard the last. The "disappointed" ones were very diffident about putting in an appearance, and it is only reasonable to infer that they were like the spirits called from the "vasty deep," who would not come when they were called. This book, on the other hand, is a record of the "satisfied" ones. Here we have a reprint of a hundred letters—most of them from well-known and influential people—testifying to their great satisfaction with the profitable results of their tontine assurances; or, in the case of ordinary policies, it is the survivors who express their gratification at the liberal bonuses and prompt payment. In "Satisfied" I think the London managers of the U. S. Equitable have given the cavillings of the past their *quietus*. Every one should read it.

MR. BONSAI.

REFERRING to the new U.S. Secretary of Legation in Tokyo, the *Sketch*, of July 24th, says:—It may be remembered that some brilliant special correspondence from Morocco was done by a young American journalist, Mr. Stephen Bonsai, who afterwards published a book on that "distressful country." Latterly he has been combining diplomatic with literary work during his sojourn at Madrid as *Chargé d'Affaires* at the American Legation, and now it seems he has gone off to Tokyo to take up a similar appointment with the United States representative there. Perhaps, by-and-by, we shall have a book from him on the Far East, viewed possibly not altogether from Mr. Henry Norman's standpoint.

OBSERVATORY ON FUJI-YAMA.

MR. NONAKA ITARU, a member of the Japan Meteorological Society, is reported to have set up an observatory on the top of Mount Fuji, intending to make continued observations all the year round. In January last he made the ascent of the mountain, and found that the cold at the summit is not so intense but that a man might pass the winter there. He will be assisted by a few experts from the Central Observatory of Tokyo, the Director of which, Mr. Wada Yuji, will pay a visit to the plucky meteorologist on the top of Fuji in the beginning of October.

SALE OF THE "FIDELIO."

A KOBE contemporary learns that the *Fidelio* was transferred to the Japanese flag last Friday, and renamed the *Hoko Maru*. The buyer is Mr. Hachima Kanesuke, of Nishinomiya, who paid £10,500 for the vessel. The sale was conducted by Messrs. Sennett & Co., the late charterers of the steamer.

PRECEPT AND EXAMPLE.

HERE are the terms in which the British electors who have voted against Independent Labour candidates are described by a writer in Mr. Keir Hardie's organ, the *Labour Leader*:—"Curs, caitiffs, cads, numskulls, ninnies, nithings, slaves, sycophants, spitlickers, sweaters, scoundrels, cacophonous caddis-heads, crapulent cowards." Another opponent is referred to as a "cabbage-headed Cockney Scotsman." By the Tennysonian motto which adorns the front page of the journal the Editor asks for "sweeter

manners," for "the larger heart, the kinder hand." He evidently knows his own needs remarks the *Kobe Chronicle*.

ECONOMICAL AND INDUSTRIAL.

Count Matsukata's resignation is said to have been felt at the Stock Exchange, shares having gone down considerably as soon as the news reached there. The War Loan went down 30 *sen*, the Ryomo Railway 1 *yen* 30 *sen*, the Tanko Railway 80 *sen*, the Boso Railway 40 *sen*, and so on. It is a fact that the ex-Minister of Finance enjoys the confidence of a large section of business men, but it is a question whether he monopolizes their confidence to the extent of causing a feeling of uncertainty at the Exchange on the receipt of news of his resignation. The incident may possibly have been utilized by speculators, but it seems to be an exaggeration of facts to ascribe the recent fall in shares to the Count's retirement.

The national banks, whose charters are to expire in the course of a year or so, are reported to be taking steps to present a petition to the Diet next session for the renewal of their charters. The Government, it is said, will not grant the renewal, even if both Houses of the Diet may recommend such a course; and it is doubtful whether their petitions will be approved by the Diet.

The extraordinary increase of insurance companies during the past few years, and the nature of many of the latest additions, are beginning to attract the attention of men who have the development of sound business at heart. Five or six years ago, insurance companies could be counted on the fingers of a single hand, but there are now more than fifty. This enormous increase has been almost exclusively in the department of life insurance, marine and fire insurance companies being still very few. Many of the smaller and later companies are said to be so intent upon enhancing the market value of their shares as to declare all the profits as dividend without setting aside anything in the form of reserves. Moreover, so keen is the competition going on between these companies, that people fear that it will lead to disastrous consequences. The *Chugai Shogyo*, from which these facts are quoted, urges the authorities to exercise a judicious control over these companies.

The scheme for the construction of a harbour in Tokyo is engaging the attention of the City Improvement Committee. The matter has also been taken up by the Tokyo Chamber of Commerce which recently appointed a committee to investigate the subject. The first meeting of the committee took place on the 26th inst., there being present Messrs. Shibusawa Eiichi, Watanabe Hiromoto, Sakuma Teiichi, Umemura Seiichi, Yamanaka Rinnosuke, Kato Masanosuke, Gimbayashi Tsunao, and Nonaka Mansuke. The meeting was also attended by an expert, Mr. Furuichi, and Mr. Nambu, a secretary of the Home Department. Mr. Watanabe was appointed chairman of the committee. Mr. Furuichi, at the request of the committee, explained at length the various engineering schemes thus far proposed since the matter was mooted in 1881. He also alluded to the investigations that are being conducted by the City Improvement Committee, of which he is a member. At the conclusion of Mr. Furuichi's remarks, the Chamber's committee decided to confine its researches to the commercial and economical aspects of the subject, leaving the engineering side to the City Improvement Committee.

The Japanese merchants of Yokohama have applied for and received official recognition of the Chamber of Commerce they have decided to establish in accordance with the provisions of the Chambers of Commerce Regulations. Among the projectors of the scheme, may be mentioned Messrs. Hara Zenzaburo, Otani Kahei, Ono Mitsukage, Kimura Riyemon, Takashima Kayemon, and so forth.

FORMOSA NEWS.

The *Chuo Shimbun's* correspondent describes the capture of Oulan and Miaoli by the Imperial Guards. The former place was occupied on the 13th and the latter on the 14th instant. The only resistance worthy of the name offered to the advancing Japanese took place on the hills to the south of Miaoli, immediately beyond its south gates. There several hundreds of Chinese held strong places and did not yield until they were surrounded on almost all sides by the Guards, who crawled up the face of the hills under cover of mountain guns. It took the Japanese a little over two hours to obtain complete possession of these hills. The casualties on the Japanese side were 1 killed and 5 wounded, including a sub-lieutenant. The exact loss of the insurgents is not given, but from the fact that nearly 50 were shot down in their flight across rice patches, it may be inferred that the total in killed alone must have been not less than 70 or 80. This engagement took place immediately after midday on the 13th. On the 14th, the Guards advanced toward Miaoli, some over the hills and the rest round their base through the fields. The town of Miaoli was found almost entirely deserted, and the residents had carried off the valuable portions of their movable property. It is a newly settled town, containing about 1,000 houses and enjoying the reputation of being one of the most difficult places to govern in the whole island. The place had, until a few days before, been held by one of the trusted captains of Liu Yung-fu, and extensive preparations had been made for giving a hot welcome to the Japanese. But the report of the treatment which their comrades had received at Chintoshan and Tsienpishan a few days ago frightened the insurgents stationed here, who were sensible enough to beat a retreat in good time in the direction of Chang-hua. The last mentioned place is about thirty-five miles south of Miaoli.

The Imperial Guards division is thus pushing southward, slowly but steadily. Meanwhile, preparations are vigorously going on to collect in some part of the island a large body of additional troops, variously estimated at 40,000 and 50,000. The new army will be composed of the whole of the Second (Sendai) Division, and part of the First (Tokyo) and the Fourth (Osaka) Divisions. The total strength of the Japanese army in Formosa will thus be increased to about 60,000 by the middle of September, when the reduction of the southern part of the island will be undertaken on a large scale. It is expected in Tokyo that the complete restoration of peace in the island will be effected in the month of November.

Lieut.-General Viscount Takashima, the newly appointed Vice-Governor-General of Formosa, who will take command of the army that is being sent there, will leave Tokyo on the 1st of September by the 11.40 a.m. train. Staying a few days at Kobe, he will leave for the south on board the transport *Yokohama Maru* on the 6th of the month. His suite will consist of Lieutenant-Colonel Ijichi, Lieutenant Takashima (his son), Captain Utsunomiya, and a number of clerks. There was recently a rumour that, upon the arrival of Viscount Takashima in Formosa, Count Kabayama would return to Tokyo. But this report has been contradicted.

A railway corps has been organized in Tokyo for service in Formosa. Its mission is twofold, to work the existing lines and open new ones. It has been placed under the command of Lieut.-Colonel Yamaye, and will leave for the south in a few days.

The following telegram from Governor-General Count Kabayama, dated Taipeh August 29th, 12.25 a.m., has been received at the Imperial Military Head-quarters in Tokyo:—"The vanguard of the Imperial Guards Division, which left Tai-kia on the 24th instant, reached the left bank of the Tai-to river on the 26th, while the main body of the Division at the same time arrived at the Tai to and Geoma-tao. On the same day the left column attacked Taiwanfu,

which it took with a loss of 15 killed and wounded.

"On the 28th, early in the morning, the right wing, under Major-General Kawamura, began to advance by the way of Benshito, while the left wing, under Major-General Yamane, commenced its attack upon Hakkesan. At 7.30 a.m., Hakkesan and Chang-hua more completely occupied. The casualties on our side were 9 killed and wounded; the enemy's loss being still unknown. The strength of the enemy was about 5,000, and the bulk of this force fled in the direction of Chia-i, while a part took the road to Lo-kiang. Chief among the spoils are about 400 pieces of ordnance of various kinds and ages. The insurgents in their flight towards Chia-i were pursued by a battalion of infantry and a troop of cavalry, while a mixed detachment was sent in the direction of Lo-kiang. The bulk of the Division encamped the same day at Chang-hua.

"I have issued orders to the Imperial Guards to remain at Chang-hua and not to advance further south, my intention being to give them time to rest and recoup their strength. The number of available men has been reduced to nearly one-half of the original strength. Previous to their advance south of Shin-chuh, they had undertaken the arduous task of clearing away the ferocious insurgents. And after entering on the southward march on the 8th instant, they valiantly pushed forward over a rough and difficult country regardless alike of scanty provision and intense heat. Driving the enemy before them everywhere, they have already pushed far on their southward march. After leaving Tai-kia, they relied entirely upon what provisions the localities they passed through afforded them, and thus relieved of waiting for the arrival of provision trains from the rear, they were enabled to occupy important places like Chang-hua and Taiwan in a short period of time, thus completing the subjugation of the whole of the northern part of the island. During the recent march of the Guards Division, our fleet cruised along the coast and on several occasions rendered effective assistance to the land forces, thus facilitating the latter's southward advance."

From the above telegram, it is to be inferred that the Imperial Guards Division will stay in the vicinity of Chang-hua, until the preparations now going on shall have been completed for a general advance upon the strongholds of the insurgents in the south of the island.

The following telegram from Major-General Oshima, Chief Staff Officer, dated Taipeifu, August 30th, 11 a.m., has been received at the Imperial Military Head-quarters in Tokyo:—

"After taking Chang-hua and Taiwan with exceeding hardships and privations on the 25th inst., the Imperial Guards Division despatched a detachment to Lo-kiang, which was taken possession of without much difficulty. On the same day, a battalion of horse, supplemented by an infantry battalion, pursued the enemy, and, killing a large number on the way, advanced as far as the vicinity of Torokumon.

"At the battle of Chang-hua, the enemy's loss was about 650; a number of prisoners were taken; among the spoils being 400,000 rounds of ammunition and a quantity of telegraph apparatus. The telegraph line between Chang-hua and Koshiho remains intact. Yesterday the division ordered a body of troops to make a search in the vicinity of Chang-hua, in the belief that, the attack having been rapid and energetic, a large number of the enemy might have been unable to make good their escape and might be lurking there still."

Lo-kiang is a sea-port town about 8 miles west of Chang-hua; Koshiho is not on the map, neither is Torokumon; but they seem to be intermediate stations south of Taiwan.

The following telegram from Major-General Baron Oshima, Chief Staff Officer, dated Taipeifu, September 1st, 2 p.m., has been received at the Imperial Military Head-quarters in Tokyo:—

"According to the information of the inhabitants and the telegrams left behind by the enemy, it is evident that the troops that had

come up to Chang-hua from Tainan had been despatched by Liu Yung-fu in reply to an urgent request for reinforcements by the Governor of Chang-hua. The main portion of the reinforcements from Tainan were still on the way when Chang-hua fell into our hands; they probably did not expect that our troops would so quickly advance upon that place. That the insurgent troops at Chang-hua suffered from want of provisions is proved by the telegrams daily wired by the Governor of that place. That official is reported to have fled on foot in great haste toward Taiwan, as soon as he heard the reports of our artillery attacking Hakkesan. A large number of loaded guns were left in the buildings of the prefectural government at Chang-hua. Between Chang-hua and Lo-kiang not a single enemy is to be found. The pursuit of the cavalry battalion was so hot that the insurgents fled leaving all their arms and ammunition as well as uniforms behind them. The inhabitants at Chang-hua are gradually returning, and commodities are also collecting there."

The Emperor was pleased to send the following telegraphic message to Governor-General Count Kabayama on the 30th ultimo:—

"We are highly pleased with the loyalty and valour displayed by the different corps under your command, which, in spite of heat and difficulties, have in so short a period succeeded in driving the insurgents out of Taiwanfu and Chang-hua, thus completing the subjugation of the northern part of the island. The lingering heat of summer being still intense, it is Our wish that every one of you should take good care of yourselves."

The Empress also caused the following message to be transmitted to the Governor General:—

"Her Imperial Majesty the Empress has been exceedingly gratified to hear of the occupation of Taiwanfu and Chang-hua by the Guards under the command of the Governor-General. Her Majesty has been profoundly pleased with the loyalty and valour shown by the officers and men, on whose account she feels especially concerned as they are operating in so hot and unfavourable a climate."

According to a private letter from a certain official interpreter attached to Count Kabayama's staff, published by the *Mainichi Shimbu*, the aboriginal tribes of Formosa, at least some of them, seem to be well affected toward the Japanese. When the Japanese troops entered Miaoli, some tribesmen through the medium of a Chinese, begged to offer alliance to their new rulers. They were told that if they wished to offer allegiance, they should come in person to the camp. A few days afterward, three chiefs arrived at Miaoli, and begged the acceptance of the assistance of the tribesmen in the subjugation of the southern part of the island. They said that some time ago Liu Yung-fu had sent a messenger to them, with presents of liquor and other things, asking their co-operation in attacking the Japanese. As this request was rejected, the messenger, Wu by name, who seems to have been accompanied by a body of soldiers, attacked the tribesmen. The latter, said the chiefs, were consequently burning with indignation against the Chinese insurgents. As the proof of their fidelity, the chiefs produced a wooden board on which a Japanese proclamation was inscribed, and which they stated they had received from the Japanese General on the occasion of the expedition in 1874. It was thought imprudent to place implicit reliance upon their expressions of fidelity, but they were dismissed with various presents. Afterward they again came to the camp, this time followed by a number of young men armed with their weapons of war, and begged for permission to accompany the Imperial troops in an attack upon the insurgents. As their entreaties were exceedingly pertinacious, the chief staff officer granted their wish. These facts, says the writer, were duly telegraphed to the Governor-General.

We have already reproduced an official interpreter's letter describing how the chiefs of the aboriginal tribes implored for and received permission to accompany the Imperial troops in their southward march. This letter was based

upon a telegram said to have been received at Taipeifu. The *Nichi Nichi's* correspondent, who accompanied the Guards in their march to Taiwanfu, writing from Miaoli, has the following story about the aborigines:—"Shinkiang is a hamlet to the east of Oulan. The inhabitants are aboriginal tribesmen who settled there under Chinese rule. They had been subjected to frequent annoyances by the insurgents stationed at Miaoli, being thereby compelled to take up arms and defend themselves. They were consequently much relieved at the advance of the Japanese troops, whom they welcomed with unmistakable goodwill, offering presents and otherwise busying themselves in the interest of their new rulers. Several of them acted as guides, and when the defences in the neighbourhood of Miaoli were attacked, they rendered valuable service to our troops, always sharing the danger with the latter. While the troops were quartered in the vicinity, the villagers did everything in their power to please them." Perhaps this story may have been the original of the version given by the official interpreter at Taipeh, a supposition which is all the more likely because no other story of the aborigines joining Japanese forces is told by any of the correspondents.

KOREAN NEWS.

A telegram, dated Söul, August 30th, 2.50 p.m., published by the *Fiji Shimpö*, states that a conspiracy has been discovered at Chhöl-wön, in Kang-wön-do, that the conspirators, pretending to act under a secret mandate from the King, had opened communications with their partisans in Chol-la-do, Kyong-san-do, and Ham-gyöng-do, and that the ringleaders have been arrested. Chhöl-wön is a prefectural town among the mountains about 40 miles north of Söul. Nothing is yet known of the nature of the alleged conspiracy, but it appears that a more or less uneasy feeling exists in provincial districts. The *Fiji Shimpö's* correspondent, for instance, writing under date of the 15th ultimo, makes the following statement:—"At present the provincial localities seem to be enjoying peace and tranquility. But this apparent quiet is not the result of either increased confidence in the central Government or the dissemination of a better spirit of discipline among the people. It is to be ascribed entirely to the presence of Japanese troops at all important places. These troops are not only feared, but respected and admired. Within the sphere of their vigilance and inspection, the Korean local officials dare not indulge in rapacious practices. These troops are, consequently, regarded by the people as their benefactors. Their withdrawal will be the signal for the revival of all the arbitrary and exacting conduct of the local officials with redoubled violence." The writer is convinced that insurrections would rise up throughout the country, should the Japanese troops be withdrawn.

Concerning the new coalition Cabinet, most of the correspondents believe that it will not last long, some even putting its life at a month or two at most. It seems to be generally understood that so long as Count Inouye remains in Söul the Cabinet may continue united, but that upon the withdrawal of his personal influence the inherent animosity between the different factions of which it is composed will break out with renewed force.

As to the rumour that the Queen has wired to Ming Yong-yik, advising him to return home, the *Nichi Nichi's* correspondent rejects it as a groundless story, probably invented by the followers of a certain aged plotter.

Although the reform of local administration remains to be carried out and local affairs are in a state of great disorder, signs are not wanting of material improvement in the capital and a few other principal centres of trade and politics. One of the most remarkable changes for the better, says the *Kokumin Shimbun's* correspondent, is the breaking down of the barrier that has hitherto existed between the gentry (*yang-pang*), and the common people. Since the reforms of last year, the political privileges of the *yang-pang* class have been disregarded,

and important official positions are now held by men of plebian extraction. To this catalogue belong Mr. An Keiju, Minister of War; Mr. Yu Kitsuei, Vice-Minister of Home Affairs; Mr. Kim Kachin, Minister of Agriculture, and several others. The abolition of all class distinctions in the dress of the people, has also had beneficial effect, there being now, at least in Söul, an equality between men of all classes.

The advantages of the postal system recently established by the Korean Government is said to be slowly receiving recognition by the people. But how slow the progress is, may be seen from the fact that the average number of letters posted in Söul is about 60 per day. Steps are being taken by the Government to extend the route to Fusan.

According to the report of the Japanese Chamber of Commerce at Ninsen, the total trade of the port for the month of July was 459,198 *yen*, of which imports amounting to 363,306 *yen* and exports to 95,892 *yen*. Compared with the returns for the preceding month of June, an increase of 103,125 *yen* is observed in imports, and a decrease of 5,995 *yen* in exports. The increase of imports is ascribed to the efforts of the Chinese merchants, who are steadily coming back to the place. Compared with the month of June, the imports by Chinese merchants increased by as much as 118,167 *yen*, while those by the Japanese show a decrease of 15,129 *yen*. A favourable sign for the Japanese is the increasing demand for cotton yarns. Cotton yarns were first tried at Khang-hwa, and the market has thence extended to the south-western part of Kyöngkwido and the western coasts of Chhung-chhông-do. The Koreans have found it more economical to weave material for their garments out of these yarns than to buy shirtings from the Chinese. At this rate it is hoped that Chinese trade in shirtings may be displaced to a large extent by the Japanese trade in yarns. Yarns No. 16 are said to be most in demand.

The recent organization of the coalition Cabinet with Kim Koshu at its head is regarded by well informed persons as proof of the complete success which has attended Count Inouye's policy of conciliating the Ming or Queen's faction and at the same time removing the unpleasant feelings with which the Tai Wön-kun and his followers have regarded Japan. Such is the view of the situation taken by the *Nichi Nichi's* correspondent, who seems to be more or less in touch with the springs of political activity in Söul. He states that, as the result of carrying out this policy, the Court and the Ming faction, whose feelings against Japan were embittered first by the Tai Wön-kun's coming into power and then by Pak's arbitrary conduct, now regard Japan with entire confidence and gratitude. The changed attitude of the Court and the Ming faction toward Japan is proved by the despatch of thirty students to Japan at the expense of the King. These youths have been selected from families with the highest connections, and they are to be trained in various administrative affairs, so that on their return home they may be appointed to important posts in the Government. As to the Tai Wön-kun's grandson, who was recently released from imprisonment, the writer observes that the young man is keeping himself very quiet, and that the party to which he belongs does not seem to be disposed to enter upon political intrigue. Kim Koshu and other members of the new Cabinet are in perfect harmony among themselves. In short, the Japanese Minister's policy has been crowned with complete success.

It is a question, however, whether this is destined to last long. Indeed, most of the Japanese correspondents in Söul appear to doubt the durability of the present arrangement. They complain of the increasing influence of the Queen and the Ming faction, and predict that their return to power will prove anything but favourable to Japanese interests. But those who take this view show themselves ignorant of the true state of affairs in the peninsula. "It must be remembered," says the *Nichi Nichi's* correspondent, "that Korea now occupies a position essentially different from that which she occupied

formerly, neither is the Ming faction in the same position as before. Will it be possible for the Queen by her own unaided efforts to reinstate her faction in power? No, she is not in a position to carry out her wishes without the consent of her country's adviser. Perhaps with the exception of the Queen and the principal leaders, the rank and file of the Ming faction are unable to account for the reviving influence of their party. It is no wonder that outsiders should indulge in various groundless speculations. It may help these persons somewhat to understand the state of things to be told that the Queen is dependent upon another's goodwill and friendship for the security of her position and the revival of her party's influence, and that she is genuinely grateful for the support afforded her by that personage." The writer, however, is quite aware of the danger involved in the recall of the Ming faction to power. Now that the suspicion and antipathy with which the Ming politicians have regarded Japan are removed, the rest says, the *Nichi Nichi's* correspondent, depends upon the tact and management of the Japanese Minister, or in other words, upon the policy pursued by the Government of Japan.

The situation in Söul is rendered still more plain by a private letter published in the *Nichi Nichi Shimbun*. The writer points out that it is a mistake to suppose that the Queen and the Ming faction are necessarily opposed to reform and Japanese interests. It is true that the party was once opposed to improvement and was also in sympathy with China; but that state of affairs was, in his opinion, the result of a mistaken policy followed by Japan, which, by taking an attitude of decided partiality to Kin Ok-kyun and Pak Yong-ho, drove the Ming into the hands of the astute Chinese Resident, Yuen Shikai. That the Ming are not positively opposed to Japan may be seen from the fact that, when the Hermit Kingdom was first opened by Japan, it was the Queen herself and her partisans who, rejecting the conservative policy of the Tai Wön-kun and others, welcomed the Japanese proposition as to the employment of Japanese officers in drilling the troops. Moreover, so long as it is impossible to keep the Queen completely out of the political arena, the writer thinks it a wiser policy to recognize her political position definitely and utilize her extraordinary talent and influence for the benefit of the country. To attempt to keep her in check would be simply to drive her into the dangerous practice of clandestine intrigue. "In our eyes," remarks the writer, "the only point of importance is the maintenance of the present close relations between Japan and Korea. It is not, consequently, diplomacy to make any distinction between the different political factions. It is unwise to attempt to judge the influence of Japan in Korea by the decline or prosperity of the Ming faction, especially when Count Inouye continues to exercise so vast an influence over the Korean Court."

On the 23rd ultimo, Countess Inouye had an audience with the King and the Queen. The latter talked with her for two hours, the conversation turning principally upon the incidents of Her Majesty's eventful life since the opening of the country for foreign intercourse. The Countess is said to have been struck by the powerful memory and extensive information displayed by the Queen. This was the first meeting between them, Countess Inouye having been unable to attend Court earlier on account of indisposition since her arrival at Söul.

Much importance is attached to the despatch of more than thirty students to Japan at the expense of the King. They are stated to have left Ninsen by the *Asahi Maru* on the 1st instant. Previous to their departure, they were received in audience by the King who exhorted them to use their time well while in Japan, so that on return they might be qualified to assist His Majesty in the work of national regeneration. On the evening of the 22nd ultimo, they were invited to the Japanese Legation, where they were addressed by Count Inouye in a long speech, telling them the reasons why they had been selected by His Majesty to proceed to Japan, and giving them many useful hints about the manner in which they should prosecute their

studies there. They will stay at the Keio Gijuku, under the special superintendence of Mr. Fukuzawa. Count Inouye has also been requested by the King to keep a watch over them while in Japan. The period of their stay in Japan will be a year or a year and a half.

The much talked of Edict about amnesty was promulgated by the *Official Gazette* of the 20th ultimo. The benefit of amnesty is to extend to all offences other than conspiracy, murder, theft, robbery, adultery, and the obtaining of money by false pretences. Besides conspiracy, there is another political offence of a similar nature, namely, that of invoking foreign aid for an internal political revolution. These two offences have never hitherto been placed in the category for amnesty, and the reason that the precedent has been established is that several of the Ming family are in exile on account of this offence. Other crimes covered by the act of grace are the receiving of bribes, extortion, and other malpractices of administration. The number of the prisoners liberated is twenty-eight. As to Ming Yong-chun, it is said that a messenger has been sent from the Court to recall him from Shanghai.

The *Yomiuri Shimbun's* correspondent remarks that Count Inouye enjoys the complete confidence of the King, who is reported to have expressed his wish that the Japanese Minister might be allowed to stay long in Korea. His Majesty is also said to have an especially high opinion of the zeal and integrity of Mr. Takehisa, Japanese Adviser on police affairs.

CURRENT TOPICS.

The *Hochi Shimbun* has the following note:—"Count Matsukata is the centre of the Satsuma politicians, and his movements cannot fail to produce direct effects upon the Satsuma men both within the Government and outside of it. It appears that his resignation has brought about general excitement among his clansmen. The excitement is not confined to young men, but extends even to the men of the older generation. There are two factions among Satsuma men, the *Doshikai* and the *Dokuritsushu* Club. They are usually antagonistic, but on the present occasion they act in common, and seem to have forgotten their old antipathy. How will the relations between Satsuma and Choshu men be settled in future?" It seems to be believed in certain quarters that a longitudinal, and not a lateral cleavage of the political world is inevitable before long. For our own part, such a result seems not at all improbable, but we cannot believe that Count Matsukata's retirement will have any power either to accelerate or retard such a consummation. Present appearances indicate that the Sat'-Cho elements in the government are more firmly united than ever.

The Radical party's messengers are everywhere well received by their provincial fellow thinkers, though the prevalence of cholera in many places prevents the holding of public meetings. But the organs of the parties opposed to the Radicals are indefatigable in circulating rumours, which, if they be true, point to a hopeless disintegration of the party. Among the provincials, those in the prefecture of Hyogo are reported to be in a most refractory mood. They are said to insist that, if the Radical party is to give support to the Cabinet, a distinct pledge should be extorted from the latter to introduce a system of government by party, and that, in addition, the Ministers should consent to revise the Public Meetings Regulations and the Newspaper Regulations, as suggested by the Radicals. On this basis alone will they, the Radicals of Hyogo, agree to follow the course decided upon at head-quarters. These rumours are reproduced for what they may be worth.

Several Extremist politicians have been arraigned on the charge of publishing incendiary pamphlets without obtaining the previous permission of the Authorities. Among the accused are two members of the Diet from the Prefecture of Niigata, namely, Messrs. Otake and Naito. The rest are the local Progressionist politicians of

Ibaraki and Tochiki. The documents printed in violation of law are said to relate to the question of the Liaotung peninsula. They were distributed in the Prefectures of Niigata, Ibaraki, and Tochigi.

The *Kokumin Shimbun* is a difficult journal to deal with, for it is an adept at imputing to others opinions which they have never expressed. Our contemporary charges us with having called it a Progressionist organ. We wish that it would point out a single instance in which we have designated it by that name. In a recent Weekly Summary, we incidentally remarked that the *Kokumin* "is almost regarded as the organ of the Progressionists." We believe there is nothing incorrect in this, because it is a well recognized fact that our contemporary is strongly in sympathy with the Progressionists. In the very next paragraph, we used the phrase "the *Kokumin* and the Progressionist organs," thus clearly distinguishing the two in the most unmistakable manner. Another point on which our contemporary pretends to think itself wronged is that we expressed surprise that Count Matsukata's resignation was first announced by the *Kokumin*. Our surprise, as we showed at the time, was not merely that the *Kokumin* was the first to report the matter, but that our contemporary was put in possession of the news almost immediately after the breaking up of the Cabinet meeting at which Count Matsukata gave his colleagues to understand that he was going to ask for another conference. If such a circumstance be not matter for surprise we do not know what can be. Our contemporary lastly charges us with weaving a romance out of circumstances which are unconnected with each other. The fact is simply that we merely hinted that there might be some meaning in the "circumstances that the *Kokumin Shimbun*, which is almost regarded as the organ of the Progressionists, was the first to announce his resignation; and that the Progressionist journals have generally manifested sympathy for him." Now, there being no question about the correctness of these two circumstances, was it not natural that some meaning should have been attached to the incident? We simply said that there seemed to be some meaning, but we did not insinuate, as the *Kokumin* would have it believed, that there appeared to be a serious conspiracy.

The *Doshikai*, the professed object of which is to bring about the amalgamation of the different Opposition parties, does not seem to be in a prosperous condition. Of late its members have been engaged in drawing up a manifesto, and several drafts have been prepared, but none of them has been found satisfactory, so that, after debating the matter long and, as it seems, to little purpose, the idea of publishing a manifesto had to be given up altogether.

The *Teikoku Teishin-sha* (Imperial News Agency) is responsible for the following item:—"Concerning Count Mutsu, contradictory reports are circulated, some saying that he will resign and others denying it. According to what we hear, the Minister of Foreign Affairs is said to have tendered his resignation to the Premier toward the end of last month on account of his illness, which, though not immediately dangerous, required complete rest from political work. The Cabinet, however, being in danger of more or less change in consequence of Count Matsukata's resignation, the Premier paid a visit to the invalid Minister at Oiso on the 26th ultimo, and prevailed upon him to withdraw his resignation for the present. Count Mutsu willingly consented, but should Count Inouye return from Korea and a suitable successor be found for the post, he will retire from the Government in order to rest and recuperate."

Viscount Miura, the new Japanese Minister to Korea, reached Seoul on the 1st instant, and had an audience with the King on the 3rd. Much curiosity is evinced about the diplomatic career of this Buddhist soldier. In nature he is the opposite of Count Inouye; he has nothing of the fiery and impetuous temper of his predecessor. On the eve of his departure from Tokyo, he is reported to have delivered himself

as follows:—"I have for some time been looked upon as a stranger by the statesmen in power, and my retired mode of life has made me unfamiliar with the state of things in the Government. By profession a soldier, I have had no experience in diplomacy, but I have a diplomacy of my own, which I propose to try in Korea. I am naturally unskilled in the art of mimicry. Some persons in the diplomatic service took pity upon my inexperience and offered to give me lessons in diplomacy, but I declined all their well meant offers, being content to rely upon my own resources. Count Inouye is urging me to be quick in coming to Seoul. I suspect he, too, is desirous of giving me lessons in the manner of discharging my duties. Haste is the beginning of mistake, so I am in no hurry to get to Seoul. If possible I should like to meet Count Inouye at Ninsen on his way home, so that I shall not be required to listen to his lectures. The post of Japanese Minister to Korea is one of great difficulty, but I believe that it is a fit place to try my own theory of diplomatic methods. What I dislike most is the interference of other persons. As to the Japanese Advisers to the Korean Government, I have written to Count Inouye to say that I will not endure any person who may come into collision with me."

Count Okuma recently returned from Oiso where he had been staying for a fortnight. Immediately after arrival in the capital he is reported to have remarked with regard to Count Matsukata's resignation:—"Count Matsukata's resignation is the subject of various criticisms, but nobody seems to understand the true state of affairs. Ostensibly the Cabinet appeared to be opposed to Count Matsukata's resignation, but in reality it is glad of his retirement. Count Matsukata's object was to satisfy the wishes of the people by summoning an extraordinary session of the Diet and by laying before it a report on affairs relating to the conclusion of peace and the friendly warning of the three Powers. But Marquis Ito is of opinion, that should an extraordinary Diet be convened, the Military and Naval measures would have to be submitted to its deliberation, and in that case the Cabinet would be deprived of the only instrument by means of which it can hope to manage the Diet in the coming winter session. This is the difference existing between the views of these two statesmen. Being an honest man, Count Matsukata implicitly believed the Premier, when the latter assured him that the Diet would be convened as soon as the Military and Naval measures should have been completed. He did not suspect that the Premier meant quite another thing. A man of strong sympathies, Count Matsukata perhaps did not think it proper to resign at once, and thus to disregard the advice of his colleagues. It is also conceivable that, being unskilful in the use of his tongue, he was probably unable to fully express his views at Cabinet Councils in opposition to the eloquent exposition of the Premier. Such I believe to have been the actual state of things. In that case, Count Matsukata deserves thorough sympathy. As to the Cabinet, it must be glad to have disposed of Count Matsukata, for his presence would have been an impediment to the carrying out of its policy."

THE CROWN PRINCE.

The *Official Gazette* publishes the following report concerning the condition of the Crown Prince:—"On the 26th ult.: temperature, between 36.65° C. and 38.1° C.; pulse, between 70 and 88; respiration between 30 and 40; on the 27th: temperature, between 36.6° C. and 38.5° C.; pulse, between 70 and 104; respiration, between 26 and 36; on the 28th: temperature, between 36.6° C. and 38.1° C.; pulse, between 80 and 100; respiration, between 26 and 36; on the 29th: temperature, between 36.6° C. and 37.7° C.; pulse, between 68 and 94; respiration, between 24 and 32; on the 30th: temperature, between 36.4° C. and 37.9° C.; pulse, between 74 and 96; respiration, between 22 and 28. The Prince is making slow progress towards recovery."

COUNT MUTSU.

Concerning the report that Count Mutsu intends to resign his Ministerial post upon the return of Count Inouye from Korea, the *Nichi Nichi* remarks that, according to the information of a certain individual who lately paid a visit to the Foreign Minister at Oiso, the story is unfounded. It is true that he tendered his resignation some time last month, but in deference to Marquis Ito's advice, it was afterwards withdrawn, and the Count has now no idea of retiring from office. The reason why he tendered his resignation is explained thus:—"Unlike some of his colleagues, who command great respect and admiration among the civil military servants of the State, Count Mutsu believes that his only utility consists in applying himself to the business of the State with zeal and industry. In the case of the elder statesmen, their usefulness remains more or less the same whether they attend office or remain at home confined to a sick chamber, for in either case their personal prestige adds to the Cabinet's power. But as to himself, he considers that the delicate state of health deprives him of a title to retain his place in the Cabinet." Actuated by these motives, he forwarded his resignation to the Premier, who advised him to withdraw it, telling him that, Treaty Revision and some other questions, on which he had thus far been engaged, being still uncompleted, his continued direction of affairs was absolutely necessary, and that, under such circumstances, his prayer to be released from his official duties would simply lead to the prolongation of his leave of absence by the Emperor. Upon this, Count Mutsu willingly withdrew his resignation, assuring the Premier that, since it was His Majesty's pleasure to allow him to direct the affairs under his charge to the best of his ability, bearing in mind the condition of his health, he was but too glad to devote himself to His Majesty's service as long as he was spared by death. The news agency which circulated the above-mentioned erroneous report about Count Mutsu's resignation mixed it up with Count Matsukata's resignation. There could, however, have been no connection between the two, because it was on the 25th ult.—namely, before the Premier had received Count Matsukata's resignation—that the Minister of Foreign Affairs withdrew his resignation. As to his condition, the *Nichi Nichi* states that, although he can not be said to be making much progress toward recovery, he is not seriously ill. He is in good spirits, and is prone, in spite of his physician's advice to the contrary, to indulge in long and animated conversations. It is believed, says our contemporary, that he may return to the Capital before the end of the present month.

THE EXCHANGE OF PRISONERS.

Particulars of the voyage of the *Toyohashi Maru* to Taku, with the Chinese prisoners on board, and about their return to the Chinese Government, are published in the *Osaka Mainichi Shimbun*. After taking on board the captives who had been collected from the respective places of their detention, the transport left Kobe on the 13th ultimo, and touching at Mitsugahama to ship those kept at Matsuyama, she weighed anchor on the morning of the 14th. Nothing worth notice took place on the voyage, but there were frequent quarrels among the Chinese about food and drink. About 2 a.m. on the 18th, the *Toyohashi* dropped anchor about 7 miles from Taku. The poor captives had been in a state of excitement during the whole night; they shaved, dressed their pigtailed, and in other ways busied themselves in preparations for landing. At dawn they were dressed in the new clothes given them by the Japanese Government on their departure from Japan. At 11 a.m., Captain Wang and two other Chinese Naval officers and a civil official, accompanied by Captain Kajikawa, the Japanese Military agent at Tientsin, and Mr. Osugi Sutematsu, a clerk of the Japanese Consulate at Tientsin, came off to the ship in a steam launch,

which was soon afterward followed by two tugs with a number of junks in tow. After a conference between Lieut.-Colonel Murayama, and the Chinese officers, the whole party, prisoners included, proceeded toward Sinchen at 1 p.m. It being the Chinese Emperor's birthday, the forts of Taku were flying hundreds of flags and pennons, while both banks of the river were thronged with a numerous crowd of people who had collected there to see their countrymen come home from their land of captivity. From the way in which the people shouted and cheered it looked, says the writer, as though they were welcoming home their troops after a glorious war. As the prisoners landed at Sinchen, they were given a loaf of bread each by Chinese soldiers stationed at the wharf for the purpose. Shortly after the whole party had landed, Major-General Lo arrived, and conducted them to the barracks at Sinchen, where the ceremony of the transfer of the men was completed between him and Lieut.-Colonel Murayama. Of the prisoners thus received, the sick were at once sent to hospital, while the rest were consigned to dirty sheds in the garrison. According to information afterward obtained, it is stated that the returned prisoners were not allowed any food that evening. Those who had money were told that they might go home at once; but those who were penniless were ordered to wait until the next morning, when provision would be made for them by Viceroy Li. But the provision promised turned out to be a paltry sum of 3 dollars each to officers and half a dollar each to non-commissioned officers and men. About a hundred of these liberated prisoners are said to be desirous of returning again to this country. One of them particularly, namely, Ma Tsintau, is said to have made preparations for leaving Tientsin for Osaka in the beginning of this month. The Japanese officers, after handing over their charge to General Lo, went to Tientsin by invitation of Viceroy Li, who entertained them at dinner. As to the Japanese prisoners in China, their delivery to Japan was to be effected somewhere in Liaotung in exchange for about 600 Chinese prisoners kept in the occupied territory on the 1st instant. But it is stated that, as the preparations were not complete, the Chinese General appointed for the task has asked for a delay of a month, and that the request has been agreed to by Lieut.-General Viscount Sakuma, Governor-General of the occupied territory in Liaotung. The number of Japanese prisoners is variously estimated to be between six and eleven. Most of them are supposed to be military coolies.

MUTINY AT TIENTSIN.

According to trustworthy information received by the *Nichi Nichi Shimbun*, it is stated that a mutiny broke out in the barracks at Yaoh-a, Tientsin, at 3 p.m. on the 16th ultimo, resulting in the massacre of about 100 persons. It was rumoured that Wu, the officer in command of the forces, had been killed, but this seems to have been incorrect. The cause of the mutiny is ascribed to the discontent of the soldiers on the question of pay. At eight in the evening, the Captain of the Japanese gunboat *Chokai* received from the Captain of the H.B.M.S. *Swift* information of the mutiny and of the landing of a party of British marines to protect the Settlement, and asking his assistance should the apprehended danger come to pass. The Captain of the *Chokai* consequently landed a party from his vessel for the protection of the Consulate. But the mutiny did not spread or cause any further mischief.

The scheme of reaching the North Pole by means of a balloon is to be put into operation by Mr. S. A. Andree, a Swedish civil engineer. He proposes to start from Spitzbergen in a balloon holding gas sufficient for thirty days, and to travel northward with two companions. Andree expects to reach the pole in six days, and takes a photographic outfit with which he expects to make pictures of the objects of interest around the pole. The car is to be provided with sails for steering the balloon.

THE SHOJI AFFAIR.

The Coroner's charge to the Jury at the Brockbank inquest seems to have caused much excitement. A correspondent, now travelling in the interior, writes as follows:—"I have lived a good deal with Hoshino and Brockbank, and know them both well. It was the very reverse of Hoshino's interest that Brockbank should die, inasmuch as Brockbank shared his allowance with Hoshino, and this share of the allowance was the only means of subsistence that the latter had, till such time as the hotel at Shoji was finished. Hoshino did not encourage Brockbank to drink, but, on the contrary, to my certain knowledge, checked him, often throwing his drink out of window. Brockbank was, in fact, always in good condition when Hoshino had him under his control, away from Miyanoshta, or any other place where he could get unstinted whiskey by signing or paying for it. The reason why Hoshino took Brockbank to Shoji was quite simple. Brockbank had on several previous occasions got into quite as bad a condition as he seems to have been in this last instance, and had recovered almost miraculously in a few days at Shoji, where he was under strict control, and especially where he was away from Matsumoto, a bad woman, who apparently was in the habit of making him drunk for the purpose of taking his money from him, and who used to stop his letters. Of course Hoshino committed a grave error in disregarding Dr. Baelz' recommendation, but I can quite understand how he came to do so, having myself seen the wonderful effect that the mere journey to Shoji had on previous occasions in pulling Brockbank together. I have in my house a letter written in pencil by Brockbank on sheets torn from a notebook. I believe this to be the very book with sheets torn from it of which so much was made at the inquest. None of these points came out in the evidence. Yet surely it is the duty of a Coroner to get at the full truth in such matters, and all the facts I have stated were readily obtainable. It almost seems as though there was no earnest desire to elicit them. Possibly the course pursued at the inquest was influenced by the talk of a certain section of the Yokohama Community. Among some persons there existed a strong dislike for Hoshino, because, being a Britisher, he had become a naturalized Japanese, and had very emphatically declared that he had never had any reason to regret the step, and that all the stuff talked about terrible things in store for foreigners when they come under Japanese jurisdiction was pure moonshine. Something of the feeling seems to have been reflected in the Coroner's summing up. . . . The Jury, it will be seen, gave a verdict exactly opposite to that which, according to one version at any rate, they had been directed to find. This showed that they, at any rate, thought the summing up unfair. I admire them that, in the face of popular prejudice, they had the courage of their opinions."

It will of course be understood that in publishing the above, we do not endorse the latter portion of it, for we know Mr. Consul Hall to be entirely beyond the reach of prejudices such as our correspondent attributes to him. But we are bound to say that he seems to have exceeded his functions when he suggested to the Jury that they might bring in a verdict of murder. It is not within the legitimate province of a Coroner's Jury, as we believe, to bring in such verdicts. Their sole business is to determine the cause of death. As for Mr. Hoshino, he deserves much sympathy. Evidently he acted to the best of his judgment in the interests of his friend, and his reward has been to be saddled with a suspicion as unwarranted as it is terrible. But we venture to hope that he has been fully righted in public opinion. We have not permission to publish the name of the correspondent quoted above, but we assure our readers that his testimony is of the highest value.

INSURANCE STATISTICS.

Dr. Indo Gentoku, formerly Professor in the Imperial College of Medicine, medical adviser to the Meiji Life Insurance Company, has prepared elaborate statistical tables embodying the results of the examinations of men and women whose lives are insured by the above named company. The tables being too minute for reproduction in these columns, we shall give only a résumé of his figures. The following table shows the results of the examination of 20,000 men of different ages :—

Age examined.	Number of men.	Stature (average). Centi-metres.	Weight (average). Grammes.	Circumference of chest (average). Centi-metres.	Difference chest expansion and Contraction (average). Centim.
15	79	150.62	43,870.00	76.70	6.84
16-20	839	156.71	50,243.46	81.14	6.76
21-25	2,231	158.99	52,347.82	83.37	6.70
26-30	3,772	159.69	52,989.85	84.65	6.74
31-35	3,977	159.48	54,012.97	85.15	6.55
36-40	3,691	159.24	55,141.04	86.15	6.50
41-45	2,584	159.21	55,065.07	86.48	6.49
46-50	1,528	158.73	55,573.68	86.89	6.26
51-55	900	157.38	54,244.40	86.51	6.13
56-60	399	157.17	54,017.20	85.75	5.90
Total 20,000		157.72	52,750.55	84.28	6.49

Depth of Chest (average). Centi-metres.	Breadth of Chest (average). Centi-metres.	Lung Capacity (average). Cubic Centim.	Number of Inspirations per minute (average).	Pulse beats per minute (average).	Circumference of Body at Abdomen (average). Centim.
17.41	22.86	2,502.00	19.97	75.61	65.05
17.94	24.27	3,009.32	19.62	75.17	68.18

CURRENT LITERATURE.

The *Kokumin-no-Tomo* has an interesting article upon Crispi, but the real subject of criticism is not the Italian but the Japanese Premier. Some of the more conspicuous features of Crispi's public and private life are considered one after another, and although not one word of direct reference is made, our contemporary manipulates its pen so cleverly that the dullest of its readers can not fail to understand that Marquis Ito is the subject of its biting criticisms. The final verdict pronounced by the *Kokumin* is that the Japanese Crispi is a coward; while, with all his faults, the Italian original has the merit of being courageous.

The same journal suggests that the Ministers of State should advise the Emperor to make

a tour in the Occident. The victories obtained by Japan in her late war have attracted widespread attention, and she has risen considerably in the estimation of the nations of the West. But our contemporary regrets to observe that the general idea entertained about Japan by Europeans and Americans at home is extremely superficial. In their eyes, Japan is a semi-civilized country, equipped with the latest military and naval inventions. It is as a military power, and not as an enlightened nation, that the Japanese have become known to the West through the recent war. These statements are illustrated by quotations from the writings of distinguished men and journals in the West. In order to remove these mistaken notions, and to let the peoples of the West know that Japan's recent successes in arms are the result of the civilization attained by her, the most effective course is, in the opinion of the *Kokumin*, the foreign tour of the Emperor followed by a large number of the prominent civil and military dignitaries. Such a tour, says our contemporary, will also be the means of removing the false ideas that may be entertained about Japan at some of the European Courts.

The *Yogaku Zasshi* recommends the sending of female students to America or Europe. The reaction against female education has passed away, and better days are dawning. In our contemporary's opinion, this reaction has been useful as a means of testing the mettle of the pioneers in the cause of female education and the elevation of women's position; and the *Yogaku* is glad to observe that a number have passed through the ordeal with safety. In order to still further promote the education of women, it strongly urges those who can afford to do so to send their girls to the west to complete their education.

CHINA NEWS.

In a footnote to a Foochow telegram telling of the slow progress made by the Kucheng Commission, the editor of the *N.-C. Daily News* says:—It will be seen that our correspondent reports slow progress, and from another reliable source we learn that some eighty persons are in prison, of whom only two have so far been convicted. One had organised the massacre, and the other participated in it. Of those in prison there is a strong suspicion of guilt. One man was found to be in possession of some clothing which had belonged to the murdered missionaries. The alleged original founder of the Society was arrested on the 22nd. Our correspondent states, it will be observed, that all the Commissioners are present, and in this connection we may add that for having the door opened we are indebted to a very urgent and peremptory demand of the U.S. Consul-General, made where it could be most effective. It will be recollected that when reports were received of the Chêngtu riots and no messages could be sent, it was Mr. Jernigan's representations to a high Chinese official here that caused a message to go through, and a reply to be received at once.

Some definite news has at last been obtained in Shanghai as to the state of the Mohammedan rebellion in the North-West of China. A telegram from Kansu, which reached Hupoh on the 15th August, is printed in the Shanghai morning journal. It reads:—"The prefectural city of Hsining is now completely invested by the rebels who also hold all the towns belonging to the jurisdiction of that prefecture. The Mahommedan rebels from Millékou and Maying having approached Pingfahsien, were attacked by Kuei, acting magistrate of Lianghsien, at a place called Yaochieh, but he was defeated. In consequence of this the rebels have also attacked Pingfahsien and the telegraph lines connecting cities west of that city have on that account been torn down and destroyed by the brigands. Hohsien is still besieged and hard pressed, and our affairs are in a critical state. It is therefore urgently requested that orders be sent to Generals Tung Fu-hsiang (Commander-in-Chief of Kashgaria), and Ma

Pi-shang, that they hasten to the rescue by forced marches into the disturbed districts. A very urgent and important telegram." On the 28th August the *N.-C. Daily News* said:—Information to hand from our Shensi correspondent emphasises the importance of the official telegram we published on Monday as to the grave state of affairs in the North-West. The rebellion is extending, and though it is difficult to gain authentic news, it may be regarded as tolerably certain that the Imperial Government has now to face thousands of organised and determined Mahommedans armed with weapons which have, it is asserted, a Russian origin. The rebels are being joined not only by the *Kolao Hui* and other secret societies, but by deserters from the Imperial forces. The object appears to be the establishment of an independent State in Central Asia, including Tibet, Ili, Kansu, and Mongolia. The rebellion at present seems to be centred in Hochou (180 li from Lanchou). Unless the troops being hurried forward by the central government show up well, the consequences will be important. Meantime, panic prevails; villages are being deserted and cities closed. It is pitiful to see the terror-stricken people flying to the cities in order to seek shelter.

The Laou Kung Mow Cotton Spinning and Weaving Company, Ltd., in Shanghai, has been successfully floated, the required capital having been fully subscribed.

Truth is loved in the abstract by some of China's Mandarins. It is reported from Hankow that upon the representation of the British Consul there that they encouraged opposition to foreigners amongst the natives, Governor Tan, of Hupeh, prohibited the sale in the province of all books and coloured prints containing untruthful representations of events connected with the recent fighting against the Japanese at Kelung and Taipeifu.

The Directorate of the Chinese Telegraph Administration declare a dividend of 20 per cent. for 1894, which is ten dollars per share over and above that settled by Government.

Despatches received by the *Hupao* from Pekin report that the Emperor acquiesced in the joint recommendation of the Board of Punishments and the Imperial Clan Court to reduce the sentences by one degree of all officers found guilty of cowardice or misdemeanour during the recent war with Japan. This means a reprieve for not a few of the military officers now lying in the condemned cells of the Board of Punishments at Pekin, as well as for those who are still at large but whose arrest has been ordered.

A correspondent writing to the *N.-C. Daily News* from Chinanfu, says:—We were shocked to hear some days ago of the sudden death in Têngchoufu, on the 21st of June, of the Rev. Dr. Charles R. Mills, of the American Presbyterian Mission, one of the veterans of Shantung and a man of lovely Christian character. Dr. Mills came to China in the fifties and was first stationed in Shanghai, whence he removed after a few years for reasons of health to Têngchoufu, where he has ever since resided. A man of extreme modesty and of true humility of character, Dr. Mills was never known to push himself forward or claim any undue recognition. He was a man of large culture and wide reading, which made him a most desirable addition to any social gathering. Death was apparently due to heart disease.

China is displaying her usual short-sighted obstinacy at Tientsin in regard to the grant of a Japanese Settlement, but it is expected that she will give way to due pressure. The place selected by the Japanese for their proposed settlement is said to consist of the villages of Tawang, Hsiaowang, and T'angchiakou, on the opposite banks of the Peiho. In connection with the German Settlement at the same port, the *N.-C. Daily News* prints a paragraph which says:—The native papers state that a number of the land owners of the proposed German concession at Tientsin gathered the other day to protest against the low prices offered by the new concessionaires for land, the rate offered being only Tls. 30 per *mow*, while the owners demand nearly ten times the amount. The Chinese

officials delegated to perform the duty of marking out the boundaries of the new settlement were mobbed, but rain fortunately came on and drove the crowd off.

A report has found credence in Shanghai that Sheng Taotai has decided to set apart a portion of the annual earnings of the Chinese Telegraph Administration for the purpose of establishing in the various maritime provinces of the empire a number of schools where the elementary branches of the modern languages of Europe will be taught. The brightest of the graduates of these schools will then probably be sent to Europe to complete their studies.

Messrs. Jardine, Matheson & Co., says the *Daily News*, have decided to establish a Cotton Mill in Hongkong, and for the purpose of superintending its inception Mr. James McKie will leave Shanghai for the Colony in a few days.

A telegram from Shantung which appears in a Shanghai paper, reports the overflow of the Yellow River and the breaking down of the southern embankments of the twenty-third section. No less than seven districts were immediately submerged, including the historic towns where the Philosophers Tsêng (the second disciple of Confucius) and Mencius passed their youthful days.

Telegraphic news, which the *N.-C. Daily News* says comes from an authoritative native source at Chêngtu, is to the effect that H.E. Lu Chuanlin, the Viceroy of Szechuan, has summarily executed four of the alleged ringleaders in the recent riots at Chêngtu. The rowdy element, trusting in numbers, two-thirds of them being armed with pistols or guns, tried to get up a public demonstration amongst the Chêngtu population against the extreme measures inaugurated by the new Viceroy, and they succeeded in terrorising some of the shop people into closing their doors and going on strike for three days. Rumours were also disseminated warning the Viceroy that if he did not release the forty odd men who had been arrested, an attempt would be made by the mob to break open the prisons. The Viceroy, however, has replied to these threats by ordering more arrests and posting proclamations advising the mob to disperse within a certain period on pain of wholesale executions. Another despatch from a private source reports that some of the mob-leaders made no hesitation in declaring that as they had official consent of the highest man in the province to do what had been done, it was a shame that they should be made to suffer for an act of obedience.

HONGKONG NEWS.

The *Daily Press* received the following telegram from Foochow, dated the 24th August—"The latest advices from Kucheng are that the Chinese have yielded the point as to foreigners being present at the trial. On Wednesday the Mixed Court began its sittings. All the foreign members were present. Torture opened mouths. Six murderers have been convicted and eighty arrests made. The officials are co-operating and extending every facility. Both Consuls (British and American) are firm. Home guards are protecting every village." Commenting on this news, the Hongkong journal says:—A Foochow correspondent, telegraphing with regard to the Kucheng Commission, states that the two Consuls, meaning the British Consul and American Consul, with other Europeans, were present at the trial of the persons accused of being implicated in the Kucheng massacre, and that "torture opened mouths." We await further explanations, and in the meantime can only express the hope that the foreigners neither assented to nor witnessed the torture. If they did, it would be the crowning horror of this horrible business and would inflict indelible disgrace on all concerned. No one, however high his position, who has any part in the infliction of judicial torture, can himself be considered very far removed from a state of savagery.

"O.P.B.," writing to the *Daily Press*, de-

clares that a genuine Cremona violin has just been sold by auction in Hongkong for \$200, the purchaser being Mr. Maclehoose, buying on behalf of Captain Cruikshank. "O.P.B." says the violin "is rather small in size and bears the ticket—

Peter Guaneri fecit.
Cremonæ Anno 17

Now, I am inclined to think it the work of the younger Peter Guaneri, son of Joseph (not the great Joseph del Jesu), and grandson of Andreas Guaneri, the first who made this name great. Peter flourished just about the middle of the eighteenth century, working first at the town of Cremona (1725-1740) and for the next twenty years at Venice. Taking up the violin as it lay in its case in the auction room, I played a few chords on it. The first and second strings were strong and sweet. Each note was exquisitely clear. The third and fourth strings, however, were weak and tubby, particularly the latter. On these failings alone it would not be safe for one to disparage the merits of this masterpiece, for it appeared to feel the estrangement of a new bridge, which not infrequently accounts for the incomplete harmonious rendering of the notes as a whole. It has been found that an old seasoned and well fitted bridge is almost as essential to good tone as any one of the vital parts of a violin. The varnish retains its lovely brilliancy. The purfling and corners are not quite what one is wont to see in a 'Strad.' But taken as a whole the violin is a thing of beauty and should be to its possessor a joy for ever."

It is proposed to raise a memorial to the victims of the Kucheng massacre, which will be erected at Foochow. The cost is estimated at \$1,000 and subscriptions are limited to \$1. Bishop Burdon is heading the movement in Hongkong. The design is after that of the Cawnpore Massacre Memorial.

The German barque *Paul Rickmers*, with a cargo of coal on board for Amboyna, has, we learn from the *Strait Times*, been wrecked in the Ombai Passage (Moluccas). The crew are safe and have arrived at Macassar, where news of the disaster was received on the 13th August.

The Portuguese community of Hongkong have presented Dr. Marques with an address of sympathy bearing close upon a thousand signatures. The reason for the demonstration, says the *Daily Press*, was that in the report of the recent Medical Commission, Dr. Marques, an officer of the Government medical staff of the colony, was referred to in terms far from complimentary to his professional reputation.

The *Chinese Mail* (*Wah Tsz Yat Po*) says that on the 22nd August at Canton a criminal was put to death by *ling-chih*, or the horrible slicing process, for the murder of his father. The criminal was a native of Haiyang district, near Swatow, and had been brought from there to Canton for trial and punishment. It was alleged that he did the act under the influence of liquor.

H.M.S. *Pique*, which has arrived in Hongkong to relieve the cruiser *Leander*, is a twin-screw cruiser of 3,600 tons and 7,000 horse-power, and is commanded by Captain H. C. Bigge. She was commissioned at Devonport on April 23rd. On her way out the *Pique* was ordered to Jeddah, where she remained two months, leaving that port on the 28th July. The following is the list of officers on board:—Captain—Henry C. Bigge; Lieuts.—(G) John J. Graham, (N) Edmund P. F. G. Grant, Thomas L. Thrope-Doublle, Bertram S. Thesiger; Lt. R.N.R.—Charles W. Unwill (act.); Staff Paymaster—Arthur E. Tuson; Staff Engineer—Mathew W. Ellis; Sub-Lieut.—Edward H. Donovan; Assistant Paymaster—Sydney Benetts; Engineer—Francis E. Lamb; Gunner—Geo. Rodden.

By the North German-Lloyd steamer *Oldenburg*, which came in from Europe this morning, says the *China Mail* of the 25th ult., there arrived a detachment of the Salvation Army bound for Japan to carry on evangelical work amongst the Japanese. Colonel Wright is in command, and the party includes—one major, one captain, one lieutenant, and two ensigns (male) and two captains and one lieutenant

(female). One lieutenant (additional) is Japanese—a convert from San Francisco. There is a Miss Newcombe in the party. We are informed that she is a sister of Miss H. Newcombe who was killed at Kucheng; she was in the Zenana Mission at one time, but left to join the Salvation Army. A specially blessed banner has been brought out, to be unfurled upon arrival in Japan.

The *Times of Ceylon* of Tuesday, 13th August, says:—We stated yesterday that the P. & O. Company's local agents had become alarmed about the safety of the *Australia*, which, though due here on Saturday evening with the mails of July 26th, had not arrived yesterday afternoon, and that the P. & O. *Bengal* had been sent out in search of her, Captain Bayley going with the *Bengal*, which left the port at 4 p.m. She steamed off at the rate of 12½ knots an hour and had been out about 6½ hours when she sighted a vessel which eventually turned out to be the *Australia*, and as she was then moving along at the rate of over 12 knots an hour they did not go alongside but contented themselves with merely exchanging signals. The *Bengal* turned round and came back with the mail steamer and they could have reached Colombo late last night but decided not to enter the port before day-break. The *Australia* consequently came in and was moored at 6 a.m. to-day. Her forward cylinder broke down, it seems, about 120 miles to the westward of Minicoy, on Friday morning, and she had to lie to as a result while the engineers ascertained if she could continue her voyage with her low-pressure cylinder. This was a work that involved some time arranging, the ship's run for that day being less than 20 knots. Soon after she hove to, a Netherlands-India mail steamer, the *Prince Hendrick* passed her, and on being signalled and told what had happened she stood by the *Australia* till the engineers reported that the latter vessel could proceed. The captain of the *Prince Hendrick* was most courteous, and offered, in the event of the *Australia* not being able to proceed, to tow her to Colombo. This, however, was not necessary, for the engineers found that the *Australia* could go on, and she came on at a reduced speed and reached our harbour as we stated. What will have to be done to her engines here cannot be known till the exact amount of the damage is ascertained, and it will take from 36 to 38 hours to find out this. There is, however, no truth in the report that the *Australia* will have to go to Bombay for repairs, and that the *Thames* has been sent for from Bombay to take her and her passengers and mails to Australia. If she can go on with her low pressure cylinder she will probably do so for, even steaming at the rate of 12½ knots only, will reach Australia in good time, according to her mail contract. As far as her advertised times go, she is here exactly to date, the P. & O. time table marking her due here on the 13th inst.

The following Express has been issued:—

Foochow, August 21, 11.30 a.m.

Referring to the statements made in Expresses now before the Foochow Community regarding the action of H.B.M. Consul and the Kutien Massacre, I feel it my duty to state that: At 5.30 on the afternoon of Saturday, August 3rd, in company with the Rev. Mr. Star, I called at the house of Mr. Cave-Thomas at Kuliang where we had an interview with the Consul and read to him a communication from the U.S. Consulate asking for volunteers to proceed to Kutien that evening and aid in conveying the wounded to Foochow.

The Consul repeatedly informed us that he had no intention of returning to Foochow until Monday morning. Later in the interview, we informed him of our intention to go to Foochow that evening so as to be at hand if it was thought necessary to send any relief to Kutien; and asked to whom we could appeal for advice if he were absent from the British Consulate. It was then the Consul changed his attitude and agreed to go to Foochow with us. He added, however, that in his opinion, any relief party was a mistake, and his object in going down was to do what he could to prevent it.

JOHN CROSS, M.B., C.M.,
English Presbyterian Mission.

INTERNATIONAL MORALITY.

SOME time ago, when it was rumoured that the three Powers, united on account of the Liaotung Peninsula, were pressing China for some material recognition of their efforts to stay Japan's conquering hand, we ventured to express the opinion that whatever course might be adopted by the individual units of the combination, it was not to be supposed that they would act collectively in the sense ascribed to them. There is still a limit to the license that States allow themselves. They do not, indeed, pay any attention to canons of conduct the neglect of which, in the case of a private person, would expose him to social ostracism. But the callousness of the international conscience has not yet found such flagrant expression as would be displayed by a combined effort on the part of three Great European Powers to traffic in purloined goods. The interference of Germany, Russia, and France in the matter of the Liaotung Peninsula, was openly based on the principle that the retention of the Peninsula by China would be necessary to the peace of the Orient and to the independence of Korea. Having induced Japan to promise the surrender of the peninsula in deference to that principle, there could certainly have been no more undignified transaction than that the three Powers should require China to buy back the Peninsula from themselves. It had been ceded to Japan by right of conquest, and neither Germany, France, nor Russia could justly advance the smallest title to make profit out of its retrocession. We are compelled to confess, however, that we credited the units of the Triple Alliance with a degree of morality not warranted by events. They commenced by constituting themselves China's bankers. We say "they" advisedly, for though Germany had no actual share in this pecuniary manœuvre, her isolation was not the result of choice. On the contrary, when she discovered that her bonds of alliance with France and Russia had held throughout the working stages of the union only, and had been snapped by her confederates so soon as the era of rewards arrived, she betrayed much umbrage, and made no attempt to conceal her indignation at being thus left out in the cold. In saying this, however, justice compels us to note that if Germany's original action was dictated by an honest belief in the view she enunciated—the view that Japan's possession of Liaotung would unduly disturb the balance of power in the East—she had an unquestionable right to be consulted by her allies in every particular of the events arising out of their joint interference. Assuredly her object in uniting to deprive Japan of the fruits of victory was not to raise Russia and France to a position of dictatorship in the Far East. It does not follow, therefore, that if the German statesmen com-

plained of the independent course pursued by France and Russia with respect to the Chinese loan, they were influenced by thought of profit. Considerations of high policy alone may have swayed them. But France and Russia, taking quick advantage of the commanding position that Germany had helped them to attain, set about reaping material advantages for themselves, so that the former was enabled to feed to her bankers and capitalists a financial plum of considerable lusciousness and size, while the latter acquired a strong lien upon the Middle Kingdom. Nor did France stop there. She pushed her claims still further, and obtained from China a large slice of territory, forming part of the Anglo-French buffer State, the integrity of which had constituted the object of an agreement between China, France, and Great Britain, only two years previously. The methods of Russia and France in this instance have been characteristic. France is always thoroughly frank in her processes of aggression. She strikes quickly and openly, often prematurely. But Russia invariably hides her hand and plays a waiting game. Her diplomacy is as astute as it is patient, and her large faith in time seldom fails to receive the endorsement of events. She has as yet no material and present profits to show as the outcome of a situation created mainly, though not avowedly, for her benefit. But she has three moral gains which may prove immensely valuable when their time of maturity comes. She has established her title to figure as the guarantor of Korean independence. She has acquired an inferential right to control the disposal of Manchurian territory. She has become the residuary legatee of China, a position with large eventualities should China die intestate, as she certainly will. Russia, in fact, is now the principal figure upon the Far Eastern stage. But it must be noted that not one of her pretensions has received British recognition. We are already familiar with the spectacle of Great Powers playing shadowy dramas in the Orient, and producing very remarkable spectacular effects, but we have also learned to be sure that so long as England remains an independent spectator among the audience, the curtain is not unlikely to fall upon a fiasco for the actors. Whatever the future may bring forth, however, there can be no mistake about the profits that Russia and France have secured by championing a principle incapable of being reconciled with the uses to which they have applied it in their own interests. Germany alone has gained nothing. It is true that she has obtained a Concession for her subjects in Tientsin, but that must have come in any case, and moreover, the arrangement will inure to the benefit of other nationals also. In truth, events tend only to confirm our original analysis that Germany committed a serious blunder

when she joined France and Russia to interfere between China and Japan. The final account figures out disastrously for her. Her prime purpose—that of modifying the character of the Franco-Russian *entente*—has not been achieved; on the contrary, she has thrown the two Powers into closer and more exclusive union than ever. In China she has not gained prestige: on the contrary, there is a disposition to make her the scape-goat of the empire's military disasters. In Japan, she has impaired the friendship that her attitude in previous years established. But it must be recorded to her credit that she has not sought to make profit for herself out of the Liaotung intervention. Her conduct throughout has been consistent and dignified. We believe that when her avowed purpose is achieved, she will step out of the unnatural alliance in which she allowed herself to become entangled without mature reflection.

THE MISSIONARY QUESTION IN CHINA.

THE Kucheng massacre has once more revived the hacknied question, should foreign Governments insist on liberty of religious propagandism in China, and, by way of corollary, should females be included among the propagandists. It is too late to consider these matters seriously now. That a great deal may be said not only against the general principle involved in bringing religious affairs within the sphere of international treaties, must be frankly admitted. That the missionaries themselves have not always refrained from abusing the privileges thus secured to them, must also be admitted. Indeed, the Kucheng massacre itself vividly recalls a phase of propagandism that has long been a source of keen anxiety to British officials; a phase that has been more than once commented on in these columns. With our reader's permission we desire to quote from an article published in the *Japan Weekly Mail* of January 6th, 1894:—"The missionaries sometimes take steps designed, apparently, for the express purpose of provoking disasters. The scheme of the Swedish mission at Kwaihwai-ching, beyond the Great Wall in a region near the borders of Mongolia, is a flagrant example. There have been sent to that remote region twenty Swedish women of various ages, several of them possessing conspicuous personal attractions. It does not appear that these girls have any special competence for the work of Christian propagandism. Enthusiasm is their one qualification. They know little if anything of the Chinese language. They never preached religious doctrine in their own country. Their idea, seemingly, is to have recourse to revivalist methods: We hear of them, dressed in Chinese costume, going out into the grimy alleys of sordid, toil-worn Chinese cities, and

there thrumming on guitars and singing hymns, a spectacle as grotesque as it is incomprehensible to the people. The most terrible part of the story is its practical side. These girls receive an annual allowance of 200 dollars. Out of that pittance they must contribute 20 dollars each to provide a house. There remains to them, therefore, for purposes of sustenance and clothing, a sum of 15 dollars monthly. The misery to which they are thus condemned is imaginable. The luxury of a genial fire they cannot know; we hear of them clubbing their pitiful mites to contrive a united coffee-drinking once a week; and even the privacy so dear to a modest woman in the West is denied to them, since the paper fronts of their wretched dwellings cannot protect them against the prying eyes of curious Chinese. Every one is entitled to lead the life of a martyr. These poor girls must be allowed to mortify their flesh if they please. For our own part, we think a strait waiscoat, or a twelvemonth in the penitentiary would be the only becoming recompense for the culpable individual whose money supports them, and for the still more culpable persons who brought them out. But larger considerations present themselves in connection with the question whether any one is entitled to plant a community of European women under such circumstances in a remote region of the Chinese empire. May we not at any moment receive from Kwaihai-ching news of a catastrophe that would revolt the whole civilized world? Have reckless enthusiasts the smallest right to endanger international relations by offering such an incentive to rapine and outrage? It is true that Swedish subjects alone are directly concerned. But if twenty Swedish girls were overtaken by a fate such as befel the Sisters at Tientsin in 1870, could helpless Sweden be left to vindicate treaty privileges and civilized liberty single-handed? Besides, this is not a question of one nation or another. It is a question of twenty European women deliberately banished to a life of useless suffering and exposed to perils the thought of which makes one shudder. Who among the sternest sticklers for treaty privileges will defend such cruel recklessness? Should a day of heavy reckoning come for China, it will be well to remember what manner of folks were engaged writing up the accounts on the foreign side."

We make this quotation, not, of course, for the purpose of comparing the female missionaries in the north of China with the unfortunate women and children that were massacred at Kucheng, but merely to recall the fact that Christian propagandism has its reckless side, and that foreigners sometimes expect from China displays of liberality and magnanimity inconsistent with the semi-barbarous character that they attribute to her people. The time to discuss such questions is past, however. The Chinese

have removed the matter entirely from the sphere of peaceful controversy and taken it into the realm of force. It is no longer possible for any of the Western Powers, least of all for Great Britain, to listen to arguments for restricting the field of missionary labour. Concessions in that sense, made in the face of acts such as the Szechuan outrages and the Kucheng massacre, must create a most mischievous impression throughout the East, and tend to precipitate rather than to retard the final collision between Chinese seclusion and Western progress. The situation, so far as concerns the missionary himself, is most pitiable. He can no longer carry his wife and children into the interior without exposing them to terrible risk, and he can scarcely afford to provide for their safety by leaving them in a Consular district. By him, therefore, the settlement of the present complication must be breathlessly watched, for the fate of his home life depends, in great part, on the measures now adopted. If they are measures so drastic as to deter repetition of these abominable crimes, and rouse the Chinese to a thorough appreciation of the penalties inevitably consequent upon sanguinary and savage violations of the treaties, then the missionary may look forward to some degree of domestic security. But will they be measures of that kind? Are measures of that kind possible so long as China remains under its present rulers?

JULIUS CÆSAR AND JESUS CHRIST COMPARED.

HAVING given space in our leading columns to a contributed article on "CÆSAR and CHRIST," we now take a similar course with regard to the opposite view of the same question.

There is a striking similarity and no less forcible contrast between the characters of CHRIST and CÆSAR, their careers, and the results that have flowed from them. Both met their death illegally, and yet in both cases as the result of the force of Roman Law. CÆSAR was stabbed by a self-constituted court of conspirators for the real crime of overturning the constitution of the Roman commonwealth; while CHRIST was crucified for calling himself a King, and thus setting himself up against CÆSAR'S successor. Although CÆSAR had that singular charm of genius that inspires great personal loyalty in those that come immediately in contact with it, he had not a sufficiently commanding influence over even his most intimate friend, BRUTUS, to prevent him from stabbing him in the hour of trial. JUDAS went and hanged himself in remorse for betraying his master. BRUTUS committed suicide because unsuccessful in his ambition. There are some who think that the object of JUDAS in the betrayal was to force his lord to take his place at the head of the people as their temporal

prince. Be that as it may, both CÆSAR and CHRIST were deserted by their followers in their hour of trial; both had traitors among their friends and followers; both apparently failed utterly at the hour of death to accomplish their mission, and both were ultimately successful in the results of their lives.

When CÆSAR cried, "The die is cast!" and crossed the Rubicon, the republic was doomed, and military Imperialism was instituted. CÆSAR was, to be sure, sacrificed as a victim, but the Empire remained, and Imperialism is to this day the most stable and successful form of government on earth. Frenchmen and Americans may feel inclined to deny this, but the most ardent republican among them, if sane, would not commend that form of government to Japan. The CZARS and the KAISERS, take their titles from the name of CÆSAR.

CÆSAR was certainly in some respects the most conspicuous if not the greatest character in history, and we must concede that if CHRIST were not more than mere man, he was somewhat less than CÆSAR, for the reason that he refused to be a CÆSAR. Three centuries after the Crucifixion his followers had climbed the throne of the CÆSARS. This fact makes it seem not entirely impossible that CHRIST should have in his own person ascended to the same place of temporal power. When the populace came to take him by force to make him a King he hid himself; had he, on the contrary, placed himself at the head of the nation, then fired with a deep feeling that it was the chosen people of GOD, and he the heaven-sent MESSIAH, it does not seem impossible—remembering how hateful the reigning tyrant was to the empire, and how frequently afterwards men born out of Italy became Emperors—that CHRIST should himself have become a CÆSAR. CHRIST "showed a conspicuous inability to grasp" a throne; he was not sufficiently selfish and was wanting in worldly ambition. He not only refused to attempt to be a CÆSAR, but he was not even willing to make himself the temporal king of the chosen people. He chose instead of a throne the Cross; and, when crucified thereon, he cried, "It is finished:" his spiritual sovereignty over men of all nations and tongues for all time and to eternity was thenceforth firmly established. Both CÆSAR and CHRIST were worshipped as gods after their death, but though all the power of Imperial Rome was brought to bear to compel the burning of incense before the statues of the CÆSARS, that worship has entirely died out, while before the pictures and images of CHRIST incense is burned and the pure offering of prayer and praise is raised to this day. Strength was the most striking feature of CÆSAR'S character and of the Empire that he founded; but all its armies could not keep the CÆSARS enthroned among the gods, while CHRIST commands the free and will-

ing homage of the best minds of now nearly twenty centuries and is everywhere worshipped as "GOD manifest in the flesh." The CÆSARS themselves bow before the Cross and place the glorified emblem on their flags. Not only do they acknowledge the force of CHRIST in war, but his blood-red cross is the sign of peace, healing, and safety for the sick and wounded; a prophetic sign of the time when the power of CHRIST shall be so fully felt that wars shall cease and He shall really reign as the Prince of Peace. It may be freely conceded that the transmission of Roman Law to the world is due more to the conservative influence of Christianity, than the preservation or propagation of Christianity is due to the conservative influence of Roman Law—CÆSAR owes more to CHRIST than CHRIST owes to CÆSAR. It appears the more remarkable that Christianity should have been the ark to carry Roman Law over the black waves of a thousand years of barbarism when we consider that for centuries all Christians were constant law-breakers, their assemblies were unlawful, and the crime of meeting for worship was punished with death. It seems strange that a society of peasants, fisher-folk, artisans, and even slaves should have cared to preserve that Roman Law that had caused the blood of their brethren to flow like water upon the sandy arenas of a hundred theatres throughout the Empire.

This difficulty becomes less as we study the constitution of the society founded by these fisher folk. CHRIST had promised them thrones and crowns; they were to be kings and priests. The character of the society as an *imperium in imperio* was early recognized by the wise and good Roman Emperors. The sensual and profligate Emperors relaxed the rigour of the persecutions, while men like MARCUS AURELIUS and DIOCLETIAN were most relentless, seeing clearly that the Empire must conquer the Church or the Church would conquer the Empire. The Church was regarded by the believers in those days as the very Kingdom of GOD here on earth; not in any unreal mystical sense, but as actual visible fact and reality. Believers obeyed religious laws bound upon their consciences that enforced the civil law when not in conflict with the higher law of the Kingdom of GOD. The Majesty of the Roman Law backed up by the armies that had subdued the civilized world and made the barbarians in the gloomy fastnesses of their northern forests to tremble, was not only defied but defeated in a struggle of three centuries by the successes of a band of feeble women and cowardly fisher-folk, the followers of a crucified carpenter. The Christians could never have accomplished this miracle had they not worn *spectacles*. Their vision was so obscured by "the spectacles of theological mysticism" that they actually believed in the "Resurrection of the body,

and the life everlasting." Had they viewed the matter with "the clear eyes of science," they would have known that no amount of evidence can prove a miracle, and that the facts of the faith attested by 500 chosen witnesses of the resurrection, were the lurid images of a distorted imagination, projected upon the mists of prejudice that the religious mind inevitably disseminates around everything connected with the origin of a cherished creed. If the Christians had not believed in the facts of the faith, they would not have stood out against the laws and power of Imperial Rome, but would have faded away at an early day. If they had not conquered the Empire, there would have been no Christian Emperor JUSTINIAN to compile the code, and the religion of CHRIST would not have been instrumental in handing down to us all that is best in the statecraft of CÆSAR.

It appears then, that we are really indebted to the theological spectacles for this result. There are some persons who consider even JULIUS CÆSAR as inferior to NAPOLEON BONAPARTE. Now NAPOLEON died in the faith, and left a strong testimony to his belief in the Divinity of JESUS CHRIST. To quote but a short extract:—"You speak of CÆSAR, of ALEXANDER, of their conquests, and of the enthusiasm which they kindled in the hearts of their soldiers; but can you conceive of a dead man making conquests with an army faithful and entirely devoted to his memory? My armies have forgotten me even while living, as the Carthaginian army forgot HANNIBAL. Such is our power! A simple battle lost crushes us and adversity scatters our friends. Can you conceive of CÆSAR as the eternal Emperor of the Roman senate, and, from the depth of his mausoleum, governing the empire, watching over the destinies of Rome? Such is the history of the invasion and conquest of the world by Christianity; such is the power of the GOD of the Christians; and such is the perpetual miracle of the progress of the faith, and of the government of his Church. Nations pass away, thrones crumble; but the Church remains. ALEXANDER, CÆSAR, CHARLEMAGNE, and myself founded empires. But on what did we rest the creations of our genius? Upon force. JESUS CHRIST alone founded his Empire upon love; and at this hour, millions of men would die for him. CHRIST speaks and at once generations become his by stricter, closer ties than those of blood—by the most sacred, the most indissoluble of unions. He lights up the flames of a love that prevails over every other love. CHRIST'S greatest miracle is the reign of charity."

The total number of Chinese residents in Japan at the end of July last was 2,874, of whom 9 lived in Tokyo, 29 in Hokkaido, 119 in Osaka, 1,475 in Kanagawa Prefecture, 732 in Hyogo Prefecture, and 510 in Nagasaki Prefecture.

WOMAN'S DRESS.

IT almost seems as though the bicycle were destined to bring about the long desired reform in female apparel. For hundreds of years women must have felt the utterly unpractical character of their garments. A skirt trailing in the dust and clinging to the knees; at once a collector of dirt and an impediment of motion; offering no sort of protection against cold, but, on the contrary, suffering draughts and wintry atmosphere to have free access to all the lower half of the body—could any more illogical and irrational species of habiliment be invented? Hampered by such a garment, it is not possible either to walk or to run as nature dictates:—instead of direct forward motion, something between a shuffle and a side-long gait has to be developed. But while conscious of all these disadvantages, ladies have not ventured to rebel practically against them. It is not a mere question of being out of fashion, terrible as that contingency seems to the average female mind. There is the super-added consciousness that to be singular in such a sense is to invite charges of immodesty and of a general want of moral equilibrium. Once in a long while some society has been started to popularize the bloomer costume, but the faith of fellowship has never survived the shock of singularity. What was wanted was a *raison d'être* for reform, over and above the mere question of utility and common sense. Such a *raison d'être* has been supplied by the bicycle. To ride with the conventional skirt on a bicycle is impossible except at a distinct sacrifice of modesty. A lady can play lawn-tennis in the old-fashioned costume—that is to say, she can play after a manner, speed of movement being sacrificed to appearances. But she can not ride a bicycle without having recourse to the divided skirt, or some other contrivance of the kind. Now it appears to be accepted as an axiom that ladies are not to be excluded from the delights of cycling. In France, in England, in America, in Australia, thousands of woman are riding bicycles, and all wear bloomer costumes. There has been an attempt in some quarters to decry the innovation, on the ground that delicacy and modesty alike forbid it; but such senseless conservatism can not live in the light of nineteenth century progress. The divided skirt has fairly asserted itself. It has come to stay, and though the number of female cyclists may be comparatively limited, there need be no limit to the number of those that don a costume sanctioned by the practice of many thousands of their sisters. There is, however, one trouble about the matter, and there is also a danger. The danger is that the female cyclist may go too far in the direction of assimilating her costume to that of the male. Already a tendency of the kind is distinctly visible. A billy-

cock hat, a stand-up collar, a scarf and pin, knickerbockers with side-pockets—nothing is wanting to transform the sex of the wearer save short-cropped hair and a meerschaum. That sort of excess will, of course, be quite fatal if it become a feature of the new departure. But we may hope that there is too much in the reform to allow it to be wrecked on a silly extravagance. Much more serious is the question of picturesqueness. Women will never permanently adopt anything that is not pretty, and bloomers are not pretty. One critic suggests that no resource offers except the page's dress of mediæval romance—a close-fitting bodice, short trunks or breeches, and tights. Before the introduction of side-saddles woman always rode astride on horseback, and wore a page's dress for the purpose. Such a costume displays the figure fully and offers opportunities for the use of the richest materials. But if bloomers are supposed to offend against modesty, trunks and tights will prove a sharper shock to morbid sensibilities. Yet how little consistency there is in such objections! When have women allowed modesty to govern fashion? Could anything be more immodest, for example, than the evening dress of the present era? There is only one social paradox equally striking, namely, the delirious morality that allows a man to hold a girl in his embrace while he jumps with her around a room, but pronounces it a deadly offence that he should do the same thing to her for an instant while standing or sitting still. When Japanese ladies seemed likely to commit the mistake of abandoning their national costume in favour of Western garments, we did what we could to avert the catastrophe, and pointed out that in the *hakama* Japan already possesses an ideal divided skirt, combining at once beauty and utility. It is a veritable pity that some prominent lady cyclist does not discover the *hakama* and bring it into use. It would become the vogue at once, and might easily be the means of at once popularizing the excellent reform now begun; a reform of which PAUL HERVIEN justly writes:—"That exaggeratedly different being whose dress placed her in pronounced and intentional contrast with the male, that *other* being whose long and trailing skirts laid universal emphasis upon the woman, is beginning now to appear more to men as a normal creature in her *culottes*, simple, viridical, thenceforth very near to them. The former feminine creation, with its artificial appearances and secret forms, that vaguely intimidating creature feared in the singularity of her accoutrements, now shows herself in the familiarity of her structure, in the cordiality and good-fellowship of her analogies as a sympathetic biped."

DURING the five days ended August 15th, nine Japanese men and two women were attacked by cholera at Ninsen, Korea. Six deaths occurred during the same period.

"SOSHI."

WHETHER the result be attributable to the caprice of fashion, or to the development of a higher political standard, or to the poverty of politicians, it is satisfactory to see that the vicious practice of employing *Soshi* in the sphere of politics is now far less prevalent than it used to be. The number of *bonâ fide Soshi* has dwindled to a very insignificant figure. *Soshi* are not a new *genus*. On the contrary, even in former times, whenever any important political change was impending, public tranquillity was liable to disturbance by persons corresponding to the modern *Soshi*. For example, just prior to the Restoration, when the country was passing through one of the severest crises on record, and when a fierce struggle was in progress between the Imperialists and the Shogunate adherents, a large number of *Soshi*, known at that time under the title of *Ronin*, ranged themselves on either side, especially that of the Court, and played a very conspicuous part. It fact, chiefly to the instrumentality of *Ronin*, favoured as they were by the tide of fortune, may be attributed the initiation and consummation of the Restoration. Several Ministers of State of our own day, and not a few others now occupying subordinate yet eminent positions within or without the Government, were, in practice, *Soshi*, who agitated either for the Court or for the Shogunate. On the completion of the Restoration and the return of public tranquillity, these *Soshi* or *Ronin*, there being no further occasion for their services, grew fewer and fewer and finally disappeared altogether. Whatever must be written against their methods, we are driven to confess that the *Soshi* of those days espoused the right cause, and that their exertions promoted the country's interests.

During more than two decades subsequently nothing was heard of *Soshi*, though the men that assaulted the late Prince IWAKURA with murderous intent soon after the Cabinet crisis brought about by the *Seikan-ron* (proposal to despatch an expedition against Korea), the gang of assassins that killed the late OKUBO, and the murderer of the late Viscount MORI, may be placed not unjustly in the ranks of the *Soshi*. But it was not until the year 1889, when Count OKUMA, then Minister of State for Foreign Affairs, undertook to effect Treaty Revision, that a genuine *Soshi* agitation set in. Undoubtedly the re-appearance of these "stalwarts" is attributable to politicians outside the Government that could not brook the idea of foreigners sitting as judges, in however small numbers, on the Japanese bench—one of the conditions then deemed essential to placing foreigners under Japanese Jurisdiction. It was then for the first time that the term *Soshi* began to carry with it a new and

disreputable significance, for the expression, in its literal meaning of "intrepid man," had formerly been applied in a good sense. Count OKUMA, though backed only by one small party, the Progressionists, pursued with admirable courage the task he had undertaken, thus rousing the Opposition to still greater indignation, until finally, on the 18th of October of that year, the tumult culminated in the throwing of a dynamite bomb at the Count as he was entering the gates of the Foreign Office in his carriage. KURUSHIMA TSUNEKI, who threw the bomb and then cut his own throat, was a member of the Genyosha, a large *Soshi* association in Fukuoka, led by the notorious demagogue TOYAMA MAN. Three years previously, the Government had endeavoured to purge Tokyo of political agitation by a bold stroke of policy. In the latter part of December, 1886, they hastily drew up—"made in one night," as some critics satirically observed—a set of laws called the Peace Preservation Regulations, under the provisions of which about two hundred politicians and *Soshi* withdrew for the space of three years beyond a radius of three *ri* from Tokyo. On that occasion Messrs. HOSHI TORU, KATAOKA KENKICHI, OZAKI YUKIO, and others now of high repute, were included among the proscribed. But though this measure temporarily freed Tokyo of *Soshi*, their activity did not suffer any material check. In the Summer of 1890, as the date for the first general Parliamentary election drew near, the number of *Soshi* both in the capital and in the country became greater than ever. Then first appeared upon the scene the organized body of *Soshi* known as "Young Radicals" (*Seinen Jiyuto*), under the leadership of SUGENO DOSHIN, NAKAMURA KEITARO, FUKUI MOHEI, and several others. In September of the same year, when Mr. OI KENTARO, another notorious demagogue who had seceded from the Radical Party in consequence of a quarrel with Mr. HOSHI, undertook to celebrate at the Yayoikan in Shiba the inaugural ceremony of his ephemeral and insignificant party, the *Kwanto Jiyuto*, rival *Soshi* created a tumult at the place of meeting, and despite the presence of a strong force of Police, almost prevented the ceremony from proceeding at all. Thus far the Progressionists seem to have held aloof from *Soshi* agitation, but the formidable struggle that ensued between the Government and the Opposition—of which the Progressionists formed a wing—in the first session of the Diet, with reference to the reduction of administrative expenditures, led to the organization of a body of *Soshi* called "Young Progressionists," whose rôle was to intensify the anti-Cabinet struggle within the Diet by fomenting agitation outside. The "Young Progressionists" numbered about seventy, and to their credit, or rather to the credit of those who presided over them, it must

be added that they were far more orderly in their methods of procedure than were other cognate bodies. About the same time the Radicals organized another *Soshi* association at Kanagawa, its leaders being Messrs. SETOOKA TAMESABURO, M.P., ISHIZUKA SHOKO, M.P., and KOJIMA UNOSUKA, Chairman of the Kanagawa Local Assembly. About 130 *Soshi* were borne on its list. The appearance of so many *Soshi* was obviously inconsistent with the preservation of good order, and their repeated acts of violence against moderate Members of Parliament culminated in a second enforcement of the Peace Preservation Regulations and the expulsion of another large batch of *Soshi* from the capital.

Even officials themselves, however, can not be wholly exempted from the blame of having indirect recourse to *Soshi* aid. This blot on the official escutcheon belongs to the history of the years 1891 and 1892. In the second session of the Diet, the Government were eager to carry the Bill for the construction of war-ships. Shortly before that time, Mr. OKAMOTO RYUNOSUKE—a Colonel who had been deprived of his commission in connection with the Takehashiri riot of the Body Guard in 1878, and who is now an adviser of the Korean Government—had organized a pro-Government body of *Soshi*, termed "*Hokkaido Giyu Dantai*" (the Hokkaido Patriotic Association), numbering as many as 150 members. It is true that the association was organized avowedly for the purpose of diverting *Soshi* labour to the beneficial purpose of reclaiming a wild tract of land in Hokkaido. But that pretext was not generally credited. The public believed that Mr. OKAMOTO had collected a number of *Soshi*, if not directly under official patronage, at least swayed by pro-Government sympathies. Mr. OKAMOTO and his fellow patriots endeavoured to persuade members of Parliament to espouse the side of the Cabinet. But little success attended their efforts. On the contrary, they rather marred the cause of naval development, for their too ardent assiduity to promote it aroused suspicion, the result being that Mr. INAGAKI SHIMESU moved in the House of Representatives that steps be taken to investigate a rumour about alleged corruption of certain members of Parliament. The motion was rejected, but so was the Bill for the construction of war-ships, and the House was at last dissolved. On the occasion of the general elections in February of the following year, the Government fell under suspicion of employing *Soshi* on an extensive scale. In almost every district where a noted Opposition candidate encountered a Government supporter, violent struggles occurred between the *Soshi* of the respective candidates, blood being freely shed in several instances, and the services of gendarmes and troops having to be requisitioned.

It is impossible without fuller evidence to apportion the blame of these proceedings. That men standing in Government interests should employ force to repel force was inevitable, man's nature being human; and though the Opposition bitterly denounced the immorality of such methods, they seemed to forget that the responsibility of inaugurating them rested with themselves. The employment of *Soshi* in the field of practical politics reached its climax on that occasion. Thenceforth, though not entirely dispensed with, the services of these stalwarts began to be less and less resorted to. The total number of *Soshi* throughout the country at that period was unusually large. At once time there existed at least as many as eighteen *Soshi* associations, some eight of which had their head-quarters in the capital, where their members aggregated about five hundred. The total throughout the country must have been at least three times that figure. No organized body of *Soshi* is now known to exist anywhere.

It is commonly assumed that the *Soshi* are ex-students, who, having made educational failures through idleness or dissipation, have been deprived of pecuniary aid from their families. That is doubtless the case with a majority of these stalwarts, but there are others who, though numerically small, must be regarded as far more dangerous. The Japanese are precocious. We find mere striplings, just out of their teens, talking politics with the air of venerable statesmen. There is a want of moral equilibrium. These boy politicians, with exquisite assurance, think themselves called upon, in the discharge of their duty to their country, to teach Ministers of State and white-haired administrators how to govern the realm, and they believe that violent means may be employed to save their counsels from contempt. Youths of this stamp are most commonly found in the provinces, as witness NISHINO BUNTARO, the assassin of the late Viscount MORI, and KURUSHIMA TSUNEKI, the bomb-thrower, both of whom arrived in Tokyo shortly before they carried out their desperate designs. KOYAMA TOYOTARO belongs to the same category, though it is true that he lived for some years in Tokyo before he proceeded to Shimonoseki to attempt the life of the Viceroy Li.

The *bonâ fide* *Soshi* possess an ordinary degree of education and are also more or less skilled in swordmanship, especially those enrolled in the three great *Soshi* associations, namely, the Senyosha of Fukuoka, the Eishinsha of Kaga, and the Hokkaido Giyu Dantai, alluded to above. As for the pecuniary reward accruing to them, it varies, according to circumstances, from twenty-five *sen* to 1 *yen* or even 1½ *yen* per diem. When the duty to be performed is merely disturbing a rival party's meeting, the remuneration is at the lowest rate, with promise of an extra al-

lowance should injury be sustained in a scuffle. A general election used to be a red-letter day for the *Soshi*. They then received the highest wages and had plenty to eat and to drink as well. As the date of the election approached and as the contest grew keener, the pay rose to as much as a *yen* and a half daily. It must be noted, however, that only *Soshi* indifferent as to principles and ready to be temporarily hired for any purpose, received a regular allowance. In each party there were and still are young devoted followers of some prominent member who never attached any importance to the question of remuneration. *Soshi* are very expensive to maintain and very difficult to rule. Even notorious demagogues like TOYAMA MAN, who had at one time as many as six hundred followers, ENDO HIDEKAGE, whose *Soshi* numbered about two hundred, and OI KENTARO, who controlled the service of at least as many, found their fortunes consumed by these parasites, and were obliged after a while to devise means of getting rid of them. In fact, these politicians were caught in their own trap, for the *Soshi* with whom they had surrounded themselves proved to be an insufferable drag, and impeded their free motion. After various fruitless attempts to shake off the incubus, OI and ENDO, if the vernacular press be credited, resolved to carry their truculent followers as emigrants to Burmah.

If it be true that more than one thousand *Soshi*, formerly prominent figures on the political stage, are now no more visible, the question arises, what has become of them. We are told that they have adopted two entirely different courses. One section—a small one—mended their ways and became industrious units of society; the other, and larger, who had followed the trade of *Soshi* merely for the sake of the money that was in it, fell away from grace altogether. To the former category belong men who have attained prominent positions as members of the Diet, of Local Assemblies, or of the political parties with which they were identified as *Soshi*; men who are sub-editors of newspapers or prosperous figures in commercial circles. Many, too, have become personal guards of members of Parliament. On the other hand, the majority of those belonging to the second and disreputable category, have degenerated into black-mailers who maintain themselves by discovering or inventing personal scandals; into newsboys, into street vendors of ballads which they compose and sing in a certain peculiar fashion devised by themselves, and even into a new class of actors. Some few have become political spies of the Metropolitan Police, and are unprincipled and base enough as to collect information against their original patrons. On the whole it seems to be agreed that very few *Soshi* now meddle in political affairs, and that

those doing so are not genuine *Soshi* at all. Even the number of *Soshi* aspirants is far smaller than ever before. We are credibly informed that it has diminished to about one hundred in the capital, and that these eke out a worthless life by black-mailing. It is against such dregs of society that the Premonition Law may be enforced advantageously.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

IOWANS IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I shall be greatly obliged if all natives, or former residents, of the State of Iowa, now resident in any part of Japan, would kindly send their names and addresses to the undersigned at 43, Tsukiji, Tokyo.

Yours respectfully,

(Mrs.) LUCETTA H. CLEMENT.

August 29th, 1895.

"CÆSAR AND CHRIST."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Owing to absence in the country I have only just seen your issues of Aug. 22 and 26.

The great majority of your readers will have read with respectful pleasure Archbishop Osoul's protest against the publication in the *Japan Mail* of your leading article on "Cæsar and Christ," and will have been obliged to you for printing it.

Your defence of the writer of the article as "carefully putting on one side the supernatural side of the problem and drawing a purely historical parallel between Christ and Cæsar, in so far as concerned the influence of each on modern European civilization," suggests that your own perusal of his words must have been for some reason very cursory. Let it suffice to mention that among other phrases, all most painful to sincere believers in Christianity, the article described our Lord Jesus Christ as a "visionary," and Christianity as one of "two great things which have now had their day," and as a religion which, but for the fact that it helped to maintain the Roman legal system, would have done more harm in the world than good.

In other words, it directly and (it must be added) in a most contemptuous tone assailed the truth of the Christian Religion in the person of its Founder.

Now I submit that, as the believers in Christianity among your readers do not ask you to defend their Faith in your Leading Articles, they have a right to feel aggrieved as well as pained when you allow them to be used for attacks on their most cherished beliefs.

I do not believe that it is your desire that this should be the rôle of the *Japan Mail*, and I therefore venture to ask you to offer us (the phrase is your own:—*Japan Mail*, Aug. 26) "one word of apology or manly retraction," and to assure us that the *Japan Mail* will not make itself responsible in future for such attacks on our Faith.

I am, Sir, your obedient servant,

EDW. BICKERSTETH,
Bishop.

August 28th, 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your reply to a criticism on an article of yours under the above heading, you say, "No question whatever was raised in our article as to the divinity of Christ. That question was not touched at all." Probably you did not intend to touch that question at all, but allow me to again call your attention to a few expressions in the article that to me seem to touch very seriously the divinity of our Lord. You say, "Christ the Jewish peasant was an ascetic enthusiast; during the short period for which, at the conclusion of his life, he emerged from his native obscurity, he showed a conspicuous inability to grasp the significance of many of the most elementary relations of practical life; and though he had that singular charm of manner which inspires great personal affection in those that came immediately in contact with it, he had not sufficiently commanding influence over even his most intimate adherents to make them trust and support him in the hour of trial."

Now it must be apparent to all, that if Jesus "showed a conspicuous inability to grasp the significance of many of the most elementary relations of practical life," he was not only not divine, but even inferior to many ordinary human beings, for I suppose even the Editor himself believes there are many who are able to "grasp the significance of many of the most elementary relations of practical life." How then can you say "That matter was not touched at all," I cannot understand. And will you please to point out at least some of the "many of the most elementary relations of practical life" that Jesus "showed a conspicuous inability to grasp?"

Further, the Editor seems to accept the gospel narrative that Jesus was a Jew, that he led a comparatively obscure life, that "at the conclusion of his life he emerged from his native obscurity," that he was tried and put to death, that he had "great personal affection," and "charm of manner." Would it not be the part of candour to also accept what else is said about him from the same source and also the prophecies pointing to this same fact and see that his birth, "charm of manner," "trial," desertion, and death, were prearranged and purposely entered into by himself rather than from an inability to command an influence over those who deserted him "in the hour of trial?" Allow me to refer briefly to a few Bible facts on this line. I shall only speak concerning his death, to show that it was not for lack of ability to command an influence over his adherents. Isaiah, some seven hundred years before it occurred, says: "He is despised and rejected of men; a man of sorrows and acquainted with grief; and we hid as it were our faces from him; he was despised and we esteemed him not. Surely he hath borne our griefs, and carried our sorrows. Yet we did esteem him stricken, smitten of God and afflicted. But he was wounded for our transgressions, he was bruised for our iniquities; the chastisement of our peace was upon him; and with his stripes we are healed. . . . He was oppressed and he was afflicted, yet he opened not his mouth: he is brought as a lamb to the slaughter, and as a sheep before her shearers is dumb, so he openeth not his mouth. . . . And he made his grave with the wicked and with the rich in his death; because he had done no violence, neither was any deceit in his mouth. Yet it pleased the Lord to bruise him. . . . Therefore will I divide him a portion with the great, and he shall divide the spoil with the strong; because he hath poured out his soul unto death":—(Isaiah 53). Nothing is clearer according to the prophet, than that it was according to the purpose of God and the will of Jesus for the latter to give his life for our redemption. Jesus himself says, "All ye shall be offended because of me, this night, for it is written (Zech., 13.7), I will smite the shepherd and the sheep of the flocks shall be scattered abroad (Matt., 26.31). "Jesus said unto him [Peter], verily I say unto thee, that this night, before the cock crow thou shalt deny me thrice" (verse 34). "And behold one of them which were with Jesus stretched out his hand, and drew his sword, and struck a servant of the high priest, and smote off his ear. Then said Jesus unto him, "Put up again thy sword into its place, for all they that take the sword shall perish by the sword. Thinkest thou that I cannot now pray to my Father and he shall presently give me more than twelve legions of angels? But how then shall the scriptures be fulfilled, that thus it must be" (verses 51—54). He says further: "Even as the Son of Man came not to be ministered unto but to minister and to give his life a ransom for many" (Matt. 20.28). "I lay down my life for the sheep. . . . No man taketh it from me, but I lay it down of myself. I have power to take it again. This commandment have I received of the Father" (John, 10.15 18). As I have already stated, these facts (and many more that can be given) are taken from the same source as are those the Editor has given about the "Native obscurity," the short period of his ministry, his desertion, his trial and death. It seems to me that no one, free from purely arbitrary principles to select what suits the purpose and reject what does not, can fail to see that Jesus's death, so far from being a source of disappointment and a lack of power of "commanding influence over his most intimate adherents to make them support him in the hour of trial," was the consummation of his own will in carrying out a purpose of which man is not worthy—the redemption of his soul.

Again, the Editor seems to regard Christianity "merely as an instrument serving its necessary place in history by its maintenance of the Roman tradition," and that having served this purpose it is one of "two things that have now had their day." Was it the purpose of Christianity to merely preserve Roman tradition? Then again, the Editor's denial to the contrary, this touches seriously upon the divinity of Jesus; for of all the utterance of Jesus, the prophets and the apostles, not one of them says that the purpose of the Gospel was to maintain Roman tradition! Hence it makes out the whole lot, from Abraham to John on the Isle of Patmos, as impostors and deceivers, Jesus himself not being excepted. Among the numerous passages concerning the purpose of Christianity I shall only give a few: "And thou child (John the Baptist) shall be called the prophet of the Highest; for thou shalt go before the face of the Lord to prepare his way: to give knowledge of salvation unto his people by the remission of their sins, through the tender mercy of our God; whereby the dayspring from on high hath visited us, to give light to them that sat in darkness, and in the shadow of death, to guide our feet in the way of peace." And the angel said unto them, "Fear not: for behold I bring you good tidings of great joy, which shall be to all people. For unto you is born this day, in the city of David, a Saviour which is Christ the Lord." Lord Jesus himself says: "And this is the will of him that sent me, that every one which seeth the Son, and believeth in him, may have everlasting life: and I will raise him up at the last day." "For God so loved the world that he gave his only begotten Son that whosoever believeth in him should not perish but have everlasting life. For God sent not his Son into the world to condemn the world but that the world through him might be saved." But I could fill a number of pages with such passages as to the purpose of Christianity. Let any one, if he can, sincerely read these and many like passages and then say with candour that Christianity was merely to maintain Roman tradition! It is hard for me to believe that the Editor wrote seriously and with due consideration. If this was the purpose of Christianity, then Jesus was either deceived or knowingly taught falsehood through life: in either case he could not be divine.

Cæsar and Christ. Cæsar was assassinated contrary to his own will or knowledge, upon which the Roman Empire, then at the zenith of its glory, tottered and fell, never to rise again. Jesus died according to a definite and long line of prophecy that had gone before several hundred years which he knew and often quoted in confirmation of the necessity of his death; and also himself pointed out accurately the very details of the same; the purpose of which was the foundation of his kingdom and the redemption of the world; since which the Church has ever been a living, acting power in the world. And that it is not, as the Roman Law and tradition, a thing of the past as myriads in every country and clime to-day can rise up and testify.

Most respectfully, J. M. McCaleb.

12, Tsukiji, Tokyo, August 30th, 1895.

A QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The article "Japan as a Mission Field," reprinted in the *Japan Mail* of yesterday from the *Chicago Record* gives food for reflection. One finds in it the astounding proposition that "Even the development of patriotism has been found to receive its most active impulse from the religion carried to Japan by the missionaries;" it further is asserted that "no one is better aware of what Christianity has done for Japan than the Emperor himself;" that "the Japan of 1852 could never have become the Japan of 1895 without the work of the missionaries," and that "the work of the 463 evangelical missionaries in Japan, backed up by 110,520 native Christians and the schools they support, is the key to the mystery of Japan's recent progress."

Of course no sensible person out here would think of treating such stuff seriously; its absurdity is too glaring to need any commentary. But it must be kept in mind that the article was not written for Japan—nobody would dream of such a thing—but for Chicago, where people are not so well informed of the real state of things in this country, and where consequently such bold assertions may well make an effect. Now it would be very interesting to learn, where all these palpable falsehoods quoted above may have had their origin, for it is scarcely to be supposed that the *Chicago Record* should have invented them on its own account. Who then may be responsible for the gross misrepresentations in the American journal by furnishing it with such false information?

I am, Sir, yours most faithfully, SIXTUS.

August 28th, 1895.

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the Weekly issue of your paper, dated Aug. 24th, under head of "the Karuizawa Conference," I find a report of an address on Formosa by Dr. MacGregor, in which occurs the following: "In reference to the proposal made by the Synod of the Church of Christ in Japan to bring the Church in Formosa into organic union with the same body here," &c.

As a member of the Synod referred to, who sat through all the proceedings of its recent session in Nagoya, I beg to say that to the best of my recollection no such "proposal" was made by that body. The question of undertaking missionary work in Formosa was brought before the Synod in the shape of an overture from the Chinzei Presbytery. The Presbytery asked that a committee be appointed to visit Formosa and to report upon the prospects for work, and also upon the advisability of establishing some sort of connection with the Church already existing in that country. But in taking action upon the matter the Synod voted to strike out the clause referring to connection with the Formosan Church, and appointed the committee with instructions to visit Formosa, carrying the greetings of the Church of Christ in Japan to the Church there and to report upon the advisability of the Synod's beginning missionary work on the island in the near future.

Yours faithfully, T. T. ALEXANDER.
27, Tsukiji, Tokyo, September 1st, 1895.

LETTER FROM PEKIN.

(FROM OUR OWN CORRESPONDENT)

Pekin, August 21st, 1895.

The mists are in no hurry to clear away from China. The mists now and then become a deep fog. The Japanese Minister still remains here ready to negotiate with the Central Government. He refuses to go to Tientsin to consult with any one of the three Viceroys, Li Hung-chang, Liu Kun-yi, and Wang Wen-shao. He says that if they want him to consult with Li Hung-chang, he must come to Pekin, and become a member of the Foreign Office. The Japanese Minister is establishing a good custom for all the foreign Ministers. There has been too much of the shuffling between Pekin and Tientsin. The Japanese Minister impresses all as a man of ability, the equal of any in the diplomatic body, unless I except Count Cassini.

The Chinese were very anxious to have the question of Liaotung settled in Pekin. The new Minister to Japan, Yü-keng, was even more anxious for this. None the less, Tokyo seems to be the place for arranging the terms. The new Minister from China is of the Manchur race, while his wife is of American extraction and speaks English. They and their children are very pleasant and cordial and have none of the anti-foreign proclivities. I fear, however, that the contest with the Japanese will be rather one-sided as in the war.

While the war is supposed to have ceased, there are still many inquiries among the Chinese as to the fate of Formosa and Liu Yung-fu. Rumours go abroad of the success of the Black Flag leader, and many still vainly hope that the Japanese will be driven out. There have been sold on the streets of Pekin different tracts, referring to the Japanese in far from respectful language. They are spoken of as "foreign devils," and are thus mixed up with the general mass of foreigners, or rather foreigners are now classed along with the hated Japanese.

The anti-foreign spirit has become more intense. The riot in Szechuan was the first outburst. Then came the atrocity in Fukien. In the demand for redress, the latent feeling was summoned forth, and everywhere there is a growing opposition to all foreigners. The guilty parties in the riots receive but little blame from the Chinese. The contest again narrows itself down to Chinese on the one side and foreigners on the other.

A few changes have occurred in the Pekin government. Four of the members of the Foreign Office have withdrawn, two on plea of sickness, Fu-kun and Lün Yü-wen; one by transfer, Liao Shen-heng, and one by Imperial orders, Hsü Yung-i, who is also degraded from the Grand Council. The two new members of the Foreign Office are the two prominent members of the Grand Council, Weng Tung-ho and Li Hung-tsu, men noted as conservative and anti-foreign. The Foreign Office has only one person in its councils who came into the body when Prince Kung and his associates were dismissed 11 years ago, namely Prince Ching.

BRETT & COMPANY, LIMITED.

THE PRESS REQUESTED TO RETIRE.

The half-yearly meeting of shareholders in Messrs. Brett & Company, Limited, was held in Kiel's Building on Monday afternoon. There were present, Messrs. J. F. Lowder, A. F. MacNab, G. C. Charlesworth, H. MacArthur, C. W. Ure, F. R. Daniel, R. N. St. John, J. H. Curtis, R. Home Cook, G. Blundell, J. H. Boag, and A. T. Watson (Managing Director).

Mr. A. T. WATSON occupied the Chair, and in opening the meeting submitted the following report and accounts.

REPORT.

The statement of Assets and Liabilities and the Profit and Loss Account for the half-year ended the 30th June, 1895, accompany this Report.

Business for the past six months has been very good, and although the Accounts appear very unsatisfactory, the loss has been previously incurred, full explanations of which will be given at the meeting.

The Managing Director resigns his position and it will be necessary to elect another.

The Agreement with Mr. Watson, Manager, expired on June 30th: some arrangement will be necessary for him to continue.

The Managing Director, immediately after his appointment, with the advice of the Advisory Committee, had the books put in thorough order and, as now closed, they present a true and correct statement of the affairs of the Company.

ARTHUR T. WATSON, Managing Director.
21st August, 1895.

I certify that I have examined the foregoing accounts and compared them with the Books and Vouchers of the Company and find them to be correct.	
JNO. H. BOAG, Auditor.	
Yokohama, 14th August, 1895.	

The CHAIRMAN said the report and accounts had

been in the hands of shareholders for some time, and he thought that it would be unnecessary to read them.

Mr. CHARLESWORTH proposed and Mr. BLUNDELL seconded that the report and accounts be taken as read.

The CHAIRMAN—Gentlemen, the accounts have been audited by Mr. Boag and have been carefully and conscientiously gone through, is it your wish that they be passed? Shall we pass them before proceeding further?

Mr. LOWDER thought it would be for the benefit of shareholders if the Chairman, before proceeding further, gave some explanation of the following paragraph in the report:—Business for the past six months has been very good, and although the accounts appear very unsatisfactory the loss has been previously incurred, full explanations of which will be given at the meeting. As a shareholder, he should greatly like to have one explanation, because, upon referring to the accounts he found under the head of working account the item:—By balance, being loss in business for six months ending 30th June, 1895, transferred to profit and loss account, \$4,084.01. This was for six months ending the 30th June, 1895, while the loss on the working account for the whole year 1894, is given as \$2,461.37. He would like an explanation of the reason why the loss for the last six months was put at \$4,000 odd, while the loss for the whole year preceding was returned at \$2,461.37. Of course he saw that the \$4,000 was stated to be due to error in previous accounts, but in the face of the report, which distinctly promised an explanation, a few words from the Chair regarding the item was certainly advisable. The paragraph of the report which he had quoted said that their business for the past six months had been good, yet the loss for the last six months was greater than for the whole preceding year.

The CHAIRMAN said he had anticipated the point, but a question arose as to the advisability of letting the details of their business go forth to the public. For his own part he had nothing whatever to conceal, but those present at the meeting were all shareholders in the Company, and it was for them to decide whether it would be advisable or not to let the details of their business be known to outsiders.

Mr. LOWDER—I don't know whether you are appealing to me, but you know my views on the subject.

The CHAIRMAN—Yes, I understand them. But is it the wish of the meeting that the reporters remain?

Mr. URE—I move that the reporters do not remain present.

Mr. BLUNDELL—I move, as an amendment, that they do remain.

The CHAIRMAN—We must take a vote. I second Mr. Ure's motion on principle.

Mr. DANIEL—And I second Mr. Blundell's amendment.

Upon a show of hands being taken, nine voted that the reporters remain and two—Messrs. Watson and Ure—that they be asked to retire.

Mr. URE—I now ask for a ballot, so that the question be decided upon the number of shares held.

Mr. MACARTHUR—I object to such a ballot. The consensus of opinion of this meeting is decidedly in favour of the reporters remaining—it is nine to two.

Mr. URE—I ask for a ballot in the interest of the business. Last year the report of the proceedings was published and it did the business a great deal of harm. I think we should follow the example of our neighbours, Messrs. North and Rae; they keep all their meetings private.

Mr. MACARTHUR—Nothing is to be gained by putting the thing into a bag. If the reporters remain, what we say will be known: if they retire then what passes here will be guessed at, and instead of facts we shall have surmises.

The CHAIRMAN said that he thought the Articles of Association did not provide for a ballot.

Mr. URE—I certainly think I am entitled to the right of asking for a ballot. I can show the rule.

Upon the rule being turned up in the Articles of Association, the CHAIRMAN announced that a ballot could be called for by five persons present at a meeting, or by a person holding one-fifth of the capital present at the meeting. Under those circumstances, he found that the number of shares held by those in favour of the reporters not being allowed to remain was 1,140. Mr. Ure held registered proxies for E. H. Sharp, and Mrs. E. H. Sharp, beside his own shares. There were also his (the Chairman's) shares. The amendment that the reporters remain was therefore lost.

Mr. CURTIS—How many shares do you, Mr. Chairman, hold?

The CHAIRMAN—Seven hundred.

SEVERAL SHAREHOLDERS—But you forfeited 500.

Mr. BOAS—And they lost their voting power after 30th June.

Mr. LOWDER—Oh, no, those shares were not forfeited, they are held as security.

The CHAIRMAN—Fair play, gentlemen. I appeal to you.

Mr. LOWDER—The number of shares held by those who object to reporters being present outnumber those held by shareholders who desire them to remain?

The CHAIRMAN—That is so. The number is 1,140 out of 2,800.

Mr. LOWDER—Is there not a rule requiring proxies to be registered at least 24 hours before being used at a public meeting?

The CHAIRMAN—Mr. Ure's proxies have been registered some time.

Mr. LOWDER—I am quite satisfied.

The CHAIRMAN—I will give you the date, 29th July, 1895.

Mr. LOWDER—As I said before, I am quite satisfied.

The CHAIRMAN, in asking the reporters to retire, said that he had no objection to their knowing what passed during the ordinary business of the meeting. The reason why he did not wish them to be present was that questions would be put which would open up a wide field, interesting of course to the shareholders, but possessing no interest for the general public.

Mr. LOWDER said he had asked his question merely from a desire to expedite matters. He had no doubt that the explanation to be given would be quite satisfactory.

The reporters then left the room.

YOKOHAMA SAILING CLUB.

A MEMBER EXPELLED.

An extraordinary general meeting of members of the Yokohama Sailing Club was held at the Club Hotel on Thursday afternoon to consider a special resolution of which notice had been given by circular. Over fifty members were present, including Messrs. J. F. Lowder, G. H. Scidmore (Hon. Secretary), C. B. Clausen, F. E. Worth, Captain Martin, B. H. Pratt, J. Eyton, J. L. Eyton, J. L. Whateley, C. V. Schmidt, C. K. M. Martin, J. O. Averill, C. S. Averill, R. Abenheim, T. Abbey, N. P. Kingdon, S. A. Mansfield, G. Philip, R. Lane, G. Hodges, A. Weston, A. Owston, F. Owston, W. H. R. Carew, J. McLean, F. Herbert, R. McCance, W. Tucker, J. B. Gibbs, Jun., G. Rice, Alex. Waugh, F. L. Elliott, E. Andreis, B. Martinelli, L. Salabelle, W. McGee, G. R. Birmingham, F. Stornebrink, and many others.

Mr. LOWDER was voted to the Chair, and Mr. Robert Hay was delegated to act as Secretary, Mr. Scidmore, as one of the interested desiring to stand aside.

The CHAIRMAN first read the notice calling the meeting, which was to the following effect:—"Yokohama Sailing Club:—Notice is hereby given, under the provisions of Rule 10, that an Extraordinary General Meeting of this Club will be held at the Club Hotel, Yokohama, at 5.30 p.m., on Thursday, September 5th, 1895: To consider a resolution for the expulsion of Mr. E. V. Thorn from membership. For the Committee of the Yokohama Sailing Club, G. H. Scidmore, Honorary Secretary, Yokohama, Aug. 24, 1895." By the rules of the Club, notice of such a resolution must be given to the member interested ten days before the holding of the meeting. He, the Chairman, would first ask whether this rule had been complied with?

Mr. SCIDMORE—A copy of the notice which has just been read was delivered at the residence of Mr. Thorn on the morning of the 25th August, and a receipt was given for it by one of Mr. Thorn's servants. Another copy was also mailed to him the same day, along with those sent to each member of the Club, to which fact Mr. Averill can certify.

The CHAIRMAN—I take it then that due notice has been given of this extraordinary general meeting, which has been specially called by the Committee of the Sailing Club for the purpose of considering a resolution which is to be presented to us now. I will ask that the resolution be read.

Mr. SCIDMORE—On behalf of my colleagues of the Committee. I ask you, Mr. Chairman, to read the following written resolution.

The CHAIRMAN then read the following:—

"Proposed by the Committee of the Club; Seconded by

"Whereas, E. V. Thorn, a member of this Club did, in a letter, dated August 11, 1895, written and delivered by him to the Officer of the Day of this club for the sailing race of

August 10, 1895, charge the owner of the yacht *Daimyo*, a participant in said race, with substituting a handicap, different from the handicap known to the said Officer of the Day previous to and during said race, to the prejudice of the said E. V. Thorn, and, by implication and innuendo did charge the said owner of the yacht *Daimyo* with fraudulent and dishonourable conduct in connection with said race and handicap;

"And, whereas, upon investigation, this club finds said charges to be unfounded and untrue;

"And whereas, the said E. V. Thorn refuses either to apologize for said charges or to resign from this club;

"Therefore, be it resolved that the said E. V. Thorn be, and he is hereby, expelled from membership in this club."

This gentleman, should it find a seconder, is the resolution upon which you will shortly be called upon to vote either in favour of or against.

Mr. BIRMINGHAM—Will the voting be open or by ballot?

The CHAIRMAN—By ballot; closed ballot. Does this resolution which I have just read find any seconder at this meeting?

Mr. BIRMINGHAM—I second it. The question before us narrows itself into a small issue: is our worthy Secretary guilty or not guilty of the charges of which he has been accused?—that is the whole thing in a nutshell.

The CHAIRMAN—The resolution having found a seconder is now open for discussion.

Mr. WAUGH—I move that this resolution be tabled indefinitely. It was not seconded to days ago, as the rule provides, but is presented by the Committee and seconded by, as the Chairman read it, Mr. Blank. It can not be seconded at the meeting this evening.

The CHAIRMAN—The seconding of the resolution at this meeting is quite proper. I rule against you.

Mr. WAUGH—Then I must take the sense of the meeting. The resolution should have been seconded 10 days ago to have a standing in law. I bow to the decision of the Chair, but appeal to the sense of the meeting.

The CHAIRMAN—You cannot do both. To what rule do you refer me?

Mr. WAUGH—To any rule of parliamentary procedure that ever was printed.

The CHAIRMAN—That is very vague. According to Rule 7—I will read it to you:—"The Committee may on ten days' notice, convene extraordinary general meetings of the Club, specifying in the notice convening the meeting, the object or objects for which the meeting is called, and to which the discussion must be strictly confined." My ruling is based on that Rule.

Mr. WAUGH—With all due deference, Mr. Chairman, the seconding of this resolution at this meeting is not in accordance with parliamentary usage. If the Committee drew up that resolution ten days ago, then it should have been seconded ten days ago.

The CHAIRMAN—It is not so provided in the Rule under which this meeting is called. Your objection is therefore overruled.

Mr. SCIDMORE, in support of the resolution, then read the series of letters which have already been published. They comprised Mr. Thorn's protest against the *Daimyo* being awarded the Gillig Cup; Mr. Laffin's letter to the Committee; and the Committee's reply to Mr. Thorn's protest. Continuing, Mr. Scidmore said—We have here the handicap which was attached to the Bulletin Board at the Rowing Club before tiffin on the day of the race. After tiffin I went to the Boat Club to see the Officer of the Day, but owing to his being delayed through business, I failed to see him. I had to get aboard my boat, so I left the score-book in care of a gentleman belonging to the Press here, who afterwards delivered it to Mr. Laffin on board the Bathing Barge, and previous to the race.

The CHAIRMAN said the point at issue, which the meeting was called to decide was, in his opinion, after a careful perusal of all the documents, properly raised upon the correspondence which had just been read. Upon that correspondence the Committee had acted: they had drawn up a resolution and properly called an extraordinary general meeting of the Club. He understood that a considerable amount of feeling had been evoked about the resolution, and he was not at all surprised at the fact, for a more serious position than that of a member of a Club about to be expelled, or who might be expelled from that Club, was difficult to find. That man certainly ought—and so long as he (Mr. Lowder) was Chairman of the meeting he should—have the amplest opportunity of explaining his conduct and of clearing himself of the charges preferred against him by the Committee. He hoped that Mr. Thorn might be present at the meeting, so that he might have an opportunity of hearing what appeared

to his (the Chairman's) mind in regard to the affair. He was not an active member of the Club; still he took a very great interest in all its doings, and as such he could not help following the developments of this matter. Mr. Thorn had accused the Officer of the Day and the owner of the yacht *Daimyo* of a conspiracy to defraud him of a prize to which he considered himself legitimately entitled, and of endeavouring to do this by a fraudulent act in substituting another handicap for the handicap agreed upon by the members of the Committee. In other words, they had been guilty of a criminal offence. Such an offence, if they should have been guilty of it, would have brought them within provisions of the law of their country—whatever it may be—and would have rendered them liable to fine and imprisonment. As Chairman of the meeting, he should not have gone to this extent, but his reason for doing so was this. He was convinced that Mr. Thorn did not properly or clearly realise the gravity of the charges which he preferred against the two members of the Sailing Club. This was how the matter presented itself to his (the Chairman's) mind. If, therefore, Mr. Thorn did not really intend to go to that extent when he wrote his letter, then he would take his (the Chairman's) advice, and proffer an apology to Mr. Scidmore and to Mr. Laffin at once. Then the matter could drop. Otherwise, the affair had come to such a serious pass, that there was nothing for it but to submit the whole question for the decision of the Club, whatever that might be.—(Applause.)

Mr. WAUGH asked pardon for again interrupting, but he wished to remark that he thoroughly agreed with the Chairman when the latter said that he had gone a little too far, considering that he was presiding over the meeting. Most assuredly had the Chairman gone too far in his remarks. He had accused Mr. Thorn of preferring a charge of conspiracy against two members of the Committee. Mr. Thorn had accused no one of conspiracy. Mr. Thorn, he contended, had not brought that charge against two members of the Committee as the Chairman alleged.

The CHAIRMAN—I only wished to endeavour to lay before the meeting the conclusion I had arrived at as an individual—not as the Chairman of this meeting—and as the result of a careful reading of the correspondence it appears to me that the charge made by Mr. Thorn amounts to that. I wish that Mr. Thorn were here, so that he might have an opportunity of saying that he had no intention of saying all that he did. I can arrive at no other conclusion, but that he did not realise the gravity of his charge, for what he does charge is that two members of the Club conspired to defraud him of the Gillig Cup.

Mr. WAUGH—It is getting late, and many are anxious to get away, so to bring matters to a head, I will ask one question:—How many members are there on the Committee?

The CHAIRMAN—Five.

Mr. WAUGH—And three members only of that Committee signed the letter calling upon Mr. Thorn to apologise or resign, which was their answer to his protest. Mr. Scidmore, charitably and gentlemanly, and Mr. Laffin, also charitably and gentlemanly, did not sign that letter. One was owner of the yacht *Daimyo*, the other the Officer of the Day. But there was another member of the Committee, Mr. Gibbs, who, if the protest had been upheld, would have been interested in the result. He had no business to sit on that Committee under the circumstances, and what I contend is that the Committee had no legal right to do what they did, for this reason—there were only two Committee men left who were uninterested in the race, and as our Committee consist of five, and it requires three to make a quorum, the protest could not have been considered.

The CHAIRMAN—Do I understand you to mean that Mr. Gibbs' name is not rightly attached to that letter?

Mr. WAUGH—There were only two members of the Committee who were uninterested.

The CHAIRMAN—Is Mr. Gibbs present?

Mr. Gibbs—Yes, Sir.

The CHAIRMAN—Did you support the Committee in the step they took, and sign this letter.

Mr. GIBBS—I may explain that I was interested in the race, but not in the first prize.

The CHAIRMAN—Did you endorse the action of the Committee? Was the letter signed by you?

Mr. GIBBS—Yes: it was.

The CHAIRMAN—Mr. Waugh, your objection is overruled.

Mr. WAUGH—You misunderstand me. If the first prize had been given to Mr. Thorn, then Mr. Gibbs would have received the second prize.

The CHAIRMAN—The question is, did Mr. Gibbs sign the letter or not; you have heard him declare that he did. We must take the action of the Committee as a whole or not at all. We cannot go into the motives of individual members of the

Committee. If we did that this discussion would be never ended. The question was raised as to whether a quorum of the Committee acted in this matter: we have heard that they did, and that ends the question.

Mr. BIRMINGHAM—We are wandering; the whole question is very simple. Is our Secretary guilty or not guilty of these charges? Did he substitute one handicap paper for another?

The CHAIRMAN—We know that he did not.

Captain LEE asked if the representative of Mr. Thorn could state to the meeting whether Mr. Thorn would withdraw his charges and tender an apology.

The CHAIRMAN was not disposed to take the question out of the hands of the meeting. He was surprised that Mr. Thorn was not present in person.

Capt. LEE—Will Mr. Thorn's representative tell us whether or not Mr. Thorn will apologise.

The CHAIRMAN—He should have gone to the Committee, I think, before this, if he wished to apologise. As I said just now, I do not feel inclined to take the matter out of the hands of the meeting.

Capt. LEE—I ask the Committee, are they inclined to accept an apology?

Mr. SCIDMORE—We will be satisfied with a written apology, which must be printed in the newspapers, and with nothing else.

Mr. WAUGH—I appear to be here under false colours.

The CHAIRMAN—We hope not.

Mr. WAUGH—I am only one of the members of the Sailing Club, nothing more. I am not Mr. Thorn's representative here, although I am his servant in his office. I merely desire to see a fair, sportsmanlike spirit prevail, and to see this question properly discussed. I know there are many points through which Mr. Thorn could upset and overthrow this resolution, even putting aside the legal one. I am not here, Captain Lee, as Mr. Thorn's representative, but merely as a member of the Club willing, like many of you here are able, though perhaps not willing, to stand up for him.

Captain LEE said that he had been under a misapprehension.

Mr. WAUGH then quoted the Rule of the Club, relating to protests. It ran:—"Should the owner of any boat, or the person acting as his representative, consider that he has a fair ground of complaint against another for foul sailing, or any violation of these rules, he must, if it arise during the Race signify the same to the Officer of the Day in writing within two hours of the arrival of the protesting boat, unless such arrival shall be after 9 o'clock p.m., in which case the time shall be extended to 10 o'clock a.m." I should like to move, said the speaker, an amendment to the resolution on this Rule. Now, Mr. Laffin, what time did you receive this protest?

The CHAIRMAN—Order, please. You must not carry on your argument in that way. You must address the chair.

Mr. WAUGH—Good enough for me sir, I shall continue. The Rule goes on to say, "In the latter case if the day following the race be a Sunday, the time shall be further extended by twenty-four hours." Now this race closed long before 9 o'clock, but the protest did not go in till the day following the race; therefore it is not a legal protest.

The CHAIRMAN—I rule that any discussion on Rule 24 is not before this meeting.

Mr. WAUGH—I must keep solely to the matter before us?

The CHAIRMAN—That is all.

Mr. WAUGH—Then I bow to your will. I thought that the meeting was a Court before which Mr. Thorn appeared as defendant. He has been charged with a heinous offence, and every opportunity should be given to enable him to clear himself—that, he took it, was the reason for Courts of Law, to give a man a fair hearing.

The CHAIRMAN—My reason for this arbitrary ruling is based on Rule 7, which I have before quoted. We must confine ourselves solely to the resolution which the Committee state in the notice to be the object of calling the meeting. The question as to whether Mr. Thorn lodged his protest in accordance with Rule 24 does not come within the power of this meeting. Mr. Thorn is not here. Now if you refer me to a Court of law, allow me to say that if a man is called before it as a defendant, and does not appear in person at all, and is not represented by an attorney—then judgment is given against him by default.

Mr. WAUGH said he had no authority to act as Mr. Thorn's representative, but he wished the matter to be properly investigated.

After a few remarks from Mr. BIRMINGHAM, Mr. LANE proposed that the resolution be put to the meeting. Mr. Thorn had not thought fit to appear there, but that was no reason why the resolution should not be put.

Captain LEE again asked if there was a possibility of Mr. Thorn withdrawing and apologising: if he did, then the whole matter stopped right there. If not, then a vote would be taken, and the possibilities were that Mr. Thorn might be turned out. It was only harmony which the speaker asked for, nothing more. The Committee were willing to accept Mr. Thorn's apology even now, if Mr. Thorn would tender one.

Mr. N. P. KINGDOM thought that Mr. Thorn had had plenty of time in which to send in an apology to Mr. Scidmore. He had not done so; he refused to apologise. If an apology were given now by Mr. Thorn it could scarcely release him, for in the speaker's opinion Mr. Thorn's conduct was now an offence done to the Club.—(Applause).

Mr. J. O. AVERILL said the Committee had sent their representative to Mr. Thorn three times, on three different occasions. He had refused peremptorily to apologise in any way. The Committee had been very reluctant to push matters to an extreme issue, but there was now nothing else for them to do. Mr. Laffin had gone to Mr. Thorn as the Committee's representative, and he can bear out what I say.

Mr. LAFFIN—Yes.

Captain LEE—It is never too late to do good.

The CHAIRMAN—I will act upon Captain Lee's suggestion. Is Mr. Thorn present?—[No answer.]—Is any representative of Mr. Thorn here?—[No answer.] I have received no answer to my calls. The meeting must be asked, Captain Lee, to take a vote on the resolution, for the matter cannot now be allowed to pass.

The CHAIRMAN then explained that the vote would be by ballot, the papers not being signed: a mark X would exclude, while a blank paper or any other mark would be taken in favour of Mr. Thorn. According to rule, 21 must vote to make a ballot, and a two-thirds majority was required.

Mr. CAREW proposed, and Mr. McLEAN seconded, that the Chairman be scrutineer. Forty-three ballots were cast: 31 were in support of the resolution, and 12 in favour of Mr. Thorn. Twenty-eight votes were the required two-thirds majority.

After a double scrutiny,

The CHAIRMAN said—By the result of this ballot I declare that Mr. Thorn is expelled from this Club.

Mr. WAUGH—I move we resign—I mean that the meeting adjourns.

The CHAIRMAN—This is all the business before the meeting.

The meeting then dispersed.

ADOPTION IN JAPAN—ITS LAWS AND USAGES.

Adoption is one of the most important factors in the family system of Japan. It is necessitated by the custom of ancestor-worship and the consequent desire to extend the family from generation to generation. Though of great importance in the social mechanism of the country, adoption has never been popular, as is attested by a current proverb, "never become adopted so long as you have at your disposal 3 *go* of rice bran" (*konuka san go motchya yoshi ni naruna*). This aversion for adoption seems to have increased of late years: a younger son is less disposed than ever to become the heir of another family unless he is closely related to it, or is under some special obligation. Nor is a family that has no heir more eager about the matter. The truth is that the recent sudden changes in the social and domestic systems of the country and the subsequent loosening of restraints, have so far undermined the manners of the people that it is now a very common thing to hear of a wealthy house brought to ruin by the prodigality of an adopted heir. It is no wonder, therefore, that considerable hesitation is felt before adopting a youth. When such a course is determined upon, should there be no eligible young man among the near relatives of the would-be adopter, a candidate of promise from among the younger sons of some poor family is selected and educated, and when the adopter is thoroughly convinced of the honesty and trustworthiness of the young man, the latter is wedded to a daughter of the house. In the highest circles where the perpetuation of the family is one of the gravest duties devolving upon its head, it is a common thing to adopt an heir even when there is no daughter of the house to be made his wife, and to hand over the estate to him in due time. This custom is also frequently followed in the houses of celebrated artists, in order to perpetuate the fame of the family.

Adoption is a very ancient custom in Japan, so ancient indeed that the orthodox Japanese annalists quote no less a personage than Amaterasu-o-mikami as the earliest authority on the question. Omitting, however, any instances said to have

occurred during remote antiquity, we come down to the time of the Emperor Monmu, in the second year of whose illustrious reign (702 A.D.), the celebrated body of laws known in history as the Taiho Code—the first of the kind ever drawn up in this country—was promulgated.

The Code established a fixed system of adoption and contained rules with respect to succession and inheritance. In the laws relating to the census it was provided that persons destitute of male issue should be permitted to adopt anyone above the 4th degree of consanguinity. The commentary on the Code, compiled under the auspices of Kiyouwara Natsuno in 833 A.D., during the reign of the Emperor Junna (824-833 A.D.), says that as males were permitted to marry when they reached the age of 15, it was necessary for an adopted heir to be younger than his father-in-law by at least 15 years, and that unless this qualification in age were satisfied, no one, however closely related by consanguinity, could be adopted. Consequently, those eligible for the purpose of adoption were confined to the following: brothers, nephews, grandsons (consanguinity of 2nd grade); cousins, sons of uncles by different fathers, sons of wives or mistresses prior to cohabitation (consanguinity of 3rd grade); second cousins, grandsons of brothers, grandsons of uncles by different fathers, nephews on the maternal side, grandsons (consanguinity of 4th grade). Thus there were two qualifications necessary for eligibility in adoption, namely, age and consanguinity. One exception to this rule existed, namely, that a foundling under 3 years of age might be adopted and made an heir without any question of consanguinity. If a son of another family totally unconnected by blood was adopted as heir, the offence was punished with penal service for the space of one year, while the man that allowed his son to be adopted in that unlawful manner received 50 blows. An adopted heir had the same rights and obligations as the real issue, but laboured under some disability according to the official rank of his adopted father. Thus an adopted heir, the official rank of whose father by adoption was under the 5th grade, was precluded from enjoying the privilege of becoming a probationer and of receiving an honorary title. Such an heir was, therefore, obliged to undergo a civil service examination if he aspired to enter the ranks of officialdom. In all other respects, as regarded inheritance, for instance, an adopted heir enjoyed the same rights as those of the real issue. When, however, an heir was a son of a brother his treatment did not differ in any respect from that accorded to the real issue. In case a son was born after an heir had been adopted, that son was treated as a stepson. A distinction was made in the relative severity of punishment when an adopted heir was killed by his father-in-law and when an heir of his own flesh and blood was killed. The punishment in the former case was severer by one degree than that inflicted in the latter.

No limit seems to have been enforced as to age when adoption was permissible, the restriction about age being confined to the provision about the relative age of a father-in-law and his heir. One noteworthy point about succession was that, whereas no less than three princesses ascended the throne prior to the drafting of the Code, daughters of subjects were precluded from enjoying the right of succession. For the period of about 5 centuries—during which time imperialism retained its sway either directly or indirectly through the intervention of the Fujiwara Family, which had almost exclusively supplied consorts to the court for many generations—regulations relating to adoption as set forth in the Code mentioned above were generally observed.

An important modification gradually took place with the transference of administrative power to military clans, namely, the inauguration of the custom of allowing a daughter of the house, in case there was no male issue, to succeed the family and to inherit its estate by contracting a marriage with a son of another family. The innovation was distinctly set forth in the Jyoyei statutes (1232 A.D.) compiled and proclaimed when Hojo Yasutoki held the reins of administration.

During the latter stage of the Muromachi (Ashikaga) Administration, when the unity of the country had entirely vanished, the recognized usages of adoption like every other social institution, were thrown into great confusion, and were flagrantly abused for the purpose of compassing political ends. Oda Nobunaga and Toyotomi Hideyoshi resorted freely to this artifice. Thus when Nobunaga invaded and defeated Kitabatake Tomonori, Lord of Ise, and the latter sued for peace, he was obliged to adopt Nobunaga's second son as heir. Hideyoshi, among other innumerable instances, at one time intended that Mori Terumoto, a celebrated fore-father of the present illustrious house of Prince Mori, should

adopt a nephew of his wife; but this plan was frustrated by Terumoto's nomination of one of his own nephews as heir. Apprehensive that Hideyoshi's displeasure might otherwise be incurred, Kobayakawa Takakage adopted the nephew of Hideyoshi's wife. Such abuses of the custom of adoption were due to ambitious designs upon the domains of others, or to schemes of personal aggrandisement. The restoration of peace by the establishment of the Tokugawa Regency on a firm basis, was naturally followed by a regular systematization of the usages of adoption. They were embodied in the "One Hundred Articles of the Regulations for the observance of *Samurai*," the fundamental statutes of the Tokugawa Regency. For purposes of succession, feudal lords and *samurai* were allowed to nominate male issue of half blood in case there was no legitimate son to succeed them. If the *pater-familias* died under the age of 15, his next brother was to succeed him; but in default of such a successor the house became extinct. In such a case adoption was forbidden. That restriction was prompted by a desire to weaken the power of barons. The above limit of age was due to the fact that in former times a male was considered to have come of age when he was 15 years old, so that when he died at that age he might have left offspring. In the "Regulations for the observance of *Samurai*," promulgated in the 3rd year of Kwan'nn (1663 A.D.), it was expressly provided that when an heir was to be adopted a report must be sent to competent authorities while the head of the family was alive. An heir adopted immediately prior to the death of the head of family was not legally recognised, except in certain special cases. An heir to be adopted was to be selected from among younger brothers, nephews, cousins, and second cousins, all coming of the same family stock and bearing the same family name. In default of these, sons of the sisters of the family chief married into another house, or his younger brothers by a different father—provided that the father was of respectable position—were eligible.

Regulations for Adoption and Succession were issued in 1667 A.D., but they were materially the same as those previously in vogue. A special article, however, was appended, strictly forbidding the selection of an heir from a non-related family. It further enjoined that an heir be selected from the relatives on the maternal side, in case there was no one eligible among the paternal relatives, and ordered that a report be submitted when the choice was determined. It also contained strict warning against the practice of nominating an heir out of a family entirely unconnected by blood for the sake of money—a proceeding to be visited with severe punishment.

The rules concerning adoption and succession enforced by the Tokugawa Regency for more than a century previous to the time of the 5th Regent were far more stringent than those subsequently observed. This was entirely due to the Regency policy of lessening the number of powerful barons and centralizing the administrative power. In pursuance of that policy, no less than 130 barons, representing more than 13 million *koku* of fief, were declared extinct during that period. In place of them about 110 barons were newly established, but their aggregate fief did not exceed 5 million *koku*. The Sixth Regent adopted a more lenient policy and a new process for preserving the prestige of the Shogunate was devised, which consisted in causing feudal lords to apply for permission to adopt the Shogun's younger sons as heirs, even in cases where they had already heirs of their own. The latter were deposed on the pretext of imbecility. Some times even the lord himself was obliged to retire on one pretext or another, while he was still young, and a son of the Shogun or of a scion of the reigning family was installed in his place. Attempts to depose a legitimate heir on the ground of imbecility and so forth, and to nominate the favourite son of a favourite mistress of the head of the house were also frequent occurrences, and constituted one of the standing causes of trouble in a *daimyo's* household.

The Restoration produced no small change in the usages of adoption, though in the country those in vogue during the period of the Tokugawa Regency are still widely followed. In general, a ceremonial similar to that observed in taking a wife is customary at the adoption of an heir. A family of means is at liberty to adopt several sons and to cause them to establish distinct households of their own. In case of disinheriting an adopted son, a similar procedure is generally followed to that taken when a husband divorces his wife. A son-in-law (*muho yoshi*) divorces his wife and thus severs his connection with the house of adoption. "Usages on Civil Matters," compiled some time ago by the Department of Justice, mention some interesting customs that are, or were, prevalent in

various parts of the country in connection with adoption.

In Minamichi District, Shinano Province, for instance, adoption is not considered permissible unless the would-be father is above 50 years of age. No other instance of the kind is known elsewhere in the country. To provide against domestic troubles incidental to the not improbable birth of a child in the adopting family after the adoption of an heir, it is customary, when anyone consents to become the heir of another house, to enter into an agreement as to the amount of estate to be handed over to him.

As regards the succession of sons-in-law, usage differs greatly according to localities. Thus in Nishi Hojyo, Mimasaku Province, a son-in-law is not allowed to succeed to the house until after a child has been born to him or his conduct has been closely watched for two or three years. When a son is adopted by another family, he is bound irrespective of age, to obey his parents by adoption just as if he were their real issue, and to apply himself to family affairs. He has no power over the estate until his installation as head of the family. Even afterwards, it is thought obligatory for him to ask the advice of the relatives when he intends disposing of any immovable property. The above case refers to the custom prevalent in Nishi District, Chikugo Province.

In Miwa District, Awa Province, it is customary for the parents-in-law to establish themselves as a distinct household within a year or a year and a half of the time of adoption. In Ishikawa District, Kaga Province, when an estate is transferred to an adopted heir, he, as a rule, forwards a receipt, not to the father-in-law, but to the head-man of the village or town in which he resides.

Another interesting point about adoption is the dowry. In Yashiro District, Kai Province, an adopted heir generally holds certain acres of farm or forest land of his own, or brings a certain amount of ready money to the house of adoption. In Kanbara District, Echigo Province, an heir adopted from another house brings with him a large amount of ready money as dowry, generally on condition that his father-in-law retires from life and hands him over the estate. In some cases a contract is entered into between the adopter and the adopted, to the effect that the latter will give to the former a certain sum of money on his succession to the estate. Pending the consummation of this payment, interest on the stipulated sum is paid by the adopted heir. The custom in Takai District, Shinano Province, is for the real father to pay, during a period varying from three to five years, the expenses necessary for the maintenance of his son adopted into another house. Sometimes a *yoshi* holds certain acres of land of his own, but these belong to him, and his parents by adoption have no power over them. Another usage in vogue in Miyoshi District, Awa Province, is for a *yoshi* to bring with him two sorts of dowry on the occasion of his adoption, one called *miyage-kin* (gift money), which the heir is entitled to claim again if the adoption be dissolved and he return to his parental home; and another called *jisan-kin* (properly dowry) to which no such distinct right is recognized, though to claim its restoration is considered permissible.

Usages differ also as to the disposition of offspring born after a family has adopted an heir. Both in Toyora District, Nagato Province, and in Akita District, Ugo Province, even if offspring is born after the adoption of an heir, it is usual not to dissolve the adoption, but to treat the offspring as a younger brother of the adopted son. In the latter district, in a case of the kind, the younger son receives a quarter or a third of the estate, to enable him to set up a distinct household. Again, in Ishikawa District, Kaga Province, and also in Shinane District, Izumo Province, such offspring is adopted by the *yoshi* as his heir, and the estate is even handed over to him in due time though the heir by adoption may have issue of his own. When the offspring is a girl, she is generally made to set up a new branch house by marrying. The usage prevalent in Mii District, Chikugo Province, with regard to the case under consideration differs widely from any given above. An heir by adoption is, it is true, nominated as head of the family, but as to the estate the adopter is at liberty to endow his own children with seven parts out of ten, leaving only three parts as the share of the adopted son. The father is, moreover, entitled either to give his offspring to another family or to cause him to set up a distinct household.

The dissolution of adoption, in consequence of difficulties between an adopter and adopted, or for other causes, is a recognized practice and is universally resorted to in almost every locality. There are one or two exceptions, however. In Kawakita District, Kaga Province, for instance, when once

the estate has been handed over to the adopted son, on no ground is the adopter permitted to dissolve the relation. Consequently, when the adopter and adopted find it impossible to live altogether in peace, it is customary for them to divide the estate and to live separately. In Minna District, Awa Province, when an adopted heir conducted himself in a discreditable manner, it was usual for his father-in-law to cause him to sever his connection with the house, the father-in-law being himself obliged to submit to a similar arrangement, *mutatis mutandis*. This custom is, however, now almost obsolete.

When adoption is dissolved, the dowry brought by the adopted son is generally carried back by him. Of the children born of the adopted son and his wife, the boys as a rule go with him, and the girls remain in the house. This is the custom prevalent in Kamakura District, Sagami Province. In Hanishima District, Shinano Province, a contract is entered into between the adopter and the adopted, a go-between standing as surety, to the effect that in case it is found impossible for the two to live together peaceably the latter shall be returned to his home.

The above are the rules and usages in vogue in olden times and to some extent in the present day. The custom is, however, considerably changed now that most of the social and domestic institutions are in a transition stage. Until a few years ago, conscription was the most potent factor in creating disorder. The old conscription regulations excluded an heir from the service, and hence every young man who had an elder brother to succeed to the house eagerly sought to be adopted into a family that had none. A vacant heirship was competed for by several candidates, with the result that it came to be bought and sold. It was a golden time for poor widowed parents with no heir to support them. The relations between them and their would-be heirs were, however, very slight, being cut off as soon as the danger of conscription was avoided. Adoption was effected in a very simple manner; namely, by merely transferring their census register to the adopting houses, though they themselves continued to live under their parental roof. When this connection was to be dissolved, the register was simply re-transferred to its original place in the census record. The amendment of the regulations entirely put an end to this scandalous mode of adoption, for since then every male, when he reaches the age of 20, is obliged, whether he be an heir or not, to enter the military service, provided that he be physically qualified for it and the lot fall to him. "Conscription Adoption," as it was termed in those days, though unquestionably a gross outrage on the usage of adoption, preserved one semblance of decency, namely that the ages of the adopter and adopted were in almost every case at a reasonable distance. Even this custom is set at naught by another outrageous mode of adoption which the elections to Local Assemblies and especially to the Diet have called into existence. Various are the shifts and contrivances resorted to by politicians desirous of entering Parliament in order to make themselves eligible. Among the most popular modes of effecting this, followed by an aspirant who finds the election district where he is registered already occupied by powerful candidates, or who has no means to show the necessary qualification, is to become heir of a wealthy house. Taking advantage of the absence of any law of adoption, he does not allow himself to be deterred by any scruples, and it frequently happens that an adopter is far younger than the ostensible heir. As such an aspirant only becomes adopted when the time of election approaches, and dissolves the relation as soon as the necessity for it ceases, it is not infrequent for him to have his name changed several times within a few years.

We append below a few articles bearing on adoption that were embodied in the Book on the Law of Persons of the Civil Code issued about five years ago, the enforcement of which was deferred indefinitely, owing to the objections raised against it by the public. The Code, and another not yet in force, will become operative prior to July, 1899, when the Revised Treaties between Japan and Great Britain and the United States of America and Japan are to go into operation.

Art. 106.—No person can adopt another unless he or she is older than one who is to be adopted, and a major.

Any person having the legal capacity to make a will can adopt by will.

Art. 107.—Any person having a son to succeed to the *katoku* (headship of a house) cannot adopt.

Art. 111.—Any person that has become the *koshu* (*pater-familias*) by succession to the *katoku* cannot be adopted by another house. A presumptive heir to the *katoku* is also unqualified for adoption.

Art. 112.—A foreigner cannot be adopted by a Japanese.

Art. 113.—Adoption is made with the consent of both parties. This consent is given by the celebration of the formalities of adoption in the presence of two witnesses in conformity with usage. * * *

Art. 115.—The adoption of a child that has not attained the full age of fifteen years can be made with the consent of the father and mother of the child. * * * *

Art. 116.—Any person who has attained the full age of fifteen years can consent to adoption with the permission of the father and mother. * * *

Art. 121.—In respect to the adoption of *mukoyoshi* (an adoption made with a view to marriage with a daughter of the adopting house) the parties shall, at the time of stating the marriage, acquaint the civil official with their intention to make such adoption. Where the conditions required for such adoption are wanting, the civil official can stop the celebration of marriage. Such adoption comes into existence by the celebration of marriage.

Art. 134.—The adopted child has from the day of adoption the rights and duties of a legitimate child of the adopting house.

Art. 135.—The adopted child has the right of ownership of the profits acquired by carrying on business separately and of the property originally held by him or her or acquired by succession, donations, or legacies. * * *

Art. 137.—The adopter and adopted can dissolve the adoption by mutual consent. * * *

Art. 140.—The dissolution of adoption can only be demanded for the following causes:—

1. Outrages, threats, desertion, or grave insults committed by the adopted towards the descendants in the adopting house or by them towards the adopted;
2. Punishment for crimes;
3. Punishment of major imprisonment for one year or more for the offence of theft or swindling;
4. Prodigality.

Art. 145.—The dissolution of adoption cannot be effected after the adopted has succeeded to the *katoku*.

Art. 147.—An adopted child whose adoption has been dissolved can demand, without regard to the presence or absence of his or her fault, only such property as is owned by him or her, except that which has been consumed by the adopting house.

THE FOREIGN COMMERCE OF JAPAN.

The Consul General for Japan in London, Mr. Gonnike Hayashi, delivered an address on the "Foreign Commerce of Japan" before the London Chamber of Commerce on the 12th of June last, in the Hall of the Salters' Company, St. Swin's Lane, London, E.C.

Sir Albert K. Rolitt, LL.D., M.P., the President of the London Chamber of Commerce, occupied the Chair. There was a numerous and brilliant attendance, including representatives of the Diplomatic and Consular Services (amongst whom was His Excellency Takeaki Kato, the Japanese Minister at the Court of St. James), Members of Parliament, and London merchants. The Japan Society and the Japanese Colony in London were fully represented.

After having been formally introduced to his audience by the President, the lecturer proceeded as follows:—

The subject of my paper, as was announced, is "The Foreign Commerce of Japan." At present everything connected with the Far East is absorbing the attention of European thinkers, and it will not be without a certain interest if I attempt to dwell on a more peaceful side of the question of the Far East, namely, the Commerce of Japan. You may regard the Japanese as a skillful people, and as successful competitors to your producers; but, on the other hand, the Japanese are a people who do not hesitate to buy anything from abroad that may be useful to them, and, in fact, they are among the best customers of Western producers, especially of English manufacturers. Again, the progress which Japan has made industrially and commercially is, yet, very modest; and there is a vast and vigorous future, full of hope and promise, for the development of which your energy and the help of your surplus money are eagerly awaited.

FOREIGN TRADE OF JAPAN BEFORE TREATY RELATIONS WITH WESTERN POWERS WERE OPENED.

What was the condition of the foreign trade of Japan before 1854, when she entered for the first time into the comity of nations by concluding treaties with the United States of America, Great Britain, and Russia? The foreign trade of Japan

up to that time had been confined to the Dutch, Chinese, and Koreans, and under very strict regulations and narrow limitations. Nagasaki was the only channel through which the insignificant trade with the Dutch and Chinese was allowed to be carried on, while the still more insignificant trade with Korea was carried on at Fusan, at present the largest port of Korea, and at Izugahara, a port in the Island of Tsushima. We may fairly say that the country was entirely closed until 1854.

The policy of shutting up the country from foreign intercourse was adopted by Iyemitsu, the third Shogun, sometimes called Tycoon, of the Tokugawa Government, in the years between 1634 and 1639. This was principally due to the policy of the rulers of those times in expelling the Portuguese from the country. The Portuguese had then a considerable trade with Japan, had even a settlement of their own at Nagasaki, called Deshima. With them Christianity was introduced into Japan, and many converts were made, including even some of the powerful feudal chiefs or Daimios. The Dutch had also a considerable trade with Japan; and, owing to jealousy or other reasons, they informed the Tokugawa Government that the attempt to Christianise the country was but a step towards their ultimate aims. The Tokugawa Government had come into power after a long period of internal warfare, and an unsuccessful and expensive invasion of Korea. Peace was therefore the first object of the Government, which did not wish to see any political difficulty with foreign powers created. The Government, which had been informed of the aggressive designs of the Portuguese, had consequently taken steps on several occasions to discourage Christianity, until finally, seeing no other effective means, they had to adopt extreme measures. The Portuguese were either expelled or persecuted. They were prohibited to enter or trade with Japan. Not satisfied with this, the Government used every means to prevent foreign intercourse. The Dutch were the only people of the West who were allowed to trade with Japan, because they were not Catholics, as the Portuguese were; but even this voluntary concession to the Dutch was confined to the narrowest possible limits, and the foreign trade of Japan thus received a fatal blow from her own rulers.

It was really a fatal blow, because the foreign trade of Japan, before these strictly prohibitive measures were adopted, had begun to be in a fair way to make progress. Iyeyasu, the founder of the Tokugawa Government, came into power at the beginning of the seventeenth century. He was as able a statesman as Japan had ever had, and to promote foreign trade was one of the objects of his enlightened policy. With regard to Korea, he tried every effort to re-establish friendly and commercial relations with her; and the Prince of Tsushima, the feudal chief of the island of the same name, was made a medium in carrying out this policy. This was rather a difficult mission, because it was not long after the destructive and unsuccessful invasion of that country; but the effort was successful, and the opening of the port of Fusan to Japanese settlement and trade was the result. The Loo-Chew Islands were subdued in the year 1608 by the Prince of Satsuma, the feudal chief of the province bearing that name, which will be familiar to some of you, because you had a naval engagement there in 1863. It was intended by Iyeyasu to use the influence of the chief of the Islands to re-open commercial intercourse with China. In those times there were a number of comparatively large vessels that traded with foreign countries. They were called "Goshuin-Buné," meaning "licensed vessels." In the year 1616 they numbered about two hundred. These ships traded with China, Siam, Tonquin, Annam, Formosa, Philippine Islands, Java, &c., &c. Some of these vessels were said to be as large as forty yards long and eighteen yards wide, and to have taken at one time about three hundred passengers on board. In Siam, there were, it is said, about seven hundred Japanese residents. Let us just glance at what was going on in England at the corresponding period. If I remember rightly the history of those times, you were then actively engaged in colonising a part of North America, and also in extending your trade to the coasts of the Mediterranean and India. It is a curious coincidence that the same activity shown by your ancestors was also displayed by our own. It is to be regretted that, while you have continued to progress, our forward movement had received a check for more than two hundred years.

Well, if I have dwelt too long on the past history of Japan, it is because I want to explain to some extent that the apparent inactivity of Japan, in which state she had remained for a long time almost secluded from the rest of the world, knowing nothing about what had been going on outside the country, was not the true characteristic of the

people. It was merely a rest, a long sound sleep. It is no wonder, then, that Japan, when she received a rude shock forty years ago, was able to rise again with fresh strength of life.

DEVELOPMENT OF FOREIGN TRADE OF MODERN JAPAN.

In order to show the development of the foreign trade of modern Japan, I will make the year 1868 the starting point, because at the very beginning of that year the Government of Tokugawa, which had lasted more than two hundred and fifty years, was abolished, and the Government of Japan was at the same time restored to the Imperial authority. It is not my business now to dwell upon the causes which produced this remarkable change in the history of Japan; but I will only state here that the sudden appearance of Commodore Perry in 1853, and soon after this the pressure exercised by the Powers of Europe to open up the country which had enjoyed its self-imposed secluded life, were the immediate causes which led to the political change just referred to. This pressure was no doubt more keenly felt than the combined pressure recently exercised upon my country by certain great military powers of Europe. But Japan was able to get the better of the shock out of which an entirely new order of things has since been evolved.

When Japan awoke to the necessity of opening up the country to foreign intercourse, the whole nation saw that they were, as a nation, immensely behind when compared with most of the Western Powers, and they determined to make up the gross neglect of the past. It is satisfactory to notice that this determination has, so far, been successful in regard to foreign trade as in other matters. The following table shows how rapidly the volume of foreign trade of Japan has grown from the insignificant figure of yen 26,246,545 in the year 1868, to yen 230,728,042 in 1894.

TABLE SHOWING FOREIGN TRADE OF JAPAN DURING THE TWENTY-SEVEN YEARS FROM 1868-1894.

Year.	Exports. Silver Yen.	Imports. Silver Yen.	Total. Silver Yen.
1868.	15,553,472'87	10,693,071'79	26,246,544'66
1869	12,908,977'99	20,783,633'09	33,692,611'08
1870.	14,543,012'51	33,741,637'36	48,284,649'87
1871.	17,968,608'66	21,916,727'65	39,885,336'31
1872.	17,026,647'22	26,174,814'93	43,201,462'15
1873.	21,635,440'85	28,107,390'03	49,742,830'88
1874.	19,317,306'09	23,461,814'40	42,779,120'49
1875.	18,611,110'61	29,975,627'62	48,586,738'23
1876.	27,711,527'50	32,964,678'96	60,676,206'46
1877.	23,348,521'60	27,420,902'95	50,769,404'55
1878.	25,988,140'28	32,874,834'17	58,862,974'45
1879.	28,175,770'19	32,953,002'39	61,128,772'58
1880.	28,395,386'66	36,626,601'00	65,021,987'66
1881.	31,058,887'93	31,191,246'02	62,250,133'95
1882.	37,721,750'57	29,446,593'98	67,168,344'55
1883.	36,268,019'59	28,444,841'78	64,712,861'37
1884.	33,871,465'50	29,672,647'45	63,544,112'95
1885.	37,146,691'43	29,356,967'92	66,503,659'35
1886.	48,876,312'79	32,168,432'26	81,044,745'05
1887.	52,407,681'15	44,304,251'69	96,711,932'84
1888.	65,705,510'21	65,455,234'01	131,160,744'22
1889.	70,060,705'82	66,103,766'60	136,164,472'42
1890.	56,603,506'03	81,728,580'50	138,332,086'53
1891.	79,527,272'34	62,927,268'38	142,454,540'72
1892.	91,102,753'03	71,362,079'50	162,464,832'53
1893.	89,712,864'59	88,257,171'71	177,970,036'30
1894.	113,246,086'15	117,481,955'49	230,728,041'64

You will see from the above table that the growth of the foreign trade of Japan, both in imports and exports, has not only been rapid, but, generally speaking, regular and steady, more particularly of recent years. One more point to notice in these figures is the balance of trade. The balance had generally been against Japan up to the year 1881, that is to say, the imports had been greater than the exports; but since that year the balance has been, with only the two exceptions of 1890 and 1894, to the credit of Japan. I suppose many of you have read an interesting article on "The Commercial Development of Japan," by Mr. J. H. Gubbins, Secretary to the British Legation at Tokyo. It appeared in the October number of *The Chamber of Commerce Journal*, 1894. The figures I have given above are somewhat different from those given in his article, but both sets of figures agree in showing the general tendency to a rapid and steady growth of trade. As to the supposed errors in statistics, and the changes of method in the compilation of returns at the Customs of Japan, I refer you to his able paper.

It will be interesting just to compare the volume of foreign trade of Japan with that of the neighbouring Empire of China. China has, not including Manchuria, Mongolia, Tibet, Eastern Turkistan, &c., about ten times as large an area, and ten times as large a population, as that of Japan, and she has a greater number of ports opened to foreign trade than Japan has, numbering twenty.

Notwithstanding this larger area and population, this greater number of open ports, and supposed boundless resources (and no doubt they are immense), China's foreign trade last year (1894),—in which year the volume of trade amounted to the highest figure ever attained, as was the case with Japan,—was in Mexican dollars, which are equivalent to silver yen, only 443,563,577, not quite double the amount of the foreign trade of Japan in the corresponding year. Again, the rate of the growth of foreign trade of Japan has been greater than that of China, though I will not trouble you with dry statistics on this point.

I entirely agree with Mr. Gubbins, that the rapid development of the commerce of Japan is largely due to "the enterprise and perseverance of the foreign merchants" resident in Japan, who numbered at the beginning of 1894 little over 4,000, together with many other people who are not merchants (Chinese are not included in this number). But the development is still more largely due, no doubt, to the rapid increase of both the producing and the buying power of the people, favoured by the improved system of roads and other means of communication, extension of railways, and the development of the coasting traffic. According to the latest statistics, there are over 2,000 miles of railway open to traffic; these are owned by the Government and fifteen railway companies. As to the shipping of Japan, there was a paper read before "The Japan Society" by Dr. Elgar, a very able paper, which attracted the attention of the British public. There is one more factor which favoured the increase of the producing power of Japan, namely, the depreciation of silver. But even without this depreciation of silver, I am of opinion that Japan has still been able to increase her producing power, on account of the cheap and abundant supply of coal and labour, and of the easy access to her principal markets. With regard to gold-using countries, the reasoning that Japan's export trade has been favoured by the depreciation of silver alone does not apply generally, for we had an instance of an enormous decrease of exports to the United States of America, in 1893, caused, no doubt, by the disturbance of the economic affairs there in consequence of the violent fluctuations in silver.

PRINCIPAL ARTICLES OF EXPORT AND IMPORT.

The chief articles of import are generally known as: kerosine oil, mousseline de laine, Italian cloth, sugar, raw cotton, cotton yarn, shirtings, arms, machinery, instruments, &c., and metals and manufactures of the same.

With all but the first two items of these imports, England or her colonies have great concern.

KEROSENE OIL.—The importation of kerosine oil has steadily increased. The amount imported in 1894 was 55,643,719 gallons, valued at yen 5,135,000, figures never reached before. In the last two or three years, Russian oil has been bought in bulk, and the oil from the United States of America, which still has the far greater share in the trade, has to compete with it. The demand for kerosine oil in Japan has increased not only for ordinary use, but also for the purpose of preserving the cultivated fields from the injuries of insects, thus taking the place of camphor, which had been used for the purpose.

MOUSSELINE DE LAINE.—Of this article France is the principal supplier. It is chiefly imported in its plain form, and the printing of it is done in Osaka or in Kyoto; an industry which has recently sprung up in those localities. The quantity imported in 1894 was 19,042,850 yards, valued at yen 3,151,000; greater both in quantity and in value than the previous year.

ITALIAN CLOTH.—England has the largest share in the import trade in this article. Among sundry other purposes, this is used for making cheap umbrellas. The quantity imported in 1894 was 6,481,638 yards, valued at yen 1,760,000, of which imports the share than by England was 6,348,086 yards, valued at yen 1,706,000. These figures are a little over those of the previous year.

SUGAR.—The increase of the imports of sugar, both white and brown, has been steady, with the exception of one or two years. White sugar is brought from China and the Philippine Islands. Imports of sugar in 1894 were:—

White Sugar.....	*Catty 109,343,475
	Yen 8,690,000
Brown Sugar.....	Catty 113,806,711
	Yen 4,562,000

* A Catty is 1½ pound.

If the direct traffic of Japan with the Island of Formosa is opened, I think that sugar refining will become one of chief industries of that island.

RAW COTTON.—The reason of the rapid increase of the import trade of raw cotton into Japan is already well known to the English public so that it scarcely needs any further explanation. So long as the imports of cotton spinning machinery, which

will be treated elsewhere, continue to increase, the imports of raw cotton will also continue to increase, unless checked by some unexpected cause which might affect the spinning industry of Japan. The following figures will show you the imports of cotton for the last three years, with the respective amount of imports from China, the United States, and India out of the total.—

IMPORTS OF RAW COTTON.			
	1892.	1893.	1894.
From China { quantity (catty).....	32,721,488	30,283,891	51,783,548
	value (yen).....	4,820,079	7,106,000
" U.S.A. { quantity (catty).....	9,185,290	6,160,340	11,056,826
	value (yen).....	1,435,802	2,273,421
" India { quantity (catty).....	36,213,221	36,592,406	42,354,246
	value (yen).....	4,691,770	6,054,048
Other countries { quantity (catty).....	78,647,573	93,835,718	108,415,609
	value (yen).....	11,026,637	15,294,898
Total { quantity (catty).....	120,220,079	126,872,355	213,993,629
	value (yen).....	16,877,488	28,454,946

COTTON YARN.—Owing to the growth of the cotton-spinning industry in Japan, the decrease of the imports of cotton yarn was considerable from the year 1888 up to the year 1892, in which year the imports showed a slight increase. Since 1892, although we have seen the fall of imports in quantity, the imports in value, notwithstanding the fall in imports in the aggregate quantity, may be accounted for by the comparative increase of the imports of yarn of finer counts, which is, of course, dearer than that of the lower counts, and partly from the rise of the price of yarn itself in the producing countries, caused by the depreciation of silver, and other local causes. The imports of this article for the last three years are as follows, showing the respective shares of imports from Bombay and England out of the total.—

	1892.	1893.	1894.
From Bombay { quantity (catty).....	8,258,369	4,805,040	2,333,625
	value (yen).....	1,814,393	1,243,103
From England { quantity (catty).....	16,048,317	14,527,812	13,600,172
	value (yen).....	5,326,082	6,033,005
Total { quantity (catty).....	24,306,686	19,332,852	15,933,797
	value (yen).....	7,140,475	7,276,108

SHIRTINGS.—Gray shirtings are the most important among the imports under this head, and England is the country that supplies almost the whole. The imports of this article were largest in 1879, since which year the imports have been very fluctuating. But in the last few years the trade has had a tendency to revive, the figures of the last three years being as follows:—

	Yards.	Yen.
1892	32,966,223	1,727,186
1893	38,970,851	2,315,124
1894	41,439,972	2,935,034

ARMS, MACHINERY, INSTRUMENTS, ETC.—Imports under this head have steadily increased, and very likely will continue to increase. The figures, in round numbers, of the imports of the last three years are as follows:—

	Yen.
1892	4,113,000
1893	6,036,000
1894	15,990,000

Steam vessels, spinning machinery, and locomotive engines were the three principal imports under this head, their respective imports being as follows:—

	1892.	1893.	1894.
	No. 8.	No. 12.	No. 38.
Value (yen)			
Steam Vessels	431,875	865,428	8,202,549
Spinning Machinery	354,624	1,912,013	2,858,321
Locomotive Engines	200,418	356,534	1,580,273

From the above figures it will be seen that the enormous increase of imports of this class last year was due to a number of steam vessels transferred to the Japanese in that year. Out of 38 vessels, 32 were bought from British owners; and as this demand was caused, no doubt, by the war with China, this increase may be regarded as abnormal. As to the other items of imports, spinning machinery and locomotive engines, the English share in 1894 was respectively, yen 2,785,825 and 989,625, the former being nearly the whole of the imports and the latter little more than 60 per cent.

METALS AND MANUFACTURES OF THE SAME.—The import trade under this class, which had declined since 1888, began to increase after the year 1892, the following being the figures of imports for the last three years:—

	Yen.
1892	3,715,689
1893	5,367,126
1894	9,178,769

The imports in 1894 of the more important articles under this head are as follows:—

	Catty.	Yen.
Pig-iron	61,081,416	743,553
Iron, Bar and Rod	46,839,223	1,339,034
Iron, Plate and Sheet	22,204,212	726,739
Rails	57,772,865	1,209,205
Iron Nails	25,320,959	1,332,638
Steel	4,985,909	362,366
Iron Pipes and Tubes	—	484,086
Tin Plates	—	296,285

Of these, iron nails come mostly from Germany,

while the share of England and Belgium, taken together, amounts to only about one-third or one-fourth of the whole imports. Iron, bar and rod, is imported from England, Germany, and Belgium, but the increase in this import trade is mostly noted from Belgium and Germany. Plate and sheet-iron is supplied from England and Belgium. Rail is imported mostly from England, and to a slight extent from Germany and Belgium. Pig-iron, steel, iron pipes and tubes, and tin-plates are imported mostly from England. If England has competitors in the import trade of metals into Japan, they are, no doubt, Germany and Belgium.

To the articles already enumerated as the principal imports, I will add here one or two more, namely wool and rice. I speak of wool because its import trade, though yet insignificant, has become a promising one; and of rice, because I think you had no idea that Japan has become its great importer.

WOOL.—There are several woollen factories in Japan, where woollen cloths and blankets, mostly for the use of the army, and such textiles as flannels, travelling rugs, shawls, &c., are made, to a certain extent, mostly for the home markets. Woollen yarn is not yet made in those mills; yarn being imported, not from England, but mostly from Germany, a country which is noted for making cheaper and apparently better articles. Wool is mostly imported into Japan from Australia, and to a less extent from England, China, and British India. The imports for the last three years were as follows:—

	Catty.	Yen.
1892	843,233	302,502
1893	1,740,275	425,120
1894	1,485,526	567,192

RICE.—Japan has imported rice within the last five years, from 1890 to 1894, in quantity 11,802,619 piculs,* and in value 29,931,766 silver yen; therefore, with the yearly average in quantity and value of 2,360,524 piculs and 5,986,353 silver yen respectively. The quantity of rice imported far exceeds the quantity of rice exported in the same period. The import trade in rice, just as its export trade, has been fluctuating, but the importance of the trade lies in its being a regulating factor of the price of rice in the home market. It is a well-known fact that rice is a chief article of food in Japan, but its produce depends much upon the mercy of Nature, and hence a sudden rise of price has often occurred. The imports of rice, therefore, from the countries where it is cheaper, and abundantly produced—from Siam, French India, China, and Korea—have proved a great benefit to the labourers and poorer classes in Japan, and indirectly to the trade in general. At the same time, it is fortunate that no cry has been raised by the farmers in Japan against foreign competition.

Let me turn now to the chief articles of export from Japan.

SILK.—The greater bulk of silk exported from Japan is going over to the United States of America. France is the next country which takes silk from Japan. The English share in this trade is almost insignificant, while I fancy that a certain amount of silk exported from Japan finds its way every year to the English market, not in its raw state, but as manufactured goods from France. The value of silk exported in 1894 was yen 42,892,751, a little over one-third the whole value of exports.

SILK PIECE GOODS.—The export trade of silk piece goods last year was very active. The amount exported was more than double that exported in 1893, the greater bulk being absorbed by the United States. The exports of these goods for the last three years were:—

	Yen.
1892	4,434,178
1893	4,074,993
1894	8,430,001

SILK HANDKERCHIEFS.—The export trade of silk handkerchiefs has, like that of silk piece goods, grown to a considerable amount. Great Britain is becoming one of the great customers for this article, and next only to the United States of America. Out of the aggregate amount of 1,435,674 dozen which was exported in 1894, America took 834,746 doz., and England 177,248, the remainder being distributed among sundry other countries. Of the total amount of yen 3,628,129, the English share was yen 569,853, or a little over 15 per cent.

RICE.—This export trade, is affected by the yield of the harvests, not only at home, but in the other rice-producing countries, a chief reason of fluctuations often seen in this trade; but in the last three years it has been a comparatively satisfactory one. England is the largest consumer of rice exported from Japan. Hongkong has apparently a greater share, but rice goes there only to be re-distributed

* A picul is 133½ pounds.

to several other parts of the world. The following figures show the share England takes in the whole export trade:—

	TOTAL.		ENGLAND.	
	piculs.	yen.	piculs.	yen.
1892	2,216,666	4,162,452	226,517	786,485
1893	1,588,538	5,001,158	293,280	688,158
1894	1,452,129	5,593,152	307,004	1,273,304

TEA.—The export of tea from Japan consists mostly of green tea, and the most of it goes to the United States and Canada. It is curious to notice that your sister people across the Atlantic take a fancy to green, while you here mostly stick to black tea. The value of tea exported in the last three years respectively was:—

	Yen.
1892	7,525,316
1893	7,702,088
1894	7,930,287

Of this value, in 1894, the United States of America took yen 6,267,365, and British America 1,460,517.

COPPER.—China and England are the largest customers of this article. The exports of the last three years of copper (ingot, slab, sheet, &c.) were as follows:—

	Catty.	Yen.
1892	29,966,009	4,863,822
1893	25,530,209	4,569,229
1894	25,404,092	4,900,753

DRIED FISH AND OTHER MARINE PRODUCTS.—China furnishes a great market for these products, in which we have a large export trade. Shrimps, cuttle-fish, shell-fish, *beche de mer*, shark's fin, and sea-weeds are among the principal exports.

COAL.—The exports of coal from Japan for the last three years were as follows:—

	Tons.	Yen.
1892	648,422	2,207,610
1893	829,667	2,647,084
1894	1,031,153	3,917,266

Besides these exports, coal supplied for ships' use amounted yearly to 400,000 tons. The markets for Japanese coal are mostly China and Hongkong, which latter place is a great shipping centre of the East, but of late Japanese coal is finding its market further south in the Philippine Islands and the Straits Settlements. The increase of this export trade has especially been noted in the last two years; favoured, I believe, to a certain extent, by the great coal strike in England the year before last, and by the fluctuations of exchange, which no doubt checked, more or less, the export of coal to the Eastern markets from England or from Australia.

COTTON YARNS AND COTTON TEXTILES.—The yearly increase of the produce of yarns at a number of mills which have sprung up rapidly in Japan has mostly been for supplying the home market, but of recent years Japan has become, though yet to a very insignificant extent, an exporter of the article, chiefly to China; and the only check to the growth of this export trade will be the introduction of the industry into China herself. Exports of cotton yarn of the last three years were as follows:—

	Catty.	Yen.
1892	32,754	7,720
1893	315,993	59,176
1894	3,538,868	955,530

We have also seen the rapid increase of the export trade of cotton textiles, especially of recent years, China and India being the chief markets. These exports for the last three years were as follows:—

	Yen.
1892	598,032
1893	1,241,813
1894	1,994,750

Perhaps they are cheaper than even the cheap German articles of a similar description.

The export trade in cheap carpets, made of mixed cotton and hemp, has also grown up, the chief market being the United States of America. Last year (1894) the export of carpets of this description amounted to 540,091, valued at yen 1,134,073.

ARTICLES CLASSED AS SUNDRIES.—There are many articles under this head, the more important of which are, for instance, matches, mats, straw-plaits, umbrellas, porcelain and earthenware, lacquered ware, glass ware, paper ware and paper leather, fans, screens, wood ware, bamboo ware, &c. The figures of exports of these, together with many other minute items, for the last three years, are as follows:—

	1892.	1893.	1894.
Value (yen)...	9,749,197	12,968,366	14,223,544

Besides the figures already enumerated, there are such exports as paper, camphor, drugs, fish oil, vegetable wax, &c.

One general remark in connection with the subject of export and import trade is this, that the growth of import trade is more conspicuous in the

imports of raw material than in the case of manufactured articles (except the imports of machinery, ships, &c.), and that the increase of export trade is chiefly noticeable in the exports of manufactured articles, a sure sign of the healthy development of industrial power of the people.

TRADE WITH GREAT BRITAIN AND HER COLONIES AND POSSESSIONS.

Below I give you the figures for the last three years:—(1) Of the amount of trade of Japan with several important countries trading with her; (2) of the import and export trade of Japan with Great Britain; (3) the same with Hongkong; and (4) the same with other British Colonies and Possessions. The figures are all in silver yen.

	(1)		
	1892.	1893.	1894.
	Yen.	Yen.	Yen.
Great Britain...	24,711,085	32,925,603	48,140,072
Hongkong ...	20,274,263	23,956,946	25,199,199
Other Colonies & Possessions	11,207,900	14,096,968	18,138,518
U.S.A.	44,603,025	33,829,867	54,306,116
China	18,868,270	24,810,395	26,325,490
France	21,714,194	22,837,253	23,846,824
Germany	7,315,831	8,698,174	9,427,091
Italy	1,322,011	1,718,486	3,070,729
Russia	1,421,091	2,492,952	2,194,123
Total.....	162,428,833	177,970,036	230,728,042

GREAT BRITAIN:— (2)

	Imports from.	Exports to.	Total.
	Yen.	Yen.	Yen.
1892.....	20,789,332	3,921,752	24,711,085
1893.....	27,929,628	4,995,974	32,925,603
1894.....	42,189,873	5,950,197	48,140,072

HONGKONG:— (3)

	Imports from.	Exports to.	Total.
	Yen.	Yen.	Yen.
1892.....	6,985,722	13,288,540	20,274,263
1893.....	8,268,071	15,688,874	23,956,946
1894.....	8,999,718	16,199,480	25,199,199

OTHER COLONIES AND POSSESSIONS:—(4)

	Imports from.	Exports to.	Total.
	Yen.	Yen.	Yen.
1892.....	7,965,415	3,242,354	11,207,900
1893.....	9,014,692	5,082,276	14,096,968
1894.....	11,140,606	6,997,911	18,138,518

The share taken by Great Britain, not including the shares taken by her colonies and possessions, in contributing to the total foreign trade of Japan, was 15 per cent. in 1892, 18 per cent. in 1893, and 21 per cent. in 1894. The share of her colonies and possessions was 19 per cent. in 1894. The percentages of other countries in those three years were respectively as follows:—

The United States			
of America	27 per cent.	19	and 23½
China	11½ per cent.	14	and 11
France.....	13 per cent.	12-13	and 10-11
Germany	4½ per cent.	5	and 4

Thus we see, speaking of the last three years, that Great Britain was the only one, among the countries above mentioned, whose trade with Japan increased, not only volume but in percentage also; a matter of great satisfaction.

Trade with Hongkong is growing steadily. No doubt more than half the amount of the trade either passes to, or comes from China, but still Hongkong enjoys its increasing prosperity by its being a shipping and distributing centre. Among the other colonies or possessions of Great Britain, Canada, like the United States of America, is one of the best customers of Japan, while India and Australia are getting more closely connected with Japan, with a promising future, in supplying her with cotton and wool, and taking from her sundry articles in return.

With regard to the trade between Japan and England, it must be said that England is the greatest contributor to Japan's import trade, nearly 36 per cent. of the total imports in 1894 being supplied by England alone. England may suffer a little in her export to Japan of cotton goods, but that she will gain in other branches of her exports is plain enough if the statistics of the last few years speak the truth. A fear that the manufactures of Japan "are driving Western producers from the field" is only a dream, and I believe that the position of England towards Japan, as the greatest contributor to her import trade, will be maintained for years to come. For the materials for railways, which are still to be largely extended; for the materials for telegraphic lines or submarine cables, which latter are almost sure to be laid down between Formosa and the Loo-Choo on the one hand, and Japan on the other; for the materials for many engineering and mining works which are to be done, not only in Japan, but in the newly-acquired Island of Formosa; for ships, both merchant and war vessels, especially large ones, of which we want many more in the near future, and for the construction of which ship-yards in Japan are not yet sufficiently developed; for machinery of sundry descriptions

which Japan is not able to make, and the introduction of which is needed in order to develop or improve her innumerable industries; for all these, to what foreign country will Japan come and look? No doubt to the market where they are made best and cheapest. And if feeling has anything to do in connection with the international trade, Japan will choose, other things being equal, to come to the country which has earned her best esteem. It scarcely needs saying that I refer to England.

A NEW COMMERCIAL ERA FOR JAPAN.

For the last twenty years or more the question of the revision of treaties, which Japan was forced to conclude with the Powers of Europe and the United States at the beginning of the last half of this century, has occupied the foremost position in questions before every Cabinet of Japan, and its solution has been the principal national end. More than one Minister of State who occupied the post of Foreign Secretary lost the position in connection with this question. Viscounts Mutsu and Aoki are to be highly congratulated on their success in this connection by concluding the treaty with Great Britain last July; but, at the same time, Japan should never forget, nor will she forget, the goodwill shown by the Government and people of this country in concluding with her this new Treaty of Commerce and Navigation.

Yes, we have heard so much about the goodwill which was no doubt heartily received, and will long be remembered in Japan. But the new treaty is based, not only upon the principles of equity, but upon those of mutual benefit. This benefit will be, in my opinion, not only great on the part of Japan, but on the part of the party who showed the goodwill. I will here only summarise those points which are interesting to those concerned in the trade of Japan. As to the particulars of advantages which the new treaty provides, I refer you to the treaty itself, the full text of which was published a long time ago and is within the reach of everybody. Hitherto, you were allowed to reside and trade only at certain prescribed spots of Japan, where you remained happy and contented. But if you once know that the whole breadth and length of Japan, from the Island of Yesso in the north down to the Island of Formosa in the south, is to be opened to you in the near future, you will, I hope, recognise the change as an immensely agreeable and profitable one. You may, then, not only travel and reside in any part of Japan you like, but may engage in trade and industry on a spot of your own choice. There you may "own or hire and occupy the houses, manufactories, warehouses, shops, and premises . . . and lease land for residential and commercial purposes . . ." To such places or ports in the Dominion of Japan which are or may be opened to foreign commerce, you may freely come with your ships or cargoes. As to warehousing, bounties, drawbacks, and facilities, you are to be placed exactly on the same footing as Japanese subjects; and so it is as to the protection of patents, trade-marks, and designs. In residing in Japan, you need have no fear of compulsory military service or exactions; so that even in time of war, of which I hope we may have no more, you may rest quietly and engage in your line of business. Of course the most favoured nation treatment as regards commerce and navigation is secured in the new treaty. The right of ownership by British subjects of real estate in Japan is not regulated in the new treaty, the matter being left, I think, to the Home legislation of Japan; but for practical purposes, there will be no inconvenience, as you can hold land under lease for any time you wish. "It is as a trader, and not as a landowner, that the interests of Britain are supreme in the Far East." *

If Japan's foreign trade and industries have made a very rapid development within the space of a generation, their progress in the coming generation will, I think, be still greater, in consequence of the opening up of the whole country to foreign trade in the course of a few years. If in Japan labour is cheap, and coal abundant, you can utilize them for your own purposes. If in Japan cotton-spinning companies are paying dividends of upwards of 15 or 16 per cent. a year, you can start there a fresh company, or any number of companies you desire. Well, if you have surplus energy and surplus money, there is in Japan a vast sphere for them. This influx of energy and money from a country which has earned of late the undying gratitude of Japan will not only be quite welcome to her, but will open to her a new Commercial Era.—(Loud Cheers.)

At the conclusion of the lecture several speeches were delivered, one of the most remarkable being that of His Excellency Takeaki Kato, the Japanese

Minister in London. His Excellency endorsed the statements of the Consul-General and, whilst not overlooking the commercial aspect of the relations between England and Japan, insisted particularly upon the cordiality of the relations between the two countries, a cordiality which, he said, was sincere, as recent events had proved. His Excellency resumed his seat amid loud cheers.

THE NEW TREATY PORTS IN CHINA.

Referring to the four new Treaty Ports in China to be opened on the 17th of October next, in accordance with the terms of Shimonoseki Treaty, a London journal thus describes them:—

Sha-tsze, the first town on the list, is, like all others above Hankow, but little known to the maritime world of Europe. In that excellent up-to-date work called "Through the Yang-tze Gorges," Mr. A. J. Little speaks of this place as a populous centre of trade lying on the north bank of the river, just a little west of the 112th meridian of longitude from Greenwich. He refers to Sha-tsze as being regularly passed by all steamers plying between Hankow and Ichang, and as having ten times the trade of the latter town. Its population, guessed at, is about 600,000; Chung-king having the same. During the summer floods here the river widens from one mile to five, and the stream runs about three knots to six, according to position. Near Sha-tsze the water rises from 10 ft. to 15 ft., and thus floods hundreds of miles of agricultural land, owing to the decay of the embankment on that side. Thus the Toong-ting Lake, near by, is swelled from 2,300 to 4,000 square miles, from May to September. On the north shore the dykes extend continuously as far down as Hankow, some 250 miles. Sha-tsze is the most important *chen*, or mart, in that part of the empire, at which during all seasons of the year a perfect forest of masts of junks may be seen. These are of various tonnage, from 10 to 50, according to the size of the rivers and affluents they navigate. The name of the city in English is "Sandmarket," such probably designating its origin in the remote past. The city is built upon a great dyke 25 feet above the surrounding country, which for miles is below the level of the river, even during the dry or winter season. Many of our best and latest maps of China place this important town on the south bank of the Yang-tze, but Mr. Little puts it on the north, and in a somewhat different longitude to that given above. It has a noble stone embankment, built years ago during China's greatness, facing the south and south-west, constructed in three different tiers each twelve feet high and ending in what has been a grand and spacious promenade on the top, but "a degenerate people" have so far projected their wretched habitations on the roadway that in 1888 there was in many places barely room for a sedan chair to pass. The otherwise beautiful embankment is now disfigured by hundreds of tons of filth and town rubbish, which have been cast over into the water, but which the tide has not taken away. Immediately facing the embankment there is little or no tide near the shore, and this is taken advantage of by "tiers upon tiers of junks" being moored along the whole extent of the city front with their bows to the banks and planks to the shore. Fine stone stairs crowned by archways, for securing the continuity of the upper roadway, have been let into the face of the wall at regular intervals, but these have been long ago all but covered up by the deposit of tons of town refuse—the accumulation of ages—over which the merchandise of the port is now regularly carried by coolies. These "muck-mounds" are still being added to with all kinds of nameless filth from a city equally filthy, though possessing many very fine public buildings of stone, such as guild houses, monasteries, bridges, and lofty pagodas. Some 60 miles above Sha-tsze the Rapids or "Yang-tze Gorges," commence, the latter being stupendous walls of perpendicular cliff attaining a height of 700 ft. and upwards. It is here where the river has cut a channel through the mountains. These peculiar chasms are narrow and the water generally insufficient for the passage of large steamers; the bottom is rocky and the current runs about 6 knots an hour.

The large junks navigating these rapids do not generally carry over fifty tons of cargo or draw more than eight feet. The smallest cargo-boats carry about two tons, and like the others, are towed up the rapids by their crew tracking with ropes along the shore. These craft are invariably built to suit the navigation of the rapids, and do not descend the river below Sha-tsze, where all freight and passengers are transhipped into larger

vessels called Hunan boats, in which the traffic of the lower river has been carried on since a date long prior to Confucius, B.C. 550.

Chung-king is the second city named in the Treaty, and lies on the north bank of the Yang-tze a little west of the 107th meridian, according to Mr. Little's map. Its distance above Ichang is about 360 nautical miles, 720 from Hankow, and 1,309 from Shanghai. In time, by large passenger junks, the distance is about 42 days from Ichang, the delay being partly caused by having to await turn in towing up the rapids; time distance from Hankow 80 days, and about 120 from Shanghai, or an average of 11 miles per diem. Another source of delay is the antiquated Custom House system, where at many points on the river all cargo has to undergo a thorough examination before being permitted to proceed.

By the Chefoo Convention of 1877, under which Ichang opened, it was promised that the opening of Chung-king would soon follow, but although Great Britain more than fulfilled her part of the bargain, China "went back" on hers and afterwards pleaded the unreasonable excuse that such a measure would throw tens of thousands of junkmen out of work.

The opening of the unimportant city of Ichang was demanded in consequence of the murder of Mr. Margery. Until a good chart has been made of the Upper Yang-tze by a competent naval surveyor, like those which exist of the lower river between Hankow and the sea, it will be impossible to speak with any degree of certainty of the various details of navigation between the rapids and Chung-king, a distance of some 300 miles. Mr. Little estimates that part of the stream to be from 800 yards to one mile broad, with various sandbanks and islands, but easily navigable for steamers of moderate tonnage that "do not draw more water than the large junks." Coal is plentiful and of good quality at many places between Hankow and Chung-king. The chief difficulty—though by no means an insurmountable one—to steam navigation are the Rapids, extending over a course of 80 miles, but as large junks are readily tracked up by their crews, or can sail up when the wind admits, there should be no trouble with light-draft steamers of ten knots speed. The rate of tide above the rapids is about an average of two knots. Chung-king lies on the confluence of two rivers and in a splendid situation as the commercial centre of two popular provinces; it is the most western city of the four soon about to open.

Soo-chow, the third port named in the treaty, is nearly the same distance from the sea as Hankow—say 600 miles—the course over the Yang-tze being the same as far as the 116th meridian. At this point vessels will branch off into the Po-yang Lake, an extensive sheet of water covering some 1,600 square miles, at the south-west end of which the town is approached by a considerable river, and lies some 70 or 80 miles from its mouth. From Soo-chow there is river communication nearly all over the south and west of the populous province of Kiang-si, particularly to the south, for a distance of 200 miles. In the south-east, one branch of this river has its sources in the same districts as those from which spring the River Min, at Foochow, so well known to all Chinese merchants. Though the navigation of the Yang-tze, 600 miles from the sea, is nearly as well known as that of the Thames, there still remains much of detail to be learnt from European surveys of the Po-yang Lake, and the smaller River Chang, on an arm of which Soo-chow is built. The head of navigation for large junks is said to be about 400 miles above Chung-king, and therefore 1,700 from the sea, in which case it reaches to a point not far removed from the city of Yunnan.

Hang chow has already been described, as far as is consistent with facts. Its grand situation at the head of the Gulf of Hang-chow will, in the near future, constitute it as great an emporium of commerce as Hongkong or Shanghai.

It is easy to understand the strong objections of ultra-conservative China to opening her ports for foreign commerce, machinery, and what not, when we remember that only a few years ago rooted antipathy was expressed by the working millions of Europe against the introduction of machinery, and hence it is not surprising that on nearly every occasion Chinese cities have been opened only at the point of the sword. Further than all this, in the case of China, her corrupt officials, high and low, can see that such a measure will at once rob them of their *cumshaw* or "squeeze-pidjin." After the war of 1842 Britain demanded the opening of Amoy, Foochow, Ningpo, and Shanghai. To these in 1858, by the Treaty of Tientsin, were added Swatow, Chinkiang, Kukiang, Hukiang, Chefoo, Newchwang, Tientsin, and other minor ports. In 1876, by the Chefoo Convention, there followed Wenchow, Wuhu, and Ichang, while

at the same time permission was unwillingly given for foreign vessels to load and unload at Ta-tung, A-king, Hu kow, Woo-sue, and the present Sha-tsze, although foreigners were not then permitted to form establishments of manufacture or trade as has just now been conceded.

In the popular question of developing the trade of China, much has been written about railways, particularly those which are to tap the country from Burmah and Tonquin; but as the western provinces do not contain more than two-tenths of the entire population, there will still remain a great multitude who can best be reached for the present and for generations to come by the magnificent rivers, than which no country has been so richly endowed as China. Three great rivers, with their broad affluents ramify like a vast network the greater part of the empire and already carry the "ships" of China to nearly every individual market of any consequence. Tributary streams, large enough to float flat bottomed steamers carrying 500 tons of weight, reach out for hundreds of miles to every point of the compass, and it is not too much to say—as far as travellers have informed us—that there is no considerable town in China without its river and larger or small ship, already capable of carrying the contents of several railway trucks. There are no people in the world who can more readily adapt themselves to the management of boats, and none where men, women, and children more generally are born in boats and live in them all through their lives. These are features which will powerfully operate against the construction of railways so long as the rivers exist, together with other causes, such as the drain now made upon Chinese capital by the Loan, the enormous comparative cost of railways, the ineradicable prejudices of the people, at the bottom of which are religious scruples about their ancestors whose graves already cover nearly every rood of ground. After that stupendous mountain has been removed there will still remain the doubtful policy and enormous cost of building railway bridges and embankments through a country that is so frequently in flood. Certain British firms engaged in the China trade are already launching steamers of 6,000 tons to replace vessels of half the size, but although these new open ports will assuredly give a vast impetus to all sea-borne trade, it is extremely doubtful if China will be ready—even if willing—to adopt any general railway system so long as her superb rivers are open for steam navigation.

Lieut.-General Viscount Takashima, Vice-Governor-General of Formosa, left here for the south by the *Yokohama Maru* to-day.

Omiya, Sept. 6.

At 11.40 a.m. to-day the 9 a.m. Mayebashi train and the 10.30 a.m. Uyeno train collided when entering this station. One railway employé was killed on the spot, two engineers were badly wounded, but all the passengers are safe. The locomotives and the track were more or less severely damaged.

Osaka, September 6.

Forty Korean students arrived here yesterday from Kobe, and put up at the Osaka Hotel. They visited the Mint, Arsenal, and barracks this forenoon under the guidance of a local official. The Spinning Factory and other establishments will be inspected this afternoon. The party proceeds to Kyoto to-morrow, whence they will leave for Nagoya on the 8th, reaching Tokyo the following day.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 192.

WHITE. BLACK.
1—P to Q 3 1—Anything
2—Mates accordingly.

Correct answers from E.D., Digamma, Kr., W.D.C., Shogi, W.H.S., E. J. King, and J.D.

PROBLEM No. 194.

By WALTER PULITZER. NEW JERSEY.

BLACK.

WHITE.

White to play and mate in two moves.

NOTE.—This problem (so writes Mr. Pollock, the chess editor of the *Baltimore News*) is the first two-mover that Mr. Steinitz, during the last 35 years, has failed to solve within 15 minutes. Here is a chance for our solvers to score off the champion.

GAME No. 333.

WHITE. BLACK.
Bardleben. Teichmann.
1—P to Q 4 1—P to Q 4
2—P to Q B 4 2—P to K 3
3—Kt to Q B 3 3—Kt to K B 3
4—B to B 4 4—B to K 2
5—P to K 3 5—Castles
6—B to Q 3 6—P to B 4 (a)
7—P takes B P 7—Kt to B 3
8—Kt to K B 3 (b) 8—B takes P
9—Castles (c) 9—P takes P (d)
10—B takes B P 10—Q to K 2 (e)
11—B to K Kt 5 11—R to Q sq.
12—Q to K 2 12—Q to B sq. (f)
13—P to K 4 13—B to K 2
14—P to K 5 14—Kt to K sq.
15—Q to K 4 15—P to K R 3
16—B to K 3 16—B to Q 2
17—P to Q R 3 17—P to Q R 3
18—B to Kt 6 (g) 18—K R to Kt sq. (h)
19—Q R to Q sq. 19—B to B sq.
20—P to Q Kt 4 20—B takes P (i)
21—P takes B 21—Q takes P
22—R to Kt sq. 22—Q takes Kt
23—R to Kt 3 (k) 23—Resigns.

(a) As second player we prefer to reserve this move till P to Q Kt 3 and Q Kt to Q 2, etc., have been played.
(b) To prevent P to K 4. It always seems to us that the White Q B is in a somewhat precarious position on K B 4.
(c) P takes P would have been our choice, for if Black then replies with P takes P, to B to K Kt 5 might be of some use.

(d) Not a favorable exchange, as it gives free scope for the operation of White's minor pieces, particularly B to K Kt 5 in conjunction with Kt to K 4.
(e) Apparently not suspecting the difficulties in store for him through B to K Kt 5. We do not like the move of P to K R 3, but Kt to Q 2 has good points.
(f) An awkward defence, but necessary, in anticipation of Kt to K 4.
(g) White makes the best of his chance by a clever disposition of his forces.
(h) Curiously enough if R to B sq. then 19—Q R to Q, Kt to Kt sq.; 20—Q takes P wins the exchange.
(i) This looks very plausible. It seems as if Black is certain to get his piece back, as the Queen will attack two pieces after retaking the Pawn.
(k) A pretty catch. If P to B 4. 24—Q to K 2.

GAME No. 334.

CHESS IN ADELAIDE.

The following game was played at a recent meeting of the Philidorian Society:—

STAUNTON'S OPENING.

WHITE. BLACK.
Mr. H. W. Apperly. Mr. A. J. Laughton.
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—Kt to Q B 3
3—P to B 3 3—P to Q 3 (a)
4—B to Kt 5 4—B to Q 2
5—P to Q 4 5—P to Q R 3 (b)
6—B to R 4 6—P to Q Kt 4
7—B to B 2 7—B to Kt 2
8—Castles 8—B to B 3
9—P to Q Kt 4 (c) 9—P takes P (d)
10—Kt takes P 10—B takes Kt
11—P takes B 11—Kt takes Kt P
12—B to Kt 3 12—Q to K 2 (e)
13—Kt to B 3 13—P to Q R 4
14—P to Q R 3 14—Kt to Q R 3
15—R to K sq 15—P to Q B 3
16—P to B 4 16—Castles (f)
17—Q to K 2 17—Q to B 3
18—P to K 5 18—P takes P
19—Q P takes P 19—Q to Kt 3
20—P to Q R 4 20—B to Kt 5
21—Q to B 2 21—P to Kt 5
22—Kt to K 4 22—Kt to B 2
23—Kt to Q 6 ch. 23—K to Q 2 (g)
24—Kt takes B P 24—B to K 3
25—Kt takes K R 25—Q to K sq.
26—B takes B ch. 26—Q takes B
27—P to B 5 27—Q to K sq.
28—P to K 6 ch. 28—K to B sq.
29—Kt to B 7 29—R to Q 4
30—B to Kt 2 (39 minutes) (80 minutes)

And Mr. Laughton resigns.

(a) As was pointed out a few weeks ago, the best defence is ...P to Q 4.
(b) Freeborough gives 5...Kt to B 4.
(c) The after play apparently justifies Mr. Apperly's sacrifice of a Pawn for position.
(d) If instead 9...B to K Kt 5, White plays 10 P to Q 5, and Black will have a cramped and difficult game.
(e) This is bad. 12...P to Q B 4 would at least give a fighting position with some possibilities about it.
(f) Though not altogether satisfactory, 16...Kt to K B 3 is preferable to the text move.
(g) As Mr. Apperly's continuation shows, this entails the loss of a clear Rook. It would have been better to exchange the Queen's Rook for Knight and Pawn.

GAME No. 335.

Played recently at Beaver Creek, N.W.T., Canada.

CENTRE COUNTER GAMBIT.

WHITE. BLACK.
Mr. George. Mr. Holland.
1—P to K 4 1—P to Q 4 (a)
2—P takes P 2—Q takes P
3—Kt to Q B 3 3—Q to Q sq (b)
4—P to Q 4 4—B to K B 4
5—Kt to Q B 3 5—P to K 3
6—B to Q B 4 (c) 6—Kt to K B 3
7—B to K B 4 7—B to Q 3
8—B takes B (d) 8—P takes B
9—Castles 9—Castles
10—R to K sq 10—Q Kt to B 3
11—Q Kt to K 2 11—P to Q 4
12—B to Q Kt 3 12—P to Q Kt 4 (e)
13—Kt to K Kt 3 13—B to Kt 3
14—P to Q B 3 14—Q to Q 3
15—P to K R 3 (f) 15—K R to K sq.
16—Q to Q 2 16—P to K 4 (g)
17—P takes P 17—Kt takes P
18—Kt takes Kt (h) 18—R takes Kt
19—R takes R 19—Q takes R
20—R to K sq. 20—Q to Q 3
21—R to K 3 21—R to Q sq.
22—Kt to K 2 22—B to K B 4
23—Kt to K B 4 (i) 23—B to K 3 (j)
24—Kt takes B 24—P takes Kt
25—Q to K 2 25—R to K sq.
26—Q takes Q Kt P 26—P to K R 3
27—R to K B 3 27—R to K B sq.
28—B to Q B 2 28—Q to K 4
29—R to K 3 29—Q to Q 3
30—Q to Q 3 30—Q to K 2
31—R to K B 3 31—Kt to K 5
32—R takes R ch. 32—Q takes R
33—P to K B 3 33—Q to B 4 ch.
34—Q to Q 4 34—Q takes Q ch.
35—P takes Q 35—Kt to Q 3

36—B to Q 3 36—Kt to Q Kt 2
37—P to K B 4 37—K to B 2
38—P to K Kt 4 38—K to B 3
39—K to B 2 39—Kt to Q 3
40—K to B 3 (k) 40—P to K Kt 4
41—P takes P ch. 41—P takes P
42—K to Kt 3 42—P to K 4
43—P takes P ch. 43—K takes P
44—P to K R 4 44—P takes P ch.
45—K takes P 45—K to B 5
46—K to R 5 46—P to Q 5
47—P to Kt 5 47—K to K 6
48—P to Kt 6 (l) 48—Kt to K sq. (m)
49—B to Q Kt 5 49—Kt to Kt 2 ch.
50—K to R 6 50—Kt to B 4 ch.
51—K to R 7 51—P to Q 6
52—P to Kt 7 52—Kt takes P
53—K takes Kt 53—P to Q 7
54—B to R 4 54—K to K 7
55—P to Q Kt 4 55—P queens.
56—B takes Q ch. 56—K takes B
57—P to Q R 4 and wins (n)

(a) Played, as we have previously noted, in order to avoid beaten tracks and the gambits, and to get a little freedom early in the game. The drawback is that for some time Black must be subjected to attack and lose a little time until his pieces are developed; when with Q file open, &c., supposing all goes well, he ought to have a good playing game.

(b) Some play 3 Q to R 4 which is safe; but the text move has many advocates still.

(c) B to Q 3, offering the exchange here, has points.

(d) We do not approve of these early exchanges. Hence we prefer B to K 3 for White's 7th move and P to Q B 3 for Black.

(e) This pawn was advanced apparently to no purpose, and the isolated pawn was left unprotected and ultimately lost.

(f) A wasted move. Kt to K 5 was very good now. The piece would be planted well in the centre, could not safely be captured, and could be supported throughout the game if need be.

(g) Which, of course, is excellent, and illustrates the preceding note.

(h) And here, not the exchange, but Kt to Q 4.

(i) Kt to Q 4 is also good here. The text move is inferior. It is a trap only, and the Kt is not so well posted as at Q 4.

(j) He should have played now P to Q 5, instead of thus losing pawn.

(k) A natural move, although P to K R 4 seems better. If then 40—P to Kt 4; 41, B P takes P ch, P takes P; 42 P to R 5, K to Kt 2; 43, P to Q Kt 4.

(l) We give a diagram of the position at this juncture. It illustrates a point in practical play that may well be noted, as it frequently occurs.

WHITE.—(HOLLAND).

BLACK.—(GEORGE).

(m) K takes B was the move. Then, if P to Kt 7 he can play Kt to K sq, threatening Kt to B 6 ch if the Pawn Queens. We have tried, also, the variation P to Kt 8, claiming a Kt, &c. Black wins in all cases by K to Q B 7 after.

(n) After the 48th move there is nothing of great importance. The game is interesting as one of a triangular match played where few chess matches can occur. Messrs. George, Holland, and Hollis were the players. Learners may profitably study such games, which are more instructive than those in which no mistakes are made. But the play here is, indeed, very creditable, if by no means perfect.

GAME No. 336.

CONSULTATION CHESS.

The following is a fine consultation game recently lost by Dr. Tarrasch at the Nuremberg Chess Club to an aggregate of talent, consisting of Herren P. Gutmann, W. Hahn, M. Kurschner, and L. Regensburger. The score and notes (condensed) are from the *New Orleans Times Democrat*, which acknowledges its indebtedness to Dr. Tarrasch's chess column in the *Frankfurter General Anzeiger*.

FALKBEER GAMBIT.

WHITE. BLACK.
Dr. Tarrasch. The Allies.
1—P to K 4 1—P to K 4
2—P to K B 4 2—P to Q 4
3—P takes Q P (a) 3—P to K 5
4—B to Q Kt 5 ch. 4—P to Q B 3
5—P takes Q B P 5—Kt takes P
6—Q Kt to B 3 6—K Kt to B 3
7—K Kt to K 2 7—Q to Q Kt 3
8—P to Q 4 8—B to Q Kt 5
9—Castles 9—Castles
10—B to Q B 4 (b) 10—B to K Kt 5 (c)
11—B to K 3 11—Kt to Q R 4 (d)
12—B to Q Kt 3 12—B takes Q Kt
13—Kt P take B 13—Q to Kt 4
14—K R to K sq. 14—Kt to Q B 5
15—B to Q B sq. 15—Kt to Q 4
16—P to K R 3 16—B to K 3 (e)
17—P to Q R 4 17—Q to Q 3
18—P to R 5 (f) 18—P to Q Kt 4
19—B takes Kt (g) 19—P takes B (h)

20—B to Q R 3
21—K to R 2
22—Q to Q B sq.
23—K takes Kt (i)
24—K to Kt 3 (j)
25—K takes B
26—Kt to K Kt 3
27—B to K 7
28—B to K R 4
29—R takes K P
30—K to Kt 2
31—K to B sq.
And Dr. Tarrasch resigns (k).

NOTES.

- (a) This is a faulty move.
(b) Losing time in order to avoid the exchange of this Bishop for the adverse Queen's Knight.
(c) Threatening . . . Kt takes Q P, and if Q takes Kt . . . B to Q B 4.
(d) Much stronger than 11 . . . R to Q sq.
(e) 16 . . . Kt takes Q B P would have been unsound, because of 17 Kt takes Kt.
(f) To drive away the adverse Knight at Q B 4 by R to Q R 4 whenever feasible.
(g) If instead 19 P takes P en passant, Black secure possession of the Queen's file.
(h) Far stronger than taking with the Queen.
(i) If instead 23 R to K B sq, Black would win by 23 . . . Kt to K R 6, 24 Kt to Kt sq, P to K 6, &c.
(j) Best, otherwise Black would win still more speedily by . . . Q to B 6.
(k) The Knight is lost, and, in addition to superiority in material, Black retains a decisive attack.

GAME NO. 337.

"RUY LOPEZ."

WHITE. Max Weiss.	BLACK. W. H. K. Pollock.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—Kt to B 3
5—P to Q 3	5—P to Q Kt 4
6—B to Kt 3	6—B to B 4
7—P to B 3	7—P to Q 4
8—P takes P	8—Kt takes P
9—Q to K 2 (a)	9—Castles
10—Q to K 4	10—B to K 3
11—Kt takes P (b)	11—Kt takes Kt
12—Q takes Kt	12—Kt to Q Kt 5 (c)
13—Castles	13—Kt takes Q P
14—Q to R 5 (d)	14—B takes B
15—P takes B	15—R to K sq.
16—Kt to Q 2	16—Q to K 2
17—P to Q Kt 4 (e)	17—B takes P ch. (f)
18—K to R sq.	18—Q to K 8
19—P to R 3	19—Kt takes B (g)
20—R takes Q	20—R takes R ch.
21—K to R 2	21—B to Kt 8 ch.
22—K to Kt 3	22—R to K 6 ch.
23—K to Kt 4	23—Kt to K 7
24—Kt to B sq.	24—P to Kt 3
25—Q to Q 5 (h)	25—P to R 4 ch.
26—Kt to Kt 5	26—K to Kt 2 (i)
27—Kt takes R (j)	27—P to B 3 ch.
28—K to R 4	28—B to B 7 ch.
29—P to Kt 3	29—B takes P mate.

(a) 9 Castles, threatening Kt takes P, followed by P to Q 4, is better play here. For if 9 B to K Kt 5; 10 P to K R 3, B to R 4 (if 10 B takes Kt; 11 Q takes B, Q Kt to K 2; 12 R to K sq.); 11 P to Kt 4; B to K Kt 3; 12 R to K sq., &c.
(b) Again 11 Kt to Kt 5 was preferable; for if 11 P to Kt 3; 12 Kt takes B, &c.
(c) A sound and brilliant sacrifice. The opening is the stale and stereotyped Ruy Lopez, but it is splendidly illuminated by the brightness of Mr. Pollock's imagination.
(d) Here also 14—Q to Kt 3, B to Q 3; 15 Q to B 3 was a better continuation for White.
(e) If 17 Kt to B 3, Kt takes B P; with a great advantage.
(f) Splendidly played, as White cannot take the piece, on account of the threatened mate in two moves by Q to K 6 ch, &c.
(g) Another magnificent sacrifice such as has very seldom occurred in actual play.
(h) Evidently overlooking Black's beautiful rejoinder. 25 Q to R 6, however, would have been useless on account of 25 Q R to K sq.; 26 Q x P (if 26 Kt x R, B x Kt ch; 27 Q to R 4, R to K 5 ch, wins); 26 Q R to K 5 ch; Kt to Kt 5, R to K 4 ch; 28 K to Kt 4 (if 28 K to R 4, R (K 6) to K 5 ch; followed by B to B 7 ch, and mate in a few moves); 28 R (K 6) to K 5 ch, 29 K to B 3, R to B 5 ch; 30 Q x R, Kt x Q; 31 K x Kt, R to K B 4 ch, &c.
(i) Really magnificent. Steinitz declares this game to be one of the finest monuments of chess ingenuity and to belong to the most brilliant gems in the annals of practical play.
(j) If 27 Q x R, P to B 3 ch; 28 K to R 4 B to B 7 ch; 29 P to Kt 3, R x Kt P and wins. If 27 Q to Q 7, R to Q sq.; 28 Q x R, R to K 4 ch; 29 K to R 4 B to B 7 ch; 30 P to Kt 3, Kt x P; 31 Kt x R, R to K 5 ch; 32 K to Kt 5, B to K 6 mate.

GAME NO. 338.

The following classical brilliancy was played some time ago in Prague:—

(TWO KNIGHTS' DEFENCE, IRREGULAR.)

WHITE. J. Reinisch.	BLACK. P. K. Traxler.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—Kt to B 3
4—Kt to Kt 5	4—B to B 4
5—Kt takes B P	5—B takes P ch.
6—K to K 2	6—Kt to Q 5 ch.
7—K to Q 3	7—P to Q Kt 4
8—B to Kt 3	8—Kt takes K P
9—Kt takes Q	9—Kt to B 4 ch.
10—K to B 3	10—Kt to K 7 ch.
11—Q takes Kt	11—B to Q 5 ch.
12—K to Kt 4	12—P to R 4 ch.
13—K takes P	13—B to R 3 ch.
14—K takes R P	14—B to Q 6 ch.

15—K to Kt 4
16—K to R 5
17—K takes Kt

15—Kt to R 3 ch.
16—Kt to Kt 5 ch.
17—P to B 4 mate.

LATEST COMMERCIAL.

IMPORTS.

The turn has come, and prospects are bright. Yarn—Good business at advancing prices in sympathy with higher values reported from Manchester. Grey Shirtings, however, have not im-

proved in proportion. Turkey Reds and Velvets have made progress both in demand and price. Woollens bracing up also.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ lb, 38½ yds, 3½ inches	\$2.30 to 2.90
Grey Shirtings—9½ lb, 38½ yds, 4½ inches	2.75 to 3.15
Fl. Cloth—7 lb, 24 yards, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yards, 11 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
Cotton—Italians and Satteens Black, 30 inches	0.16 to 0.22
Velvets—Black, 35 yards, 22 inches	7.50 to 9.75
Victoria Lawns, 12 yards, 12 3/4 inches	0.75 to 0.90
Turkey Reds—2.0 to 2.4 lb, 24 1/2 yards, 40 inches	1.60 to 1.70
Turkey Reds—2.8 to 3 lb, 24 1/2 yards, 30 inches	1.80 to 2.05
Turkey Reds—3.8 to 4 lb, 24 1/2 yards, 32 inches	2.30 to 2.55
Turkey Reds—4.8 to 5 lb, 24 1/2 yards, 32 inches	2.80 to 3.20

Nos. 16s, Bombay	—

METALS.

Lower prices have induced more trade in Iron, both "Pig" and manufactured. Wire Nails move fairly well, and the stock is not overwhelming. Galvanized Sheets and Tin Plates are the turn dealer, but the large stock of the last-named must work against any decided improvement in price.

	PER PICUL.
Flat Bars, 4 inch	\$3.15 to 3.20
Flat Bars, 4 inch	3.20 to 3.25
Round and square up to 4 inch	3.15 to 3.25
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	8.50 to 9.00
Wire Nails, assorted	5.50 to 5.90
Tin Plates, per box	5.25 to 5.50
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

More inclination for business, and if holders are firm there need be no further reduction in quotations. Deliveries are good, and with the long nights approaching the prospect for sellers is brighter than for some time past.

American	\$2.05 to 2.10
Russian	2.00 to 2.05
Langkat	1.90

SUGAR.

Brown—Market very dull, with heavy stocks, which have depressed the prices for Java and Manila sorts. White—Better trade at advancing figures. Stock moderate and demand good.

	PER PICUL.
Brown Takao	\$3.70 to 3.75
Brown Manila	4.20 to 4.40
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.20 to 3.70
White Java and Penang	6.10 to 6.20
White refined	6.25 to 9.50

EXPORTS.

RAW SILK.

At last the demand has slackened—after a huge business for the first two months of the season. Prices now are more or less nominal and have a downward tendency.

QUOTATIONS—(NEW SILK.)

Reatures—Extra 9/11, 10/12 den.	Nom \$930 to 940
Reatures—Extra 11/15, 14/16 deniers	930 to 940

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the druggist Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.

Annual Subscription, post free, 25s., in the United
Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds,
and swindles.

"MONEY" is THE Journal for Investors, Speculators and
Business men.

"MONEY" is a thoroughly up-to-date Record of all Financial
and Business Matters.

"MONEY" is not subsidised by any financial association,
clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

YOKOHAMA: SATURDAY, SEPT. 14TH, 1895.

BIRTHS.

On the 8th instant at No. 38, Bluff the wife of J. C. HARTLAND of a daughter.

At 141, Bluff, on the 13th inst., the wife of P. E. F. STONE of a Son.

DEATH.

At his residence, 247, Bluff, on the 8th instant, at 10 a.m., CHARLES JUBIN in the 56th year of his age.

SUMMARY OF NEWS.

THE text of the revised Russian Treaty has been published this week.

LIEUTENANT YOSHIMI has been appointed Vice-Governor of Sasebo Harbour.

MR. TSUCHIKO KINSHIRO has been appointed to the London Branch of the Specie Bank.

THE Sakurajima Military Quarantine Station, Osaka, will be closed on the 15th inst.

THE *Kokumin* and the *Nippon* have been suspended for the usual offence this week.

THE disturbed weather of the last few days has induced a decided drop in the temperature.

THE O. & O. steamer *Belgic* ran ashore at Su-no-saki on Sunday evening, while on the

way in to Yokohama. She still remains hard and fast in the sand.

THE Imperial Commercial Bank, Tokyo, has decided to establish a branch in Formosa.

THE Viceroy Li Hung-chang has been ordered to take up his permanent residence in Peking.

A SENTENCE of fifteen years' hard labour has been passed on a Tokyo forger of one-yen notes.

JAPANESE Post Offices have been re-opened at Chefoo and Tientsin since the first of the month.

THE Third National Bank has arranged to transact business between Tokyo and Taipeh, Formosa.

MR. SHIMAMURA was appointed on the 6th inst. Japanese Consul-General and Diplomatic Agent at Honolulu.

THE training season for the Autumn Meeting of the Nippon Race Club, commences on the 16th inst.

VISCOUNT N. NABESHIMA has been elected by the Viscounts as a representative of their Order in the House of Peers.

DR. GOTO SHIMPEI has again received the appointment of Chief of the Sanitary Bureau in the Home Department.

THREE thousand repeating rifles, manufactured at the Koishikawa Arsenal, Tokyo, were sent to Formosa the other day.

It is stated that the contract to lay a submarine cable between Nagasaki and Formosa has been given to the Mitsui Company.

THE repairs of the *Irukushima Kan* at Kure will be completed this month, and she will proceed to Formosa early in October.

THE typhoon of the 4th and 5th inst., did a lot of damage at Kelung, Formosa. Several lives were lost in the Government transports.

THE Crown Prince is making satisfactory progress towards recovery. He will remove to Hayama as soon as convalescence is assured.

THE Emperor has selected a model of the proposed statue to the late Captain Sakamoto, of the *Akagi Kan*, designed by Mr. Okuma Ujihiro.

THE Tsuchiura-Tomobe section on the Japan Railway Co.'s line has been completed, and will be opened for traffic about the middle of this month.

H.I.M. THE EMPEROR has given consent to the marriage arranged between H.I.H. Prince Yamashina Kikumaro and the second daughter of Prince Kujo.

THE Osaka Mint struck coins to the following amount during August last:—5 yen gold pieces, yen 110,000; 1 yen silver pieces, yen 1,390,000; 5-sen nickel coins, yen 51,506.

MR. OKAMURA TERUHIKO, who went to England in connection with the *Chishima-Ravenna* appeal, has been feted by several associations, governmental and private, during the week.

SAIJO EHIZO, an office boy of the Mitsui Bank, Tokyo, has been arrested by the police for having stolen a cheque for yen 587. He attempted to cash the cheque at the Commercial Bank.

THE total amount of income tax to be paid by residents in Kanagawa Prefecture this year is estimated at yen 45,460, the number of payers being 3,606, an increase of 24 payers and yen

1,145,785 tax as compared with the previous year.

THE Yokohama Town Assembly has resolved to give sanction to an application of Mr. Fusejima and others for permission to cut a canal joining Yoshidashinden with the O-oka-gawa.

ARRANGEMENTS have been made for building a fine first class hotel on lot No. 11, Bund, for so many years in the occupation of the Oriental Bank. Mr. Muraour, we understand, will manage the new concern.

Two cholera patients—a man and a woman—attempted to end their lives by hanging and drowning, when approached by the Tokyo sanitary officials. They were eventually taken to Hospital.

AN earthquake shock was felt in Tokyo and Yokohama on the 9th inst. at 9h. 53m. 22s. p.m. The oscillation lasted 37 seconds and moved from south to north, the maximum horizontal motion being 0.4 millimetre in 0.8 second.

MR. YANAGIDA YOSETSU, Secretary of Saga Prefecture, has been placed on the Retired List, his late position being taken by Mr. Yamada Shimizo, Secretary of Nara Prefecture, who has been succeeded by Mr. Tanaka Akita, Chief Tax Collector of Yamanashi Prefecture. Mr. Kobayashi Omoshi, an attaché of the Finance Department, has been appointed Chief Tax Collector of Yamanashi Prefecture.

REUTER telegraphs:—The *Defender* won the first of the races for the America Cup, and *Valkyrie III.*, the second. The owners of the American yacht *Defender* having entered a protest against the *Valkyrie* on the ground of a collision in the course of the second event, the race has been awarded to the *Defender*. The Hon. Geo. N. Curzon, Under-Secretary for Foreign Affairs, stated that the Government itself would construct a railway the whole distance between Mombassa and the Victoria Nyanza, with a view to develop trade and to prevent German competition. The estimated cost was under two millions sterling. The situation is again critical, owing to the unyielding attitude of the Sultan with regard to reforms in Armenia. The resignation of the Vizier in this connection is imminent. Turkish troops have repulsed a large band of Bulgarian insurgents south of Burghas. H.I.M. the German Emperor, in a speech at a dinner given by the Guards on the occasion of the twenty-fifth celebration of the battle of Sedan, said that the Socialists were a treasonable rabble in daring to vilify the founder of the Empire, and he called upon the army to resist them. Mr. Pillsbury, a young American, has won the Chess Tournament at Hastings, defeating the greatest masters of the game. The result of the Doncaster St. Leger was as follows:—Sir Visto 1, Telescope 2, Butterfly 3.

THE condition of the Import trade is unaltered, and a further increase of business is looked forward to as the autumn comes on, though there are persons who anticipate a possible drawback—the tightness of the money market. Yarns and Piece goods continue in fair request, and certain lines of Fancy Cottons are also in demand. There is some business in Metals, but nothing special to report. There is nothing new in the Kerosene trade, and both holders and buyers are apparently playing a waiting game. The Sugar trade is not in a satisfactory condition, and buyers will probably wait for a fall before they come on again. There is less doing in Silk, and some holders have reduced prices, though these may be called nominal. The Tea trade has fallen off in volume, though values are about the same. Exchange has been fairly steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

During the week under review three of the metropolitan dailies have been placed under the ban of suspension, namely, the *Kokumin Shimbun*, the *Nippon*, and the *Choya Shimbun*, on account of publishing matter prejudicial to the public peace and order. The offensive articles are not named in the sentence of suspension, and it is, consequently, mere guess-work to pretend to indicate the utterances that have been the cause of suspension. It may, however, be stated with safety that, so far as the two first named journals are concerned, suspension has been ordered through their incendiary writing, in which they have indulged with a view to excite public opinion against some of His Majesty's Ministers, chiefly on account of the honours that they had recently received from their Imperial master. As to the *Choya's* offence, it entirely passes our power of comprehension, though there can be no doubt that the Minister of Home Affairs knew what he was about in suspending that usually inoffensive and comparatively sober journal.

As already stated in these columns, the object of the Opposition politicians in the coming session of the Diet is to bring about a collision with the Cabinet on the question of the curtailment of administrative expenditures. That is an old and hacknied theme, but nevertheless it will have considerable weight with the masses, who, however much they may desire the increase of their country's fighting capacity, are not particularly enthusiastic for the increase of their public burdens. They are almost certain to welcome any device by which the desired object may be attained without touching their own pockets. But the educated class, who can see through the tactics of the politicians, will not be so easily deceived. But probably it signifies little what course the Extremists may pursue in the coming session of the Diet, for in the present state of parties they are not likely to secure a majority under any circumstances. The Extremists themselves doubtless understand the situation perfectly well. We hear a suggestive story about one of these politicians. In reply to a challenge that his side can never hope to get a majority in the next session, he is reported to have answered that he was of the same opinion, and that it would have been a great misfortune for the country had it been otherwise. The Opposition organs have not yet made it clear in what manner the reduction of official expenses can be effected; the matter is probably just now engaging the attention of these parties, and it will take some time before their proposals will be made public. Meanwhile, the question is discussed by one of the sympathizers of the Opposition, namely, the *Kokkai*. Our contemporary evidently thinks that there is still ample room for economy in the expenses of administration. But it seems to think it unwise to direct attention to the reduction of the number and salaries of officials. In its opinion, the wisest course would be to effect economy by the simplification of the structure of administration or, in other words, by abolishing some Departments and Bureaux, though it does not say what Departments and Bureaux. This question promises to attract the increased attention of the press as the 9th session of the Diet draws near.

A rumour has been circulated by some papers to the effect that a serious dissension has occurred between Marquis Ito and Marquis Yamagata in connection with the expenditure on the increase of the Army and the Navy. Marquis Yamagata, according to the story, is said to be in favour of presenting it to the Diet in the form of a Continuing Expenditure Fund, while Marquis Ito is represented to be opposed to that method. This report is evidently without the slightest foundation, for, as the *Nichi Nichi* points out, any person acquainted with the Constitution will see that there is no room for a dispute on the subject. But a section of the press, either in ignorance of the

Constitution or in the excess of zeal to discredit the Cabinet, devoured the foolish story and gave publicity to it in a manner plainly signifying a tacit endorsement. The matter has, consequently been taken up by the *Nichi Nichi* at some length. The Continuing Expenditure Fund, according to the Constitution (Art. 68), is to be voted "for a previously fixed number of years," and it is therefore plain that it applies only to extraordinary expenditures and never to ordinary expenditures. Now the expenses required for the increase of the Army and the Navy include both classes of expenditure; and to say in general terms that they should be presented in the form of a Continuing Expenditure Fund, would be to confess one's ignorance of both the Constitution and the nature of the cost of increased armament. Of course it would be incumbent upon the Cabinet to explain to the members of the Diet the general plan of augmentation for which increased supplies are required, but with the exception of extraordinary expenditures, such as the construction of warships, forts, and so forth, all the items should be incorporated in the ordinary Budget. As to the story about Marquis Yamagata's advocating the theory attributed to him, it is evident that he never had any idea of such an unconstitutional method. It was during his Premiership that the measures for the augmentation of the Imperial Guards Division and the Cavalry corps were introduced to the Diet, on which occasion no recourse was had to a Continuing Expenditure Fund.

The curse of Japan at present is the presence of a class of men who make politics their livelihood. The subject is dealt with by the *Fiji Shimpō* in a very interesting manner. In Japan, says our contemporary, the activity of the political world is inversely proportioned to the prosperity of the business world. When business is at a standstill and industry languishing, and when general activity in the other departments of life is at low ebb, then the professional politicians have the field for themselves, and make themselves heard, says the *Fiji*, "as the barking of dogs is best heard in the dead of night when the world around is asleep." At a time like the present, when trade is reviving and industrial enterprises are rising, professional politicians may bark as hard as they please without attracting much notice. In the *Fiji's* opinion, there is little fear of their irresponsible utterances catching the ears of the best portions of the nation, namely, the mercantile and industrial classes. Our contemporary then goes on to lament such a condition of affairs, and concludes by observing that normal political progress will be impossible until politics shall have been wrested from those who make it a profession.

The increase of irregularities in the departure and arrival of trains and the frequency of accidents on the principal railways, both private and Government lines, has called forth loud complaints in the press. Irregularities in the arrival and departure of trains are said to be most frequent on the Tokaido line on which through trains are sometimes late by as much as five hours. The insolent conduct of the servants of the railway companies as well as the officials on the Government lines, is another subject of bitter complaint. It is stated that a certain railway company, when asked for compensation for the loss of some goods belonging to a factory, threatened to decline the transportation of the factory's produce in future. These and other cases of real and supposed grievance are printed by the press, and, if the stories be true, it must be held that the railway authorities and companies are much to blame.

The same journal strongly urges its countrymen to take prompt and energetic steps in order to take full advantage of the commercial concessions secured from China by the Treaty of Shimonoseki. The *Fiji* regrets to observe that the Japanese have been in many respects forestalled by Europeans who have shown remarkable acuteness and enterprise in seizing upon the fruits of Japanese diplomacy. Some Japanese, remarks our contemporary, seem to hesitate

about plunging into competition with Europeans, because the latter have a decided advantage over them in their easy command of cheap money. But they are reminded that, small as their country is, its economical development has of late been so remarkable that they need not be afraid of being in want of cheap capital. The question of capital apart, everything is in their favour; their country is so close at hand, and they have much in common with the people of China in point of language and customs. These advantages ought to make, or, as the *Fiji* is convinced, will make them more than a match for the Westerns in the war of commerce and industry in China. While on the one hand urging business men to undertake some enterprise in China at once, our contemporary, on the other, dwells on the importance of educating men for a commercial career in China.

EDITORIAL NOTES.

RAILWAY ACCIDENT.

THE particulars of the accident that took place at the Omiya Station on the Nippon Tetsudo Kaisha's line, are as follow:—The down train leaving Uyeno at 10.35 a.m. on the 6th instant arrived at Omiya about an hour later. For the purpose of joining goods cars to the train the engine was uncoupled, and to effect this went on another track. After having accomplished its object, the engine was about to return to its train, when an up-train that had left Mayebashi at 9 that morning came in sight. The engine driver, perceiving the danger, tried hard to stop the train, but was unable to do so, and the result was a collision, killing a coolie, wounding the engine driver and the stoker of the up-train, the former severely and the latter slightly. The engine of the down train only received slight injuries, but that of the up-train was very badly damaged, while two goods cars attached to it were smashed to pieces. No passenger was injured. The coolie who met with instant death had been standing between the tracks and was knocked down by the engine of the up-train, which, besides causing his death, damaged the track.

THE AGE OF THE JAPANESE CABINET.

THE *Fiji Shimpō* has taken the trouble to compute the ages of the present Japanese Ministry. The average age in the month of August was a little over 52. Count Matsukata is included in the list, because the date of computation is previous to his resignation. The individual ages of the Ministers are as follow:—Marquis Ito, Minister President of State, 53; Count Matsukata, Minister of Finance, 59 years 8 months; Marquis Saigo, Minister of the Navy, 51 years 4 months; Marquis Oyama, Minister of War, 51 years 11 months; Viscount Enomoto, Minister of Agriculture and Commerce, 58 years 2 months; Count Mutsu, Minister of Foreign Affairs, 52 years 2 months; Viscount Watanabe, Minister of Communications, 48 years 6 months; Mr. Yoshikawa Akimasa, Minister of Justice, 52 years 9 months; Marquis Saionji, Minister of Education, 44 years 11 months; and Viscount Nomura, Minister of Home Affairs, 52 years 1 month. Marquis Saionji is the youngest (44 years 11 months); while Count Matsukata having resigned, the oldest member is Viscount Enomoto 58 years 2 months.

JAPAN AND AUSTRALIA.

INCREASING attention is being paid in this country to Australia, with a view to opening direct commercial relations with her. The *Chugai Shogyo Shimpō*, in an editorial, urges the business men of Japan to study the question in a serious manner. Their relative geographical positions, the difference in the variety of their respective produce, and the existence of prosperous business centres between them,—these circumstances, says our contemporary, clearly point to the fact that a vast and profitable trade is destined to grow up between the two countries. If Japanese merchants wish, as they certainly do, to take this trade into their hands instead of leaving it to others, they are advised to set to work in earnest while there

are no formidable foreign competitors in the field. The *Chugai Shogyo*, alluding to the letter recently received by the Tokyo Chamber of Commerce from Mr. Dyer of Melbourne, observes that the subject under consideration is receiving more attention in Australia than in Japan. Reference is also made to the expected visit of Mr. J. S. Parsons, of Adelaide. When so much is being done by the Australians, it is regrettable, writes our contemporary, that the Japanese do nothing to make the most of the present favourable opportunity.

ELECTRIC LIGHTING.

ACCORDING to the *Yomiuri Shimbun*, the Town Assembly is desirous of purchasing the concern of the Yokohama Electric Light Company, but the latter decline to sell. It might be beneficial if the Assembly became the possessors of the Electric Light business, for a more wretched illumination than that at present existing on the Bluff roads is not easy to imagine. The company obtained subscriptions from Bluff residents on the understanding that the Bluff and its approaches would be properly lit, but it not only fails to provide a decent light but has disestablished the lights on Heg's Hill, the central approach to the Bluff. As the Gasworks have been so much extended and improved, and pipes have been laid to the top of the Bluff, the Company may find it worth while to compete with the electric light on the Bluff, for the houses using the latter are comparatively few, and many residents would be glad to see gaslights on the roads in preference to the present rush-light-power electric lamps.

CLAIMING A YEAR'S SALARY.

AN interesting claim is being heard in the summary jurisdiction section of the Hongkong Supreme Court. F. Wessel, a German clerk, sues Messrs. Carlowitz & Company, for \$1,000, equivalent to a year's salary. It appeared that the plaintiff came out to Hongkong on a three years' contract. He arrived on the 31st of July and reported himself at the offices of Messrs. Carlowitz & Co. He was then told by the Manager, Mr. Sachse, that he might have a look round the place and acquaint himself with the locality. Upon this he drew \$50 from the comradore and left. The following day plaintiff presented himself at the office, and as Mr. Sachse had gone to Canton there was no one to give him instructions as to the work he should do, so he went again to look around the town. The next day was Sunday and the day following Bank holiday, and so Wessel thought it unnecessary to put in an appearance at the office. Then he fell ill, and sent a note asking to be excused for a day. Upon this a note was sent from Messrs. Carlowitz's office expressing surprise at his non-appearance at the office since the 31st July, and next day a notice of dismissal reached him, along with a demand from the comradore for repayment of the \$50 advanced. Plaintiff was cross-examined at great length, and it was elicited that he had spent a good deal of the six days at the German Club, the Kowloon Hotel, and on board the *Preussen*; while he declined to state the number of bottles of beer he had consumed or the nature of the private business which detained him at the Club or Hotel. At this stage the hearing of the case was adjourned.

* * *

The case brought by a German clerk named Wessel against Messrs. Carlowitz & Co. has ended in the firm giving him a first class passage to Bombay on board an Austrian Lloyd steamer and a second class passage from Bombay to Trieste. They also hand him 100 marks and pay his incidental expenses in Hongkong, in addition to \$50 for expenses on board the steamer; and, further, they agreed that the sum of \$50 which was obtained from the comradore shall not be accounted against the plaintiff, although of course the defendants admitted no liability in this respect.

LUNACY IN ENGLAND.

THE report of the British Lunacy Commissioners this year still further enforces the conclu-

sion drawn from the report of 1894, and the effect of both together is practically to destroy the hasty assumption that madness is increased by what is called the "wear and tear of modern life." In the first place, it is an unproved and very doubtful assumption that it is increased at all. More lunatics are discovered, enumerated, and interned in asylums, but that is probably only the result of greater care for the insane. In the second place, it is not the highly civilised, nervous, literary, modern man who is most afflicted, but, curiously enough, the huckster, the costermonger, the woolstapler, and even the labourer, who hold the highest places on the list. Civil servants, also, in spite of the supposed tranquillity and security of their calling, contribute more than their share.

THE TOKYO WATERWORKS.

A MEETING of the Tokyo City Assembly was held on the 11th inst. to discuss the matter connected with the Japan Cast Iron Foundry Co. The chair was occupied by Mr. Kusumoto Masataka, and forty-five members were present. The special committee appointed to investigate the matter of releasing the Company from its contract presented two reports. The majority reported in favour of releasing the firm by ordering it to pay yen 2,900 as a fine for the delay in delivering the pipes but did not recommend confiscating the security money; while the minority advised the Assembly to confiscate the security, amounting yen 21,900, besides ordering the payment of yen 2,900. A hot debate took place between the two parties, and a short recess was declared by the Chairman, but the dispute became more violent, and one of the members thereupon proposed to discuss the final resolution on the following day. This motion was rejected. Several supporters of the original report then withdrew from the hall, but the proceedings were continued by thirty members, who finally decided to accept yen 2,900 as a fine for the delay in delivery and to confiscate the bargain-guarantee yen 21,900.

CHOLERA IN KOREA.

THE Japanese Consul at Gensan, Korea, under date August 9th, reports that the number of cholera patients is gradually increasing in the native quarters of that settlement. The death rate is comparatively high. A physician who personally inspected the patients, says that the epidemic is exceedingly fatal this year. Strict measures of disinfection are effected in the settlement. In a sea-side street one or more patients are discovered in almost every house. The Korean police authorities state that 126 deaths occurred between July 31st and August 19th. Two Japanese workmen have been attacked, of whom one died. A Consular report from Fusan, dated the 31st ult., announces that during the ten days ending that day a case was reported in a fishing boat, and one case in a sailing ship, while no new cases were reported in the settlement. Six cases occurred in the native villages near the settlement. The Japanese Commercial Agent at Vladivostok reports that a case of cholera was reported on board a Yusen Kaisha's chartered ship, which arrived there on the August 8th, and she was detained at the quarantine station for eight days, being allowed to put into the port on August 21st. Over twenty persons have been affected by the epidemic on shore. Three Japanese men and one woman had been attacked up to August 26th, of whom two men died.

THE NEW CHINESE MINISTER.

THE new Chinese Minister to the Court of Japan passed through Yokohama on Friday. His suite occupied four long railway carriages. At Yokohama Station a deputation of the leading Chinese residents met the Minister and extended to him a cordial welcome. His Excellency reached the capital yesterday, and with his family, and chief secretaries, put up at the Imperial Hotel. The rest of the suite took lodgings at a Japanese hotel near the station.

METALS.

MESSRS. S. W. ROYSE & Co. in their Report, dated July 27th, say:—Speculation and business generally in Metals has been very much

curtailed during the month owing to the General Election. Affairs are now settling down, and a hopeful feeling prevails. Some are sanguine that a firmer tone will soon result in advances all round. There is every reason for this view, especially in regard to Pig Iron and Iron generally. There is more activity in Scotland than Middlesbrough, without any good reason to be assigned. The stocks of Tin-plates have been very much reduced, and higher prices are being asked. Buyers are, however, acting very cautiously, and very few transactions have taken place at the higher prices. There is a natural feeling that prices will fall on business being resumed at works that are now closed owing to the strike. Considerably more business is being done in Pig Lead, and prices close steady. An advance has been secured in Tin, and a still further rise may take place at any time. Speculation has not done much for this metal lately. More business is passing in Spelter, and the market closes in a better tone.

THE STORM AT KOBE.

THE lower part of Division-street, Kobe, was flooded on Sunday morning, but little damage was done. The unfortunate bathing stage of the K. R. & A. Co., which has only been recently replaced at a cost of \$125, after being destroyed by the last gale, was again smashed, while a few planks were washed out from the pier stage, and one or two sampans in the harbour destroyed. The *Ancona*, which left Kobe for Yokohama on Saturday afternoon, returned to port the following morning, having apparently found the weather outside so bad as to render it necessary to await the passing of the storm. The *Natal*, which should have arrived on Sunday morning from Yokohama, did not reach there until Monday morning.

"HE WHO FIGHTS AND RUNS AWAY."

APROPOS of the difficulties which have arisen in connection with the present Sikkim-Tibet Boundary Commission, Captain Bower has an interesting reminiscence of the Sikkim hostilities in his book *Across Tibet*. He says that in the Asi district of Eastern Tibet he met a great many of the warriors who fought against us in Sikkim, and remarks that "their recollections of the fire of breech-loaders are mostly lively." One man, with a scar on his face, gave the following brief and graphic account of his military career:—"I was told I had to go and fight the English, and with a lot of others I started for Sikkim. When we got there we suddenly heard a rattle of musketry: a great many men fell. I got hit in the face, turned round, and went straight for home, and have stayed there since." That Tibetan was wise in his generation.

LEAVING FOR LONDON.

A LARGE number of distinguished persons gave a farewell banquet on the 9th inst. at the Seiyoken, Ueno, Tokyo, to Mr. Tsuchiko Kinshiro, lately appointed to the London Branch of the Specie Bank. Amongst those present were Messrs. Watanabe Koki, Tajiri Inajiro, Hara Rokuro, Shimada Saburo, Suyematsu Kencho, Taguchi Ukichi, Fujii Saburo, Soma Nagatane, Kanai Nobiru, and Sakaya Yoshiro. Mr. Soyeda Juichi spoke on behalf of the promoters of the banquet, after which addresses were given by Messrs. Tajiri, Taguchi, Kanai, Sakaya, Soma, and Suyematsu. Mr. Tsuchiko afterwards returned thanks for the great kindness extended towards him by his friends.

THE DONCASTER ST. LEGER.

LORD ROSEBERY'S Sir Visto, the winner of the Derby, has pulled off the classic event on the Town Moor, the pair following second and third being unknown to fame. Sir Visto appears to have been first favourite and steady in the betting, and early last month occupied that position at 7 to 2, though Whittier stood at about the same price. Telescope, the second, a chesnut colt by Tyrant—Astrology, is owned by Mr. W. M. G. Singer, and started in eight races as a two-year-old, but only won twice—at the Liverpool July and at Doncaster. The latter race was the Prince of Wales Nursery Stakes (handicap) over the Sandall mile, where, starting

at 100 to 9 with 7st. 1lb. up, he won by half a length in a field of 20. Butterfly is a bay filly by Hampton—Merry Duchess, and belongs to Mr. L. Brassey. She started five times as a two-year-old, but was not credited with a win.

THE AGE OF THE PRIVY COUNCIL.

Of the Privy Councillors, the most aged is Viscount Sano, who is 71 years 11 months. Next to him comes Count Katsu, with 71 years 9 months. The youngest is Mr. Kuki Ryuichi, 42 years and 3 months, the average age of the Council is 59 years 2 months. The ages of the rest of the Councillors are as follow:—Count Kuroda, President, 54 years 1 month; Count Higashikuze, Vice-President, 60 years 11 months; Count Kawamura, 58 years 11 months; Count Soyejima, 66 years 2 months; Viscount Fukuoka, 59 years 9 months; Count Sasaki, 54 years; Mr. Ozaki Tadaharu, 63 years 5 months; Viscount Tanaka, 49 years 5 months; Viscount Nire, 62 years 9 months; Viscount Kaiyeda, 62 years 9 months; Mr. Hosokawa Junichiro, 60 years 9 months; Viscount Kawase, 55 years 9 months; Mr. Otori Keisuke, 61 years 9 months; Viscount Miyoshi Shigeomi, 54 years; Viscount Torio, 46 years 11 months; Baron Takasaki Masakata, 58 years 3 months.

SIR HENRY IRVING.

THE knight of Henry Irving has recalled a number of stories concerning the famous actor. One refers to a meeting of a certain learned society in London some years ago, when the topic discussed was Shakespeare. Mr. Irving was present, but every one did not seem to know it. A man was on his feet deploring the improvement of spelling which had resulted in modifications of pronunciation so that were the Elizabethan poets to return to earth they might not be able to read their own works, and surely not to understand them as others read them. "If Shakespeare were to rise from the dead now," said the speaker, "I make bold to say he would hardly comprehend his own words as they issue from the mouths of the present exponents of them. He would be shocked were he to hear Irving—" From a seat on the left hand of the chairman there rose a slim figure and from a pair of thin lips, whose corners lollicked in mirth, there issued in the clear tones of a bell these three words, "Or see him."

AN ENORMOUS HEAD.

BISMARCK's head was measured by Schaper, the sculptor, who made his statue at Cologne, and from the measurements the French scientific journals are trying to calculate the size of his brain. The head is enormous, being 212 millimetres from forehead to occiput, and 170 millimetres between the temples; the average figures for German heads are 195 by 155 millimetres. The volume of the skull is 1965 cubic centimetres, the average being 1478, and the greatest recorded 1860; from this the inference is that the brain weighs 1897 grammes, 35 per cent. above the average weight.

SUSPENSION OF NEWSPAPERS.

THE *Kokumin Shimbun* and the *Nippon* have been suspended for having published matter prejudicial to the public peace. We do not pretend to know the particular articles that have given offence. But it may be stated that both our contemporaries are paying for the persistent and acrimonious manner in which they have of late been attacking the Government on account of the honours recently bestowed upon some of the highest servants of State.

THE GOVERNOR-GENERAL OF FORMOSA.

ADMIRAL COUNT KABAYAMA, Governor-General of Formosa, has been ill for some time. The sudden departure of Lieut.-General Viscount Takashima, Vice-Governor-General of Formosa, is said to be due to this cause. A relative of Count Kabayama lately proceeded to the island on a visit to him.

AN INTERESTING WAGER.

A WAGER of \$100 aside has just been made by Captain Weston, owner of the yacht *Tori*, and Mr. T. M. Laffin, owner of the *Mary*. The con-

ditions are simply that on "the first two-reef-gale day" the two boats shall be started over a course selected by Capt. Walls. Both yachts have a big local reputation, though *Mary's* is the most assured, her performance now embracing two seasons' racing. The *Tori* was launched this year.

HEAVY SENTENCES FOR FORGERY.

KAWAMURA NOBUTOSHI and Yojima Hisato, residing at Hongo, Tokyo, were sentenced by the Tokyo Local Court on the 9th inst. to imprisonment with hard labour for fifteen years for having forged a number of one-yen notes. Kawamura's wife, Fumi, was sentenced to nine years' imprisonment, and Nishimura Kichinosuke and two other men to six years' imprisonment for having circulated the forged notes.

DEATH OF AN OLD RESIDENT.

WE have to record the death of another old resident—Mr. Charles Jubin, who passed away on Sunday morning at his residence on the Bluff in his 56th year. Mr. Jubin, who was born at Vielmanais, Nièvre, France, and arrived in Japan in 1870, was much respected. The funeral, which took place the next day, was numerously attended.

DR. TANNER.

DR. TANNER has been suspended from the privileges of the House of Commons for giving the lie to a member while the latter was addressing the Speaker. Mr. Chamberlain moved his suspension, and when the Sergeant-at-Arms walked the excited M.P. out of the Chamber, Dr. Tanner shouted all the way "Judas."

DESTRUCTION OF STRAY DOGS.

THE police have again announced a two week's raid upon ownerless dogs, and we hope their measures this year will be more drastic, far-reaching, and effectual than they were on the last occasion. The number of stray dogs in and around Yokohama has increased beyond the limits of a mere pest.

SALE OF THE "SATANELLA."

THE *Kobe Chronicle* understands that Major Hughes has sold his fine steam yacht the *Satanella*, which has been so familiar a feature of the harbour for the past year or two, for \$10,000. The purchasers are Russian gentlemen, but the names have not transpired. The *Satanella* has already left Kobe—for Vladivostock we believe.

CAPTAIN EKSTRAND.

THE many friends of Captain Ekstrand, of the *Tosa Maru*, will be glad to learn that he is completely recovered from his recent indisposition, which was at first considered so serious that a doctor was sent for from Kobe. He is now quite restored to health.

THE LATEST BOYCOTT ENDED.

OVER one hundred Japanese and Chinese merchants resident in Yokohama foregathered at an entertainment held in the Chitose-ro, Sumiyoshicho, on the 8th inst. to celebrate the peaceful settlement of the boycott of the latter by the former.

NEW MEMBER OF THE HOUSE OF PEERS.

AN election for a member of the House of Peers, which took place in Tokyo yesterday, resulted in the return of Viscount N. Nabeshima, who obtained 192 votes, against 49 cast for Viscount Nagaoka.

NAVAL FUNERAL.

THE mortal remains of a stoker on board H.M.S. *Caroline*, who died of heat apoplexy while on the voyage down from Hakodate, were buried in Yokohama Cemetery on Friday afternoon with full naval honours.

THE KUCHENG COMMISSION.

LATEST news in regard to the Kucheng Massacre Commission is to the effect that all the ring-leaders have been caught. A telegram from Foochow, dated Sept. 4th, which has been received in Shanghai, states that Miss Hartford's

assailant has been captured. There have been 126 arrests; 27 have been tried and 23 convicted. Evidence has been adduced sufficient to convict 31 more.

THE "UMBRIA" CHOLERA CASES.

EIGHT of the crew of the Italian ship *Umbria* received medical treatment at Nagahama. All have recovered, and five left there the other day, while the remaining three came out of hospital on the 9th inst.

THE "BELGIC" ASHORE AT SUNO-SAKI.

The O. & O. steamer *Belgic*, which left San Francisco with the Japan and China mails on the 24th August, ran on shore about four miles the other side of Suno-saki at 8.30 o'clock on Sunday evening. The *Belgic* struck the sand gently and the passengers were unaware of anything being wrong till the ship began to bump. Suno-saki, near where she struck, is the east point of the entrance to the Bay of Tokyo and is 5 miles S.W. $\frac{1}{2}$ S. from Daibo-saki. The point is low, with the exception of a small elevation at the north-west corner, on which are the remains of an old fort. There is often a heavy tide-rip off it, but mariners say that there are no dangers to a greater distance than half-a-mile from the shore, and the point may be safely rounded at a mile. Not far from Suno-saki lies the dangerous Mela Ledge. A heavy sea was running at the time of the accident, and the current soon swept the unfortunate vessel nearly broadside on to the beach. Meanwhile, life-belts were served out to every passenger and the boats were lowered in readiness for any eventuality. The shore was so near that the loom of the low-lying land could be seen from the deck. Two boats were then manned to go ashore to give news of the accident. One, in charge of the Chief Officer, carried two of the Cabin passengers, who had volunteered to go, and a Japanese passenger, who offered his assistance as interpreter. This boat made straight for the shore, and notwithstanding some opposition on the part of the Chinese boatmen, accomplished its object, being carried in on the top of a big roller. After landing, the small party made its way under considerable difficulties to Tateyama, many miles distant from the place of landing, and from there a telegram was dispatched to Yokohama, telling of the accident and appealing for help. This telegram reached Yokohama at 2 a.m. on Monday. Meanwhile, the Third Officer's boat went off on a long pull to Sagami with a similar object in view. This was a very long and arduous undertaking, and it did not return to the ship till the afternoon of Monday, being picked up by the *Empress of Japan*, bound to Kobe, on the afternoon of that day, to the north of Saratoga Spit. As soon as possible help was sent to the stranded steamer from Yokohama, Mr. Tilden, of the O. & O. Agency, leaving port by the Company's tug *Restless* at 6.30 a.m. Later in the day, Mr. B. C. Howard, the Agent, went down the Bay, having succeeded in chartering the *Hokkai Maru* and the *Carmarthenshire*. The passengers, specie, and mails came up to Yokohama towards midnight on Monday, and the luggage followed the next day, when the *Carmarthenshire* returned for a further supply of anchors and wire hawsers.

One sad fatality occurred on Sunday evening shortly after the stranding. The Second Officer, Mr. Bickman, was superintending the lowering of a boat, when a heavy sea broke on board. It carried him up against the side of the ship with such violence as to stun him. In this helpless condition he was swept away and was no more seen.

Up to time of writing no cargo has been removed from the ship, but as soon as all the anchors are laid out, an attempt will be made to lighten her, and then operations will be carried out with the object of pulling her out of the sand. At present she has made no water. The *Belgic* draws about 18 feet on an average, and there is about 12 feet of water around her.

FORMOSA NEWS.

The *Nichi Nichi Shimbun's* correspondent with the fleet describes the share taken by the *Yoshino* and the *Naniwa* in the operations against the insurgents south of Shinchuh. Leaving Kelung on the evening of the 7th August, these two warships witnessed, early on the following morning, the fighting at Heongsan. About a quarter of a mile from the sea, in vicinity of the port of that name, parties of the enemy were soon observed beating a retreat to the south. A few shells from the cruisers soon scattered these insurgents in all directions, most of them disappearing among the hills. At about 11 a.m., a party of marines under Lieutenant Sora was landed at the port of Heongsan. Straggling parties of the defeated insurgents were still to be seen in the neighbourhood. Presently a Chinese came up to the party of marines, and asked them to come to his village, about half a mile off in a forest, and drive out the insurgents who were robbing the villagers of their rice. But Lieutenant Sora wisely judged it not prudent to comply with the villager's request. The same Chinese also stated that about 1,000 insurgents had come to the place by junks from Oulan at daybreak that morning, and that the total strength of the insurgents in this neighbourhood had been from 3,000 to 4,000. A party of Guards arrived at the place at 1 p.m., and the marine party returned to the fleet soon afterward. Besides effecting a junction with the Army, the marine party succeeded in finding a field-piece that had been planted by the insurgents on the seashore not far from Heongsan harbour. On the receipt of this report 12 centimetres quick-firing guns were carefully trained on the battery which was recognized by several figures moving about in the vicinity. A few shells drove them into the hills.

On the 9th, the fleet sailed southward to Chang-kong, about 5 miles from Heongsan, and assisted the troops by bombarding the insurgents' camps. Bombardment was stopped at noon, when the Guards entered Chang-kong, and the villagers along the sea coast hoisted Japanese flags. The *Naniwa* returned to Kelung that evening.

On the 11th, the *Yoshino* left Chang-kong and sailed southward to Oulan. The Guards had not then reached there, and things were still quiet. Descrying barracks on an eminence 700-800 metres from the seashore, quick-firing guns were brought into action and a few shells drove the insurgents into the mountains. The *Yoshino* then put about and returned to Kelung.

On the 13th, the *Yoshino* again left for the south, and when she arrived off Oulan at 1 p.m. the Guards were in the midst of an engagement with the insurgents, who held their ground so well that it took several hours to dislodge them. The insurgents were posted on the hills, and as the Japanese attacked them from the seaside, the *Yoshino* could render but little assistance.

On the 14th, the *Yoshino* sailed to Tong-sian, about 10 miles south of Oulan. By way of a feeler, a blank cartridge was fired, when the villagers began to run about, but there was apparently no insurgents stirring. A party of marines was immediately landed, when the headman of the village came out to the landing-place to welcome them. He was attended by a number of servants, and accompanied by an aged scholar, the village schoolmaster, who carried on a written conversation on behalf of the local official. They had a flag on which were inscribed characters meaning that they were the "loyal subjects of Great Japan." The headman and his attendants were afterwards brought to the *Yoshino*, where they gave some valuable information about the movements of the insurgents further south.

On the afternoon of the same day, the *Yoshino* sailed further south to Tai-an, and a party was told off to land there. When the boat approached the landing place, a big fellow, who had been watching its approach, suddenly disappeared behind a house. Presently a number of Chinese soldiers came out of the house, and taking up positions at the landing-place, began

to load their pieces. The Japanese boat was at a distance of only 30 or 40 yards. The officer in command attempted to steer his boat behind a junk lying a little distance off with the intention of there exchanging shots with the insurgents. But this was found impracticable as the water was too shallow. He then steered out to sea, and at a distance of about 300 yards he poured a volley into the Chinese, who had only just finished their loading—so quick was the Japanese boat in its movements. The Chinese took to their heels on receiving the first fire and were soon out of sight. The *Yoshino*, observing what was going on in the harbour, began to bombard the barracks, the occupants of which soon fled in all directions in great disorder. Afterwards two boats were lowered, and a party of marines landing found the place entirely deserted by the insurgents, whose strength seems to have been about 200. They had arrived there about ten days before, and, besides committing the usual depredations, compelled the younger portion of the inhabitants to join them. One lad who refused was shot down. Towards evening a shell was sent in the direction of Tai-kia, about five miles inland.

On the 15th, the *Yoshino*, which was still at the anchorage at Tai-an, received a visit from a deputation of the inhabitants of Tai-kia. The principal member of the deputation was a wealthy rice merchant who, taking out a memorandum, respectfully presented it to the Japanese Captain. The document expressed the loyal allegiance of the people of Tai-kia to the Japanese Emperor, and implored protection against the depredation of the insurgents. The spokesman further stated that the preceding evening a large shell had come booming from the sea, and passing over his town struck a place about a mile away, destroying two houses, and injuring two persons, one mortally. Frightened by this, the insurgents, about 1,000 strong, who had been stationed in the place at once fled to Chang-hua.

On the 17th, a scouting party of the Guards came to Tai-an and effected a junction with the warship. Before coming there, the party had visited Tai-kia, where they were welcomed by the inhabitants with professions of goodwill. The *Yoshino* remained a few days longer at Tai-an, but the Guards having not yet arrived to take possession of Tai-kia, she sailed northward, and, after stopping a day at Tamsui, returned to Kelung on the 22nd.

The following telegram from Major-General Hishijima, chief of the commissariat department in Formosa, dated Taipeh, September 6th, 7.20 p.m., has been received at the Imperial Military Head-quarters in Tokyo:—

"Violent storms have visited here since the afternoon of the 4th instant, and the Tamsui and other rivers have overflowed. The iron bridges between Ta-hu-kow and Shinchu have been carried away, and traffic on the river and land routes is stopped in many places. Railway communication is likewise interrupted on account of damage done to the track. All telegraphic communications having ceased with the country south of Changkong, nothing is known of the state of affairs there. While transportation on land has been almost completely stopped, the means of conveyance by sea is scarcely much better. Forage has been under water in many places in this vicinity, but the Guards Division has a sufficient quantity in store in the vicinity of Chang-hua to last for several days. The storm having subsided, the necessary measures are now being taken."

The letters from Formosa just published in the Tokyo papers, describe the march of the Guards from Miaoli to Tai-kia. There is not much worth reproducing in these letters, except the general fact that the inhabitants in these regions are well affected to the Japanese troops, who are everywhere received by the villagers with awe and respect. At one place, it is said that the villagers volunteered to span a river with a bridge for the passage of the troops, to whom they further showed their esteem and respect by playing music.

An interesting incident took place at Shin-pu

on the second day after its occupation by the Japanese. A few soldiers were resting themselves in a deserted house, when their attention was attracted by a large bottle which began slowly to descend from the ceiling. On closer inspection the bottle was found to contain rock-candy (*kori-zato*) and was suspended by means of a slender cord. Rightly judging that defeated insurgents must be in hiding, a search was at once instituted, which resulted in the discovery of three armed men crouching in a corner of the upper room. According to their confession, they had been lying there from the preceding day, and being extremely hungry, they had sent down the bottle with the rock-candy to their victors to get some substantial food in exchange.

According to a rumour current among the inhabitants of Miaoli, the aborigines in the mountains are said to have killed all the defeated insurgents who had taken refuge among them, and as this fact became known, the insurgents are said to have stopped taking refuge in the mountains.

A telegram from Taipeifu, received at the Imperial Military Head-quarters in Tokyo, states that Vice-Governor-General Viscount Takashima and suite safely arrived there at half-past six o'clock on the evening of the 11th instant.

The report that Governor-General Count Kabayama is sick is generally discredited in Tokyo. All the official information thus far received from Formosa makes no mention of the fact, while a private letter just received in Tokyo from the Governor-General himself is stated to say that the writer is in the best of spirits. A few days ago there was a rumour at the Rice Exchange that he had died of cholera, and it is believed that the report about his illness may have emanated from the same quarter.

The following telegram, dated Taipeifu September 11th, 11.30 a.m., has been received at the Head-quarters in Tokyo:—

"The Imperial Guards Division is stationed in the vicinity of Chang-hua, only sending scouting parties in the direction of Tainan. Things are quiet in the neighbourhood of Chang-hua. Reserves are constantly arriving, and are now relieving the garrisons for the protection of the commissariat routes. The 4th Brigade is assembling somewhere to the east of Taipeifu, while those Companies of the Guards, which have hitherto formed the commissariat garrisons south of Oulan, are being brought together in the vicinity of Chang-hua.

"The violent storms that raged during the three days, the 3rd, 4th, and 5th instant, have swelled the rivers, carrying away bridges and otherwise interrupting the means of communication. The telegraphic communication being still broken, we cannot forward a report, as usual as to the position of the various bodies of troops and the actual number of men and horses for yesterday, the 10th. Rain is still falling copiously."

KOREAN NEWS.

Much attention has been attracted in Japan by the news that the American Trading Company has obtained from the Korean King the exclusive right of working mines in Phyöng-an-do for a period of twenty-five years, on condition that a quarter of the profits shall be paid to the Royal Treasury. Complaints are made by some of the Tokyo papers against Japanese capitalists like Messrs. Furukawa, Sumitomo, Mitsui, and Iwasaki, telling them that they ought not to have been forestalled by a foreign company.

Chinese merchants are said to be gradually returning to Söul, but at present they are not in a position to compete with the Japanese. Many of the provincial dealers with whom they had transactions before the war have since failed in consequence of the Tonghak troubles and the unquiet times that have generally prevailed in the peninsular kingdom. The newly returned Chinese merchants consequently find themselves under the necessity of seeking fresh customers and establishing new connections,

and in doing so they keenly miss the powerful influence and protection of their former Resident, Yuan. Another disadvantage under which they labour is the absence of any direct steam service between their country and Korea. At present their goods are imported by way of Nagasaki, and the consequent increase in the expense of transportation considerably handicaps their business. But even with these serious drawbacks, the Chinese merchants are slowly making headway, especially at Ninsen, and the fact is beginning to attract the attention of the Japanese correspondents, who confess that their countrymen are no match for the astute and persevering Chinaman in the field of commercial competition.

Concerning the superstitiousness of Koreans, the *Kokkai's* correspondent mentions an interesting story about the sale of the new postage stamps. Strictly speaking, these stamps are not new, having been ordered from the United States in 1884. In that year a postal system was to be opened, and a General Post Office was established in Söul. It was at the entertainment in celebration of the opening of this Office, that the abortive revolution was inaugurated by Kim Ok-kyun and others by the assassination of several distinguished politicians. This affair put an end to the postal business, and the stamps ordered from America were stowed away until recently, when the postal system was opened in Söul. When the historical association of the stamps with Kim Ok-kyun and his bloody deeds became talked about, many of the stamp-sellers are said to have been seized with such superstitious fears that they gave up the business.

Viscount Nomura arrived at Ninsen at 10 a.m. on the 1st instant, being greeted on landing by Mr. Sugimura, Secretary of Legation, who had come down specially from Söul, the members of the Japanese Consulate, the local Korean officials, and the principal Japanese residents. After a short rest, he left Ninsen for the Capital in a launch belonging to the Japanese Government. It was about 8 p.m. when he entered Söul, where he was saluted at the South Gate by the Korean Ministers of State, and other high functionaries, the Japanese troops, and a great number of the Japanese residents. A large number of persons are also said to have proceeded as far as Yong-san to welcome the new Minister. Every house front in the settlement was decorated with a Japanese flag in honour of the Viscount.

A recent letter of the *Fiji Shimpö* correspondent alluded to an abortive conspiracy at Chhöl-wön. According to the last batch of letters from Söul, local disturbances have not been confined to that place. Even at In-won, only 16 or 17 miles from the capital, the orderly portion of the population was annoyed by the assembly of a crowd of ruffians during several days in the latter part of last month. A party of police was at once dispatched to the locality, but when it arrived there the mob had already dispersed. Similar disturbances are very common throughout the kingdom. Many of the ringleaders are said to pretend that they are in communication with certain influential figures in Söul. The leaders recently arrested at Chhöl-wön, for example, are stated to have confessed that they had planned for the destruction of the Ming faction under the command of the Tai Wön-kun. But their statement does not seem to be believed by anybody in Söul. The opinion of the *Nichi Nichi's* correspondent and others is that these disturbers of the public peace have no political object, but are simply gangs of good-for-nothing fellows bent upon pillage and depredation. These disturbances do not seem to take place where the Japanese troops are stationed, their presence being regarded as the only security for the maintenance of peace and tranquility in the peninsula.

Ken Toju and Ko Shan (Hong Tzong-u), the would-be assassin of Pak and the assassin of Kim Ok-kyun respectively, have fled to Wladivostock. They tried to impose upon the Russian officials by producing what they pretended to be their King's autograph letter, in which the Czar was requested to send 10,000 troops to Korea to rescue her from the oppres-

sion of the Japanese. A reference to Söul having exposed their imposture, they were recently sent back to Gen-san, where they are believed to have been arrested by the Korean authorities.

The *Chuo Shimbun's* correspondent states that Ming Yong-chun is expected to return soon to Söul, but that Ming Yong-ik is so distrustful of the state of things in Korea, that, in spite of the repeated and urgent recommendations of the Queen and Count Inouye, he still hesitates to quit his secure place of refuge.

The mansion of the former Chinese Resident, which had been overgrown with weeds and in many places considerably dilapidated, is said to be undergoing repairs. It is inferred from this fact that the appointment of a Chinese Representative to Söul may not be far distant.

The Minister of Education is said to have under contemplation the establishment of a system of public education by opening primary schools. Should the project be approved by the Cabinet, the Itsubi Gijuku, a private seminary under the joint management of a Japanese named Ayumi Fusanoshin and a Korean official of the Foreign Office, will be converted into a model primary school, with Japanese as instructors. Besides this seminary, about thirty private Korean schools will also be turned into primary schools, where instruction will be given according to the text books compiled by the Government. A normal school has already been established in Söul. The number of students is about 60, and they will graduate at the end of the present year, the course of instruction covering only six months.

On the 4th instant a ball was to be given at Court in commemoration of the anniversary of the founding of the present dynasty.

STABBING FATALITY ON THE "EMPRESS OF INDIA."

A Japanese named Iida, 25 years of age; is under arrest pending the result of official enquiries into a mysterious affair which happened on the *Empress of India* shortly after noon on Thursday. A Chinese cook, Chun Sheng, it appears, while engaged in work on the under-deck aft, discovered a Japanese in the act of stealing a pair of trousers, and sprang forward to detain him. A dispute ensued, and the noise attracted to the spot another Chinese cook, who soon lent a hand to his comrade. The Japanese turned from Chun Sheng to the other cook and ran after him. He then drew a clasp knife, and having managed to open a blade, with the assistance of his teeth, cut the Chinese on the arm, inflicting a wound over four inches long. Then the Japanese turned the weapon on the other Chinaman, plunging it into his neck, making a terrible wound extending to the lung. Then he bolted forward, mounted the rail, jumped on to a lighter moored alongside, and disappeared from view. As soon as the alarm was raised, the coolies on the lighter were ordered up on to the deck of the mail-packet and examined, but the man "wanted" was not found among them. The Chief Officer then made an inspection of the lighter and found a Japanese crouching in a corner. He was at once identified by the Chinaman, and when the police appeared was handed over to them. The Chinaman who had been cut in the neck died within a quarter of an hour, all attempts to staunch the flow of blood being seemingly ineffectual. The other man had his wound bandaged and is progressing favourably. Chief Public Procurator Ando held an investigation on board the ship in the afternoon, and H.B.M.'s Consul conducted an enquiry on Friday. No weapon of any kind was found on the arrested man—who by the way had an abrasion near the eye from which blood was flowing when he was discovered—and it is presumed that if it was he that used the knife, he threw it away while attempting to escape.

CURRENT TOPICS.

Concerning the tactics to be employed by the extremists in the next session of the Diet, the latest report is that they will assail the Government on the question of the return of the Liaotung peninsula. If they do not succeed in this—they know very well that they will not succeed—then their next plan is to return to the charge on the subject of the curtailment of special expenditure. They will demand curtailment on a large scale, for they say that the increase of the Army and the Navy must be effected chiefly by economy in other Departments of State, and only the amount that cannot be saved by instituting economies should be obtained by increased taxation. Perhaps they think that on the question of official economy the course proposed by them will have to be approved by the Radicals, or that the latter will at least be compelled to desist from opposition, for the Radical manifesto also inculcates the necessity of retrenching the administrative expenditures of the Government. It is, however, a question whether the Radicals will agree to a policy the avowed object of which is to create a dead-lock in legislation thereby impeding the passage of the Army and Navy measures.

Concerning the change of Director in the Higher Commercial School, it is stated that it was the result of a collision between the former Director, Mr. Yufu, and the Professors, especially Mr. Iida Hataro. Professor Iida was so very popular among his fellow Professors, as well as the students, that he was regarded by some persons as the real head of the institution. Under these circumstances, the relations between him and Director Yufu were anything but cordial. The popular Professor's cause was finally taken up by the rest of the faculty, and they demanded the removal of the Director. The grounds of complaint against the latter are not very clear, but the general cause of disaffection seems to have been that he was not fitted for the post he occupied. On investigation, the Minister of Education adopted their representation, and Mr. Yufu was replaced by Mr. Koyama Kenzo, a Secretary of the Department of Education. At the same time Professor Iida was called upon to resign.

It is also reported that Mr. Kano Chigoro, Director of the Higher Normal School, is the subject of complaint in certain educational circles. Some papers already indulge in speculation as to his probable successor, Messrs. Sugiura Shigetaka, Nakagawa Hajimu, Kinoshita Hiroji, and so forth, being mentioned in this connection. We hope that the Minister of Education will think twice before deciding upon the rumoured change, for the present Director of the institution seems to be the right man in the right place.

Count Inouye, according to a telegram said to have been received in Tokyo, will return to Japan about the 20th instant. Various conjectures are made about his movements after his return to the Capital. Will he enter the Cabinet, and, if so, what post will he accept? These questions are variously answered according to fancy or prejudice. Most persons, however, seem disposed to think that, whatever may be his personal wish, circumstances will force him to take a seat in the Cabinet. As to the question what portfolio will be most acceptable to him, it was at first suggested that it would be either that of the Home Minister or the Foreign Minister. But the latest supposition is that the post selected by him, if choice be left to him, will be that of Minister of Agriculture and Commerce, the alleged reason being that he is desirous of carrying out a policy of industrial development on a large scale.

Count Goto is apparently keeping very quiet. But if gossip may be trusted, he is far from inactive. His opinion on the Liaotung question is reported to be still as pronounced and hostile to the Cabinet as ever, though it is not clearly known on what points he disapproves the course pursued by his former colleagues. He is de-

terminated, it is said, to organize a combination in the coming session of the Diet to give effect to his views and attack the Cabinet. He is said to be daily holding conferences with Messrs Kitagawa Sadahiko, Yasuoka Yukichi, and others, with a view to the carrying out of the intention referred to.

With the exception of a small portion, the revision of the Codes upon which the Codes Investigation Council is engaged, will be finished before the opening of the next session of the Diet, and it is reported that the revised parts will be submitted to the Diet. Apprehensive that the Diet may rashly attempt modifications without mature deliberation, the Investigation Council hope that a standing committee will be appointed by the Diet to consider the codes carefully before deciding upon any alteration.

The addition of another daily paper is promised in Tokyo. The new journal will be started on the 15th instant, under the name of *Yiron Nippo*. The editor will be Mr. Yamakawa Zentaro, whose name has not been heard for the last few years, but who was quite a prominent figure on the political stage in the capital about fifteen years ago, when he was one of the most eloquent demagogues of the time. What line will be taken by him in his new journal is not known.

An advertisement appears in the papers announcing the publication shortly of the facsimiles of the late Admiral Ting's letters, including those addressed to Vice-Admiral Ito at the time of his surrender, and also to the Chinese officer in command of troops at Weihai-wei. The book will have a preface written by Vice-Admiral Ito, and a portrait and sketch of the life of the Chinese hero. It is to be published at the office of the *Chuo Shimbun* on the 20th instant. The subscription price is 1 yen, the published price yen 1.50. The number of subscribers is limited to 1,000, and names must be sent in before the 20th instant.

The report that Count Matsukata had gone from Kyoto to his villa at Mikage, is incorrect. He went to Futami in Ise, where he is dividing his time between sea-bathing and literary diversions, refusing to receive any visitors except men of letters. It is understood that ere long he will go to his favourite seat at Mikage.

Mr. Shiba Shiro, M.P., has just left Tokyo for Korea, where it is believed he will assist his friend Viscount Miura. Mr. Shiba is a great friend of Pak, the ex-Minister of Home Affairs, and is said to be well acquainted with matters relating to Korea. A rumour is current in the Japanese papers that he will succeed Viscount Miura as Japanese Minister to Korea, it being asserted that that was the condition on which the present Minister accepted the post. There is no doubt that Mr. Shiba is a clever man and may be fitted for the position, but the story as now told in the columns of some vernacular journals is incredible on the face of it. It is easier to believe that he will accept the post of Adviser to the Korean Government and in that capacity will work in concert with Viscount Miura. In short, he will probably be to the latter what Mr. Saito Shuichiro has been to Count Inouye.

In the course of the next six or seven years, the number of officers in the Army has to be doubled, and the manner in which this object should be accomplished has been engaging the attention of the authorities. As the result of mature deliberation, it has been decided, it is said, to obtain the required number of officers by continuing the operation for a certain number of years those Regulations which were promulgated during the recent war for the appointment of officers from men of certain qualifications but not graduates of the Military College. As to the non-commissioned officers, the increased demand for them is to be met by promotion from the ranks and extending the *Kyodo Dan* and other schools for the education of non-commissioned officers.

The Tokyo Association of Merchants and

Manufacturers has just presented a memorial to the Minister of Foreign Affairs, urging him to cause the Chinese Government to open a port either at Ta-tung-kow or at the mouth of the Yalu. At present the produce of the comparatively fertile region in south-eastern Manchuria has to be sent either overland to Newchwang or by junks to Chefoo, and the opening of a port in this district will be a great advantage to China, and in a less degree to Korea, because it will become an outlet for Wijn and the surrounding localities. The principal articles of export will be beans, vegetable oil, wild cocoons, wool, hides, and so forth; while the memorialists are certain that, in exchange for these commodities the Japanese will be able to dispose of cotton goods, cotton yarns, sugar, silk goods, iron ware, matches, and so on.

There is a tendency in certain medical circles in the Capital to attack Dr. Kitazato on the ground that he shows little respect for the lives of his patients by making them the subjects of experiment with his new method of treating cholera. The public in general regard this movement as the result of professional jealousy, but the worthy doctors must be credited with some sense in preferring a charge of the kind. The question depends upon the nature of the method invented by the great bacteriologist. He doubtless thinks that his new method of treatment is sufficiently advanced to be tried on patients, but many of the metropolitan physicians seem to doubt it. It is not, however, necessary for us to pronounce any opinion on the matter.

Mr. Iida Hataro, lately a Professor in the Higher Commercial School of Tokyo, in a speech recently delivered, deprecates the present tendency to encourage emigration. In his opinion, the Japanese had better stay at home and develop the resources of the country. Japan, says he, cannot be said to be densely populated, and he illustrates his point by comparison with countries like Holland and Belgium. He is, in our opinion, prone to exaggeration, and his warning is not likely to be heeded by his countrymen, so strong is the prevailing tendency for foreign adventure and emigration.

CURRENT LITERATURE.

The latest number of the *Nippon-jin* is, as usual, full of interesting matter. Among the editorial articles, we may notice one on the question of National Defence. The subject is not treated in an exhaustive manner, but the writer strikes the right note when he asserts that the present revenue is not a correct index of the country's resources. He does not say definitely which way the error lies, whether the income of the State bears too high or too low a proportion to the tax-paying capacity of the people. That point he reserves for elucidation by others. But from the context it may be inferred that he considers the actual resources of the country are very inadequately represented by the income of the Treasury. At all events, he insists that, in discussing the question as to the degree of the military and naval increase, reference should be made to the actual wealth and the general economical condition of the country rather than to the amount of taxes paid by the people. He, therefore, disapproves of the method pursued by those writers who try to discover a proper degree of armament for Japan by comparison of her revenue with that of the European countries. Neither can he approve the determination of the question purely on the basis of an imaginary military policy, without any regard to the economical condition of the country. The writer seems to think that such a tendency is noticeable in military and naval circles. On the whole, the writer appears to be in favour of a deliberate and cautious procedure in the development of the fighting capacity of the country.

The chief interest of the journal, to ourselves at least, lies in the light and interesting literary effusions by the editors, Mr. Shiga and Mr.

Miyake. Mr. Shiga concludes his paper on the Australian poets. As yet few of the Australian poets, he observes, are qualified to take their place in a history of English literature. Literature is yet young in the southern continent, but that its prospects are exceedingly bright and inviting is not doubted by the Japanese critic, who believes that the Australian poet W. C. Wentworth, is not too sanguine in the following lines:—

And grant that yet an Austral Milton's song,
Pactolus-like, flow deep and rich along;
An Austral Shakespeare rise whose living page,
To nature true, may charm in every age,
And that an Austral Pindar, daring, soar
Where not the Theban eagle reached before.

Mr. Shiga concludes his review in the following strain:—"The cry of Australia for Australians has already been raised in the Southern Continent, where it is evident on all sides that the people are longing to be separated from the mother country and set up an independent community. This longing for an independent national existence will lead first to the combination of different states of Australia, then to the establishment of an independent Republic, and lastly to the independence of Australian literature. It is now seventy years since the above quoted lines were written by Wentworth, and it may be supposed that in another three score and ten years there will have grown up a great and independent literature in Australia as the result of the latter's independence as a Republic. The nineteenth century has grown old, and the revival of literary life in the twentieth century will doubtless receive much impetus from the birth of Australian literature. The future is for you, the poets of Australia."

The *Taiyo* of this month is not specially interesting, though as usual it is full of matter. Not a single article worthy of attention is met with in the columns devoted to political and other current topics, many of the essays being merely the reproduction of old ones in a new dress. In the department of literature, however, there is abundance of readable matter. Mr. Fukuchi Genichiro concludes his interesting story *Yoru no Tsuru* (the Crane of Night). The story is said to be founded on fact. The central figure is a depraved samurai, a former respectable retainer of the Tokugawa House. After a life of crime, he finally lends himself as an instrument in a plot for the seduction of a young lady in whom by accident he is surprised to find his own daughter, of whose existence he had not known, since it had been given out that she had died with her mother while he was in prison. He repents, and to save the honour of his daughter he dies the death of a samurai, namely, by committing *harakiri*. The dialogue is couched in the peculiar rhythmical language in use on the stage, and there is, consequently, something artificial about it. Another interesting novellette is from the pen of Mr. Emi, who is an enthusiastic advocate of the approximation of the written to the spoken language. The characters are a newspaper man and a blind girl who are united by marriage and live happily together.

ECONOMICAL AND INDUSTRIAL.

The following table shows the value of postal stamps and cards sold during the seven years ending 1894:—

Year.	Value.
1894	Yen 6,795,335
1893	5,527,511
1892	4,772,327
1891	4,354,173
1890	3,912,797
1889	3,486,653
1888	2,798,449

If the increased use of stamps and cards be any indication of increased prosperity, the figures quoted above show that Japan's progress is going on steadily and rapidly.

The Nippon Kombu Kaisha held the shareholders' general meeting in Tokyo on the 30th ultimo. The company's trade was at a standstill during the recent war, and the loss sustained by it amounted to 487,122 yen during the latter

half of last year and 57,165 *yen* during the first half of the present year. The company's finances are consequently in a state of considerable derangement and a committee is considering the means of reestablishing its credit. According to the statement of Mr. Murayama, the president of the company, there is hope of placing the company again on a satisfactory footing. He proposes to buy a small steamer for carrying the *kombu* to Hakodate from the various places of collection in the north of Hokkaido. Freights are at present exceedingly high between these places, and this item can be greatly reduced by purchasing a steamer. Negotiations are also going on to alter the existing contract between the company and the collectors of *kombu*. The present arrangement binds the producers not to sell any *kombu* to the Chinese merchants of Hakodate; while on the other hand, the company is bound to buy all the produce at fixed prices. The object of this contract was more patriotic than business-like, for it aimed solely at keeping the exportation of *kombu* out of Chinese hands. The producers are opposed to any modification of the existing arrangement, and it will probably take some time and considerable management to induce them to relinquish their present advantages.

According to Osaka papers, the investigations that have been going on in the City Government about the construction of a harbour at Osaka are stated to have been finished. The works are to be completed in eight years, the total outlay being estimated at about 10,000,000 *yen*, and the money is to be obtained by means of a Municipal Loan. Apart from all the indirect and general benefits to be enjoyed by the city, the land reclaimed will alone suffice to ultimately cover the entire cost of the works. The total area of land to be reclaimed is 1,500,000 *tsubo*, of which, supposing that 300,000 *tsubo* be taken up by roads, 1,200,000 *tsubo* will represent the area of the land for sale. At the rate of 10 *yen* per *tsubo*, not a high estimate, a sum of 12,000,000 *yen* will be realized. Beside this, the dredgers, machinery, and buildings, when sold on the completion of the works, will realize at least 2,000,000 *yen*.

A certain Japanese merchant just returned from China is quoted by the *Chugai Shogyo Shimpō* as having expressed an opinion, as the result of personal observation, that there is little room for the industrial enterprise of his countrymen at Shanghai, Newchwang, Chefoo, and some other places, all the profitable kinds of industry having been undertaken by Europeans and Americans. He thinks, however, that there is more or less hope for Japanese enterprise at Tientsin, Hankow, and one or two other places. Even at these places, he states the Japanese will be excluded unless they are prompt and vigilant.

Another railway project in the vicinity of Tokyo is reported. Starting from the neighbourhood of the Koishikawa Arsenal, the line is to extend as far as Ashikaga in Shimozuke, passing through Itabashi, Owada, Kawagoye, and Kumagai. The whole distance is 57 miles, the capital being 2,000,000 *yen*. The principal projectors are Messrs. Morioka, former President of the Nippon Yusen Kaisha, Kunoki Uhei, Hatsumi Keijiro, and others.

According to the official returns of the Hokkaido Administration Board, the quantity of herrings caught this year was 1,062,407 *koku* (equal to 5,451,147 bushels). The actual quantity must have been considerably greater, for reports have not yet been received from several fishing grounds. Compared with the average for the eleven years ending 1893, the above mentioned quantity shows an increase of 167,640 *koku*; though a decrease of 53,908 *koku* is observed when compared with the returns for last year. Of the herring fishery this year, it is remarked that the quantity of fish caught was generally greatest off the northern parts of the island.

The utilization of water power for the production of electricity to be applied to industrial purposes is receiving increased attention in this

country. There are projects for the utilization of the fall of Nachi in Kii, the Hakone Lake, the fall of Kegon, and various other waterfalls, rivers, and lakes. Some of the projects may be bubble schemes, but in the case of others it is evident that the originators are thoroughly practical men of business enjoying credit and respect.

Some anxiety, says the *Fiji*, is felt in business circles about the fate of the project for the establishment of an Industrial Bank, which had been taken up with much zeal by the ex-Minister of Finance. The capital of the Bank is to be 10,000,000 *yen*, but it is to be provided with a power to issue notes several times the amount of its capital. Our contemporary seems to believe that, although Viscount Watanabe may not be quite so powerful as his predecessor, the change of *personnel* in the Ministry of Finance will not affect the position of the scheme in question.

The Autumn Meeting of the delegates of the railway companies throughout the country is to be held either at Nikko or Sendai. The delegates are to assemble at Ueno, Tokyo, whence they will be taken to the place of meeting by the Nippon Tetsudo line. If Nikko be selected it is the intention of the company to lay an electric line between the station and the Daiya river, so that the delegates shall be carried by train to the front of the shrine. These meetings take place twice a year, in Spring and Autumn, the expense being borne by the different companies in turn.

There have been two projects for electric railways in Tokyo, and a third has just been announced by Messrs. Morioka Masazumi, formerly President of the Nippon Yusen Kaisha, Takei Morimasa, formerly Governor of Tottori, Seki Naohiko, formerly editor of the *Nichi Nichi Shimbun*, and a few others. It is believed that this project will not interfere with the two others, as the route selected is not the same. The capital is said to be 800,000 *yen*.

The Ryomo Tetsudo is one of the most flourishing railway companies in Japan. This company convened an extraordinary meeting of its shareholders in Tokyo on the 3rd inst. Mr. Watanabe Hiromoto, the President of the company, was in the chair. It was unanimously decided to extend the line from Ashikaga in Shimozuke to Kanagawa. The new line will cross the Nippon Tetsudo's line at Kumagai and that of the Kobe Tetsudo at Sakai, the whole length being 67½ miles. This line, when completed, will place the rich silk district of Shimozuke in direct and shorter connection with this port. It was also decided to construct a branch line connecting Owada, an intermediate station on the above line, and the city of Tokyo in the neighbourhood of the Koishikawa Arsenal, the length of this branch line being 13½ miles. The total cost of construction is estimated at 3,000,000 *yen*.

The amount of coins of different descriptions turned out at the Osaka Mint during the fiscal year ended March 31st, 1895, was as follows:—

	Yen.
Gold coins	1,680,000.00
Silver coins	29,801,790.90
Nickel coins.....	350,036.00
Total.....	31,831,826.90

Compared to the output of a normal year, the amount for the last fiscal year shows an increase of 300 per cent. Since the middle of July, 1894, the operation of coinage went on so continuously that work was not suspended on Sundays, the average working day being 16 hours, while the daily output sometimes amounted to as much as 150,000 *yen*. It is scarcely necessary to add that the increased need for coins was principally due to the demand for silver *yen* and subsidiary pieces for use by the expeditionary forces in China and Korea.

A few months ago the amount of specie reserve at the Bank of Japan had a tendency to decrease, on account of the disturbance of the balance of trade against Japan, and the importation of war material from abroad. But the prosperous condition of the silk trade has since turned the scale in the opposite direction, and

the specie reserve has gradually increased, as may be seen from the following figures:—

	Gold Coins and Bullion	Silver Coins and Bullion	Total
	yen.	yen.	yen.
July 29th—August 3rd	30,627,000	34,072,065	64,699,065
August 5th—August 10th ...	30,627,000	34,162,154	64,789,154
August 11th—August 17th ...	30,627,000	34,954,078	65,581,078
August 19th—August 24th ...	30,909,000	35,111,303	66,020,303
August 26th—August 31st ...	30,996,000	36,105,824	67,101,824

A corresponding increase is noticed in the issue of convertible notes. The amounts at the beginning of the present and last months were as follow:—

	yen
Beginning of August	64,699,065
Beginning of September	67,161,824

Increase

2,462,759
It is believed that the rate of increase will be still more striking in the near future in the case of both the specie reserve and convertible notes.

The committee of the Tokyo branch of the *Nippon Boyeki Kyokai* (Japan Trade Association), recently entrusted with the investigation of some topics connected with the development of foreign commerce, met at the Seiyoken, Tsukiji, on the 5th instant. There were present Messrs. Ikeda Kenzo, Abe Kosuke, Asano Soichiro, Matsuo Gisuke, Yezoye Renzo, Kaki-mura Tanizo, Kasahara Megumu, Horitoshi Zenjuro, and a few others. They adopted the draft report on the extension of foreign markets for Japanese exports, the facilities to the import trade, the regulation of manufactures, and the organization of guilds. As to the encouragement of the improvement of manufactures for exportation, and the degree of official encouragement proper in the matter of foreign trade, the adoption of a report on these topics was deferred to the next meeting. As to the investigation of the history of commerce of various nations immediately after foreign wars, the work was in the hands of the professors of the Higher Commercial School of Tokyo, and the report on the subject is expected to be ready for presentation at the next meeting of the Committee.

Commenting on the project on foot among the business men of Tokyo and Yokohama for the establishment of a company to undertake the direct export of silk, the *Chugai Shogyo Shimpō* recommends the projectors to be deliberate and careful in maturing their plans. Should they direct their attention to affording judicious assistance to the silk producers by accommodating them with loans on favourable terms, and should they further take care to have the company's foreign transactions placed in charge of properly qualified persons, then our contemporary sees no reason why the concern should not succeed.

Some idea of the commercial importance of Osaka may be formed by a glance at the following figures showing the amount of merchandise coming in and going out of that city:—

	Exit.		Entrance.	
	By water	By land	By water	By land
	yen.	catty.	yen.	catty.
1892	675,858	163,694,210	38,547,659	19,615,607
1893	66,591,224	311,567,137	47,389,466	51,801,130
1894	30,427,802	449,746,491	43,062,669	59,133,196

These figures are taken from the last Annual Industrial and Commercial Statistical Report of the City Government of Osaka.

The question of national banks is receiving considerable attention in business circles. The charters of these banks are to expire at different dates between the years 1896 and 1899, and with the charters will go various valuable privileges, thereby seriously affecting their financial positions. It is believed that without these privileges many of the national banks will be unable to continue their existence. Consequently the majority of them are taking active steps to get the renewal of their charters for a certain number of years granted by the Government. But about a dozen in Tokyo, namely, those occupying the foremost positions, take a different view of the matter. In their opinion, it is not advisable to claim the renewal of the charter, but they think it better to ask for certain facilities for conversion into private banks.

In this sense they have just presented a memorial to the Government, requesting the latter to introduce the matter in the coming session of the Diet, so that the question may be settled once for all. The document is signed by Messrs. Shibusawa Eiichi (1st National), Hara Zenzaburo (2nd), Yasuda Zenshiro (3rd), Arimura Kunihiko (5th), Hozumi Shigehide (20th), Watanabe Jiyemon (27th), Takagawa Ryoza (30th), Otani Kahei (74th), Nakazawa Hikokichi (84th), Kobayashi Chikakazu (95th), Takata Kojiro (100th), Tanaka Heihachi (112th), and Toyokawa Ryohei (119th). It is reported that the national banks west of Osaka are mostly in favour of the renewal of charters, while in Tokyo the 15th (the Nobles) is an ardent advocate of the same course. Should renewal not be granted, the last named bank would, it is stated, most probably wind up its affairs.

The Kyushu Tetsudo's current semi-annual term ends on the 30th instant. There has been a considerable increase of receipts during the half-year, as compared with the preceding period. The estimated total income is 525,000 yen, from which, after subtracting all expenditures, the total net profit is 327,500 yen. Making due allowance for the reserve fund, to rewards, and so forth, it is calculated that the rate of dividend will be at least 8 per cent. per annum.

With the revival of business activity, there is a tendency throughout the country towards a rise of wages. The spinning factories of Osaka are said to be complaining of the scarcity of hands and the steady rise in the price of labour. A similar report is received from the silk manufacturers in the Kwantō district. In the vicinity of Iwatsuki, for instance, the wage of female hands employed in weaving establishments has risen from 4 to 6 sen per tan.

Another indication of the dawn of better times is furnished by the increased home demand for the products of the cotton spinning factories. Taking the case of the Kanegafuchi factory, one of the largest in Japan, while the quantity exported has not thus far exceeded 500 bales, not only all the yarns have been sold, but contracts have been made for those to be produced in the next three years. Last year about 1,500 bales were exported to China between the months of May and October, and yet there remained a certain quantity unsold at the end of December.

TYPHOON NEAR FORMOSA.

The *Nichi Nichi Shimbun* states that several telegrams dispatched from Kelung since the 4th inst. and received by the Government, convey intelligence of a heavy typhoon which commenced about 6 o'clock in the afternoon of the 4th inst. and raged off Kelung. The departure of transports or unloading of freight was consequently interrupted. The ships then at anchor off Kelung were the *Ryōjun Maru*, *Sendai Maru*, *Hinode Maru*, *Shiganoura Maru*, *Ariake Maru*, *Niigata Maru*, *Izumi*, and *Yamato*. The *Tenshin Maru* met the storm on her way from the Pescadores. The storm had spent itself by the 6th, when unloading recommenced. The *Kagoshima Maru* and *Tenshin Maru* put into Kelung on the 6th. The *Kagoshima* was to arrive at Kelung on the 4th with a number of troops, but was prevented from entering the harbour, and anchored near Tamsui. She lost a steam-launch, two boats, and forty horses. Fifteen soldiers and three seamen were slightly injured. Five horses and two coolies were washed overboard. The steamer was damaged, and will require some repairs. The *Yamato*, *Shiganoura*, and *Niigata* left Kelung on the 7th, when the *Himeji Maru* arrived there. The latter transport was caught in the storm, and some persons on board, as well as horses, were either killed or washed overboard, one steam-launch and three boats being damaged; one boat was washed away. A number of boats were wrecked in the port of Kelung.

THE "NICHU NICHU" ON FOREIGN POLICY.

While the rest of the metropolitan journals are urging the Government to adopt a definite and fixed line of foreign policy, the *Nichi Nichi Shimbun* alone takes a different view of the matter. Our contemporary is of opinion that in the present state of affairs, nothing could be more unwise than for Japan to commit herself to any fixed line of action in reference to foreign relations. It considers the question with reference to Korea, England, and Russia. As to the peninsular kingdom, the policy pursued by Japan must necessarily change with the changing aspect of the situation there. Whether Japan should confine her efforts to maintaining its independence, or whether she should annex it, depends entirely upon the turn of events. The *Nichi Nichi* thinks it the height of folly to attach importance, as is done by many of its countrymen, to the increase of the so-called Japanese party in Korea. "The first object of diplomacy," says our contemporary, "should be to maintain and promote the rights and interests of the country. In so far as the attainment of this object is not interfered with, should the principles of humanity and justice be carried out. The abolition of slavery, the institution of the Red Cross Society, and other humanitarian schemes, make it evident that virtue and chivalry are not inconsistent with international intercourse. At the same time, we cannot approve the sacrificing of national interests for the sake of the principles of humanity. Where the vital interests of the country are concerned, it will not do to be fettered by petty considerations of sentiment; neither would we object to the promotion of our national interests by all conceivable means not at variance with the principles of humanity and justice. So long as the Korean Government and people do not turn their back upon her, Japan should do everything in her power to protect the independence of the country in name as well as in reality. But at the same time, Japan would never pardon the Koreans should they prove false to her. What has been said in reference to Korea applies equally to our policy with regard to all other countries."

With reference to England, our contemporary is not in favour of the suggestion made by the *Fiji* and others for alliance. Now that, as the result of the recent victorious War, Japan stands in direct diplomatic relations with the Powers of Europe, the *Nichi Nichi* is well aware of the fact that circumstances may at any moment make it necessary for her to form an alliance with one or other of these Powers. But to talk of alliances while such circumstances are not in sight, is to talk nonsense. "England," remarks our contemporary, "from the nature of her political system, is not fitted to be a party to a secret convention, while her national interests are best served by preserving what she already possesses; her position is such that she would be most seriously affected by a foreign war. Moreover, Japan is destined to become her rival in the field of commerce. It is plainly difficult to discover the advantages of an alliance with such a Power. Moreover, in event of an emergency, England would feel comparatively safe in India without Japan's assistance. But will Japan be perfectly secure in a similar case without England's help? Perfect security will be impossible even after the completion of the present measures of Military and Naval augmentation. Would England consent to any arrangement which would require her to come to Japan's assistance at the risk of plunging into a ruinous war? England's favourite policy is to pretend that she would support a friendly State, but, when the latter is involved in war, to keep aloof from the contest, and upon the conclusion of hostilities to come upon the stage again with the two-fold purpose of preventing another from monopolizing the advantages gained and appropriating for herself what profit she can out of the situation. Without going far to seek an illustration, it is sufficient to point at her conduct in Siam in connection with the latter's complications with France, or still

nearer home, to her doings during the recent war between Japan and China. What was Britain's object when she attempted diplomatic interference immediately after the battle of Pyongyang and the naval engagement off the Yalu? It is scarcely necessary to state that her object was to reap benefits out of the situation in pursuance of her favourite policy. We fail to discover any circumstance that tends to favour an alliance with England. On the contrary, we think that such an alliance would be extremely dangerous. Look at the papers published in England; it seems to be their common practice to stir up Japanese antipathy against Russia. England's interest in the Far East will be best served, not by acting in concert with Japan, but by inducing the latter to fight with Russia so that the energies of both these countries may be exhausted with beneficial results to herself. Such is the ulterior object of English diplomacy, and should, in ignorance of this fact, effort be made to come to an understanding with her, Japan would probably find herself at arm's length with Russia before an agreement had been effected with England.

As to Russia, the *Nichi Nichi* observes that Japan has little interest in common with that Power; on the contrary, their interests are in many instances antagonistic to each other. Russia does not think it necessary to seek Japan's alliance, because she has little fear of England's ever advancing in a northerly direction, and further because she holds China in the hollow of her hand. Either Russia must give up her cherished hope of securing an ice-free port on the Pacific, or Japan must renounce her rights in regions which she has long regarded as within the sphere of her influence. Unless she be prepared to give up Korea and suffer Russia's occupation of Liaotung, it would be impossible to form an alliance with the Northern Power. "Perhaps it might not be," says the *Nichi Nichi*, "an altogether unwise policy to make concessions to Russia as to Korea, and seek compensation in another quarter. But before deciding upon such a policy, it would be absolutely necessary for Japan to increase her military strength to a degree sufficient to insure the safety of her shores against the presence of a first-rate Power in Korea and Manchuria. Is the nation or the Government prepared to undertake such a large increase in its armament? Even if supposing that such gigantic measures are possible, it is a question demanding the most serious consideration whether or not the loss of a bulwark on one side in consideration of compensation in another direction would be beneficial to Japan." For these reasons, our contemporary is opposed to all projects of alliance, and thinks it absurd to expect the Government to decide upon a fixed and permanent line of policy in the field of foreign affairs.

PRINCE BISMARCK ON THE LIAOTUNG QUESTION.

It is well-known that Prince Bismarck follows closely the events transpiring in the political world. There is little that escapes his vigilant eye, and when he deems it necessary in the interest of the German people he does not hesitate to give his opinion to the public either through the numerous deputations that visit him or, more frequently, through the columns of the *Hamburger Nachrichten*. Whether a leader in this journal is inspired by Prince Bismarck or not, is a question not so difficult to decide as it may seem at first sight. His style and method of expressing his thoughts are thoroughly individual and characteristic, he could not hide himself under a pseudonym if he tried, and his contributions to that journal have generally been recognized at once. *Exungue leonem*. It was but natural that people should look for some intimation of Prince Bismarck's views on Germany's recent departure in the East, and the "Old Man of the Saxon Forest" did not disappoint his countrymen. As early as the middle of May, there appeared in the Hamburg journal a leader, every line of which bore the impress of Bismarck's spirit and policy. "We are far

from blaming Russia," he says, among other things, "if she tries to realize her plans in Asia, nor do we see in such endeavours any danger to important interests of Germany; but we believe that a benevolent neutrality on Germany's part would have been amply sufficient for the realization of Russia's intentions. It is repugnant to the dignity of a great Power to stake its authority for interests not its own. We are the last to under-estimate the importance of good relations with Russia, and would always advise our statesmen to oblige Russia by services that can be rendered without detriment to our dignity as a great Power, and without sacrificing German interests. The rivalry of France in this respect cannot determine German action, for in this way we should finally reach a point where German policy is not controlled in Berlin, but in Paris. It is of course possible that the loss which Germany has risked in Japan may be counterbalanced by other political advantages; but so long as we do not know those advantages it is impossible for us to say whether German participation in the action of Russia and France deserves approbation and consent. In some semi-official papers stress is laid on the necessity of preventing Japan from throttling China commercially and politically, in the interests of German trade in the East. We hope that this point of view, when necessary, will also be maintained against Russia, and that German commerce will be preserved from injury through Russia's Chinese policy." Such an opinion from such a source could not be ignored, and many of the semi-official papers denied that Germany had become the "train-bearer" of Russia, an assertion that had not been made by anybody, least of all by the *Hamburger Nachrichten*. The *Cologne Gazette* went into lengthy and elaborate arguments to show that the possession of the Liaotung peninsula by Japan would be a perpetual threat to China; that it could have led to a state full of uncertainties, utterly incompatible with the maintenance of peace, and that the possession of Port Arthur would have led to a dominion over the Gulf of Pechili injurious, if not fatal, to a further development of Germany's trade with China. Had the Government not foreseen this danger, the very people who now criticize its policy would have assailed it most loudly and most justly. The permanent occupation of Liaotung, continued the *Cologne Gazette*, would never and under no circumstances have been permitted by Russia, and the German Government has earned the gratitude of Japan by pointing out this fact in good time and in a friendly spirit. It was the Russian government that first asked Germany whether she would assist in warding off the dangers threatening Europe through a permanent occupation of Liaotung by Japan. Of course, Russia's interest in this matter was greater than that of Germany; but for united action not equality, only identity of interest, was required. Had Germany refused to co-operate, she would have abandoned her own interests and left the settlement of affairs in Asia to France and Russia alone. The objective point of the diplomatic action was simple, clear, and well defined. England's abstention was without significance, as the three continental Powers were strong enough to carry through their joint demand. Germany enabled Japan to yield in an honourable way, has rejected all other demands of third Powers, and has enabled Japan to enjoy the rich fruits of her victory, fruits far in excess of what Germany herself obtained in 1870-71 at a far greater sacrifice of men and money. The tendency of the English press to ascribe to Great Britain the peaceful solution of the question is sufficient proof of the correctness of Germany's position. In reply to these views of the semi-official *Cologne Gazette*, the Hamburg journal is not yet certain whether a definite settlement has been reached; it holds that the final development will depend on the attitude of the other Powers, Great Britain and the United States included, and not on the will of Germany alone, and adds that it would not be pleasant for Germany in a given case to have to fight side by side with

those with whom she had been politically united during the recent diplomatic negotiations. "The question is a proper one to ask," the journal continues, "whether, when Germany decided to take part in the diplomatic action, the *pros* and *cons* had been thoroughly considered, whether every possible consequence had been weighed, and whether our interests really demanded the abandonment of our neutrality and, possibly, an engagement of our squadron in battle with an enemy that cannot be counted among the uncivilized and easily vanquished peoples. Fortunately, this intervention has passed off peaceably and perhaps there is still a possibility of considering Germany's action in this matter as closed so that we may again have 'a free hand.' We should be filled with satisfaction if such were now the case."

THE YOKOHAMA SPECIE BANK.

The Yokohama Specie Bank held its half-yearly general meeting on the 10th instant. President Sonoda was in the chair, and there were present about 120 shareholders, besides the official inspector of the Bank, Mr. Soyeda of the Finance Department, and Mr. Iida of the Household Department, who represented the shares owned by the Imperial Family. Mr. Sonoda opened the proceedings with a speech, in which he surveyed the present condition of the economical world in Japan and referred to the general policy pursued by the Bank. On looking back upon the economic condition of Japan during the first half of the present year, the speaker was glad to observe that neither the war nor depression of trade in the West produced any serious economic disturbance in this country, but that, on the contrary, in spite of these untoward circumstances, its foreign trade continued to increase and prosper more than ever. Excepting slight fluctuations caused by the speculative purchase of silver bullion in expectation of the demand for the metal after the termination of the war, the rate of exchange remained comparatively steady and uniform. Under these circumstances, the Specie Bank was able to present a tolerably encouraging report to the shareholders. As to the future policy of the bank, the speaker assured his hearers that attention would be directed to extending its operations so as to keep fully in step with the commercial development of the country. It is the bank's purpose to extend its business in concert with the Bank of Japan, with which it hopes to maintain a relationship of the most intimate kind. As the first step toward the extension of its operations abroad, the bank proposes the establishment of a branch at Hongkong. Other matters of importance to which attention was called by Mr. Sonoda was the appointment of Mr. Takahashi Korekiyo, head of the western branch office of the Bank of Japan, to be Manager, *vice* Mr. Koizumi deceased, and of Mr. Yamamoto Tatsuo, Director of the Business Bureau of the Bank of Japan, to be at the same time a Director of the Specie Bank, in the place of Mr. Mori Motoaki, who has resigned. After the speech was over, a report was made on the financial condition of the bank, and the profit and loss account was laid on the table. These were all adopted without debate. From the financial statement we take the following:—

	Yen.
Total Profit	1,529,179.192
Total Loss	1,019,930.631
Net Profit	509,248.561
Carried over from the preceding period	26,620.512
Total net profit	535,869.073
To the reserve fund	92,000.000
To rewards	50,000.000
To the dividend (15 per cent. per annum)	337,500.000
To construction reserve	20,000.000
To be carried forward to the next period	36,369.073

THE "DOSHI-KAI."

The *Doshi-kai* politicians, who style themselves the centre of the Opposition parties, assembled at the Atago-kan on the 9th instant, and adopted the following resolutions:—

FOREIGN POLICY.

- 1.—That the weak and irresolute policy hitherto pursued should be replaced by a strong and resolute one.
- 2.—That care should be exercised in the appointment of diplomatic officials.
- 3.—That the members of the diplomatic and consular services should be urged to discharge their duties properly.

DOMESTIC AFFAIRS.

- 1.—That a perfect system of responsible Cabinets should be introduced, and the responsibilities of the Ministers of State should be placed on a definite basis.
- 2.—That the completion of armaments should be carried out in accordance with a plan definitely elaborated in view of all possible future contingencies, and within the limits not prejudicial to the economic development of the country.
- 3.—That, before increasing taxes for the purpose of the Military and Naval augmentation, all superfluous expenses of the Government should be rigidly curtailed.
- 4.—That in all things simplicity should be maintained, and discarding all the evil practices attending a conservative bureaucracy, a spirit of enterprise should be encouraged.
- 5.—That, by abolishing administrative practices tending to injure personal liberty, efforts should be made for the assertion of individual rights and freedom.
- 6.—That all machinery necessary for the development of private industry should be completed, and, imposing restraints upon the ascendancy of the "favourite merchants" (*cho sho*), all obstacles should be removed from the path of honest manufacturers and business men.
- 7.—That a check should be placed upon those members of the Houses of the Diet, who, heedless of their high trust as the overseers of the Executive, do not hesitate to combine with officials for the furtherance of personal interests.
- 8.—That the educational system should be reformed in such a manner as to lay the foundation for the progress of the country.
- 9.—That attention should be paid to the accomplishment of social reforms.
- 10.—That no indulgence should be shown to the officials for their neglect of duties in respect of the protection of private life and property.

THE CROWN PRINCE.

Saturday's *Official Gazette* has the following report concerning the condition of H.I.H. the Crown Prince:—On August 31st: temperature, between 36.3° C. and 37.7° C.; pulse, between 82 and 96; respiration, between 23 and 30; on the 1st inst.: temperature, between 36.2° C. and 37.6° C.; pulse, between 78 and 96; respiration, between 22 and 28; on the 2nd: temperature, between 36.3° C. and 37.7° C.; pulse, between 88 and 92; respiration, between 22 and 28; on the 3rd: temperature, between 36.2° C. and 37.55° C.; pulse, between 84 and 96; respiration, between 24 and 28; on the 4th: temperature, between 36.2° C. and 37.9° C.; pulse, between 76 and 100; respiration, between 22 and 30; on the 5th: temperature, between 36.5° C. and 37.6° C.; pulse, between 84 and 96; respiration, between 24 and 28.

The *Official Gazette* states that the latest condition of H.I.H. the Crown Prince is as follows:—On the 6th inst.: temperature, between 36.5° C. and 37.65° C.; pulse, between 77 and 96; respiration, between 24 and 30; on the 7th: temperature, between 36.5° C. and 37.6° C.; pulse, between 80 and 92; respiration, between 20 and 30; on the 8th: temperature, between 36.35° C. and 37.8° C.; pulse, between 84 and 100; respiration, between 22 and 30; on the 9th: temperature, between 36.8° C. and 38.2° C.; pulse, between 72 and 104; respiration, between 24 and 32; on the 10th: temperature, between 36.5° C. and 38.2° C.; pulse, between 80 and 102; respiration, between 22 and 29; on the 11th: temperature, between 36.6° C. and 37.7° C.; pulse, between 84 and 96; respiration, between 24 and 28.

THE INCREASE OF THE ARMY.

The *Nichi Nichi Shimbun* states that, with the exception of a certain part, the projects for the increase of the Army is complete, and that the computation of expenses required for the carrying out of the projected measures is now being pushed forward with great industry at the Finance Bureau of the Department of War. According to our contemporary's information, the principal points of the proposed increase are as follow:—

1.—Six new Divisions will be added, thus increasing the number of Divisions to twelve. Besides, the Imperial Guards Division, which is not included in the above number, is to be brought up in numerical strength and in all other respects to the standard of an ordinary Division. Consequently by the fourth year after the carrying out of the present scheme, the entire standing establishment of the country will have been increased to thirteen Divisions.

2.—With a view to the increase of the strength of individual Divisions, a regiment of foot artillery and a railway corps will be newly created and added to each and every Division. At the same time, the cavalry establishment will be so far extended as to bring up the present force, which is on the basis of a battalion per Division, to a regiment per Division. Besides, the strength of a regiment of foot will be increased up to a certain point.

3.—Where an increase of strength may be deemed necessary in the existing coast defence artillery, the object is to be attained by altering the organization of a battalion, so that it shall consist of four companies instead of three as at present. At the same time a regiment of coast defence artillery will be stationed at each of the six or seven important places on the coast.

4.—The defences of the smaller islands will be completed, and all important places on them will be defended by coast defence artillery and a cavalry corps.

5.—With the increase of the Army Divisions, the Gendarmes will be augmented, so that a corps may be attached to each Division.

6.—Among the offices to be created are the Field-Marshal's Head-quarters, the Regiment Head-quarters, the Gendarmerie Head-quarters, and so forth. As to the extension of the existing official organization, the two Bureaux in the General Staff Office will be replaced by four sections, while all the Military educational institutions, from the University down to the Kyododan, will be enlarged to meet the increased demand for officers and men. Similar enlargement will also be made in the case of the Arsenal, the Woollen Cloth Factory, the Powder Factories, the Horse Breeding Establishments, the District Head-quarters of Artillery and Engineers, and so forth.

Such are briefly the essential points of the projected increase of the Army. As to the expenditure required by these measures, the subject being still under consideration, it is impossible to get definite figures. But the *Nichi Nichi* is informed that the increase of the ordinary expenditure will approximately not exceed 13,000,000 *yen* annually, while the extraordinary expenditure required for the construction of forts and so forth will amount to about 70,000,000 *yen*. It being the purpose of the present plan to complete the increase of the Army in three years beginning with the next fiscal year, which commences on the 1st of April, 1896, the ordinary expenditure is to be gradually increased until the increase will reach the whole amount, 13,000,000 *yen*, in the fiscal year beginning with the 1st of April, 1899. It is further observed that experience in the past warrants the belief that, after the increase of the Army shall have been completed, it will be possible to effect more or less curtailment of the expenditure.

CHINA NEWS.

The *N.-C. Daily News* says that it is reported in Chinese official circles that the Imperial Government intend to make Wuchang or Hanyang in Hupeh the starting point for the railway to Canton, and that Chinkiang will be the starting point for Peking. A number of officials have already been sent by the high provincial authorities of Hupeh and Kiangsu to survey and report on the most feasible route. The Emperor has given these Viceroy's only a month to report on the matter.

A report comes from Chêngtu that the amount of indemnity to be paid the Roman Catholic Missions for damage done by the rioters in that province is to be something like Tls. 700,000. Furthermore, that the work on the reconstruction

of the Roman Catholic Church at Yitung-chiao has already commenced. The delay of the British and American Ministers in sending a commission to Chêngtu has raised the rumour amongst natives of Szechuan that no commission is to be sent after all, and that the Chung-king Taotai will probably be the person to settle the British and American claims. The Roman Catholic priests in Szechuan are now being treated in a most deferential manner.

Taotai P'an Chih-chün, formerly Second Naval Secretary of the now defunct Peiyang fleet, according to news from Tientsin, has been appointed to take command of the officers and sailors that came up to Tientsin after the surrender of the fleet at Weihaiwei last February, who have ever since been housed at Taku and in the Tientsin Naval College. There are, says a Shanghai journal, about 2,500 sailors still available for the fleet that is to be, and these men have been temporarily formed into five battalions for purposes of convenience in drill and practice. Of officers and non-commissioned officers ready to resume their work there are, roughly calculated, nearly 200, either at Tientsin or Nanking. The Tientsin Naval and Engineering Colleges are also to be enlarged owing to the increased number of cadets who appear to be in no wise deterred by the experience of their seniors in the late war.

Foochow tea export returns to date show 10,612,000 lbs. exported this year against 13,270,000 lbs. last year. The Chinese hold that Congons will alone be about 100,000 half-chests short of last year's export.

The record price has just been given in Shanghai for a Chinese pony, Sans Doute being knocked down for Tls. 2,200 at the auction sale of "Mr. Ute's" racing stud.

Credulous as ever, the Chinese in Shanghai now declare that cholera is no longer to be feared there this summer. And why? The story is very short. A wheel-barrow man plying at the Bubbling Well was hired the other day by two well-dressed strangers, who asked to be taken to Jessfield. As usual, he listened to the conversation of his passengers, and soon discovered that they were the cholera gods, who had made up their minds to leave Shanghai, cross the Soochow Creek at Jessfield, and go off to the westward.

The Chinese vernacular press report that the Viceroy and Generalissimo Liu K'un-yi lately sent up to the Throne a memorial asking to be allowed to retire altogether from public life, giving as a reason the serious character of his present maladies. He is lying seriously ill at Tongshan, near the Kaiping mines. By the retention of Li Hung-chang, Chief of the Anhui or Huai political party, at Peking, and the retirement of Liu K'un-yi, the chief of the Hunan or Ts'u party, the literary faction of which Chang Chih-tung is the acknowledged head, will, thinks the *N.-C. Daily News*, gain a decided superiority over its two older rivals in the politics of the Celestial Empire. By the way, Liu K'un-yi is reported to have recommended to the Throne Chang Taotai, the manager of the Kaiping mines, for an important post in the new Railway Board of Construction, and has backed his recommendation by an offer of Chang Taotai, who comes from a wealthy Shantung family, to subscribe Tls. 3,000,000 to assist the government in beginning the new railway which is to connect Peking and Canton.

The Viceroy Chang Chih-tung has consented to providing Nanking with water-works after the foreign method, and several deputies have already received orders from him to come to Shanghai to study the matter on the spot and to engage some foreign firm to undertake the work. The scheme has been hailed with delight by the whole population of Nanking, except, of course, the water carriers. It is to be a commercial undertaking and residents of Nanking have been asked to subscribe to the shares.

On September 3rd, says the Shanghai morning journal, an important legal question was raised in H.B.M.'s Supreme Court, before Mr. George Jamieson, Acting Chief Justice, in connection with the case of Yuen Tsze-chuan v.

Major Brothers, Limited, which was before the Court on the 15th of July last. It will be recalled that the Chinese plaintiff claimed Tls. 21,000 in connection with the sale of a certain match factory, and that the defendants entered a counter-claim. The counter-claim was not tried, as his Lordship, giving judgment on certain points put to him, referred the matters of account back to the parties with a view to an arrangement. Apparently this agreement could not be come to, as yesterday Mr. H. S. Wilkinson, on behalf of Major Brothers, applied for a further hearing, asking the Court to take cognizance of the counter-claim. Mr. W. A. C. Platt opposed the application on the ground that in consequence of the decision of the Privy Council in the case of the Imperial Japanese Government v. the P. & O. Steam Navigation Co. (the *Chishima-Ravenna* case) the Court could not entertain the counter-claim. He contended that under that decision in order that a counter-claim against a Chinese or Japanese subject could be tried in a British Court, it must be shown that the Chinese or Japanese subject, and his government as well, had consented to such a course. In the present case neither the Chinese subject nor his government had waived their rights, and if Major Brothers desired to sue Yuen Tsze-chuan they must do so in a Chinese Court. His Lordship expressed reluctance to decide such an important point if it could be avoided and offered to go into the matters of account: if he found any sum due from Major Brothers he would make an order, but if, on the other hand, he found the balance against the Chinese subject, then he would merely give an opinion that so much was due, without any order. Mr. Platt said an expression of opinion from his Lordship would have the weight of a judgment if brought to a Chinese Court, and his instructions did not permit him to accept the suggestion. His Lordship accordingly dismissed the case with the note: "The plaintiff elects not to proceed with his case; the case therefore dismissed, with costs."

The unpaid Chinese soldiery now hanging about Shankaikwan seem to be getting quite out of control. The other day some fifty of them attempted to break into the station yard and get a free ride on the railway, and upon Mr. Moore, the conductor, remonstrating, they set upon and villainously mauled him. He now lies in a dangerous condition with a huge gash on the head. In connection with this outrage, a Tientsin correspondent writes:—A week or two ago, some eighty men packed themselves ticketless into a railway car and refused either to pay or to budge; happily it was the rear carriage, so the train officials quietly slipped the couplings and went off without them to the huge delight of all the rag-tag-and-bobtail which haunt a Chinese railway station. Next day every man in that four-score had a ticket and was civil. Still in justice to the "red-coats" it must be said they are more often sinned against than sinners in this respect. They are ordered up or down the line: the officers probably get all the fares and disburse a few to the booking clerks, trusting to the men's bluffing powers to get through all right. The railway officials have to fight this as best they can. We are pretty confident that the present attack is a *mêlée* of this sort.

It is reported from Ichang that owing to the large number of missionary refugees from Szechuan in that port and in order to provide against a popular *émeute* against them, Governor T'an of Hupeh has sent a Taotai with a force of soldiers to Ichang both to protect the foreigners there as well as to overawe the hostile factions of Kiangsi and Ichang coolies now disorganising trade in that city by their street brawls and conflicts.

The remains of the late Li Hsien-mou, son of the late ex-General Li Chao-shou, says a China exchange, whose corpse suffered decapitation at Nanking in June, 1893, on suspicion of his having been Mason's accomplice in a projected *Kolao Huï* rebellion, were after two years' burial in the strangers' burial ground at Nanking, exhumed the other day from the ground in com-

pany with his wife's and concubine's coffins and handed over by the local magistrate to the relatives of the deceased who had come from Anhui specially for the purpose. At the time of Li Hsien-mou's suicide there were found at his house nearly Tls. 20,000 worth of curios, jewellery, etc., which were taken charge of by the Kiangning magistrate. These were also handed over to Li Hsien-mou's relatives.

The *P. & T. Times* of the 31st ult. says:—His Excellency Li Hung-chang, who left this for Peking on Saturday last accompanied by Mr. Pethick, has been made a member of the Privy Council and is henceforth to reside at the Capital. H. E. Wang Wênshao has received the appointment of Viceroy of Chihli and Superintendent of Northern Trade. We are informed that H. E. received the congratulations of the principal native officials on Thursday evening, at his Yamên. The same paper remarks:—Considerable speculation is going on in the Settlement as to the position of the late Viceroy Li Hung-chang. A few are sure that he has gained in power; but some, who should be in the know, are equally positive that Li Hung-chang's day is over, and that he has been shelved. There is even a whisper that his late suspected antagonism to all things English has not helped him. If this is true, it is almost a pity, as undoubtedly Li stands out amongst his compeers for his ability and energy. But England is, after all, a hard rock to buck-up against.

A Censor has memorialized the Throne urging that the arsenals, dockyards, and powder manufactories, at present run at ruinous cost by the mandarins, be sold to private companies. The Throne is said to have agreed with the suggestion, and has ordered inquiries to be set on foot in regard to it.

HONGKONG NEWS.

A new industry originated by Chinese returned from the Pacific coast of America, has sprung up at Canton, namely, the canning of fish and fruit. The goods are shipped to Shanghai, Singapore, and California. The fish is preserved in oil—groundnut oil being used. The wholesale prices are almost as high as those of foreign canned fish and fruit, but the goods obtain a sale amongst the Chinese. The tins bear labels with very good illustrations of the contents and descriptions in Chinese.

The borrowing public, says the *Daily Press*, is anxiously awaiting the reduction of the Banks' rate on loans which should follow as a corollary of the reduction in the rate of interest allowed on deposits. Formerly the Banks paid five per cent. interest on deposits and charged seven per cent. on loans, making thereby a profit of forty per cent. on the amount they paid as interest to depositors. Now they pay four per cent. and charge seven, making a profit of seventy-five per cent. If the rate charged for loans were reduced to six per cent. the profit to the Banks would still be fifty per cent., or ten per cent. more than it used to be.

The French and Chinese telegraph lines were connected at Moncay on the 22nd August.

The *Bangkok Times* of the 20th August says:—A remarkable matrimonial union was celebrated on Friday, at the city end of New Road. The parties married were both dwarfs, the bridegroom only 48 inches in height, while the bride was 2 inches shorter.

The French column operating against the pirates near Moncay have captured their stronghold, after encountering a stubborn resistance, but the Lyaudet family, abducted from Port Wallut some months ago, were not found there. It is supposed that they have been conveyed across the border into China.

Two distinct shocks of earthquake were felt in Hongkong on Friday, August 30th. The first was experienced at 5'40"30, and lasted 15 seconds: while the second occurred at 5'50"15, and lasted for four seconds. No damage was done. At ten minutes to six o'clock the same evening a severe shock of earthquake was felt in Swatow. It had been excessively hot all day

and many of the Europeans had complained of a dull oppressive feeling in the air. Just before the shock rain fell heavily. Some idea of its severity may be gathered from the fact that the ships in the harbour were shaken from truck to keelson and the mud in the river so agitated that the colour of the water was changed completely in a few seconds. During the passage from Amoy of the *Thales* the confused appearance of the sea outside the port was observed and commented upon. From the time this shock was felt until 3 15 a.m. on Saturday, a continuation of minor shocks were felt, although none attained the severity of the first.

Small value notes of fifty and twenty-five cents denomination have been introduced in British North Borneo. The issue, from the Government Treasury, was to commence on the 1st inst. Notes of the value of ten cents are also to be issued as soon as they can be prepared.

A proclamation has been issued by the Governor of British North Borneo to regulate the practice of barristers and others in the courts of the State. Persons duly qualified in England, Scotland, or Ireland, or in India or any British colony as barristers, advocates, solicitors, attorneys, writers to the signet, law agents, or pleaders, will be admitted to practise subject to payment of the prescribed stamp duties on admission and for certificates to practise.

Charles Woodward, the proprietor of Woodward's Circus, was shot at by a man named George Laurence—who it is alleged is financing the show—during the course of a quarrel which the men started in the Waverly Hotel at Singapore. Three shots were fired, but Woodward escaped them all. Laurence is now in custody.

On Tuesday, September 3rd, the dead body of a European was found on the road near the Wongneichong Gap, Hongkong. He had shot himself in the left breast, and although no weapon was found near him several cartridges were found in his pocket, and it is supposed that the revolver was picked up and taken away by Chinese. In the dead man's pocket was found a card bearing the name, Hermann Michael, and another one bore the name of the Praya East Hotel.

A telegram in the *Manila Comercio*, from its Madrid correspondent, states that a Commission has been appointed at Madrid composed of naval officers, in conjunction with the chief officials of the War Department, to consider what steps should be taken for the defence of the port of Manila.

THE MAHOMMEDAN REBELLION IN KANSU.

The following decree of the 4th instant, received by the *Hupao* by wire from Peking, says the *North China Daily News*, will give an insight into the progress of the Mahomedan rebellion now in full force in the province of Kansu, or the "Great North-West" of the Chinese empire:—

Yang Ch'ang-chün, Viceroy of Shen-Kan, telegraphs a memorial denouncing the conduct of the Brigadier-General, T'ang Yen-ho. It appears from this Viceroy's reports that the Mahomedan rebellion first began in the city of Haich'eng of Kansu province, daily increasing in size and seriousness until a large portion of the country was occupied. Haich'eng was, however, recaptured by our troops, the siege of the prefectural city of Hsün-hua raised, and quiet partially restored, when the prefectures of Hochou and Sining became suddenly the seat of another rebellion characterised by greater ferocity and defiance of the constituted authorities. At this juncture Brigadier-General T'ang Yen-ho was instructed to go to the assistance of the local authorities. But he delayed his march, tarrying on the road for many days before getting to Hochou. Arrived there, and without taking the precaution of reconnoitring to find out the strength of the rebels, T'ang Yen-ho rashly proceeded to attack the enemy, resulting eventually in the almost complete rout of his army. By this unwarranted conduct the said Brigadier-General dis-

organised the plans of the projected campaign against the rebels. As a punishment he is therefore forthwith cashiered, but must remain in the army and is given a chance to redeem, by future bravery and good conduct, his past errors.

With reference to Yang Ch'ang-chün, Viceroy, and Lui Chen-kuan, Provincial Commander-in-Chief, of Kansu, also, we must not pass over their conduct as they have been culpably negligent in their duties. The former officer has been a great many years chief of the province and hence should have kept himself accurately informed of the condition of the Mussulman population of Kansu. Instead of this, and moreover without a definite programme to go by, we find him one day sending punitive expeditions against these people and another day assisting and relieving them. There seemed to be in fact not the least system, from first to last, in dealing with the question, hence it is not astonishing to learn that the prefectures and sub-prefectures of Haichou, Tiao-chou, Hochou, and Tih-chou are one grand encampment of the rebel armies. Yang Ch'ang-chün has, therefore, made glaring mistakes which he seems scarcely able to rectify. As to the Provincial Commander-in-Chief, Lui Chen-kuan, he has proved his mediocrity of talents, blindness to the dangers of the times, and ignorance of the actual crisis which hung over the province, by being inveigled into authorising the gift of arms, ammunition, and warlike stores to the very people who only wanted them to rebel with. Lui Chen-kuan is clearly unfit for this important post. We therefore decree that both Yang Ch'ang-chün and Lui Chen-kuan be forthwith handed over to the Boards for the determination of a penalty, and we would also exhort them to look more about them in the future and endeavour to redeem their past errors. As soon as the armies of General Tung Fu-hsiang (Kashgar) and the others shall have arrived in Kansu, let each and every one combine to use their best efforts and by united action speedily crush the present rebellion with one sweeping blow. In this way, only, will there be a chance to redeem the culpable negligence and errors of the past. Pay sharp heed and reverential obedience to these our commands!

According to telegrams received from Kansu, it seems that so far only about 5,000 mounted troops have arrived in that province to assist the provincial forces to oppose the Mohammedan rebels. These reinforcements started nearly two months ago from North Tungchow ahead of the main body of 20,000 men, and arrived to relieve Lanchou last June. The unprecedented wet weather greatly retarded the march of General Tung's troops, and it was only a fortnight ago that the first battalion of Kashgar troops entered the southern border line of Kansu. Behind General Tung the Imperial government has also sent the army of General Ma consisting of 12,000 Honan foot soldiers. Both armies are composed of picked men; and well-informed Chinese who have seen these troops when encamped last winter at North Tungchow and the Southern Hunting Parks feel confident that they will make short work of the Mohammedans in Shensi and Kansu. It is high time that these troops faced the rebels, for from a telegram dated the 1st instant received by the local mandarins, the rebels are again menacing Lanchou, the capital of Kansu, and their advanced posts are only about ten miles distant from that city. In fact, the provincial troops have been so often defeated that they are now shut up within the walled cities, leaving the open country to the rebels, who are confidently estimated at 100,000 in all.

The latest dysentery returns are as follow:—108 cases and 18 deaths in Oita during the eleven days ended the 28th ult., 190 and 46 in Fukuoka, and 31 and 10 in Saga during the week ended the 31st ult., 126 and 41 in Hyogo during the eight days ended the 2nd inst., 79 and 18 in Miyazaki during the week ended the 8th inst., 435 and 108 in Okayama during the two weeks ended the 2nd inst., and 107 and 19 in Shizuoka during the week ended the 7th inst.

*TSUNE KIJIMA AND OTHERS V.
THE P. & O. COMPANY.*

WE publish in this issue the judgment of the Judicial Committee of the Privy Council in the case of TSUNE KIJIMA and others *versus* the P. & O. Company. With the facts of the *Chishima-Ravenna* collision our readers are well acquainted. Seventy-four of the officers and crew serving in the *Chishima* lost their lives, and the man-of-war itself was a total loss. If the *Ravenna* was to blame, this gave rise to a right of action of several classes of persons. Firstly, of the owners of the man-of-war; secondly, of the survivors for loss of effects on board; and thirdly, of the relatives of the deceased, within certain degrees of relationship, for the damages sustained by them though the loss of their relations. The Government commenced an action in due course against the P. & O. Company for the loss of the man-of-war, and that action, is now pending. The survivors, having six years within which to bring their actions, chose to await the decision in the Government's action before suing. The relations, by Lord CAMPBELL'S Act, were obliged to bring their action or actions within one year, consequently they could not await the result of the Government action without the consent of the Company to extend such time of one year, or without the Company's agreeing that the Government's action should be counted a test as to who was to blame for the collision, leaving only the amount of damages to be subsequently settled should the *Ravenna* be held to be in the wrong. The P. & O. Company, through their counsel, were asked to consent to either of these courses, but they refused to do so. This was not a liberal attitude for a great company to assume against a number of people who had suffered seriously by the collision, who only wanted compensation if the *Ravenna* was in the wrong, and to whom the costs of litigation would render a lawsuit almost prohibitive. The company in so acting were badly advised. If the *Ravenna*, in the main action of the Government, should be found to blame, on what grounds could the Company have fairly refused to pay the damages of these claimants, their individual claims having been subsequently established? Failing in these efforts to obtain the Company's consent that the Government's action should be counted a test as regards the rights and wrongs of the collision, they asked the Company to consent that an action brought by one of them should be made a test action for all, so far as concerned the trial of the question of whether the *Ravenna* was to blame or not. This request was also refused by the Company; for what reasons it is impossible to say, since we can not suppose that by forcing these poor people to bring separate actions the Company hoped to take advantage of their financial inability.

Of the 74 persons who died, only 62 had relations that could properly claim damages. These 62 groups of persons, the cause of action being the same, brought their claims in one petition, claiming separate amounts, but with a view of having only one trial instead of 62 different ones. In so doing they followed the interpretation of the Courts in England of certain Rules of Procedure, which were not clearly worded and had become the subject of litigation in England. The defendant Company objected to the claims being brought in one action, and the British Court for Japan at Yokohama upheld the objection. On Appeal to Shanghai the Supreme Court reversed the decision of the Yokohama Court, considering that Court bound by the decision of the Court of Appeal of the High Court of Judicature in England in the case of HANNAY v. SMURTHWAITE, which case had been decided only a few months before the present action was instituted, and which, under circumstances similar to those that gave rise to the action, established the principle that the several plaintiffs could join their claims in one action. It would seem clear, therefore, that the Japanese plaintiffs did all they were bound to do in going to the British Court. A then quite recent decision of the highest Court in England had decided that the proper interpretation of the Rule of Procedure was to permit such plaintiffs to sue in one action instead of bringing separate actions. But now came the unforeseen. Soon after the Shanghai Court's decision was rendered, the House of Lords having before it, on appeal, the decision of the Appeal Court in HANNAY v. SMURTHWAITE, reversed that judgment, holding that the proper interpretation of the Rule of Procedure was that in such a case the claims could not be joined together in one petition. The P. & O. Company having appealed from the Shanghai decision to the Privy Council, the Judicial Committee was virtually bound to follow the quite recent decision of the House of Lords, and consequently reversed the judgment of the Supreme Court, that judgment, as well as the whole course of procedure of the plaintiffs, having been based on the decision of the High Court of Appeal in HANNAY v. SMURTHWAITE, which the House of Lords subsequently reversed. What is the consequence to the plaintiffs, and how do they now stand? Their joint Petition is dismissed and they cannot bring separate actions because the period of one year allowed by Lord CAMPBELL'S Act has much more than elapsed. Is that due to any fault of theirs? It would seem clearly not. When they instituted their action, they followed the procedure indicated by the interpretation placed by the highest Court in England on an ambiguous Rule of Procedure. What more could they do? Are they to suffer because that decision has since been reversed? That a British subject would,

under like conditions, suffer by the uncertainty of the law, is quite beside the question. He must in such a case remain without a remedy; there is nobody he can claim from; he cannot complain of his Courts; he must congratulate himself on the protection that he himself may one day in his turn obtain from the legal system of his country. But what has that to do with Japanese plaintiffs who are forced by Treaty to sue in a consular Court in Japan? Surely the most, the very utmost, that they are bound to do is to institute their suit according to the interpretation placed upon the Rules of Procedure by courts whose decision is at the time binding on that Consular Court. They cannot be expected to go further than that, to know more than that. They would certainly be wrong in acting contrary to such a decision. If during the course of their action, the decision forming the basis of their procedure and binding the Court in which their action lay, is reversed, can they, having regard to the Treaties, be thereby dispossessed of their rights? If so, it seems a great hardship, and a denial of that justice which they have by the Treaties a right to expect. The defendant Company were in this case of course entitled to avail themselves of the subsequent decision of the House of Lords favourable to their views, but if that decision is to cause the plaintiffs' petition to be dismissed, as it has been, and to deprive them of all remedy against the defendant Company without any fault of theirs, they must surely be entitled to obtain a remedy from some one, and this would seem to be the Government, whose Courts are now no longer able to do them justice. The matter is one of great interest; it has a bearing that extends beyond the present case, and it is to be hoped that the Foreign Office will not allow the affair to rest without obtaining for the plaintiffs some fair enquiry into their claims and proper compensation, if they are entitled to it.

AN ANSWER.

AN article published in these columns on the 22nd ultimo, under the heading "Cæsar and Christ," has been made the subject of strong protest by the two highest dignitaries of the Christian Church in Japan, Archbishop OSOUF and Bishop BICKERSTETH. Each Prelate finds the same ground of objection, namely, that the language of the article gives serious offence to our Christian readers by assailing the truth of their religion in the person of its founder. We do not hesitate to say that if the article has indeed been a source of pain in the manner described by our correspondents, we regret its publication. Our constant editorial principle has been that all respectable feelings deserve to be respected; every disputant, in choosing the terms he applies to another's creed, should be guided by the

reverence he entertains toward his own. The article in question was "communicated," and would have been thus distinguished but for an accident. That, however, is a point of secondary importance, not affecting the responsibility of the editor. We refer to it here merely for the purpose of disavowing our own agreement with the views of the writer. What we have chiefly to consider is whether in truth the article contained language capable of being construed in a sense insulting to Christianity and wantonly hurtful to the cherished sentiments of Christians. We do not think that it did. Fortunately, in examining this question, the explicitness of Bishop BICKERSTETH'S letter saves us from unsatisfactory recourse to a general disclaimer. The Bishop singles out two expressions as specially objectionable, namely, the term "visionary" as applied to CHRIST, and the phrase describing Christianity as one of "two great things which have now had their day." Yet our readers know well that hundreds of eminent and good men at the present day regard CHRIST and Christianity in the sense denounced by Bishop BICKERSTETH. They count CHRIST a "visionary" because he preached a system of ethics irreconcilable, in some respects, with the exigencies of human existence; and they consider that Christianity has had its day "because the supernatural elements, without which it would become a mere cult, are discredited by nineteenth century science. It would be difficult to find in any religious teaching a more impractical behest than the Nazarene's beautiful counsel, "consider the lilies of the field; they toil not, neither do they spin." Most assuredly if any preacher were to inculcate such a doctrine in these times, he would be called by common consent a "visionary." Hence there is no just cause of offence if men whose analytical proclivities overmatch their synthetic capacity discover in CHRIST'S teachings isolated precepts indicating that he thought less of the world in which his disciples are compelled to live than of a world existing only in his own immaculate ideas. The expression of such views ought not to be resented. They are warrantable equally with the contention of an astronomer who rejects the tradition that the sun and moon stood still for military purposes at the bidding of JOSHUA, or the incredulity of a physicist who holds that the properties of matter are superior to the potentialities of any miracle-worker. We can not too strongly record our dissent from the notion that restraints may be duly imposed upon the free expression of honest doubts, or that Christians have any right to be offended because a dissenter from their creed formulates the reasons of his scepticism in plain terms. The former contention has too close affinity with the age when the vista of free thought was bounded by the rack and the stake; the

latter contrasts too glaringly with the practice of Christian propagandists themselves, who, in their crusades against "pagan" and "heathen" creeds, seldom display toward the revered traditions of others such refinement of phrase and courtesy of contention as our correspondents claim for their own faith. Christianity has nothing to apprehend. Its survival does not depend upon the silence of critics, nor are its truths so fragile that they must shrink from contact with every wind of alien doctrine. It bears upon its face the stamp of divine origin. The material miracles may go; the accidents and errors of annalists may be exposed. But the divinity of the great creed will live for ever. For what reasoning man can imagine that in an age of scientific darkness and among a people whose ethics were as defective as their customs were depraved, a philosopher was born who, without divine inspiration, conceived and enunciated standards of morality to which the civilized world has ever since been striving to attain; which are still beyond the reach of our best efforts, and to which all the wisdom of all the ages has not been able to add anything? That is the miracle of miracles, unassailable by science, absolutely satisfactory to reason. Would CHRIST himself have sought to impose silence upon those who, less happy than his disciples, were unable to accept his teaching? Would he have dictated phrases for the expression of their doubts, or protested against the insult of their querying his divine origin? We do not think so, and unless our judgment be proved defective, we shall continue to open our columns to discussion dictated by a sincere craving for truth.

This brings us finally to Monseigneur OSOUF'S *dictum* that newspaper columns are unsuited for purposes of religious controversy. We observe that the Archbishop couches his assertion in language not without a shadow of contempt. But his Grace's character is too well known to permit any protest on that score. We can be sure that he had no intention of offending. Why, however, should newspaper columns labour under any such disability? They are acknowledged to be due media for the discussion of political, literary, historical, commercial, scientific, and economical topics. Why not for religious also? Religion, we have been taught to believe, should belong to the domain of real, every-day life, quite as much as secular pursuits. And if men are to be precluded from defending their faith or enunciating their doubts in journalistic columns, what media are fitting for the purpose? Magazines, which differ from newspapers only as to the interval of their publication? Books, which possess the fatal faculty of propagating in permanent form errors that may remain always uncontradicted for their readers? The pulpit or the platform,

where controversy is either forbidden altogether, or exposed to the disfigurements of immature speech? In the newspaper, on the contrary, the refutation of a fallacy follows quick on its enunciation, and appeals being always made to the same audience, there is no fear that a clever expression of infidelity may be left to distil poison beyond the reach of antidote. So radically do we differ from Monseigneur OSOUF in this particular that we deem the daily journal to be eminently fitted for the very function denounced by his Grace. Indirectly connected with the same class of objection is Bishop BICKERSTETH'S proposition that "as the believers in Christianity among our readers do not ask us to defend their faith in our leading articles, they have a right to feel aggrieved as well as pained when we allow them to be used for attacks on their most cherished beliefs." We should be surprised did the Bishop defend that assertion after careful thought. It is our right, and has often been our privilege, to defend the cause of Christianity in these columns. It is our duty to promote for others the right of free speech that we claim for ourselves. In asserting the former title, we certainly shall not wait for a mandate from our Christian readers any more than in discharging the latter duty we shall recognise any veto imposed by them.

"SURI," OR OUTDOOR THEFT.

"SURI"—which term includes all kinds of out-door theft—is carried to a remarkable point of proficiency in Japan. It has in truth reached the level of a fine art, as murder did in DE QUINCEY'S days.

The total number of pickpockets entered on the books of the Metropolitan Police since the year 1884, is about one thousand, of whom only four or five per cent. are women. According to the returns for 1893, the pickpockets arrested in that year totalled 494, of whom two were females. We may therefore assume that there are in Tokyo at least five hundred professional *Suri*. The proverbial "honour among thieves" is well exemplified by these gentry, who not only observe strict faith toward each other, but are also noted for mutual helpfulness. In the whole community of "merry boys," there is no fraternity more perfectly organized than that of the out-door thieves. Tokyo boasts about 70 "masters" in this trade. All of them are ostensibly engaged in honest business, as, for instance, tailoring, grog-shop-keeping, and so forth, and each of them has under him a number of less experienced workers. The relation between such masters and disciples was extremely close in pre-Restoration days, and is kept up to a certain extent even at present. For instance, when a disciple is arrested for theft and thrown into prison the master usually provides him with good food, and endeavours, in every possible way, to

mitigate the hardships of prison-life. In return for such protection the disciple hands to his master a portion of any booty that he has succeeded in obtaining.

The field of operations is still to a certain extent divided among respective masters; the district of Shiba, for instance, being considered as coming under the jurisdiction of one SEIJI, a resident of Shinami. When a provincial sharper comes to Tokyo and begins to ply his business without at first obtaining the recognition of a master of the district where he chooses to work, he is pretty sure to be "sold up" to the Police Authorities by one or other of the masters controlling the district.

Very remarkable is the attitude of burglars and these out-of-door thieves to one another: it amounts almost to actual hostility. Burglars are despised by pickpockets, because while the crime of house-breaking carries with it a much heavier penalty than that of theft from the person, the rewards of the former are not nearly so great as those of the latter. Besides, Japanese pick-pockets labour under the pleasant delusion that their play is comparatively fair and above-board, since it is carried on in the daylight and can only be successful with folks that fail to exercise proper vigilance in protecting their property. At all events, a pickpocket seldom, if ever, travels beyond what he considers his legitimate field of operations, or turns into a regular house-breaker. Should he fall so far from grace, he is sure to be ex-communicated by his fellow craftsmen.

Suri are in general divided into three classes according to the special lines that they pursue; namely, those that aim at objects generally carried in the bosom of people's garments, as purses; those that aim at things carried in the capacious sleeves of the Japanese garment, and those that ply their trade in trains, tram-cars, and even in steamers, the last kind being technically termed "box-workers," (*hako-kasegite*). Those falling under the third category generally succeed in obtaining richer booty than those that pilfer in the streets. By way of set-off, however, they require more capital and more shrewdness, for it is commonly in the second or first-class cars that they seek their victims. They must also be very prompt in effecting their escape after accomplishing a theft, for if the alarm be once given their exit from the car is hopeless. Perhaps watch-stealers should be placed in a separate class. In their special line the utmost dexterity is needed, a sleight of hand almost equal to that of a juggler. The pickpocket is usually armed with two implements, a pair of scissors and a knife, but as to the precise manner in which he employs these tools it is difficult to speak. It is said, however, that the more skill a thief develops the less recourse has he to the knife. No sooner is a watch detached

from its original chain, than it is attached to another which the thief has on his person, so that no one has any reason to suspect the *povenance* of the purloined property. To extract a watch or a purse from the pocket of a foreign-cut garment or from under the girdle of the Japanese costume, is a delicate feat. It is alleged that the thief narrowly watches the breathing of an intended victim, and avails himself of the moment of exhalation, when the tension of the clothes becomes somewhat relaxed so that the sensation of a touched garment is tardily conveyed to the body. It follows that in the hot season, when people wear thin clothes, the thief experiences most difficulty in exercising his art, and we find that the Police Report shows a decided diminution in this kind of crime during summer. Thus the numbers of cases in Tokyo in the summer and winter of 1893, were 143 and 315 respectively. It is not, however, solely to a difference in the victim's habiliments that this diminution of crime in the summer must be attributed. There is another patent cause, namely, the difficulty of employing during the hot season contrivances that facilitate the business of theft in winter. Thus in cold weather the *suri* can wear a shawl, cloak, or some other loose garment, which serves to conceal his operations. There appears to be a pride of craft among these men. They seek to consummate their villany in as clever a manner as possible and condemn all rough ways of doing business. One of the commonest methods resorted to by a young pickpocket is to collide against a person whom he wishes to rob, and to take advantage of the confusion thus caused. This is called a "rough device," and is condemned by experienced hands. When the true expert employs his art, not only is his victim entirely unconscious of being robbed, but even others of the same gang—for pickpockets generally work in bands—are equally ignorant that the job has been done. A band commonly consists of from three to five men, who pass the booty in quick succession from one to another, so that even though the actual thief be arrested, he can allow himself to be searched with impunity. The gang is sometimes accompanied by a watch, whose duty is to stand sentry at the place where the gang intend to carry on business, and to make signals when a policeman or detective appears on the scene. The booty is divided in a certain fixed proportion. Generally the man that has actually performed the stealing takes one half, the other half being distributed among his comrades and the watchman. One of the most interesting points is the relations between *suri* and licensed victualling shops established near prison houses to supply food to prisoners. A pickpocket now and then deposits a small sum of money at one or other of these victualling shops, to provide against the chance of his being thrown into prison.

In the event of imprisonment, he sends notice to the keeper of the shop where he has this reserve fund, and asks to have victuals supplied to soften the hardship of prison life. Of course every depositor is not arrested, but for however long a period the pickpocket succeeds in eluding the clutches of the law, he generally leaves his deposit in the hands of the victualler. The latter, however, seldom acquires any reversionary interest in the fund, for if another prisoner of the same trade sends for food, he must be supplied, even though not directly concerned in the deposit. It need scarcely be said that the purveyor finds his account by charging higher prices for food supplied to such customers. The habits of the *suri* vary according to localities. Those of Tokyo, for instance, so soon as they accomplish a theft, generally hasten to a house of ill-fame, and are consequently soon reduced to their old condition of poverty. Such is not the case with the light-fingered gentry of Osaka, *chibo*, as they are there called. There the prevailing business spirit of the town infects even the pickpockets! They steal, not to squander the proceeds in vicious amusements, but to save up a permanent provision for themselves. Thus, when a man is robbed by an Osaka pickpocket, not infrequently the money returns safely to its owner, which is very rarely the case in Tokyo. In either place, however, the police are urgent in asking for prompt notice. It is mainly owing to delay in sending notice that thieves are enabled to escape in the face of strong suspicions against them. If pickpockets are shrewd in eluding the vigilance of the police, the latter are equally shrewd in detection. They know the persons of all professional thieves, and are, in general, acquainted with their respective haunts and fields of operations. Thus the detectives can prosecute such rigid inquiries that, in eight or nine cases out of every ten, a stolen article is recovered, if only notice be promptly sent in. Not rarely pick-pockets find the pursuit of the detectives so hot that they are obliged to send back the purloined goods to the Police Authorities, in which event they are careful to defray the cost of transport.

Rarely are Japanese pickpockets armed with lethal weapons, and still more rarely do they employ them. Even in Tokyo instances of robbery from the person with violence do not average five annually. An event very frequent in pre-Restoration days, namely, the wounding of an informant who interfered with a pickpocket's trade, is no longer heard of. *Per contra*, a new method imported from abroad is now and then reported by the press, namely the use of chloroform to anæsthetize an intended victim. An instance occurred not long ago in a train between Tokyo and Yokohama. A traveller happening to be without a match,

a fellow-passenger, sitting close by, kindly supplied the want, but as the passenger was in the act of lighting his cigarette, he felt a strange sensation, and, in a moment, lost his senses. When he recovered consciousness, the match-giver had decamped taking with him the traveller's gold watch. Experienced pickpockets disdain such extraordinary devices, and hold in contempt those that resort to them.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

"CÆSAR AND CHRIST."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Thanking you for the space given to my former letter, I ask space for a few words more. The Editor while admitting there is a "forcible contrast" between Christ and Cæsar thinks there is a "striking similarity" between them in some points. Let us for the present admit this, does it therefore follow that they are characters of like nature and are to be treated of upon the same plane? In my previous letter it was clearly shown that Jesus was a subject of prophecy; this point can be made much fuller, pointing out the time of his birth, the place, of whom, his name (or names) the purpose of his coming, his trial, his crucifixion, his burial, and his resurrection. A line of evidence entirely too convincing to be set aside and clearly showing him to be what he claimed, "the Son of God," hence different from any other being that has ever made his advent into the world. Any one in treating of Jesus who ignores this stupendous fact must of necessity make himself illogical, contradictory, and a false historian; and, I might add, unscientific; for true science does not treat in a confused way things that clearly differ. There is a similarity between Christ and a lion, he is called "the lion of the tribe of Judah," but does it follow that both are alike in nature? His coming is also said to be like a thief in the night, but it would be great injustice to the Son of God to deal with him as a thief. He also has points of similarity to that of a sheep; a sheep when killed "opens not its mouth" neither did Jesus; a sheep is not killed because it is a bad animal, but to gratify the fleshly desires of man, so was Jesus; the Editor thinks Jesus apparently failed of his purpose but was afterwards successful, and so it can be said that in killing a sheep it fails of its purpose for which God made it but is afterwards successful in that it propagates a higher and more intelligent order of life than its own. Now I hope, by the aid of this comparison, to show that we should not be led astray to treat as alike in nature things that happen to have some points of similarity. But there is one signal point in the Editor's line of similarities that shows he has not an accurate knowledge of the facts. He says: "Christ was crucified for calling himself a king, and thus setting himself up against Cæsar." From the same source the Editor gets his knowledge concerning the Christ I shall show that he did not set himself up (in the eyes of the people) against Cæsar nor was crucified for calling himself a King. The Jews tried to entangle him with Cæsar that they might thus induce the Romans to put him to death, but in this they entirely failed, and he was finally put to death on the accusation of blasphemy in making himself the "Son of God." Neither Pilate, nor Herod, heads of the Roman Law, found any cause of death in Jesus, but the former sought three times to release him from the false accusation of the Jews, but the cry of the mob, instigated by the Jewish Sanhedrim, prevailed, and Pilate gave him over to them to be crucified; at the same time washing his hands as being "innocent of the blood of this just person." See Matt., 27; 11—25; Luke, 23; 1—26.

That Jesus even "apparently failed" at the hour of death to accomplish his mission was only apparent to those who through national pride and the errors of tradition failed to grasp the purpose of his coming. As was shown in my previous letter, the death of Jesus was as definitely predicted by the prophets and himself as was any other event connected with his history. Speaking of his death he says: "The hour is come that the Son of man should be glorified. Verily, verily I say unto you except a corn of wheat fall into the ground and die it abideth alone: but if it die

it bringeth forth much fruit. . . . Now is my soul troubled, and what shall I say! Father save me from this hour? but for this cause came I unto this hour." "And I if I be lifted up from the death will draw all men unto me. *This he said signifying what death he should die.*" Besides what has already been given, more space than is allotted me in this entire letter could be filled with evidence from the same source that the Editor gets his idea that there ever was a Christ even, showing that there was not even an "apparent" failure in the death of Christ, but that it was in the very purpose of his coming that man might be redeemed. "Without the shedding of blood there can be no remission." To say then, in attempting to compare Jesus and Cæsar, that "both apparently failed utterly at the hour of death to accomplish their mission," is to do great injustice to the "Son of God," and ignore the facts of prophecy and history.

Nor can I admit that the result of their lives forms a parallel. Imperialism existed long before Cæsar's day; the first was the Babylonian, next the Medo-Persian, next the Grecian, then the Roman Republic, which again sank back into "Roman Imperialism" and went to ruin; some of the fragments of which we have in some of the governments of to-day. But who would dare to say that all we have of the system Jesus died to establish is a few broken fragments of a decayed code? Man may fail to live up to it, but the Bible to-day is as complete in all its parts as when the last line was written by the beloved Apostle on the Isle of Patmos. The system Jesus came to establish was a development—"First the blade, then the ear, then the full grown corn in the ear;" what remains of Cæsar is the fragments of a political system that had begun to decay even in the time of Daniel. The one is a ruin: the other is a Temple yet in process of building.

But "Christ showed a conspicuous inability to grasp a throne; he was not sufficiently selfish and was wanting in ambition." What a strange turn from the Editor's former statement that "he showed a conspicuous inability to grasp the significance of many of the most elementary relations of practical life." I for one was certainly not prepared to receive a throne as one "of the most elementary relations of practical life." But did Jesus refuse to receive a throne? Not if the source of evidence from which the Editor takes his authority concerning him is true. "Pilate therefore said unto him art thou a king then? Jesus answered, Thou sayest that I am a king. To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." But it seems to me the Editor's trouble in most that he has said lies in not observing the distinction both in the nature of Christ and his kingdom from that of an earthly one, and has arbitrarily rejected the saying of Jesus in the same connection that, "My Kingdom is not of this world: if my kingdom were of this world then would my servants fight that I should not be delivered to the Jews." And suppose Christ could have been a Cæsar would he thus have shown himself to be greater than he was? And does he, as is indicated, show that he was less than Cæsar in refusing to "become a Cæsar?" Even our friend himself tacitly admits that Cæsar succeeded by selfishness and ambition. Are these the elements of greatness! But Christ could never have been a Cæsar (the granting of which is simply saying that instead of being a good man he could have been a bad one). He came in fulfilment of a certain line of prophecy that had long since gone before upon him, even concerning his name. The name Cæsar was not included among them; they were such as "Wonderful Counselor," the "Mighty God," "Immanuel," "Christ," "Jesus:" all of which had this peculiar significance as to his nature and work. To have become a Cæsar or any thing else than what he was would have been to set aside the purposes of God in him and redemption of the world through him. If this be the peculiar sense in which the Editor uses the word, "inability" (and he rather hints at it as an explanation of his former statement) in saying Jesus showed inability to grasp a throne, I suppose none will object.

In conclusion, I wish to notice as fully as space will allow the strange objection to the resurrection. I say strange, because it is exceedingly strange in one who has admitted as much as the Editor has concerning the birth, life, and death of Jesus to deny his resurrection. Some who claim to not believe in the resurrection deny that Jesus ever died, that he only went off into a swoon, and thus try to evade the truth of it. But to one who admits that Jesus died, there is no escape that he arose again from the dead. Nor is this truth affected even though we should admit that no amount of evidence even though five hundred witnesses could prove a miracle. These witnesses in this case are not called

upon to "prove a miracle" but to testify to common events just as they did in regard to the birth, life, trial, and crucifixion; all of which the Editor accepts. The same historian (the Apostle John) who is relied upon for the saying of Jesus, "It is finished," gives another line of events after his death and burial somewhat as follows: That Mary Magdalene and others went to his tomb early on the morning of the third day and found it empty; that shortly afterwards she saw Jesus but did not at first know him; he then called her by name, and she knew him and said: "Robboni, or Master;" that she then "came and told the disciples that she had seen the Lord;" at the same day at even Jesus stood in the midst of the twelve and said, "Peace be unto you." And when he had so said he showed them his hands and his side. Then were the disciples glad when they saw the God; that one of the disciples Thomas was absent at the time, and when told of this event said, "Except I shall see in his hands the print of the nails, and put my finger into the print of the nails, and thrust my hand into his side, I will not believe;" but that after eight days, Thomas had this privilege and exclaimed, "My Lord and my God;" that "After these things Jesus showed himself again into the disciples" on the sea shore, and that "None of the disciples durst ask him, Who art thou, knowing that it was the Lord;" and that "This is now the third time that Jesus showed himself to his disciples after he had risen from the dead." Now let it be definitely borne in mind that John in this whole line of events does not give witness to a single miracle, but to a natural course of events such as any man of common ability could testify to. What is claimed from this line of evidence is that the same historian upon the same authority says that he and a number of others saw Jesus alive again after his death, and that he talked and ate with them as before; and as the Editor admits that he actually did, how are we to account for this kind of history of him after his death. There is only one possible answer, namely (call it a miracle or something else if you choose) that he came back bodily to life again or "rose from the dead." To deny the resurrection is to deny some of the plainest facts of history. It is also equal to denying the divinity of Jesus, for he says of himself, "The Son of Man shall be betrayed into the hands of men; and they shall kill him, and the third day he shall be raised again." Now, if we say the last thing mentioned did not take place and that Jesus was either deceived or willfully told a falsehood, in either case he could not be divine. Josephus, it seems, saw the utter impossibility of giving a history of Jesus without admitting his divinity, and hence passed him over in silence. The most remarkable silence, considering that he was a contemporary of Jesus and of the same people and country, that has ever occurred in the annals of history.

The most excellent quotation from Napoleon comes strangely enough from one who denies the resurrection and divinity of Jesus.

Most respectfully, J. W. McCaleb.
12, Tsukiji, Tokyo, Sept. 5th.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I quite concede the correctness of your criticism that there ought to be freedom to express honest doubt by unbelievers. The physician even solicits an expression of his malady from the patient that he may the better apply the remedy. I for one, Sir, believe the truth of the Gospel has suffered more from the suppression of sincere and honourable discussion than by all its outspoken enemies from Celsus till the present day. In the affairs of the world men are ruled either by the dictum of dignitaries, the force of majorities, or by the power of the sword. Not so in the Kingdom of Light, where the will and conscience of each is to be regarded. The power that Jesus exerts is purely a moral power implanted in the hearts of men. Not once in all his history did he appeal to popular sentiment, force of majorities, or civil power to carry a measure, but frequently he went against all, because all were in error. He allowed every objector to make his objection and met him patiently and fairly. And now by way of a practical application of these remarks, I may be allowed to remind the Editor that he has lately expressed some very serious "doubts" on some of the most vital points of the Christian's faith to which I have attempted a reply in the *Mail* of the 9th inst. to which there has as yet been no response. Unless already convinced that the ground taken cannot be sustained I should be pleased to hear a further attempt at a defence of the Editor's doubts.

Most respectfully submitted,
J. M. McCaleb.
12, Tsukiji, Tokyo, Japan, Sept. 12th.

A PROTEST.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your leader of to-day you take notice of a "shadow of contempt" with which Archbishop Osof in his letter of the 23rd of August disposes of newspapers as "mediums for the discussion of theological matters," adding at the same time that "his Grace's character is too well known to permit any protestation on that score." However that may be, it strikes me that in the letter alluded to not only a "shadow," but a *most distinct* contempt is expressed for readers of newspapers generally, and more specially for readers of "those published in the East," who are pronounced to be "not qualified to appreciate at their true value the arguments which might be brought forth."

I must confess that I was painfully surprised at such an uncalled for offence to the feelings of the reading public in the East, the more so as this sweeping accusation was not accompanied by so much as an iota of anything like proof. If I understand the letter of Archbishop Osof right, he opines that only theologians by profession can have the necessary qualification to understand such arguments. He evidently quite forgets that with much more justice it could be maintained that, on the contrary, professional theologians are the least fitted to appreciate arguments on religious matters at their true value, especially arguments coming from the opposite side—it following from their very profession that their point of view cannot be but an extremely one-sided one.

Yours very truly,
September 9th, 1895.

READER.

ADMIRAL BELKNAP.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Absence from home has prevented my replying earlier to Admiral Belknap's letter in your issue of 26th August, in which he charges me indirectly with cowardice in sheltering behind an incognito while stigmatising his utterances as vulgar virulence. It is one of the penalties of obtruding one's personality in such correspondence that remarks made without passion or prejudice are liable to be construed as personal affronts and thus to obscure the real issues involved. There are plenty of reasons obvious enough to any fair-minded person which justify the anonymity of newspaper warfare, reasons doubtless well appreciated also by your correspondent W.E.G., to whose anonymous attack my letter was mainly directed. The Admiral may have very substantial grounds for keeping his name before the public, but he must be tolerant of those who neither share his motives nor his tastes. He has no right to compel to silence those whose methods may not agree with his own. I thank your correspondent for setting me right as to the Lloyd-Garrison family, but I do not attach much weight to his estimate of the influence of the writer referred to.

Admiral Belknap regrets that distance prevents effectual fire or he would be glad to answer my letter in detail, but although he thus avows his lack of oratorical power enough to reach Japan, he is able to throw thus far a little mud, and the spattering of this is evidently his main object in referring to the Jamaican outbreak of 1865. He styles it a ridiculous scare. It was a scare that cost the lives of twenty-three white settlers, including women and children; about double the number of those whose recent massacre in China has excited the execration of the world. A Negro population (freed by the British people twenty-five years before at a cost of over £6,000,000, although their savage instincts were but little tempered by some generations of bondage) rose against the whites, but a tithe of their number. Eyre's judgment in stamping out the rebellion with remorselessness may have been at fault, but the very fact that Englishmen so illustrious as those named by your correspondent supported his action is proof that it was not without justification—a fact also shown by the abandonment of the prosecution instituted against him. Still, the sentiment of the nation as a whole condemned him, a Royal Commission investigated the circumstances, Eyre was recalled, and his career closed. The incident therefore has no analogy with the Southern lynchings either in its nature or its treatment by the public sentiment. The latter have occurred in time of peace, have included the burning alive and flaying alive of some of their victims, and yet they have not aroused any national wrath strong enough to lead to redress, although there have been no redeeming features about them calling forth their defence by any eminent Americans.

The Admiral is unfortunate in speaking of McCarthy as an Englishman. He is a member of that Irish party of treason which now lies in the dust of well-deserved defeat, too long postponed by the forbearance of a great people. The year of Eyre's disgrace is a memorable one for Americans

as well as Englishmen. With that "devotion to ideals" (*vide* W.E.G.) which (not *vide* W.E.G.) distinguishes us, we had abolished slavery thirty years before, but it was not till 1865 that America followed our example. That country, whence Admiral Belknap sends forth his somewhat belated exposure of our misdeeds, was the house of bondage of 4,000,000 human beings for more than a generation after the mother country had abandoned the "peculiar institution." Cruelties far surpassing those of Eyre were practised on a population ten times that of Jamaica, not in the heat of conflict with rebels but in time of profound peace. Particulars of some of these cruelties (which no just and merciful Government Commission was ever empowered by national sentiment to enquire into and redress, but which were justified by many eminent American judges, clergymen, etc.), may be found in a work which is not exactly an historical one, but is for all that an excellent authority, fully confirmed from many sources, and likely to be remembered long after Sanderson and McCarthy are forgotten. The work is doubtless not unknown to your correspondent. It is entitled "Uncle Tom's Cabin." That acute observer, Huxley, somewhere remarks that one of the most powerful of all influences on our conduct is the opinion of our fellows. What is true of individuals is equally true of nations, especially those of kindred tongue and traditions, and Admiral Belknap protests in vain the contrary. The power of English opinion in moulding American conduct is undeniable. It would be preposterous to ignore the corresponding American reaction on ourselves. Whenever one of us is guilty, the other is a mentor whose voice summons to expiation and reform. But calumnious criticism does not promote righteous judgment. That criticism of that character exists is amply proved by Admiral Belknap's letters to the American press, letters so violent in their tone that one of your contemporaries has gone so far as to treat them as possibly the effusions of a madman. Putting aside that theory, let me ask him how he can justify a statement he made some time ago, that the policy of the British Government had always been arranged so as to hamper American commerce. Now, can he name any nation which treats American commerce as liberally as Britain does, or has done for a generation past, or which accords as many privileges to Americans dwelling within its dominions? If he cannot, and I am sure he cannot, what name shall we give to his statements?

In conclusion, let me disclaim emphatically all bitter feeling such as might be inferred from my mention of the question of slavery. It has been recalled simply to show that those who live in glass houses cannot afford to throw stones.

As I believe I said in a previous letter, no nation has a monopoly of the virtues, and it would be well for those who criticize so unmercifully and unfairly the faults of England if they would turn a backward glance at their own history before exhuming the buried evils of our past.

I am, Sir, yours faithfully,

AN ENGLISHMAN.

September 6, 1895.

CHINESE CHARACTERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Japan Mail* of the 17th of August last appeared a most kind and appreciative article upon a book I recently published with the object of helping students in that most arduous of labours—the study of Chinese Characters. Personally I have devoted a considerable time to the ideographs, and it was my desire to give others the benefit of my experience, to enable them to obtain a sufficient knowledge with a minimum expenditure of time and trouble. Such was the aim of my work.

However, a letter was addressed to the *Japan Mail* on August 18th, in which the writer, while acknowledging the "real merits" of the volume referred to, and confessing that it "must prove a boon to every student of the Japanese language," proceeded to point out its "shortcomings." It stands to reason that a book of this kind, containing as it does only a selection of characters, cannot be complete in every respect; and were it not that his remarks savoured of hypercriticism, no exception could have been taken to them. But in view of the undue severity of his strictures and the mistakes he has fallen into, I am reluctantly compelled to reply briefly to his letter.

In the very first attempt to correct what he considers a misprint in one of the characters, he commits an error. He says 復 (which in any case he writes incorrectly, 復 being what I have given and the proper form), page 14, is written "instead of 復, which of course belongs to radical 禾." Now, there is no misprint here: 復, on page 14, is per-

fectly correct under the radical 禾 (see the *Gioku Hen* (玉篇) 復, on the other hand, occurs on page 45 under the radical 禾).

He has again been misinformed when he insists that 𦵏 (*Sō, saru*, "a basket"), page 90, should be written 𦵏. If he will refer to page 762 of Hepburn's Dictionary, page 290 of Gring's, and page 34 of Williams', he will learn that in criticizing my work, he has himself committed a mistake. The form I have given being correct, is the only one to be met with in the authorities I have mentioned. The character he names 𦵏 is not *Sō, saru*, a basket, but something very different. The *on* of 𦵏 is *ko, ku, the kun, tabaneru*, signifying "to bind." On page 432 of Williams' dictionary he will find 𦵏, meaning "an ancient trumpet or a kind of musical instrument blown at the end; a whistle in a whip; a bamboo good for switches." There are few, if any, better reference books on such matters than the well known Dictionary of the Chinese Language by S. Wells Williams, LL.D. "And so on," with his corrections.

His next paragraph, which I shall quote in full reads:—How on earth comes the Buddhistic symbol 卐 (placed under radical 十!) into the company of Chinese characters? In reply I would say that any character to be found in Williams' Dictionary is surely of sufficient importance to find a place in any book on the subject of Chinese Characters. Let him look at page 1,160 in the Index of Characters (Williams) and he will see the radical 十. Then let him turn to the eighth character in the second column to the left, and he will find the character 卐. For the meaning, reference is made to p. 1,040, to which, if he will accompany me, he will read: 卐^{man}_{ban}, a form of 萬, "a mystic emblem of high antiquity, the Indian *swastika*, drawn on the breast of Buddhist idols," etcetera. Several examples of its use in composition follow, e.g., 卐字錦, the Vitruvian scroll.

In several instances where I considered it advisable, I have furnished a second form of the character in small print in the left hand corner. To do so in all cases did not fall within the scope of this work. My critic objects to the form to which, in some cases, I have given the preference and put in the principal position. He says I should have put 𦵏 above and 𦵏 at the side, 携 first and 携 underneath; I again advise a reference to Williams' Dictionary. On p. 728, he will only find the character 𦵏 which I have placed above—the other not being given at all; on p. 177, 携 is put first, the other form 携, coming in the order I have indicated: on p. 26, 場 appears before 場, just exactly as I have it. With reference to 場, my form, and 場, his form, Williams says: "The first form is correct, but the second is 'the most used.' Naturally the correct form ought to be given the preference. In the same way 𦵏, being the more correct form, was placed in the more prominent position. The *Kōkijiten* (康熙字典) calls 𦵏 a *Zokuji*, 俗字.

With regard to the Radical 言, of which he says the "correct" form 言 is not given, see Williams pp. 1,083, Gring pp. 403-421, and Gubbins, pp. 113, 1,173-1,175, in all of which places occurs only the form I have given. He again says 言 is not given at all, but only its variation 音; but as he writes them both exactly in the same way I cannot divine his meaning. Williams, p. 1,100 furnishes only the form I employ. Yet again, he remarks that 垂 should have been inserted instead of 垂. Williams, p. 102, gives two forms, the one I use being placed on the top. The form he desires me to employ does not appear. And so on. He enquires why I did not give 𦵏 under 凡. Simply because, to quote Williams, "the second, (𦵏) is unauthorized," p. 126. I cannot find the form 𦵏 in the *Kōkijiten* (康熙字典), which only gives the form I employ. Once more, Williams, p. 1,019, gives 尊 as I write it only, and not the form 尊; and on page 935 of Gubbins' "Dictionary of Chinese-Japanese Words," he will not find the form he blames me for not adding, but the one which is on page 38 of my book.

研, which I have given, is the "more correct" form of the character (Gubbins' Dictionary, p. 393). 研 is not in Williams, but only 研 and 𦵏, p. 1,085. In the same manner, p. 886, Williams gives 𦵏 first, the other form 𦵏 having occasionally a slightly different meaning: "only the second form is now usually applied to a

string of cash." So too 往 from "step" and "a lord" is the better form, the other 往 form "step" and "born" is unauthorized (Williams, p. 1,044). 井 is the correct form, 井 being an abbreviation. In the way he writes it, it is liable to be mistaken for 井, i.

He ought not to accuse me of having forms I have not got, and suggest the insertion of forms to be found in my pages. He asks why not, "彙, besides 彙." On p. 44 I have 彙; I have not 彙, because it is incorrect; and I can find it in no dictionary (Williams, p. 1,056, Gubbins p. 248). He is guilty of the same error when he enquires: why not "忍 besides 忍." I have the former: see p. 45.

Now for something else. He asks "why not 汗 besides 汚." For the very good reason that they are two quite distinct characters. 汗, Kan, ase "sweat," he will find on p. 69, just above the character 汚. Gring, page 178, says 汗 means "perspiration, long, as an expanse of water, bright, trouble, labour which causes perspiration." The character 汚, on the other hand, O, Kegareru, means "to be dirty, polluted."

添 is the form given in Williams, p. 898. I cannot find the other there, nor in the Kokijiten. The character is derived from "water" and "disgrace," and on p. 899 the character for disgrace 添, he will find is from "heart" and "heaven."

畫 is the best form of the character, p. 81 of my book. The two forms he wishes me to insert are both written wrong: see Gubbins p. 555. Williams, p. 241, gives 畫 and 画, and remarks: "the contracted form is common in cheap books."

I entirely disagree with his opinion that it would have been better to arrange the characters under the 3 initial strokes—| 丿. That is one of the disadvantages of Gring's Method, and increases greatly the work of the student when he wishes to find a character. It might have been better, he thinks, to employ, "instead of the horizontal arrangement in squares, the vertical order," but I am not of that opinion.

"Some characters occur under Radicals where under ordinary circumstances they are not looked for." No character occurs except under the Radical to which the Gioku-Hen (玉篇) assigns it. On page 84 he will find 眞 under 目, as he says it ought to be. As it occurs in the Gioku-Hen (玉篇), also under 匕, I have also given it on page 21. To take another example, and one where he shows himself unaware of the origin and nature of the character and deceived by its present structure, Williams, p. 444, gives 渠 from 水 "Water," and an old form of 渠, "a rule," "a place for water to run into, a cesspool." The radical 木 (tree), has nothing whatever to do with the character, although the critic wishes to place it under 木 (tree). 船渠 (sen-kio) means a dock. This character is in its proper place on p. 72; and so on.

He affirms that a number of kun or yomi which I have given are never employed "when reading or pronouncing a character," and gives examples. He is again at fault; 座 is read idokoro. In the Genkai (言海), on page 1,603, under idokoro (ゐどころ), he will find that character. 灣 is read "mizu no kuma;" see the Irohajiten under kuma (くま) 德, is sometimes read "megumu," see Hepburn, p. 670, where in the word 德澤 he gives the kun, megumu, see the "Gioku-Hen," &c. 街 is read matsurigotodono, and so on.

The kun (訓) or yomi is, as everyone knows, purely arbitrary, and Japanese differ concerning the kun of certain words. If you ask one man, he will tell you one thing, and another something different. Yet each is probably correct. My object on this point, as throughout the book, was to do my best to assist students to a right understanding of the ordinary uses of the character; and it was my endeavour to avoid giving too many kun on the one hand, and on the other not to omit any I had found it necessary to learn myself.

But to come to one of his chief criticisms. "Moreover, quite a number of 'on' given in the text are erroneous." This is a misstatement. To point out a few of his errors, to 差 p. 40 I have given the "on" usually employed, "sa, shi. This is correct. Other "on" are sai and se, but I do not find sha in many dictionaries. The Kōkijiten (康熙字典) gives sa and shi as I do. Gring, p. 87, shi and sai. Gubbins, p. 776, gives sha, but adds, "more usually read sa." It will be observed that the critic does not mention that I have given sa first place. 憫 he says should be chō. The

mistake is his. Gring, p. 114, gives chu, but the vowel should be long, also shū. The more usual on of 拐 is kai, e.g. the legal term, 拐帶, kai tai to steal. 撒 p. 56:—The Japanese ordinarily read this character san "e.g. Sansuisha, 撒水者 Misumaki guruma, or water cart, although satsu is not incorrect. 播 is ha, not han, as he says. There is no nasal sound in the original Chinese, Williams, p. 1,179: see also the Kokijiten, &c. 旁 is hō. Bō is used, but some dictionaries only give hō. To give the on of 牀, p. 62, as shō is correct. 藝 is read dō and nō; I do not find jō in the Kōkijiten. The usual "on" of 稔, is jin, as I have it: see Gioku Hen. 竄 is san, also read zan, e.g. 竄亡 san-bō. And the on of 狩 is shū as well as shu. Again, take 簾. In all the dictionaries I have searched the on is given as "ha" as I give it, not "hi." The proper on of 欠 is ken (Gring, p. 168, gives ken only) although it is in colloquial also read ketsu (Gubbins, p. 391). I give the on of 日 as jitsu, nichi, the two more usual forms.

On p. 383 of Williams, also in the Kokijiten, he will find 減 under the Radical 冫, as I have it.

I purposely made no attempt to distinguish between the Kan On and Go On. To do so was beyond the scope of the book. In cases where two on are given, the intelligent student can have no difficulty in determining which is which.

Drawing to a close, the critic says: "I have noticed the absence of some for the most part very common characters." He may not have noticed their presence; he cannot have noticed the absence of most of those he names, for they are there. For instance 葬, to bury, comes under Radical 艸 on page 104, Williams page 949. 獎 is (弊!) on page 43, under 艹, see Williams, page 676; 寶, on page 116; 歡, on page 50, under 懽, with which it is interchangeable, (Gubbins' Dictionary page 566). On page 27 he will find 歎 under 嘆, with which it is interchangeable. The character 基 he will find on page 86 as 基. Williams, page 342, explains that it is from "wood" or "stone," see also Hepburn page 11. 叫 is on page 25, and so on.

He finds fault unreasonably with my selection of nanori. If he can read them all correctly he can read most Japanese names, and therefore, I am fully entitled to call them "fairly representative." For instance, to take his examples:—Kiyokata (清堅) is on p. 140, Tomomori (知盛) p. 142. Being able to read both these names, he can read Kiyomori (清盛), his first example. Yoshimitsu (義満) is on p. 143, Noritsune (教經) on p. 141: Yoshitsune hence reads 義經. Iyeyasu I do not give, because 家康 presents no difficulty to anyone acquainted with a limited number of characters. I might as well have given Kuniyoshi 國吉, Tomotsugu 友次, Yasushi 安, and so on.

The second character of Kagoshima is not wanting. Kagoshima is written either 鹿島 or 鹿兒島. I adopted the former on the authority of the Kaisei Kwan In Roku (改正官員錄), Revised Official List, of 11th November, 1894.

I am, Sir, yours truly,

ARTHUR HYDE LAY.

September 6th, 1895.

TRAITÉ DE COMMERCE ET DE NAVIGATION, PROTOCOLE, ET ARTICLES SÉPARÉS, CONCLUS ENTRE LE JAPON ET LA RUSSIE.

Sa Majesté l'Empereur du Japon, et Sa Majesté l'Empereur de toutes les Russies, animés d'un égal désir de maintenir les bons rapports déjà heureusement établis entre eux, en étendant et en augmentant les relations entre leurs Etats respectifs, et persuadés que ce but ne saurait être mieux atteint que par la révision des traités jusqu'ici en vigueur entre les deux Pays, ont résolu de procéder à cette révision sur les bases de l'équité et de l'intérêt mutuels, et ont nommé, à cet effet, pour Leurs Plénipotentiaires, savoir :

Sa Majesté l'Empereur du Japon :
Monsieur Tociro Nissi, Jussami, Son Envoyé Extraordinaire et Ministre Plénipotentiaire près Sa Majesté l'Empereur de toutes les Russies ;
et Sa Majesté l'Empereur de toutes les Russies :
Son Secrétaire d'Etat et Conseiller Privé actuel, Prince Alexis Lobanow-Rostowsky, Sénateur, Ministre des Affaires Étrangères, et

Son Conseiller Privé, Serge de Witte, Ministre des Finances.

Lesquels, après s'être communiqué leurs pleins pouvoirs, trouvés en bonne et due forme, ont arrêté et conclu les articles suivants :

ART. I.—Les sujets de chacune des deux Hautes Parties Contractantes auront toute liberté en se conformant aux lois du Pays, d'entrer, de voyager, ou de résider en un lieu quelconque du territoire de l'autre, et y jouiront d'une pleine et entière protection pour leurs personnes et leurs propriétés.

Ils auront un accès libre et facile aux tribunaux pour la poursuite ou la défense de leurs droits; ils auront, sur le même pied que les sujets du Pays, la faculté de choisir et d'employer des avoués, des avocats, et des mandataires afin de poursuivre et de défendre leurs droits devant ces tribunaux, et quant aux autres matières qui se rapportent à l'administration de la justice, ils jouiront de tous les droits et privilèges dont jouissent les sujets du Pays.

Pour tout ce qui concerne le droit de résidence et de voyage, la possession des biens et effets mobiliers de quelque espèce que ce soit, la transmission des biens mobiliers par succession testamentaire ou autre, et le droit de disposer de quelque manière que ce soit des biens de toutes sortes qu'ils peuvent légalement acquérir, les sujets de chacune des deux Parties Contractantes jouiront, dans le territoire de l'autre, des mêmes privilèges, libertés, et droit ne seront soumis, sous ce rapport, à aucuns impôts ou charges plus élevés que les sujets du Pays ou les sujets ou citoyens de la nation la plus favorisée. Les sujets de chacune des Parties Contractantes jouiront, dans le territoire de l'autre, d'une liberté entière de conscience, et pourront, en se conformant aux lois, ordonnances, et règlements, se livrer à l'exercice privé ou public de leur culte; ils jouiront aussi du droit d'inhumer leurs nationaux respectifs, suivant leurs coutumes religieuses, dans des lieux convenables et appropriés qui seront établis et entretenus à cet effet.

Ils ne seront contraints, sous aucun prétexte, à payer des charges ou taxes autres ou plus élevées que celles qui sont ou seront imposées aux sujets du Pays ou aux sujets ou citoyens de la nation la plus favorisée.

Les sujets de chacune des Parties Contractantes qui résident dans le territoire de l'autre, ne seront astreints à aucun service militaire obligatoire, soit dans l'armée ou la marine, soit dans la garde nationale ou la milice; ils seront exempts de toutes contributions imposées en lieu et place du service personnel, et de tous emprunts forcés, de toutes exactions ou de contributions militaires.

ART. II.—Il y aura, entre les territoires des deux Hautes Parties Contractantes, liberté réciproque de commerce et de navigation.

Les sujets de chacune des Parties Contractantes pourront exercer en quelque lieu que ce soit du territoire de l'autre, le commerce en gros ou en détail de tous produits, objets fabriqués et marchandises de commerce licite, soit en personne, soit par leurs représentants, tant seuls qu'en société avec des étrangers ou des sujets de Pays; ils pourront y posséder ou louer de occuper des maisons et des magasins, louer des terrains à l'effet d'y résider ou d'y faire le commerce, le tout en se conformant aux lois, aux règlements de police et de douane du Pays, comme les nationaux eux mêmes.

Ils auront pleine liberté de se rendre avec leurs navires et leurs caïques dans tout les lieux, ports, et rivières du territoire de l'autre, qui sont ou pourront être ouverts au commerce étranger, et ils jouiront respectivement, en matière de commerce et de navigation, du même traitement que les sujets du Pays, sans avoir à payer aucuns impôts, taxes, ou droits de quelque nature ou dénomination que ce soit, perçus au nom ou au profit du Gouvernement, des fonctionnaires publics, des particuliers, des corporations, ou établissements quelconques, autres ou plus élevés que ceux imposés aux sujets du Pays.

Il est toutefois entendu que les stipulations contenues dans cet Article ainsi que dans l'Article précédent ne dérogent en rien aux lois, ordonnances et règlements spéciaux en matière de commerce, de police, et de sécurité publique en vigueur dans chacun des deux Pays et applicables à tous les étrangers en général.

ART. III.—Les habitations, magasins, et boutiques des sujets de chacune des Hautes Parties Contractantes dans le territoire de l'autre ainsi que les édifices qui en dépendent, servant soit à la demeure, soit au commerce, seront respectés.

Il ne sera pas permis de procéder à des perquisitions ou visites domiciliaires dans ces habitations et édifices, ou bien d'examiner ou d'inspecter les livres, papiers, ou comptes, sauf dans les conditions et formes prescrites par les lois, ordonnances, et règlements applicables aux sujets du Pays.

ART. IV.—Il ne sera imposé à l'importation dans

le territoire de Sa Majesté l'Empereur de toutes les Russies de tous articles produits ou fabriqués dans le territoire de Sa Majesté l'Empereur du Japon, de quelque endroit qu'ils viennent et à l'importation dans le territoire de Sa Majesté l'Empereur du Japon, de tous articles produits ou fabriqués dans le territoire de Sa Majesté l'Empereur de toutes les Russies, de quelque endroit qu'ils viennent, aucuns droits autres ou plus élevés que ceux imposés sur les articles similaires produits ou fabriqués dans tout autre pays étranger. De même, aucune prohibition ne sera maintenue imposée ou sur l'importation dans le territoire de l'une des Parties Contractantes d'un article quelconque produit ou fabriqué dans le territoire de l'autre, de quelque endroit qu'il vienne, à moins que cette prohibition ne soit également appliquée à l'importation des articles similaires produits ou fabriqués dans tout autre pays. Cette dernière disposition n'est pas applicable aux prohibitions sanitaires ou autres provenant de la nécessité de protéger la sécurité des personnes, ainsi que la conservation du bétail et des plantes utiles à l'agriculture.

ART. V.—Il ne sera imposé dans le territoire de chacune des Hautes Parties Contractantes, à l'exportation d'un article quelconque à destination du territoire de l'autre, aucuns droits ou charges autres ou plus élevés que ceux qui sont ou seront payable à l'exportation des articles similaires à destination d'un autre pays étranger quel qu'il soit; de même, aucune prohibition ne sera imposée à l'exportation d'aucun article du territoire de l'une des Parties Contractantes à destination du territoire de l'autre, sans que cette prohibition ne soit également étendue à l'exportation des articles similaires à destination de tout autre Pays.

ART. VI.—Les sujets de chacune des Hautes Parties Contractantes jouiront, dans le territoire de l'autre, relativement à l'exemption des droits de transit et à tout ce qui concerne le magasinage, les primes, les facilités, et les drawbacks, de tous les avantages qui sont ou seront accordés à la nation la plus favorisée.

ART. VII.—Tous les articles qui sont ou pourront être légalement importés dans les ports du territoire de Sa Majesté l'Empereur du Japon sur des navires japonais, pourront, de même, être importés dans ces ports sur des navires russes; dans ce cas, ces articles n'auront à payer aucuns droits ou charges, de quelque dénomination que se soit, autres ou plus élevés que ceux imposés sur les mêmes articles importés par des navires japonais. Réciproquement, tous les articles qui sont ou pourront être légalement importés dans les ports du territoire de Sa Majesté l'Empereur de toutes les Russies, sur des navires russes, pourront, de même, être importés dans ces ports sur des navires japonais; dans ce cas, ces articles n'auront à payer aucuns droits ou charges de quelque dénomination que ce soit, autres ou plus élevés que ceux imposés sur les mêmes articles importés par des navires russes. Cette égalité réciproque de traitement sera accordée indistinctement, soit que ces articles viennent directement des pays d'origine, soit qu'ils viennent de tout autre lieu.

De la même manière, il y aura parfaite égalité de traitement relativement à l'exportation; ainsi, les mêmes droits d'exportation seront payés, et les mêmes primes et drawbacks seront accordés, dans les territoires de chacune de Hautes Parties Contractantes, sur l'exportation de tout article qui est ou pourra être légalement exporté, que cette exportation ait lieu sur des navires japonais ou sur des navires russes et quel que soit le lieu de destination, qu'il soit un des ports de chacune des Parties Contractantes ou un des ports d'une Puissance tierce.

ART. VIII.—Aucun droit de tonnage, de port, de pilotage, de phare, de quarantaine ou autres droits similaires ou analogues de quelque nature ou sous quelque dénomination que ce soit, levés au nom ou au profit du Gouvernement, des fonctionnaires publics, des particuliers, des corporations, ou des établissements de toutes sortes qui ne seraient également et sous les mêmes conditions imposés, en pareil cas, sur les navires nationaux en général, ne seront imposés dans les ports des territoires de chacun des deux Pays, sur les navires de l'autre. Cette égalité de traitement sera appliquée réciproquement aux navires respectifs de quelque endroit qu'ils arrivent et quel que soit le lieu de destination.

ART. IX.—En tout ce qui concerne le placement, le chargement, et le déchargement des navires dans les ports, bassins, docks, rades, havres, ou rivières des territoires des deux Pays, aucun privilège ne sera accordé aux navires nationaux, qui ne serait également accordé aux navires de l'autre Pays, l'intention des Hautes Parties Contractantes étant que, sous ce rapport aussi, les navires respectifs soient traités sur le pied d'une parfaite égalité.

ART. X.—Le cabotage dans les territoires de l'une ou de l'autre des Hautes Parties Contract-

antes est excepté des disposition du présent Traité, et sera régi par les lois, ordonnances, et règlements du Japon et de la Russie respectivement. Il est toutefois entendu que les sujets Japonais dans le territoire de Sa Majesté l'Empereur de toutes les Russies, et les sujets Russes dans le territoire de Sa Majesté l'Empereur du Japon, jouiront, sous ce rapport, des droits qui sont ou pourront être accordés par ces lois, ordonnances, et règlements aux sujets ou citoyens de tout autre pays.

Tout navire japonais chargé à l'étranger d'une cargaison destinée à deux ou plusieurs ports du territoire de Sa Majesté l'Empereur de toutes les Russies, et tout navire russe, chargé à l'étranger d'une cargaison destinée à deux ou plusieurs ports du territoire de Sa Majesté l'Empereur du Japon, pourra décharger une partie de sa cargaison dans un port, et continuer son voyage pour l'autre ou les autres ports de destination où le commerce étranger est autorisé, dans le but d'y décharger le reste de sa cargaison d'origine, en se conformant toujours aux lois et aux règlements de douane des deux Pays.

Le Gouvernement Japonais, cependant consent à permettre aux vaisseaux Russes de continuer, comme précédemment, pendant la période durée du présent Traité, à transporter leurs cargaisons entre les ports actuellement ouverts de l'Empire, excepté ceux d'Osaka, Niigata, et Ebisu-Minato.

ART. XI.—Tout vaisseau de guerre ou navire de commerce de l'une ou de l'autre des Hautes Parties Contractantes qui serait forcé par un mauvais temps ou par suite de tout autre danger de s'abriter dans un port de l'autre, aura la liberté de s'y faire réparer, de s'y procurer toutes les provisions nécessaires, et de reprendre la mer, sans payer d'autres charges que celles qui seraient payées par les navires nationaux. Dans le cas, cependant, où les capitaine du navire de commerce se trouverait dans la nécessité de vendre une partie de sa cargaison pour payer les frais, il sera obligé de se conformer aux règlements et tarifs du lieu où il aurait relâché.

Si un vaisseau de guerre ou un navire de commerce de l'une des Parties Contractantes a échoué ou naufragé sur les côtes de l'autre, les Autorités Locales en informeront le Consul-Général, le Consul, le Vice-Consul; ou l'Agent Consulaire du lieu de l'accident, et, s'il n'y existe pas de ces officiers consulaires, elles en informeront le Consul-Général, le Consul, le Vice-Consul, ou l'Agent Consulaire du district le plus voisin.

Toutes les opérations relatives au sauvetage des navires japonais naufragés ou échoués dans les eaux territoriales de Sa Majesté l'Empereur de toutes les Russies, auront lieu conformément aux lois, ordonnances, et règlements de la Russie, et, réciproquement, toutes les mesures de sauvetage relatives aux navires russes naufragés ou échoués dans les eaux territoriales de Sa Majesté l'Empereur du Japon, auront lieu conformément aux lois, ordonnances, et règlements du Japon.

Tous navires ou vaisseaux ainsi échoués ou naufragés, tous débris et accessoires, toutes fournitures leur appartenant, et tous effets et marchandises sauvés des dits navires ou vaisseaux, y compris ceux qui auraient été jetés à la mer ou les produits des dits objets, s'ils sont vendus, ainsi que tous papiers trouvés à bord de ces navires ou vaisseaux échoués ou naufragés, seront remis aux propriétaires ou à leurs représentants, quand ils les réclameront. Dans le cas où ces propriétaires ou représentants ne se trouveraient pas sur les lieux, les dits produits ou objets seront remis aux Consuls-Généraux, Consuls, Vice-Consuls, ou Agents Consulaires respectifs, sur leur réclamation, dans le délai fixé par les lois du Pays, et ces officiers consulaires, propriétaires, ou représentants payeront seulement les dépenses occasionnées pour la conservation des dits objets ainsi que les frais de sauvetage ou autres dépenses auxquels seraient soumis, en cas de naufrage, les navires nationaux.

Les effets et marchandises sauvés du naufrage seront exempts de tous droits de douane, à moins qu'ils n'entrent à la douane pour la consommation intérieure, auquel cas ils payeront les droits ordinaires.

Dans le cas où un navire appartenant aux sujets de l'une des Parties Contractantes ferait naufrage ou échouerait sur le territoire de l'autre, les Consuls-généraux, Consuls, Vice-Consuls, ou Agents-Consulaires respectifs seront autorisés, en l'absence du propriétaire, capitaine, ou autre représentant du propriétaire, à prêter leur appui officiel pour procurer toute l'assistance nécessaire aux sujets des Etats respectifs. Il en sera de même dans le cas où le propriétaire, capitaine, ou autre représentant serait présent, et demanderait une telle assistance.

ART. XII.—Tous les navires qui, conformément aux lois Japonaises, sont considérés comme navires Japonais, et tous les navires qui, conformément aux lois Russes sont considérés comme navires

Russes seront respectivement considérés comme navires Japonais et Russes pour le but de ce Traité.

ART. XIII.—Si un marin déserte d'un vaisseau de guerre ou d'un navire de commerce appartenant à l'une ou l'autre des Hautes Parties Contractantes sur le territoire de l'autre, les Autorités Locales seront tenues de prêter toute l'assistance en leur pouvoir pour l'arrestation et la remise de ce déserteur, sur la demande qui leur sera adressée par le Consul du Pays auquel appartient le navire ou vaisseau du déserteur ou par le représentant du dit Consul.

Il est entendu que cette stipulation ne s'appliquera pas aux sujets du Pays où la désertion a eu lieu.

ART. XIV.—Les Hautes Parties Contractantes conviennent qu'en tout ce qui concerne le commerce et la navigation, aucuns privilèges, faveurs ou immunités que l'une ou l'autre des Parties Contractantes a déjà accordés ou accorderait à l'avenir, au Gouvernement ou aux sujets ou citoyens de tout autre Etat, seront étendus immédiatement et sans condition au Gouvernement ou aux sujets de l'autre Partie Contractante, leur intention étant que le commerce et la navigation de chaque Pays soient placés, à tous égards, par l'autre, sur le pied de la nation la plus favorisée.

ART. XV.—Chacune des Hautes Parties Contractantes pourra nommer des Consuls-Généraux, Consuls, Vice-Consuls, Pro-Consuls, et Agents consulaires dans tous les ports, villes et places de l'autre, sauf dans les localités où il y aurait inconvénient à admettre de tels Officiers consulaires.

Cette exception ne sera cependant pas faite à l'égard de l'une des Parties Contractantes, sans l'être également à l'égard de toutes les autres Puissances.

Les Consuls-Généraux, Consuls, Vice-Consuls, Pro-Consuls, et Agents consulaires exerceront toutes leurs fonctions et jouiront de tous les privilèges, exemptions, et immunités qui sont ou seront accordés à l'avenir aux Officiers consulaires de la nation la plus favorisée.

ART. XVI.—Les sujets de chacune des Hautes Parties Contractantes jouiront, sur le territoire de l'autre, de la même protection que les sujets du Pays relativement aux patentes, marques de fabrique, et dessins, en remplissant les formalités prescrites par la loi.

ART. XVII.—Les Hautes Parties Contractantes sont convenues de ce qui suit :

Les divers quartiers étrangers au Japon seront complètement incorporés aux communes Japonaises respectives à partir de la date, où le Traité de Commerce et de Navigation signé en ce jour entrera en vigueur, et formeront désormais une partie du système général du Japon.

Les Autorités compétentes Japonaises assumeront dès lors toutes leurs obligations municipales au regard de ces quartiers, et les fonds communs, ainsi que les propriétés, s'il en est qui appartiennent à tels quartiers, seront en même temps transférés aux dites Autorités Japonaises.

Lorsqu'une telle incorporation se produit les baux perpétuels existants sous lesquels les biens fonciers sont maintenant tenus dans les dits quartiers seront confirmés et aucunes conditions d'aucune sorte autres que celles qui contiennent les dits baux existants, ne seront imposées par rapport à ces biens. Il est, cependant, entendu que les Autorités consulaires mentionnées dans les dits baux seront dans tous les cas remplacées par les Autorités Japonaises.

Toutes les terres qui peuvent avoir été antérieurement concédées libres de rentes par le Gouvernement Japonais pour l'usage public des dits quartiers, seront, sans le droit de domaine éminent, maintenues perpétuellement libres de toutes taxes et affectées à l'usage public auquel elles avaient été originellement destinées.

ART. XVIII.—Le Présent Traité pendra, du jour où il entrera en vigueur, lieu et place du Traité conclu le 21^e jour du 12^e mois de la 1^{re} année d'Ansei correspondant au 26 Janvier, 1855, du Traité d'Amitié et de Commerce conclu le 11^e jour du 7^e mois de la 5^e année d'Ansei, correspondant au 7 Août 1858, de la convention conclue le 28^e jour du 11^e mois de la 3^e année de Keio, correspondant au 11 Décembre 1867, et de tous les Arrangements et Conventions subsidiairement conclus ou existant entre les Hautes Parties Contractantes; et à partir du même jour, les dits Traités, Arrangements, et Conventions cesseront d'être obligatoires, et, en conséquence, la juridiction jusqu'alors exercée par les tribunaux russes au Japon et tous les privilèges, exemptions, et immunités exceptionnels dont jouissaient jusqu'alors les sujets russes comme une partie de cette juridiction ou comme y appartenant, cesseront et prendront fin absolument et sans notification, et tous ces droits de juridiction appartiendront à partir de ce moment aux tribunaux japonais et seront exercés par ces mêmes tribunaux.

ART. XIX.—Le présent Traité n'entrera en

vigueur que quatre ans au moins après sa signature. Il entrera en vigueur une année après que le Gouvernement de Sa Majesté l'Empereur du Japon aura notifié au Gouvernement de Sa Majesté l'Empereur de toutes les Russies, Son intention de mettre le dit Traité en vigueur. Cette notification pourra être faite à un moment quelconque après l'expiration de trois ans après la date de la signature. Le présent Traité restera valable pendant une période de douze ans après le jour où il entrera en vigueur.

L'une ou l'autre des Hautes Parties Contractantes aura le droit, à un moment quelconque après que onze ans se seront écoulés depuis l'entrée en vigueur de ce Traité, de notifier à l'autre, Son intention de mettre fin au présent Traité, et, à l'expiration de douze mois après cette notification, ce Traité cessera et finira entièrement.

ART. XX.—Le présent Traité sera ratifié par les Hautes Parties Contractantes et les ratifications en seront échangées à Tokio dans six mois ou plus tôt, si faire ce peut, après sa signature.

En foi de quoi les Plénipotentiaires respectifs ont signé et scellé de leur sceau le présent Traité en deux exemplaires et en langue française.

Fait à St Pétersbourg le 8ème jour du 6ème mois de la 28ème année de Meiji, correspondant au vingt-sept Mai mil huit-cent quatre-vingt-quinze.

PROTOCOLLE.

Le Gouvernement de Sa Majesté l'Empereur du Japon et le Gouvernement de Sa Majesté l'Empereur de toutes les Russies jugeant utile, dans l'intérêt des deux Pays, de régler certaines matières spéciales qui les concernent mutuellement, séparément du Traité de Commerce et de Navigation signé en ce jour, sont convenus par leurs Plénipotentiaires respectifs, des dispositions suivantes :

1.—Il est convenu par les Hautes Parties Contractantes qu'un mois après l'échange des ratifications du Traité de Commerce et de Navigation signé en ce jour, le Tarif d'importation aujourd'hui en vigueur relativement aux articles et marchandises importés au Japon par les sujets russes, cessera d'être obligatoire. A partir de la même date, le tarif général en vigueur établi par la législation intérieure du Japon, sera appliqué à l'importation au Japon des articles produits ou manufactures dans le territoire de Sa Majesté l'Empereur de toutes les Russies, le tout en se conformant aux dispositions de l'Article 16 du Traité de 1858, tant que le dit Traité qui existe actuellement entre les Hautes Parties Contractantes restera en vigueur; et aux dispositions de l'Article 4 du Traité signé en ce jour après que le Traité de 1858 aura pris fin. Mais aucune disposition de ce Protocole n'aura pour effet de limiter le droit du Gouvernement Japonais de restreindre ou de prohiber l'importation des drogues, médecines, aliments et boissons altérés; des gravures, peintures, livres, cartes, gravures lithographées, ou autres et photographies indécentes ou obscènes, des articles en violation des lois sur les patentes, les marques, de fabrique ou la propriété littéraire du Japon; ou de tout autre article qui, pour des raisons sanitaires ou en vue de la sécurité ou de la morale publique, pourrait offrir des dangers.

2.—Il est convenu également que, dans le cas où l'application du principe de la nation la plus favorisée, garanti au regard des droits de douane par le Traité signé en ce jour, ainsi que par le présent Protocole ne prouverait pas après la satisfaction en pratique, les deux Gouvernements intéressés s'entendront entre eux à substituer le tarif conventionnel relativement à l'exportation des articles d'un intérêt spécial pour chacun d'eux.

3.—Les deux Gouvernements s'engagent d'entamer sans délai la négociation pour conclure une convention ayant la réciprocité comme base relativement à l'importation des poissons, salés, ou séchés.

4.—Le Gouvernement Japonais s'engage, avant la cessation de la juridiction consulaire Russe au Japon, à conclure avec le Gouvernement Russe une convention concernant la protection respective de la propriété industrielle et commerciale.

5.—Les Plénipotentiaires soussignés ont convenu que ce Protocole sera soumis à l'approbation des deux Hautes Parties Contractantes en même temps que le Traité de Commerce et de Navigation signé en ce jour, et que, quand le dit Traité sera ratifié, les stipulations contenues dans ce Protocole seront également considérées comme approuvées, sans qu'il soit nécessaire d'une ratification formelle ultérieure.

Il est également convenu que ce Protocole prendra fin en même temps que le dit Traité cessera d'être obligatoire.

En foi de quoi les Plénipotentiaires respectifs

ont signé et scellé de leur sceau le présent Protocole en deux exemplaires et en langue française.

Fait à St. Pétersbourg le 8ème jour du 6ème mois de la 28ème année de Meiji correspondant au vingt-sept Mai mil huit-cent quatre-vingt-quinze.

[L.S.] Prince LOBANOW-ROSTOWSKY.
[L.S.] SERGE DE WITTE.

ARTICLES SÉPARÉS.

ART. I.—Les relations commerciales de la Russie avec les Royaumes de Suède et de Norvège et les Etats et Pays limitrophes de l'Asie, étant réglées par des stipulations spéciales concernant le commerce de frontière et indépendantes des règlements applicables au commerce étranger en général, les deux Hautes Parties Contractantes conviennent que les dispositions spéciales contenues dans le Traité passé entre la Russie et la Suède et la Norvège le 26 Avril (8 Mai) 1838, ainsi que celles qui sont relatives au commerce avec les autres Etats et Pays ci-dessus mentionnés, ne pourront, dans aucun cas, être invoquées pour modifier les relations de commerce et de navigation établies entre les deux Hautes Parties Contractantes par le présent Traité.

ART. II.—Il est également entendu que ne seront pas censés déroger au principe de réciprocité, qui est la base du présent Traité, les franchises, immunités, et privilèges mentionnés ci-après, savoir :

de la part du Japon :

Le monopole sur quelque article que ce soit que le Gouvernement Impérial du Japon pourrait se réserver à l'avenir;

et de la part de la Russie :

1. La franchise dont jouissent les navires construits en Russie et appartenant à des sujets russes, lesquels pendant les trois premières années sont exempts des droits de navigation.

2. La faculté accordée aux habitants de la côte du Gouvernement d'Arkhangel d'importer en franchise ou moyennant des droits modérés dans les ports du dit Gouvernement du poisson sec ou salé, ainsi que certaines espèces de fourrures, et d'en exporter de la même manière des blés, cordes et cordages, du goudron, et du ravendouc.

3. Les immunités accordées en Russie à différentes compagnies de plaisance dites Yatch-clubs.

4. Le monopole sur quelque article que ce soit que le Gouvernement Impérial de Russie pourrait se réserver à l'avenir.

ART. III.—Les présents Articles séparés auront la même force et valeur que s'ils étaient insérés, mot à mot, dans le Traité de ce jour. Ils seront ratifiés et les ratifications en seront échangées en même temps.

En foi de quoi les Plénipotentiaires respectifs les ont signé et y ont apposé leurs cachets.

Fait à St. Pétersbourg le 8ème jour du 6ème mois de la 28ème année de Meiji, correspondant au vingt-sept Mai mil huit-cent quatre-vingt-quinze.

[L.S.] NISSI.
[L.S.] Prince LOBANOW-ROSTOWSKY.
[L.S.] SERGE DE WITTE.

St. Pétersbourg, le 27 Mai, 8 Juin, 1895.

Le Soussigné, Envoyé Extraordinaire et Ministre Plénipotentiaire de Sa Majesté l'Empereur du Japon, en vertu d'une autorisation spéciale du Gouvernement Impérial Japonais, a l'honneur d'informer Son Excellence Monsieur le Prince Lobanow-Rostowsky, Ministre des Affaires Étrangères de Sa Majesté l'Empereur de toutes les Russies, que le Gouvernement Impérial Japonais, reconnaissant l'avantage d'avoir les Codes de l'Empire qui ont été déjà promulgués, mis en vigueur quand les stipulations du Traité existent aujourd'hui entre le Gouvernement du Japon et Celui de la Russie cesseront d'être obligatoires, s'engage à ne faire la notification prévue par le premier paragraphe de l'Article XIX. du Traité de Commerce et de Navigation signé en ce jour, que quand ces Codes dont la mise en vigueur est aujourd'hui ajournée entreront en vigueur.

Le soussigné prie Son Excellence Monsieur le Prince Lobanow-Rostowsky de vouloir bien agréer les assurances de sa considération la plus distinguée.

Signé : NISSI.

DÉCLARATION.

Les soussignés déclarent que l'Article XVIII. du Traité de ce jour ne concerne pas le Traité conclu le 25 Avril (7 Mai) 1875 entre Sa Majesté l'Empereur du Japon et Sa Majesté l'Empereur de toutes les Russies, ni l'Article Supplémentaire signé à Tokio le 10/22 Août de la même année, qui tous les deux restent en vigueur.

St. Pétersbourg, le 27 Mai, 8 Juin, 1895.

Signé : NISSI.
Prince LOBANOW-ROSTOWSKY.

St. Pétersbourg, le 27 Mai, 8 Juin, 1895.

Monsieur le Ministre,

En réponse à la note que Vous avez bien voulu m'envoyer en date du 1/13 Mars dernier No. 952, j'ai l'honneur d'informer Votre Excellence que j'accepte au nom du Gouvernement Japonais la proposition formant l'objet de la dite note et consistant à ce que la substitution du tarif conventionnel prévue dans le Protocole signé en ce jour relativement aux articles d'exportation ayant un intérêt spécial pour chacun des deux Pays, pourra être proposée par l'un ou l'autre des deux Gouvernements à un moment quelconque, après que le dit Protocole sera entré en vigueur, et, que, dans le cas où le tarif conventionnel ne pourrait pas être conclu dans l'espace de six mois après la communication de telle proposition, le tarif général pourra être appliqué à l'importation des articles de chacun des deux Pays, en même temps qu'il sera sursis à l'application du principe de la nation la plus favorisée jusqu'à la nouvelle conclusion du tarif conventionnel.

Je prie Votre Excellence de vouloir bien agréer les assurances de ma considération la plus distinguée.

Signé : NISSI.

A Son Excellence,

Monsieur le Prince LOBANOW-ROSTOWSKY,
Ministre des Affaires Étrangères,
de Sa Majesté l'Empereur de toutes les Russies.

St. Pétersbourg, le 27 Mai, 8 Juin, 1895.

Monsieur l'Envoyé,

En réponse à la note que vous avez bien voulu m'adresser en date du 17/29 Mars a. c., j'ai l'honneur de vous informer que le Gouvernement Impérial de Russie accepte la proposition du Gouvernement Impérial du Japon formant l'objet de la dite note et consistant en ce que la substitution du tarif conventionnel, prévue dans le Protocole signé en ce jour relativement aux articles d'exportation ayant un intérêt spécial pour chacun des deux Pays, pourra être proposée par l'un ou l'autre des deux Gouvernements, à un moment quelconque, après que le dit Protocole sera entré en vigueur, et, que, dans le cas où le tarif conventionnel ne pourrait pas être conclu dans l'espace de six mois après la communication de telle proposition, le tarif général pourra être appliqué à l'importation des articles de chacun des deux Pays, en même temps qu'il sera sursis à l'application du principe de la nation la plus favorisée jusqu'à la nouvelle conclusion du tarif conventionnel.

Veuillez agréer, Monsieur l'Envoyé, l'assurance de ma considération la plus distinguée.

Signé : LOBANOW.

A Monsieur NISSI,

Envoyé Extraordinaire et

Ministre Plénipotentiaire

de SA MAJESTÉ L'EMPEREUR du Japon.

MINUTES OF THE FIFTH ANNUAL MEETING OF THE ARIMA CHRISTIAN CONFERENCE, 1895.

SATURDAY, August 3rd, 7.45 p.m.—A meeting was held in the Conference Hall to seek a special blessing upon the approaching Conference. The meeting was led by Dr. L. H. Wainwright.

SUNDAY, August 4th, 4.10 a.m.—The sermon was delivered by the Rev. M. B. Hill, of Shanghai, from the text, "But ye shall receive power after that the Holy Ghost is come upon you; and ye shall be witnesses unto me both in Jerusalem and in all Judæa and Samaria and unto the uttermost parts of the earth.—Acts 1:8 7.45 p.m.—

In the absence of the Rev. F. C. Neitz the sermon was preached by Rev. J. A. B. Scherer from the text, "When I am weak, then am I strong."—Cor. 12:10.

MONDAY, August 5th, 6.30 a.m.—Prayer Meeting led by the Rev. T. B. Demaree. 9.30 a.m.—A meeting was held for the election of officers, Dr. Hail, President of the Board of Managers, in the chair. The Rev. Mr. Walne nominated for President of the Conference the Rev. A. D. Hail, D.D., other candidates being Dr. C. H. Finch, Rev. J. N. Hayes, Rev. D. N. Lyon, the last three being from China. The balloting resulted in the election of Dr. Hail. Mr. A. T. Hill was nominated for Secretary by the Rev. H. T. Graham, and duly elected.

The following is the Programme carried out by the Conference:—

MONDAY Aug. 5, 10 a.m.—Paper on "Methods for developing and training workers from among the Japanese Christians," by the Rev. G. H. Pole. Remarks by Messrs. Wilson, Turner, Wainwright, Maynard, Price (of Osaka) Moore, and H. B. Price. 7.45 p.m.—Devotional Meeting led by the Rev. Mr. Wadman.

TUESDAY, August 6, 6.30 a.m.—Prayer meeting led by the Rev. S. Swann. 9 a.m.—The Conference assembled to listen to an address by the Rev. R. S. McArthur, D.D., Pastor of the Calvary Baptist Church of New York. Dr. McArthur was on a tour round the world, and came to Arima especially to address the Conference. His remarks were most earnest and helpful. 10.30 a.m.—Bible Study by Ven. Archdeacon Page on the subject of "God's purpose of love in the gift to man of Himself, an eternal purpose." 11 a.m.—Paper on "the Holy Spirit as Comforter," by the Rev. F. Franson of Scandinavia. Remarks by the Revs. G. H. Pole and J. N. Hayes. 7.45 p.m.—Devotional Meeting on the same subject led by Rev. S. E. Hager.

WEDNESDAY, August 7, 6.30 a.m.—Prayer Meeting led by Rev. J. R. Graham. 10 a.m.—Bible Study by Ven. Arch. Page on, "The sin of man makes necessary the Atonement that the eternal purpose may stand, hence the Love of God has a supreme manifestation as Redeeming Love." 10.55.—Paper on "The Holy Spirit as Teacher," by Rev. J. W. Moore. Remarks by Messrs. Blalock, Murphy, and Ven. Arch. Page. At the close of the Meeting the Rev. H. B. Price moved, and it was carried, that the Secretary be instructed to write to the Rev. Dr. McArthur expressing the appreciation of the Conference of his earnest address and of thanks to him for having changed his plans in order to speak to the Conference. 7.45 p.m.—Devotional Meeting led by Rev. J. B. Hail.

THURSDAY, August 8, 6.30 a.m.—Prayer Meeting led by Rev. R. Wellword. At the close of this meeting a Committee, consisting of the President and Messrs. Pole and Hayes, were appointed to send a telegram to Shanghai asking for the names of those murdered, and for particulars of the recent riots in Foochow and vicinity. 10 a.m.—Paper and Conference on Medical work as an Evangelistic Agency in China, by Rev. C. H. Finch, M.D. Remarks were made by Dr. Greig, who spoke of his own medical work, by Rev. W. B. Hamilton, on work in Shantung Province, and by Rev. R. Wellword, and Rev. W. M. Baird of Korea.

On the motion of Rev. H. B. Price a Committee of five, consisting of Revs. Price, Pole, Towson, Hamilton, and Hayes were appointed to send resolutions of sympathy to the friends concerned in the recent outrages in China. 7.46 p.m.—Devotional Meeting led by Rev. W. B. Hamilton; an address on educational work being delivered by Rev. J. N. Hayes.

FRIDAY, August 9, 6.30 a.m.—Prayer Meeting led by Rev. J. H. Pole. 10 a.m.—Bible Study by Ven. Arch. Page on this subject:—"God manifesting His Redeeming Love, has made the power and Glory of Christ to be the result and reward for His death for man." 10.55 a.m.—Paper on "The Holy Spirit as Convictor," by the Rev. R. H. Consterdine. Remarks by Messrs. Blalock, Wainwright, Hamilton, and Wilson. At the close of the meeting an opportunity was given to the Rev. M. Wadman to present the claims of the "Japan Evangelist." 7.45 p.m.—Devotional Meeting led by Rev. W. Wynd. At the close of the Meeting the Rev. D. S. Spencer made a statement regarding the families left destitute as a result of the late war between Japan and China, and expressed a willingness to receive contributions. It was voted that a collection be made on the following Sunday morning for this purpose. A question being received as to whether this was in order, the Chair ruled that as the appeal was an undenominational one it was not contrary to the bye-laws.

The Rev. Mr. Archibald, of China, gave an account of some of the riots and of the indifference of China with regard to them.

SATURDAY, August 10th, 6.30 a.m.—Prayer Meeting led by Rev. J. A. B. Scherer. 10 a.m.—Bible Study by Ven. Arch. Page on this subject:—"The only worthy response due to such Love is that we receive Christ for all that God means Him to be for our life and power." 10.55.—Paper on "The Holy Spirit as Sanctifier," by Rev. F. S. Curtis, read in his absence by Rev. G. H. Pole. Remarks by Rev. R. H. Consterdine. 7.35 p.m.—Devotional Meeting led by Rev. R. B. Gorman.

SUNDAY, August 11th, 10 a.m.—The sermon was delivered by the Rev. Mc. C. E. Price from text, "But ye, beloved, building up yourselves on your most holy faith, praying in the Holy Ghost, keep yourselves in the love of God, looking for the mercy of one Lord Jesus Christ unto eternal life." Jude 20.21. 7.45 p.m.—Consecration service held by the President. Several took part in this, the closing meeting of the Conference. The Revs. W. E. Towson and D. N. Lyon led in prayer; and with the hymn, "God be with you till we meet again," and the benediction by the President, the Conference came to an end.

On Monday, August 12th at 9.30 the Annual Business Meeting was held. Forty-six persons were present. The minutes were read and approved. The Rev. D. S. Spencer reported that the sum collected for relief of families left destitute by the recent war amounted to \$100. The Rev. G. H. Pole reported for the committee sending a letter of sympathy to the friends in China. The Report was received, adopted, and forwarded to the Press.

Prayer was then offered by Rev. Mr. Spencer on behalf of the China friends.

The Treasurer reported receipts of \$24.50 for repayment to the original guarantors of the Building Fund.

On the motion of the Rev. J. W. Doughty the thanks of the Conference were given to all who had taken part.

On the motion of the Rev. J. W. Moore, the following amendment to the Constitution was made and voted:—

"A Board of Six Managers, one of whom shall be a missionary resident in China, the other five of whom shall be from the following bodies: one Baptist, one Episcopalian, one Methodist, one Presbyterian, and one from each of the other denominations represented shall be elected annually at the regular business meeting at the end of the Conference."

The following amendment to the Constitution was proposed by Rev. Mr. Utley and carried:—"No amendment shall be made to the Constitution except by two thirds vote of those present at any regular annual business meeting, three days' notice of such proposed amendment having been posted on the Conference bulletin board."

The following were elected to serve as Board of Managers for the ensuing year:—Rev. G. H. Pole, Dr. Wainwright, Revs. J. W. Moore, J. A. B. Scherer, J. N. Hayes, R. A. Thomson. The following were elected as Services Committee for next year:—Revs. R. H. Consterdine, A. D. Hail, D. S. Spencer, W. Wynd, and J. A. B. Scherer. After a vote of thanks to the President, Secretary, Organist, and all Committees, the meeting adjourned.

A. T. HILL, Hon. Sec.

LETTER FROM HOLLAND.

(FROM OUR CORRESPONDENT.)

August, 2nd, 1895.

A summer's outing in the two countries of Europe which have had most to do with modern Japan, recalls many points of contact, interest, and suggestion. I have just finished my fourth journey through the Netherlands, this time spending five weeks and visiting every one of the eleven provinces. To the American, this little country, scarcely more than one-third the size of Ohio is not known or visited as it ought to be. Most tourists from the United States flit between Rotterdam and Amsterdam, with possibly a "stop-off" at Utrecht or Arnhem on their way to Germany. Yet although the provinces outside of North and South Holland have not the wealth, the picture galleries, and the attractions of business, art, and architecture, possessed by the two maritime provinces, yet a journey through the North-West and South richly repays the student, the artist, the bicyclist, and those whose resources of enjoyment are within as well as without themselves. To go into "free Frisia," and hear the market people talking language which is astonishingly like English, or, more exactly, like the Lowland Scottish (which is English unaffected by the Norman influences) makes the gold helmeted peasantry seem wonderfully near akin. The old battlefields, ancient relics, and splendidly successful agriculture of Groningen are worth knowing about. The heath and turf-fields of Dranthe, with their great stacks of fuel cut in the form of bricks, their marvellous stone relics of an earlier day, mis-called "giant graves," and the many coloured embroidery of the heath flowers which attract artists from afar, have a charm which is peculiar to themselves. When, moreover, in these various provinces one can always find a friend in the English-speaking Dutch teachers, or perhaps preachers, when he discovers that nearly every educated gentleman and lady can converse in the language that is now covering the earth, and when, moreover, one can meet his Dutch hosts inside their own homes, there is much to soften prejudice and help one to arrive at truth. We who speak the English language have inherited a heavy mass of hostile tradition, to take pains to preserve which is not particularly creditable to us. The American sinners have closely followed their English exemplars. The average school history and the dignified monograph which sketches the story of the United States ignores, in a wholesale manner, the part played by the Dutchmen in the making of the American Republic.

As for English folks in their ideas concerning Holland, they illustrate the Japanese proverb, "It is dark at the lantern's base." For thousands who study the French or German either for business or culture, there is scarcely one who makes a serious study of the Dutch country or language. All this is very different from the days when the men of the four nationalities of the United Kingdom lived in the Dutch Republic by the tens of thousands, when twenty-seven English churches were organised on Dutch soil, and when the pikemen and shotmen from across sea stood side by side with the Dutch infantry against the Spaniard. Nevertheless, it must be confessed that among the English-speaking people on either side the Atlantic there is a revival of interest in Holland. The little country in outside of European politics as represented by "Powers," but it is still among leaders in art, in colonies, in trade, and in the solid comforts of life. Amsterdam may be under German influence, the Hague may have a French atmosphere, but Rotterdam is most closely allied with England in mutual intercourse, and one hears his mother-tongue spoken on the quays and in the streets as it is nowhere else used under the red, white, and blue flag. This year the volume of travel between the United States, England, and Holland, is greater, I believe, than for many years past. There being no World's Exposition at home, business showing unmistakable signs of revival, and no war or pestilence in Europe, the Americans are here in droves. True, the advance guard of the American army was badly worsted at the oar and on the water. The students of Cornell University, that inscribed the names of twenty-five victories upon their flag, have been obliged to lower their colours before the victories of Trinity College. Nevertheless, it is more than probable that a second ten thousand dollars will be raised, and a fresh crew be sent over to compete for honours in 1896.

While in Holland there was a great deal to remind me of Japan. Entering the famous Rijks Museum, Amsterdam, one of the first sights that greets the visitor is that of the four flags from the Dutch ships which took part in the bombardment of Shimonoseki. Each of them is duly inscribed. The old wooden ships which took their part in the attack of the allies have long ago been broken up. Both the Dutch ships and the forts of to-day show the application of modern ideas to coast defence and deep-sea fighting. I made a trip to the Helder, the Dutch Naval station of the north, just opposite to the island of Texel, whence Will Adams and most of the Dutch ships sailed to Japan. I learned from Lieutenant Fabius, of the Dutch ship *Scorpion*, that his father, Captain Fabius, who cruised during several years in the frigate *Medusa* in the waters of Japan, and who visited Mr. Townsend Harris two or three times at Shimoda, died in 1889. Some of the relics of his father's naval experiences in Japan, when a steamship was a curiosity, were very interesting. Admiral Cassembroot who commanded at Shimonoseki died during the past winter at the Hague. In a Rotterdam newspaper in the early days of July I read of the death of another Dutch officer who had taken part in that attack.

Other reminders are not lacking. The old plans and maps of the island of Deshima, the streets in Dutch cities named after the same historic island, the old parchment maps of Formosa, and of the former Dutch settlements on that recently acquired island of the Japanese empire, the Museum at the old "Scotch Staple" town of Veere, a glance at Sluys, where the famous imposter, George Psalmanez, concocted his so-called Formosan language, and his amazing book of description, called up curious memories and associations. In a hat-store in Arnhem, I saw the last new fad in head gear; it was a "Korea hat," only a little bit peculiar in shape, but having printed on the silk crown inside a brightly coloured map of the country which now hangs between Russia and Japan, not knowing to whom it belongs. It seems to be the impression here among those especially interested in far Oriental affairs, that Japan and Russia will have a war before the status of Chōsen is fixed.

Most interesting of all to the eyes of your correspondent was the wonderfully rich mass of papers and documents relating to Japan now stored away in the Royal archives of the Hague. Here, arranged in boxes, and recorded in books which fill many feet of shelving, is a rich mass of information to the investigator and writer, who is or who are yet to tell the story of the Dutchman in Japan. Surely such a monograph is needed. We have had fragments of this story thrown out by men hostile in faith, or jealous of trade. Through the efforts of Sir E. Satow and Dr. Geerts, we have had authentic documents translated or printed in English; but surely, the story of a quarter of a millennium of European influence on Japan is

worth the telling. Despite all the influences emanating and the impulses arising from the Japanese themselves, we doubt whether the full story of the Renaissance of Japan in our days can be truthfully told if the story of the Deshima Dutchmen be left out. The modern expression of the parable of the mustard seed (as illustrated by Japan) has impressed the world mightily. To the thoughtful, it may be that the story of the parable of the leaven will be even more fascinating. Why does not some Dutchman devote himself to this task? Or, why does not some one not of Holland descent attempt the work. On enquiry of the royal archivist, I found that recently many hundred pages of these records had been copied out for and at the expense of the Japanese Government, and these transcripts have already been sent to Tokyo. The Japanese Minister at the Hague, Mr. Akabane, and his American wife, are very popular in the society of the Dutch capital.

I had also the pleasure of meeting several Dutch gentlemen who had been in Japan, notably the Royal Commissary or Governor of the Province of Overijssel, Lacklyma à Nieholt, who served in the Royal Navy in Japanese waters during several years. Dining with him in his residence at Zwolle, in which he expects to entertain the two Queens on September 10th, he informed me that Graf von Polhsbroek was still living, though in very infirm health, at the Hague, while Dr. Pompe van Meerdervoort, so eminent in the scientific history of Japan, was living at Brussels, his vast schemes of oyster culture in Zeeland having unfortunately failed. That the modern Dutchman still takes interest in the nation within whose bounds his countrymen so long enjoyed a monopoly of trade, is shown by recent books of travel. These, fresh from the press, are found in the Dutch book-stores, and show that the globe-trotter sets out from the Netherlands, as well as from London and New York.

I send you this gossip letter from London, where I arrived only four days ago. I have not yet visited the rooms of the Japan Society or of the Geographical Congress now in session. However, showing how numerous are Englishmen returned from Nippon, I found at my side at the breakfast table in the hotel a gentleman who introduced the subject of the books and writers concerned with Japan. He gave his opinion pretty freely about those who wrote voluminously concerning a country and people which they had seen within two moons. He was especially sarcastic about a certain letter-writer who had seen three sea-ports, the capital, and Hakone, within a space of forty days, but who continued to pour out his opinions and disquisitions (usually hostile) in the London press. My companion's conversation was so full of pith and force and evinced so clearly a knowledge of Japan and the Japanese *not* based on hasty glimpses, that I enquired his name and gave my own. He belonged to the noble family of the Smiths, and for years was instructor in the engineering department of the Imperial University.

Hoping to return home during the last week in August, I trust, should I inflict upon you my impressions of England after a fourth sojourn in the land of my Fathers, that not even the most severely captious of your readers will suppose that I am vilifying either my own ancestors or that I am trying to destroy in an infinitesimal degree the greatness and glory of the English name and power. No sane American, as it seems to me, ought to wish the glory of that name decreased, so long as the moral power behind it is what it is.

W. E. G.

BRITISH CONSULAR TRADE REPORT FOR YOKOHAMA.

The report of Mr. Troup, Her Majesty's Consul at Yokohama, on the trade and navigation of that port for 1894, states as follows:—

GENERAL REMARKS.

In the valuation of imports, with the exception of sugar and miscellaneous Eastern products, but including imports from British India and Australia, and in the conversion of figures representing gold specie and bullion, the Customs figures are converted into sterling at the rate of 2s. 2½d. per yen, being the average for the year of the quarterly rates used by the Customs in their conversions from gold into silver. In the valuation of imports of sugar and miscellaneous Eastern produce, other than imports from British India and Australia, and of all exports, as well as in other calculations in this report, the yen is taken as equal to 2s. 1½d., being the mean of the bank demand drawing rate for the year.

GROSS TRADE IN GOLD.—According to the returns, the total value of the foreign trade of the port for the year, as stated, on the above methods

in gold, amounted to £13,092,359, being £5,410,501, value of imports, and £7,681,858, value of exports.

For the past two years it has been the habit in these reports to add to the Customs valuations of imports, which represent the invoice values of cost of the goods at the place of production or original shipment a percentage to cover freight and other charges, so as to arrive more nearly at the amount which Japan actually pays for her imports. This correction has in previous reports been taken at 15 per cent. Applying the same to the above valuation of the import trade of last year, we arrive at a sum of £6,222,076, as representing the actual value to Japan of that trade, and of £13,903,934 as representing the total foreign trade. In the previous year the corresponding figures were, for imports, £5,579,288, and of the total trade, £12,653,018; the value of exports was £7,073,730. The above shows an increase in imports of £642,788, in exports of £608,128, and in the total trade of the port of £1,250,916, or in percentages of 11½ per cent. in imports, of 8½ per cent. in exports, and of 9½ per cent. in the total trade of the year, as compared with that of 1893.

The following is the silver valuation of the trade, as given in the Customs statistics, but with the above correction of 15 per cent. on the valuation of imports:—

	1894.	1893.
Imports	\$58,014,478	\$41,750,829
Exports	73,015,078	55,209,586

Total 131,029,556 96,960,415

SPECIE and bullion have been imported to the value of £176,637, being £5 in gold and £176,632, in silver; and exported to the value of £1,399,855, being £214,383 in gold and £1,185,472 in silver.

DUES and duties levied by the customs amounted to £357,486, being £164,624 duties on imports and £188,017 on exports, and £4,845 miscellaneous dues.

EXCHANGE.—WAR.—Two disturbing elements have specially to be noted in reviewing the general features of the year's trade—namely, the further great drop in exchange, with the irregular fluctuations in the course of this fall, and the outbreak of war between this country and China, which occurred in July last. Both of these occurrences, through the uncertainty which they have caused, have had an adverse influence on the general import trade; and the fact that this trade has, notwithstanding, shown the considerable expansion which has just been noticed above must be taken as a proof of the substantial enrichment of the country in recent years, through the development of her industries and her export trade. The fall in exchange has in previous years caused much derangement in values, and has, no doubt, contributed to cause the fall in sterling prices in most imports in the home markets. Resulting losses have been felt in some cases by the Japanese dealer, in some by the foreign importer or home manufacturer.

The war has exercised no very perceptible influence on the general export trade, unless on that with China itself and Hongkong, and the fall in exchange has, without doubt, operated in the direction of fostering and stimulating different branches of the trade, as there will be occasion to note below. The periodical interruption of the railway traffic, occasioned by the transport of troops and military stores, has, however, hampered both branches of trade to some extent, as has also dearth of labour.

The rice crop last year was a large one, notwithstanding a partial failure in this neighbourhood caused by drought, and the quality a fair average.

BRITISH TRADE.—There has been, last year, an increase in the total of the trade between Yokohama and the various portions of the British Empire. Adding to the total of the import trade, as given in that return, the correction of 15 per cent., which has been applied to the total in the general table of imports, we arrive at a sum of £63,730,805 as representing the total value of imports from the British dominions. The value of the exports amounts to £1,122,674, and thus the value of the total of this trade to £4,853,479. This increase is entirely on the side of imports, the export trade by itself showing a decrease. Taking the different parts of the British Empire separately, there is an increase in imports from Great Britain, Canada, and Australia, and a decrease in imports from Hongkong and India; while in exports there is a decrease to Great Britain, Canada, and Hongkong, and an increase to Australia and British India. The total trade with both Canada and Australia is insignificant in amount. The import trade from Great Britain forms 53 per cent. of the total import trade of the port, and that from all the British dominions nearly 69 per cent. The total of the British trade, import and

export together, constitutes 61 per cent. of the total trade of the port. The decrease in the trade with Hongkong is sufficiently accounted for by the interruption caused by the prevalence of the plague in that colony, and by exodus of Chinese from Yokohama, which took place on the outbreak of the war between this country and China. Much of the trade between this port and Hongkong is in the hands of Chinese.

IMPORTS.

The estimates of the deliveries of cotton, woollens, and other manufactures, taken from the statistics of the Yokohama General Chamber of Commerce show an increase under the headings of indigo shittings, cotton Italians, Italian cloth, mousselines, cloth and blankets, and a decrease under the headings of cotton yarns, grey shittings, T-cloths, prints, Turkey reds, velveteens, victoria lawns, silk-faced sateens, and flannel. Except in the cases of cotton Italians and silk-faced sateens, stocks had decreased during the year.

COTTON AND WOOLLENS.—An exact estimate of the deliveries of cotton yarns is not easily arrived at, as the finer yarns are not included in the Chamber's statistics. Where there has been a decline, it has been in the lower counts, in which the competition of the Japanese mills tells. When mill operative labour can be had, as it can in this country, at from c. 10 to c. 25, say from 2½d. to 6½d. a day, the competition, in the classes of manufacture in which it exists, must soon be decided in favour of the manufacturer here.

In these and in all classes of cotton piece-goods, the continuous fall in the prices of cotton and the resulting decline in Manchester prices have, in addition to the general causes alluded to previously in this report, operated against demand.

Of the cotton and woollen manufactures and mixtures, with the exception of mousselines de laine, flannel, cotton duck, woollen yarn, and about one-half of the woollen cloths, nearly the whole import comes from the United Kingdom. The same holds of canvas, while the British interests in the four exceptions just enumerated, and in silk-faced sateens, is but fractional.

IN METALS, deliveries of bar-iron, pig, plate, and sheet, have about kept pace with the importation; of galvanised iron the deliveries exceeded the importations. Notwithstanding an increase in deliveries, the stock of wire nails increased. Deliveries of iron of all sorts, but excluding wire nails and other manufactured iron, amounted last year to 36,437 tons, as against 29,771 tons in 1893. There has been no great variation in silver prices of metals here, the fall in laid-down cost having about kept pace with the fall in exchange.

PIG IRON.—The construction of the Tokyo Waterworks has contributed to the demand for pig-iron. The pipes for these works are partly being made by a Japanese company in Tokyo, partly they are being imported from abroad. An order, which is being executed in Belgium for 10,000 pipes, it is understood lately went to a European firm here. The works for pipe-making in Tokyo have lately been extended, and it is believed that great efforts are being made to have the remainder of the pipes manufactured there. 10,000 tons of pipes are at present on order there, and it is estimated that some 50,000 to 60,000 tons will be required before the waterworks are completed. The increase in plate and sheet may be accounted for by the demand for boiler-making and chimneys.

TINNED PLATES.—The great increase in the importation and deliveries of tinned plates is the result of the demand for the purpose of the making of tin cases for the transportation, into the interior, of kerosene arriving here in bulk, in tank steamers, and for army stores.

The above classes of iron generally come from the United Kingdom. Iron for blacksmith work comes from Belgium; wire nails from Germany. Basic steel from the Continent is tending to supplant English iron, the Continent having the advantage in the matter of prices.

IRON PRODUCTION IN JAPAN.—The production of iron in Japan, for the year 1892—the latest returns published—is estimated at about 19,500 tons, about one-sixth of which is from Government mines, the rest from private mines. The Kamaishi pig-iron, for castings, is good, but is too hard for purposes where machining is necessary, unless mixed freely with soft imported iron. The charcoal iron made in Yamaguchi is of excellent quality, but dear. No machine-rolled iron is yet made in Japan.

Of the LEAD imported, 40 per cent. comes from Australia; the whole of the TIN from the Straits.

MACHINERY.—The importation of spinning and other machinery, generally from England, last year reaches over £100,000 in value.

RAILWAY PLANT.—The construction of privately-owned railways, it was noted in last year's

report, had given an impulse to the demand for railway material; but some inquiries in this direction were withdrawn after the outbreak of the war. Rails were imported to the amount of 9,000 tons: these are of English make, and other material such as wheels, springs, buffers, sole bars are generally from England. Locomotives have been imported from England, but the American locomotive also finds extensive favour in Japan.

Japanese engine drivers, it is stated, find that the American engine can be made to steam more easily than its English rival, although this is, it would seem, at a considerably greater cost; for it is estimated that the American engine costs 10 per cent. more, and burns 30 per cent. more fuel than the English one, to do the same work.

Bridge work has been largely brought from England; Belgium and Germany, however, share in this import. The lighter bridge work supplied from Germany is more in favour for private lines.

About one-third of the money spent by this country on railway construction is spent abroad, and chiefly in England.

It would be in the interest of British makers who supply the above, as well as of those who supply electric-light material, and other manufactures of metals, that they had expert agents here on the spot with detailed specifications at hand when inquiry is made.

GOVERNMENT WANTS.—Large quantities of steel and iron, and also copper and iron sheets, have been supplied to the dockyards and arsenals from England and Scotland; and some special orders from France. Krupp successfully competes, for Germany, for shafting for those establishments, on account of price. Guns are supplied by both Canet and Armstrong.

ELECTRIC LIGHT material is supplied from Germany and America, telegraphic apparatus from England. Japan now makes dynamos for herself, with material coming from England. The telephones used are all made in this country. The supply of galvanised iron wire is mostly in the hands of German makers.

The import of SUGAR last year again shows a considerable increase in quantity. White sugars exhibit little variation in that respect, but there is a further marked development under the heading of browns. The increase consisted chiefly of direct importations from Manila. The prices ruling for the lower grades of sugar from the Hongkong refineries, which are classed in the returns as browns, induced these importations of Manila browns, which competed with the former on this market. Sugars of all grades ruled high in dollar price in the first six months of the year, but declined again subsequently. During the former period the prices for refined sugars were abnormally high, and this tended to throw the demand upon browns. Towards the end of the year prices closed weak.

Deliveries of sugar of all kinds may be estimated at about 77,279 tons, as against 75,000 tons in 1893, and 70,400 tons in 1892. Of the deliveries last year, 47,689 tons are given as brown, and 29,590 tons as white and refined.

Of the KEROSENE imported last year 14,684,060 gallons were American oil, and 10,498,300 gallons Russian. It was noted in last year's report that Russian oil had, in 1893, for the first time, secured the preponderance in import over American. Last year, however, the relative importations reverted to their former position. The total import has increased, American oil having done so by more than 50 per cent. On the other hand, the importation of Russian has decreased somewhat. Deliveries are given at 12,691,310 gallons of American, and 10,634,020 gallons of Russian, an increase in both sorts, but mainly in American. Average prices were higher last year than in 1893.

As indicative of the tendency of Japan to become a manufacturing country, an increase has a gain to be noted in the importation of Raw Cotton, Wool, Flax, Hemp, and Jute. Of other miscellaneous imports, among the most conspicuous are medicines and Chemicals, Dyes, and Paints. Great Britain and Germany share, in nearly equal proportions, the importation of Medicines and Chemicals. Germany for the most part supplies the Alizarine and Aniline dyes imported; and shares the importation of extract of Logwood with France; while Paint in oil comes from Great Britain; and Indigo mostly from British India. Germany has almost a monopoly of the importation of alcohol.

EXPORTS.

RAW SILK.—The export of raw silk in 1894 amounted to 7,295,944 lbs., valued at £4,131,267, as against 4,946,202 lbs., valued at £3,606,387, in 1893.

A large stock had remained over on the market from the previous year, and last year commenced with a brisk trade, principally for the United

States, with prices advancing, No. 1 Filatures being quoted at \$800 to \$820, exchange on London at four months being at 2s. 3½d. From then till March the market was comparatively quiet, although exchange was falling, but in that month a fair business was done for Europe, with an advance in prices. A moderate business continued later for both continents, with weakening prices, until the end of the season in June. The total supplies for the season 1893-94 reached 6,753,000 lbs., as against 6,426,700 lbs., in 1892-93.

It was not till the middle of July that much activity was shown in the new season's silk. Prices for No. 1 Filatures ranged from \$690 to \$730, with exchange at 2s. 1½d. The highest prices obtained for No. 1 Filatures were from \$800 to \$810 in August and October, exchange being then 2s. 3½d. and 2s. 2d. The highest figure for extras was \$840. Stocks at the end of the year were given at 1,533,300 lbs., making, together with the export, the available supplies for the season 6,386,700 lbs., as against 5,584,700 lbs. at the end of 1893.

Of the silk exported during the year about 3,152,000 lbs. were for the European, and 4,143,000 lbs. for the United States market.

The crop of last year was abundant. Supplies for the season 1894-95 exceed those of any previous one. The quality has generally been good, and shows an improvement on that of the previous season. Complaints are, however, still heard of irregularities in size, even in the best qualities, a defect which excites the prejudice of buyers in the consuming markets against Japan raws. Too much stress cannot be laid on the necessity for reellers to exercise a little more time and care in preparation.

WASTE SILK.—The total supplies of silk wastes for the whole season 1893-94 amounted to 5,518,000 lbs., and available supplies for the season 1894-95 up to the close of the year were estimated at 5,695,900 lbs., as against 4,440,000 lbs. for the corresponding period in 1893. In the early part of last year only a moderate business was done in wastes; but between September and the end of the year large transactions took place both in Noshi and Kibiso. The highest prices given for new season's Noshi were from \$130 to \$135 in September and October, and for Kibiso from \$100 to \$112.50 in the same months. The total exports during 1894 were 5,002,109 lbs.; stocks at the end of the year amounted to 2,467,000 lbs.

TEA.—The tea export of last year amounted to 29,946,528 lbs., as against 28,760,693 lbs. in 1893. On the whole, the quantity of tea exported from here does not vary greatly from year to year. The quality of the crop was superior to that of 1893, and silver prices have ruled from 20 per cent. to 25 per cent. higher than in that year. The fall in exchange, however, has admitted of the tea being laid down in the American market at lower gold prices. An impression appears to have prevailed there that the outbreak of the war between the two countries would interfere with the export of tea from both China and Japan. This has certainly not been the case as far as this country is concerned, but this notion, together with the more favourable conditions existing in the United States, contributed to stimulate the export during the autumn months. The result was that considerable profits were realised, and the causes above enumerated have made the year a good one for both exporters and producers. Stocks, here at the end of the year were low, mostly of inferior qualities, and very dear. The distribution of the export was:—To the United States, 22,836,000 lbs.; Canada, 6,313,000 lbs.; Europe and elsewhere, 797,000 lbs.

COPPER.—The export of copper from this port last year amounted to 8,158 tons, as against 7,375 tons in 1893, and an average of 10,060 tons per annum for the three years previous.

This decrease is much on a parallel with the decrease of the export from all Japan. This has fallen from 17,837 tons in 1892 to 15,121 tons in 1894. Very recent figures are not available to show the present production of copper in Japan, but, according to figures from the "Résumé Statistique," the production rose from 17,972 tons in 1890 to 20,463 tons in 1892, and there is reason to think that this increase continues. It will follow, therefore, that the increase in the production is absorbed for domestic purposes, and it is otherwise apparent that there has been an increased home demand for copper for the manufacture of telephone wire and other material. And still, owing to the low rates of exchange, the prices paid for copper for export during the year have been remunerative to producers. Market prices advanced during the early part of the year, but subsequently retrograded, remaining quiet until towards the close of the year. The quotations then were:—For refined ingots, \$22 to \$22.50 per picul (of 133½ lbs.); for unrefined slabs, \$21.50; and for tiles, \$22.50 to \$23.

SILK AND COTTON MANUFACTURES.—Under

the heading of "Miscellaneous exports" there appears a class of goods which have come to be of the highest importance. The exportation of piece-goods and other manufactures of silk and cotton from Japan is growing steadily. Last year the value of the export of silk manufactures amounted to the very respectable sum of £1,338,854. These manufactures include handkerchiefs, in which, by themselves, there is a decrease as compared with the export of the previous year; but silk piece goods, including the light material known as Habutae, have increased largely. Silk and cotton mixtures also figure in the returns to the value of over £5,000. Chinese piece goods amount in value to £103,527, not including the goods described in the returns as clothing apparel and raw materials thereof. The export of cotton yarn last year reached £19,875 in value.

FISH OIL was exported to the value of nearly £65,000. An interesting experiment was made last year in the export of this oil in tank steamers.

TOBACCO has risen again in quantity, figuring to the value of nearly £24,000. **STRAW PLAITS** have become an important article of export, while **LACQUER WARE** and **PORCELAIN** lost ground. **UMBRELLAS** again show an increase, while **MATCHES** show a falling off.

EXCHANGE.—The highest monthly average bank demand drawing rate of exchange on London was in January, when it stood at 2s. 3½d. By March it had fallen to 1s. 11½d. Recovering somewhat during the next eight months, it fell again, in December, to 1s. 11½d. This represents a decline of very nearly 12 per cent. in the course of the year. During the three years 1892-94 the decline has amounted to 36 per cent. The mean of the monthly average for last year was 2s. 1½d.

SHIPPING.

Last year there entered this port 2,031 merchant ships, of an aggregate of 2,002,248 tons. This shows a decrease of 128 vessels and 61,684 tons, as compared with the number and tonnage entered in 1893, equivalent to nearly 3 per cent. on the tonnage. The decrease is in ships under the Japanese flag. On the outbreak of the war with China a large part of the Japanese steamers which were engaged in the carrying trade of this port were requisitioned by the Government to serve as transports to the seat of war, and so were withdrawn from their ordinary occupation. Their place in the coast trade was largely taken by British, German, and Norwegian steamers, under charter to Japanese shipping companies. In this way as many as 25 British and 5 other steamers were under charter last year on the coast.

Under the British flag there is an increase of 120 vessels and 198,466 tons, or of 31 per cent. on the tonnage. The number of British vessels under Japanese charter entering the port amounted to 64 vessels, of an aggregate of 115,696 tons; after deducting this from the total increase in British shipping, there still remains an increase of 13 per cent. on the tonnage. Under the Japanese flag there is a decrease of 287 vessels and 288,125 tons, or of 24 per cent. on the tonnage. Under the German flag there is an increase of 21 ships and 24,615 tons, or of nearly 27 per cent. on the tonnage. There were 14 entries under the Norwegian flag. Under the United States flag there shows an increase of 11 ships and 1,153 tons, or of 1 per cent. on the tonnage. This increase is due mainly to arrivals of sealing vessels. Under the French flag the entries remain stationary.

During the year, and after the outbreak of the war, there were seventeen steamships, of an aggregate of 30,750 tons, sold and transferred at this port from the British to the Japanese flag. The total amount paid for those vessels amounted to £516,029. One other British steamer, a vessel of 1,940 tons, which was sold in London, was transferred here to the Japanese flag.

Two German steamers were sold and transferred at this port to the Japanese flag for a total of £27,354.

SILK FREIGHTS to European ports by Peninsular and Oriental, Messageries Maritimes, or North German Lloyd's steamers were \$6.80. per cwt. until towards the end of July, when they rose to \$8, which rate prevailed for the remaining months of the year. To New York by Pacific Mail and Canadian Pacific routes the rate throughout the year stood at c.4 per lb. gross; by Northern Pacific steamers and rail to New York, via Tacoma, from June, at c.3 per lb. gross.

TRA FREIGHTS by Canadian Pacific, Northern Pacific, Pacific Mail, and Occidental and Oriental steamers, and rail to Eastern cities of the United States and Canada varied from c.1½ per lb. gross to c.3 and c.1½ during the course of the year. The average rate by each of the three routes was the same for the twelve months. To San Francisco, Portland, and Vancouver, by the same steamer

lines, the rate stood at \$8 per ton throughout. By Suez Canal steamers to New York freights rose from £2 in the early part of the year to £2 15s. in April, and continued at that figure till December. By sail to New York the rates were c.1 per lb. in June, and c.½ from July onwards.

For general merchandise the rate to London by Peninsular and Oriental steamers was £1 15s. during the whole year; by Messageries Maritimes, £2 5s.; by North German Lloyd's steamers the rates were £2 2s. 6d.; by Ocean Steamship Company, £1 15s.; and by other canal steamers from £1 15s. to £2 during the year. Dead weight (copper) freight by Peninsular and Oriental steamers to London has been 7s. 6d. per 20 cwt. throughout.

GENERAL.

HARBOUR WORKS.—In consequence of the refusal of the Diet, in the early part of last summer, to grant the appropriation desired for the prosecution of the works on the breakwater these have, from July to February last, been practically at a standstill. During this suspension of the active work of construction, however, the Government has applied certain sums to the maintenance of the works, and the removal of the defective concrete blocks alluded to in last year's report. Votes of \$165,198 and \$144,123 have this year been passed, to cover the cost of the maintenance of the works, and for their future prosecution; and active operations have been resumed on them since February last, with some prospect of their being finished within another twelve-month.

CUSTOMS WAREHOUSES.—Further votes of \$89,886 and \$43,391 have similarly been passed for building expenses in connection with an extension of the customs warehouses, and the construction of the tramway connecting them with the iron pier.

The PIER has opened for use for the berthing of vessels.

Practically no progress has yet been made with construction of the graving docks referred to in a previous report.

The Japanese Population of the town of Yokohama on Dec. 31 amounted to 168,903 persons, and of the town of Kanagawa to 14,527, or 183,430 persons in all, an increase of 14,772 during the year 1894.

The Foreign Population of Yokohama, exclusive of Chinese, amounted, on the same date, to 1,613 persons, of whom 797 were British. This shows an increase during the twelve months of 8 persons in the general foreign population, and a decrease of 11 in the British by itself.

The Chinese population is returned at 1,173, showing a decrease of 2,152 on what it was twelve months before, numbers of Chinese having left for home on the outbreak of hostilities between the two countries.

The increase in British firms is mainly owing to the establishment here of a number of British Indian firms.

RAILWAY CONSTRUCTION.—In pursuance of the project of Government railway extension referred to in the annual trade report of this consulate for the year 1892, and in furtherance of private enterprise in the direction of the construction of other than Government lines, a series of new railway lines and extensions was sanctioned by the Diet in the month of May of last year. These include several lines or branches in the north-eastern portion of Japan which forms the country of which this is the port of foreign trade. According to the latest official railway report published—that, namely, of October of last year—there were then, 1,938½ miles of railway open to traffic, and 994½ miles under construction. Since then some of these extensions have been opened to traffic.

THE P. AND O. Co. v. TSUNE KIYIMA AND OTHERS.

Before the Judicial Committee of the Privy Council (Present—Lord Watson, Lord Macnaghten, and Sir Richard Couch), the appeal from an order of Her Britannic Majesty's Supreme Court for China and Japan, of April 23, 1894, reversing a decision of the Court for Japan, was decided on 20th July, when judgment was given for the P. and O. The Attorney General (Sir Richard Webster, Q.C.), Mr. Findlay, Q.C., Mr. E. H. Pollard, and Mr. J. W. McCarthy were counsel for the appellants; the respondents did not enter appearance on the appeal. The case for the appellants was argued in May last.

Lord Macnaghten, in delivering their Lordships' judgment, said, on Nov. 30, 1892, a collision occurred between the *Chishima*, an Imperial Japanese cruiser, and the *Ravenna*, a steamship belonging to the appellants. The *Chishima* sank

immediately with great loss of life. On Nov. 29, 1893, a suit was commenced against the appellants by petition in Her Majesty's Court for Japan on behalf of sixty-two different persons, or groups of persons, who were all joined as co-plaintiffs. The petition alleged that the disaster was caused solely by the negligence of the servants of the appellants. And each of the persons and groups of persons who together constituted the plaintiffs claimed to represent some one of the seamen who were drowned and to be entitled separately to damages for the injury resulting from his death. On being served with the petition, the appellants applied that the suit should be dismissed with costs, on the ground that distinct causes of action were improperly joined. The application was granted, but the order was discharged with costs by the Supreme Court of China and Japan. As the appeal to Her Majesty in Council from that decision was heard *ex parte* the respondents were not represented at the Bar, but their case was very fully and ably stated in a written argument addressed to the Supreme Court, which left nothing more to be said on their behalf. His Lordship here quoted from the rules of Her Majesty's Courts in China and Japan, and came to the conclusion that such a suit as the present was not and never was maintainable in England. The result was that the arguments on which the respondents succeeded before the Supreme Court were now turned against them. They were compelled to fall back on the Rules of the Courts of China and Japan, and they were met with this difficulty, that nothing was to be found in those Rules to warrant the joinder in one suit of different and distinct causes of action not being causes of action by and against the same parties. There was no authority there express or implied for so great a departure from settled practice. The language of Rule 39 was no doubt, in form, permissive. The reason why that form was adopted was not perhaps quite clear. It might have been intended to leave room for the introduction of any change of procedure that might be sanctioned in England, or it might have been used merely to emphasise the point that a suit wrongly constituted by the joinder of distinct causes of action by different persons might be dismissed on the application of any defendant without regard to the nature of his interest in the litigation. Whatever the true explanation might be, it was in the opinion of their Lordships impossible to construe the language of the rule with regard to the dismissal of such suits as impliedly authorising their institution. Their Lordships would, therefore, humbly advise Her Majesty that the appeal ought to be allowed with costs and the suit dismissed with costs, in the Supreme Court and the Court of First Instance.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 9.

The yacht *Defender* has beaten the *Valkyrie* in the first race.

Raconteur has been scratched for the Doncaster St. Leger.

London, September 10.

The Porte has notified the Embassies that various concessions have been made in Armenia.

The yacht *Valkyrie* won the second race from the *Defender*.

Beckhampton has been scratched for the St. Leger.

London, September 11.

The result of the Doncaster St. Leger, run to-day, was as follows:—

Sir Visto	1
Telescope	2
Butterfly	3

The owners of the American yacht *Defender* having entered a protest against the *Valkyrie* on the ground of a collision in the course of the second event, the race has been awarded to the *Defender*.

(FROM THE "N.C. DAILY NEWS.")

Foochow, August 30, 9.15 p.m.

Serious news comes from Hokchiang near Hinghua, of an attack on Chinese Christians. Up to Wednesday rioters had destroyed eight houses, first plundering them of everything they contained. The cattle of the Christians were also carried away, and some of the Christians were wounded, one not being expected to live. The magistrate was appealed to five times, but refused to act.

The riot was the outcome of a proclamation with a double meaning, issued by the magistrate with reference to the Kucheng massacre, inciting to a rising against Christians. Worse is apprehended.

Foochow, 2nd Sept., 8.45 p.m.

The latest news from Hokchiang is that no steps have been taken by the authorities to check the raid on the native Christians.

The latest news from Kucheng is that twenty-five men had been convicted up to Friday night.

H.M.S. *Linnet* is leaving for the South, and will be absent ten days.

Taipei, September 5.

The greatest storm known for years is raging here. The floods are out, and much damage has been done.

London, September 5.

Sir Arthur Elibank Havelock, K.C.M.G., Governor of Ceylon, succeeds Lord Wenlock as Governor of Madras.

The Congo Free State has forwarded to Lord Salisbury full papers regarding the hanging of an English trader named Stores by the Congo officers on the charge of selling arms to the natives.

General Charles B. Knowles, C.B., has been appointed Commander-in-Chief of the forces in Egypt.

London, September 6.

An anarchist has been caught in Paris in the act of igniting a bomb at Rothschild's Bank.

The Hon. George N. Curzon, Under-Secretary for Foreign Affairs, has announced that papers have been produced which show that the case of the trader Stokes is very serious.

Foochow, Sept. 6, 8.40 p.m.

It is reported that Hsu Hsing-i, Taotai, has been given equal rank with the Viceroy, and that he goes to Kucheng with full powers.

All the known leaders of the massacre are now caught.

(FROM THE "HONGKONG DAILY PRESS.")

London, August 28.

The *Journal de Débats* contends that the British occupation of Mongsin is in absolute disregard to the rights and interests of France.

The Porte has cabled to its Envoys at Paris and St. Petersburg, complaining bitterly of the discourteous attitude taken by Great Britain in re the Armenian Reforms, which, it states, is derogatory to the prestige of the Sultan. It appeals to France and Russia to induce Great Britain to modify her attitude. The replies from France and Russia are unfavourable to Turkey.

London, August 30.

Lord Salisbury stated in the House of Lords that negotiations were proceeding between Great Britain and France regarding both banks of the Meikong, that the tendency of both France and China was to underrate British claims and rights, but that the British and French Cabinets were discussing all questions in an amicable spirit.

Mr. Curzon stated in the House that he believed the Foreign Office would not only maintain British dignity and prestige abroad, but that it would do its best to promote the commercial interests of the country.

(FROM TONKIN PAPERS.)

Paris, August 18.

The Council, which met yesterday at the Elysée, decided to denounce the treaty of commerce between Italy and Tunis.

Paris, August 23.

The Italian press is bitter in its comments on the subject of the Tunisian treaty.

Paris, August 18.

General Zurlinden announces that the French troops in Madagascar are advancing. The sick do not exceed one-tenth of the effective force.

Paris, August 19.

The Northern Squadron has been reviewed at Havre by President Faure.

The Emperor William has laid the first stone of the monument to his grandfather. He eulogised the founders of German union.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 193.

| 3—Q takes P, mate | |
| | 1—P takes R |
| 2—Q to K 4 ch. | 2—Kt takes Q |
| 2—B takes P, mate | |

with other variations.

Correct answers from Shogi, J.D., Digamma, W.D.C., Kr., E.D., E. J. King, and W.H.S.

PROBLEM No. 195.

By P. G. L. FOTHERGILL.

BLACK.

WHITE.

White to play and mate in three moves.

A splendid-contestedly correspondence game between the village of Brandford and the capital of the Orange State.

GAME No. 339.

- | | |
|---------------------------------|--------------------|
| WHITE. | BLACK. |
| Brandford. | Bloemfontein. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—B to B 4 |
| 4—Q to K 2 | 4—P to Q 3 (a) |
| 5—P to Q B 3 | 5—Kt to K 2 |
| 6—P to Q R 4 | 6—P to Q R 4 |
| 7—Kt to Q R 3 | 7—Castles |
| 8—Kt to K Kt 5 (b) | 8—P to Q 4 |
| 9—P takes P | 9—Kt takes P |
| 10—Kt takes R P (c) | 10—Kt to K B 5 (d) |
| 11—Q to K 4 | 11—B takes P ch |
| 12—K to B sq. (e) | 12—R to K sq. |
| 13—P to Q 4 | 13—B to R 5 |
| 14—P to K Kt 3 | 14—P to K Kt 3 |
| 15—B takes Kt (f) | 15—B to B 4 |
| 16—Q to Q 5 | 16—B to Q 6 ch. |
| 17—K to Kt 2 | 17—B takes B |
| 18—Q takes B | 18—P takes B |
| 19—Q R to K B sq. | 19—R to K 5 |
| 20—P takes B | 20—Kt to K 4 |
| 21—P takes Kt (g) | 21—R takes Q |
| 22—Kt to B 6 ch. | 22—K to Kt 2 |
| 23—Kt takes R | 23—Q to Q 6 |
| 24—P to Q Kt 3 | 24—Q to B 7 ch. |
| 25—R to B 2 | 25—Q takes Kt P |
| 26—R takes P | 26—Q to B 7 ch. |
| 27—K to B 3 | 27—Q takes B P ch. |
| 28—Kt to K 3 | 28—Q takes K P |
| 29—P to K R 5 (h) | 29—R to R 3 |
| 30—P to R 6 ch. | 30—K to R sq. |
| 31—Kt (K 3) to Kt 4 | 31—Q to Q B 4 |
| 32—R to K sq. | 32—R to K 3 |
| 33—R takes R | 33—B P takes R |
| 34—R to K 4 | 34—Q to K B 4 ch. |
| 35—K to Kt 3 | 35—P to Q B 4 |
| 36—K to R 4 | 36—P to Q Kt 4 |
| 37—P takes P and White wins (i) | |

- (a) Or Kt to K B 3 now. If then 5, B takes P ch, K takes B; 6, Q to B 4 ch, P to Q 4; 7, Q takes B, Kt takes P with a fine game.
- (b) In some way or other this Kt is intended to be sacrificed.
- (c) It is not likely White saw all the effect of this move.
- (d) Not K takes Kt at once because of the reply Q to Q 3 or K 4 ch.
- (e) Again, not K takes B, for then Q to R 5 ch regains the piece.
- (f) And now P takes Kt would be bad on account of B to R 6 ch.
- (g) A very elegant and apparently sound Q sacrifice, which reflects infinite credit on the winning side. See also the next move.
- (h) This move is also pretty. If P takes P, R to Kt sq ch wins Q or R, as can easily be worked out.
- (i) Black, it will be found, has no good move left. White must soon get the R through, and one ch will be fatal.

GAME No. 340.

Play in the match, City v. Metropolitan:—

- | | |
|------------------|----------------------|
| WHITE. | BLACK. |
| Dr. S. F. Smith. | R. Loman. |
| 1—P to Q 4 | 1—P to Q 4 |
| 2—B to B 4 | 2—P to Q B 4 |
| 3—B takes Kt | 3—R takes B |
| 4—P takes P | 4—P to K 3 |
| 5—P to K 4 | 5—B takes P (a) |
| 6—B to Kt 5 ch. | 6—K to B sq. |
| 7—Q to K 2 | 7—Q to R 4 ch |
| 8—P to B 3 | 8—P to Q R 3 |
| 9—B to Q 3 | 9—P takes P |
| 10—B takes K P | 10—Q to Kt 3 |
| 11—Kt to K B 3 | 11—Kt to K B 3 |
| 12—B to Q 3 | 12—B to Q 2 |
| 13—Castles | 13—K to K 2 |
| 14—P to Q Kt 4 | 14—B to Q 3 |
| 15—Kt to R 3 | 15—Q to B 2 (b) |
| 16—Q to Kt 2 (c) | 16—B to B 3 (d) |
| 17—Kt to Q 4 | 17—B takes P ch. |
| 18—K to R sq. | 18—B to B 5 |
| 19—K R to K sq. | 19—K R to Q sq. |
| 20—Q R to Q sq. | 20—K to B sq. (e) |
| 21—Kt takes B | 21—Q takes Kt |
| 22—P to B 4 | 22—P to Q Kt 4 |
| 23—P takes P | 23—Q to Q 4 |
| 24—B to K 2 (f) | 24—Q to K Kt 4 |
| 25—Q to Kt 3 | 25—Q to R 5 ch. |
| 26—Q to R 3 | 26—Q takes B P (g) |
| 27—Q to K B 3 | 27—Q to R 5 ch. |
| 28—K to Kt sq. | 28—B to Kt 6 & wins. |

- (a) Supposing 5—, P takes P, then 6, B to Kt 5 ch, B to Q 2; 7, B takes B ch, Q takes B; 8, Q takes Q ch, K takes Q; 9, Kt to Q B 3. White can afterwards castle Q R with effect.
- (b) Black here makes a move which has a good deal more point than the mere attack on the weak Q B P.
- (c) A move of apparent necessity, but somewhat awkward.
- (d) This move seems to win something in any case, and it is not easy to find a good reply. It is curious how from this point all the game appears to Black's advantage.
- (e) White may now be said to have castled, and his king is in perfect safety.
- (f) A poor defence. Q to K 2 was perhaps better. It is pretty clear that the threatened ch must be prevented.
- (g) A simple, but effective way of winning. The latter part of this game is finely played by Mr. Loman.

GAME No. 341.

The following highly original game has lately been contested by correspondence between Messrs. Nielsen and others of Copenhagen and some London amateurs. It is, in many respects, a splendid study:—

DANISH GAMBIT.

- | | |
|------------------------------|----------------------|
| WHITE. | BLACK. |
| Denmark. | London. |
| 1—P to K 4 | 1—P to K 4 |
| 2—P to Q 4 | 2—P takes P |
| 3—P to Q B 3 | 3—P takes P |
| 4—B to B 4 | 4—P takes P (a) |
| 5—B takes P | 5—Kt to K R 3 (b) |
| 6—Kt to Q B 3 | 6—P to Q Kt 3 |
| 7—Kt to K B 3 | 7—B to Kt 2 |
| 8—Q to B 2 | 8—Kt to Q R 3 (b) |
| 9—Castles Q R | 9—Kt to Q B 4 |
| 10—Kt to Q 5 | 10—Kt to K 3 |
| 11—Kt to K 5 | 11—B to Q 3 |
| 12—P to K B 4 | 12—B takes K Kt (c) |
| 13—Q B takes B | 13—Castles |
| 14—B to Q Kt 2 (d) | 14—B takes Kt (c) |
| 15—B takes B | 15—R to Q B sq. |
| 16—P to B 5 | 16—P to Q B 3 |
| 17—B to B 4 | 17—Q to Kt 4 ch (e) |
| 18—K to Kt sq. | 18—Kt to Q B 4 |
| 19—P to K Kt 4 | 19—Kt takes Kt P (f) |
| 20—K R to K Kt sq. | 20—K R to K sq. (g) |
| 21—P to K 5 (h) | 21—P to K R 3 (f) |
| 22—P to B 6 (h) | 22—P takes P |
| 23—P to K R 3 | 23—P to K B 4 |
| 24—Q R to K B sq. | 24—Kt to K 5 |
| 25—R takes Kt | 25—P takes R |
| 26—B takes P ch. | 26—K to B sq. |
| 27—Q takes Kt | 27—K to K 2 |
| 28—P to K 6 | 28—Q to Q Kt 4 |
| 29—P takes Q P ch. | 29—K takes P |
| 30—R to Q sq. ch. | 30—K to B 2 |
| 31—B takes R and White wins. | |

- (a) Can the third pawn be safely taken? Some answer to this question is here presented.
- (b) An original attempt is made to combat the evils of the attack.
- (c) These moves occupied much attention. The captures were bad, as both bishops went; but it is a nice point if there was anything better?
- (d) It is not sound to take the B P at any time; and now White's B's are a tremendous force.
- (e) Necessary now: otherwise White plays P to B 6 and wins?
- (f) Each move from this point at least presents a problem of some difficulty but of rare interest. The capture is bad, but so is any alternative. It was intended to give up the Kt for pawns.
- (g) Intending, if P to K R 3 at once, to reply Kt to K 6 presently.
- (h) The pawns are splendidly played by the Danish opponents, as indeed is the whole game. It will afford earnest students a rich treat. We cannot note a tithe of the salient points and the countless variations presented.

GAME No. 342.

FROM GAMBIT.

- | | |
|--------------|-------------|
| WHITE. | BLACK. |
| V. Kosek. | J. Sfastny. |
| 1—P to K B 4 | 1—P to K 4 |
| 2—P takes P | 2—P to Q 3 |

- | | |
|------------------------|--------------------|
| 3—Kt to K B 3 (a) | 3—P takes P |
| 4—P to K 4 | 4—B to Q B 4 |
| 5—B to Q B 4 | 5—Kt to K B 3 |
| 6—P to Q 4 (b) | 6—P takes P |
| 7—Castles | 7—P to K R 3 |
| 8—K to R sq. | 8—Castles |
| 9—Kt to K 5 | 9—B to K 3 |
| 10—B takes B | 10—P takes B |
| 11—Kt to Kt 6 (c) | 11—R to K B 2 |
| 12—P to K 5 | 12—Kt to Q 4 |
| 13—R takes R | 13—K takes R |
| 14—Q to R 5 | 14—K to Kt sq. |
| 15—B takes R P (c) | 15—P takes B |
| 16—Q takes P | 16—Kt to Q B 3 |
| 17—Kt to Q 2 | 17—Kt to K B 3 (d) |
| 18—R to K B sq. | 18—Kt to K R 2 |
| 19—Kt to K 4 | 19—B to K 2 |
| 20—R to B 7 (e) | 20—K takes R |
| 21—Q takes Kt ch. | 21—K to K sq. |
| 22—Kt takes B | 22—Kt takes P (f) |
| 23—Kt to B 6 ch. | 23—K to B sq. |
| 24—Kt to R 5 (g) | 24—K to K sq. |
| 25—Q to Kt 7 and wins. | |

- (a) Or P takes P, to which Black replies with B takes P and has a grand attacking game in several ways.
- (b) Forced now, as various strong attacks are threatened by Kt to Kt 5, &c.
- (c) The attack White obtains is worthy of special attention, and would have succeeded easily in play over the board.
- (d) This looks a little like desperation, but is the only saving clause. Indeed, it would relieve Black if White would at once take the Kt.
- (e) A charming position and White plays splendid chess.
- (f) If, instead, Q takes Kt, 23, Kt to B 6 ch, K to Q sq; 24, Q to Kt 8 ch and wins. Or, if Kt takes Kt, then, 23, Kt to B 6 ch, K to B sq; 24, P to K Kt 4, P to Q 6; 25, P to Kt 5, P to Q 7; 26, Q to R 8 ch, Kt to B 2; 27, P to Kt 6 ch, K takes P (if Kt takes, mate follows in three by 27, Q to R 7 ch, K to B sq; 28, Q to Kt 8 ch, K to K 2; 29, Q to Kt 7 mate); 28, Q to R 7 ch, K to Kt 4; 29, P to R 4 ch, K to B 5; 30, Q to K 4 ch, K to Kt 6; 31, Q to K 3 ch, K takes P; 32, Q to B 4 ch, K to R 6; 33, Q to Kt 4, mate. Simply magnificent.
- (g) Very fine play. If now Q takes Kt, then 25, Q to R 8 ch, K to B 2; 26, Q to Kt 7 ch, K to K sq; 27, Kt to B 6 ch, and wins in a few moves.

GAME No. 343.

Played in the match at Montreal:—

- | | |
|----------------|---------------------------|
| WHITE. | BLACK. |
| Gossip. | Pollock. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to Q B 3 | 2—B to B 4 |
| 3—P to K B 4 | 3—P to Q 3 |
| 4—Kt to K B 3 | 4—Kt to K B 3 |
| 5—B to B 4 | 5—Kt to B 3 |
| 6—P to Q 3 | 6—P to Q R 3 |
| 7—Q to K 2 | 7—B to K Kt 5 |
| 8—B to K 3 | 8—P takes P |
| 9—B takes B | 9—P takes B |
| 10—Q to K B 2 | 10—Castles |
| 11—Kt to K 2 | 11—Q to K 2 |
| 12—Castles K R | 12—B takes Kt |
| 13—P takes B | 13—Kt to K R 4 |
| 14—P to Q R 3 | 14—Q R to Q sq. |
| 15—Kt to B 3 | 15—R to Q 3 |
| 16—Kt to Q 5 | 16—Q to Kt 4 ch. |
| 17—Q to Kt 2 | 17—Q to R 5 |
| 18—K to R sq. | 18—R to Kt 3 |
| 19—Q takes R | 19—R P takes Q, and wins. |

GAME No. 344.

TWO KNIGHTS' DEFENCE.

- | | |
|------------------|------------------------|
| WHITE. | BLACK. |
| Allies. | J. Sfastny. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—Kt to B 3 |
| 4—P to Q 4 (a) | 4—P takes P |
| 5—P to R 5 | 5—P to Q 4 (b) |
| 6—B to Q Kt 5 | 6—Kt to K 5 |
| 7—Castles | 7—B to Q B 4 |
| 8—Kt takes Q P | 8—Q to R 5 |
| 9—P to Q B 3 (c) | 9—Castles |
| 10—B takes Kt | 10—P takes B |
| 11—B to K 3 | 11—B to R 3 |
| 12—R to K sq. | 12—P to K B 4 (d) |
| 13—P to K Kt 3 | 13—Q to R 6 |
| 14—Q to B 2 | 14—B takes Kt |
| 15—P takes B | 15—P to B 5 |
| 16—B takes P | 16—R takes B |
| 17—P takes R | 17—B to Q 6 |
| 18—Q to Q sq. | 18—R to K B sq. |
| 19—Kt to Q 2 (e) | 19—Kt takes K B P (f) |
| 20—K takes Kt | 20—R takes P ch. |
| 21—Kt to B 3 | 21—B to B 7 & wins (g) |

- (a) The alternative here is, of course, Kt to Kt 5, with all the well-known variations resulting therefrom.
- (b) By other lines of play Black gets a bad game. The freedom of action obtained by P to Q 4 is obvious.
- (c) Kt takes Kt is promising, but is answered by 9—, B takes P ch; 10, R takes B, Q takes R ch; 11, K to R sq, B to K Kt 5; and now White must lose in any case, his disch amounting to little.
- (d) This move, coupled with the sacrifice at move 16, does much to carry the day.
- (e) Q to R 5, with complications all in Black's favour, would be the reply to the apparently forcible R to K 3.
- (f) After R to K B sq, this sacrifice is easily indicated, but the finish of the game, move for move, is fine.
- (g) The Q must go to K 2 to protect the Kt; when Black replies B to K 5, and must win.
- Correspondence chess has often been voted dull. No such term can be applied here. Messrs. J. Benes and Vaclav Dobias conducted the White forces.

GAME No. 345. KING'S GAMBIT.

WHITE. Amateur.	BLACK. Mackenzie.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—P to Q 4 (a)	4—P to Kt 5
5—Kt to K 5 (b)	5—Q to R 5 ch.
6—K to Q 2	6—Q to B 7 ch.
7—K to B 3	7—Kt to Q B 3
8—P to Q R 3	8—P to Q 3
9—Kt takes Kt	9—P takes Kt
10—B to Q 3	10—R to Kt sq.
11—R to B sq. (c)	11—Q takes Q P ch. (d)
12—K takes Q	12—B to Kt 2 ch.
13—P to K 5	13—B takes P ch.
14—K to K 4	14—Kt to B 3, mate

(a) White's fourth move is the beginning of his troubles P to K R 4 or B to B 4 should have been played.

(b) Having played P to Q 4 last move, the proper game is to abandon the Kt, playing for attack by B to B 4.

(c) Black's clever reply was of course a surprise. Otherwise, now, P to Q Kt 4 was better.

(d) In the celebrated master's well-known style. There is no reply.

THE HASTINGS CONGRESS.

From a telegram published in the *North China Daily News* we see that Pillsbury, the young American player, has won the first prize. Born in Boston about 25 years ago he has been celebrated in the American chess world for the last two or three years. We believe this is his first visit to Europe; and he certainly has achieved fame by his success in such a contest.

We transcribe from the *San Francisco Chronicle* some interesting paragraphs written about the 20th of last month when the tourney was at its height. We also give the score as it stood at the end of the eleventh round. We expect to publish at least two of the games next week. We note (*en passant*) that Lasker won his game with Steinitz thus emphasizing his Championship victory of a year ago.

"Young Harry Pillsbury, representing the Brooklyn Chess Club, still continues to add to his score of won games by defeating his opponents in nearly every instance. The present finds him along with the veteran master, Tschigorin, at the top of the score. The Brooklyn man has gained for himself the respect of all the players engaged in the tourney, and has inspired a wholesome dread of encountering him, which of itself should prove an advantage to his score.

"Of all the great masters, Tschigorin (Russia) seems to be in the finest form. Gunsberg and Steinitz have so far found this tournament anything but a bed of roses; and they still remain among the tail-enders. The latter player, who started so well, met a severe setback by losing in succession to Pollock, Pillsbury, and Bird.

"The rating of several of the masters is as follows.—

Steinitz is the most theoretical.
Blackburn is the most brilliant.
Tschigorin, the most nervy.
Gunsberg, the most sly.
Albin, the most original.
Tarrasch, the most solid.
Lasker, the most keen.
The rest, most anything."

Players.	Won.	Lost.
Albin	4	6
Bardeleben	7½	3½
Bird	7	4
Blackburne	4	6
Butt	3½	7½
Gunsberg	4	7
Janowski	4½	6½
Lasker	8½	2½
Marco	4	7
Mason	5	6
Mieses	3½	7½
Pillsbury	9½	1½
Pollock	4½	6½
Schiffers	6½	4½
Schlechter	5½	5½
Steinitz	6½	4½
Tarrasch	5½	5½
Teichmann	5½	5½
Tinsley	5	6
Tschigorin	9½	1½

For Canada, &c.	per C. P. R. Co.	Friday, Oct. 11th.

LATEST COMMERCIAL.

IMPORTS.

The good feeling continues and transactions will grow in extent and number as the autumn sets in, if a tight money market does not cramp the dealers. With the huge amount of dollars which has been poured into the country in return for Silk the last two months, there should be plenty of coin to spend in Imports. But a fragment of a cloud appears on the horizon when the Government talk about another issue of War-loan-bonds to carry on the Formosa campaign. Let us hope for the best.

COTTON PIECE GOODS.

	PER YARD.	PER PIECE.

RECIPIENTS.

Rather a colourless week. There is of course some business doing, but no special stir in the trade. Unlike the soft goods trade, there is no help from improved values on the home side, and exchange keeps fairly steady.

Flat Bars, 4 inch	PER POUND.
Flat Bars, 1 inch	\$3.15 to 3.20
Round and square up to 4 inch	3.20 to 3.25
Iron Plates, assorted	3.15 to 3.25
Sheet Iron	3.40 to 3.50
Galvanized iron sheets	4.30 to 4.50
Wire Nails, assorted	8.50 to 9.00
Pin Plates, per box	5.50 to 5.90
Pig Iron, No. 3	5.25 to 5.50
Pig Iron, No. 4	1.60 to 1.65

KEROSENE.

Not much change in the situation at present. Holders have only to sit tight and there need be no anxiety as to the future. Native dealers ascribe the recent fall in values to the keen competition between the two principal importers! A few months ago it was gravely announced that these very same firms had made a close "combine" to raise prices!

American	\$2.05 to 2.10
Russian	2.00 to 2.05
Langkat	1.90

SUGAR.

Brown—Market still very unsatisfactory and buyers look for still lower prices. White—Steady trade and prices well maintained.

Brown Takao	PER POUND.
Brown Manila	\$3.70 to 3.75
Brown Daitong (New)	4.20 to 4.40
Brown Canton	3.10 to 3.20
White Java and Penang	3.20 to 3.70
White Refined	6.10 to 6.20
	6.25 to 9.50

EXPORTS.

RAW SILK.

Much less doing: and in some instances holders have given way a little in price rather than lose a buyer. Our quotations are more or less nominal, with the turn against buyers at the close, as a speculative movement has apparently set in.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 den.	Nom \$930 to 940
Filatures—Extra 13/15, 14/16 deniers	930 to 940
Filatures—No. 1, 10/13 deniers	Nom. 910 to 920
Filatures—No. 1, 13/15, 14/16 den.	910 to 920
Filatures—No. 1, 10/14 deniers	870 to 880
Filatures—No. 1, 13/16, 14/17 den.	870 to 880
Filatures—No. 2, 10/15 deniers	840 to 850
Filatures—No. 2, 13/18 deniers	840 to 850
Re-reels—No. 1, 13/15, 14/16 deniers	850 to 860
Re-reels—No. 1, 13/16, 14/17 deniers	800 to 810
Re-reels—No. 2, 14/18 deniers	760 to 770
Re-reels—No. 2, 14/18 deniers	740 to 750
Re-reels—No. 3, 14/20 deniers	720 to 730
Kakedas—Extra	820 to 830
Kakedas—No. 1	800 to 810
Kakedas—No. 1	780 to 790
Kakedas—No. 2	760 to 770
Kakedas—No. 2	720 to 730

WASTE SILK.

Some business doing: but holders will have to adopt an easier tone before large transactions are entertained by the regular shippers.

QUOTATIONS.—(NEW WASTE.)

Noshi—Filature, Best	\$130 to 135
Noshi—Filature, Good	120 to 125
Noshi—Oshu, Best	130 to 135
Noshi—Oshu, Good	120 to 125
Noshi—Oshu, Medium	110 to 115
Noshi—Shinshu, Best	80 to 85

Noshi—Shinshu, Good	70 to 75
Noshi—Bushu, Best	140 to 145
Noshi—Bushu, Good	130 to 135
Noshi—Bushu, Medium	120 to 125
Noshi—Joshu, Good	70 to 75
Noshi—Joshu, Fair	60 to 65
Kibiso—Filature, Best	100 to 105
Kibiso—Filature, Seconds	90 to 95

TEA.

Rather less doing this week, but prices remain without change. It is rumoured that early shipments of this season are showing losses at home: but this requires confirmation.

Choicest	PER PICUL.
Choice	\$30 to \$32

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

August 3, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPTOMISED DEBATES. Translations of the Bills discussed, Budgets, Speeches of the Ministers of State in full, Questions put and the answers of the Government, and the Legislative Work of the Session.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 21ST, 1895.

SUMMARY OF NEWS.

THE health of the Crown Prince is steadily improving.

COUNT GOTÔ has purchased a glass factory at Tamachi Ichome, Shiba, Tokyo.

MR. HASHIGUCHI NAOYEMON has been appointed Japanese Consul at Ninsen, Korea.

H.I.H. PRINCE YAMASHINA KIKUMARU was married to the Lady Nori-ko on the 14th inst.

YOKOHAMA's cricket week commences on Oct. 14. Shanghai and Kobe will both send teams.

THE new Chinese Minister, H.E. Yu Keng, has been visiting the foreign Ministers during the week.

MR. YAMAGUCHI ICHIJÎ, Secretary of the Home Department, is appointed Chief of the Kumamoto Police.

THIRTY-TWO houses were destroyed by fire at Ohara-cho, Tsukui-gun, Kanagawa Prefecture, on the 7th inst.

LIEUT. DON CARLOS INIGOY GOROZTIZA has been appointed a naval attaché at the Spanish Legation in Japan.

TRAINING for the Autumn Race Meeting commenced on Monday. The fine weather of the

last few days has attracted goodly gatherings to the Race-course in the early mornings.

H.I.H. PRINCESS FUMI-NO-MIYA, who has been staying at Miyano-shita for some time, returned to Tokyo on the 15th inst.

INSPECTOR KAWADA of the Yokohama Settlement Police has been promoted Superintendent of Ishikawa Police Station.

THE anniversary of the battle of the Yalu has been universally celebrated at all naval stations and ports in Japan this week.

ABOUT 2,000 *kwamme* (one *kwamme*=about 8½ lbs.) of cocoons were burnt during the fire at Yata, Nagoya, on the 7th inst.

THE *Chishima-Ravenna* case has been compromised, the P. & O. Company agreeing to pay £10,000 and all costs.

ONLY three of Lieut. Gunji's *Chishima* settlers now remain alive on the northern islands: their condition is said to be very pitiable.

It is stated that the leading promoters of the two proposed electric railway companies in Yokohama have agreed to amalgamate.

A MILE swimming race in the open sea was won on Wednesday afternoon by R. C. Ross, who covered the distance in 1h. 6m. 13sec.

THE N.Y.K. steamer *Asamor* collided with the German steamer *Donau* in Kobe harbour on Tuesday, and considerable damage was done.

SIR NICHOLAS O'CONOR has been promoted to Ambassador to the Court of St. Petersburg. His successor at Pekin has not been made public.

THE body of the late second officer of the *Belgic* was found floating in the sea last Saturday, and has since been buried in Yokohama cemetery.

MR. SOYESHIMA MICHITADA, a Chamberlain of H.I.H. the Crown Prince, has been appointed a Master of Ceremonies in the Imperial Household.

THE total receipts of the Government railways during August last was yen 573,471, an increase of yen 68,327 against the corresponding month of the previous year.

THE storms of the 4th, 5th, and 6th inst., did great damage off the coast of Nagasaki Prefecture and in Korea. Many lives were lost along the banks of the Nak-dong-gang.

DURING the week several companies of gendarmes have left for Formosa. The reinforcements of troops leave Ujina for the south the beginning of next week.

THE "boys" engaged in the Club Hotel, Yokohama, struck work shortly before dinner on Monday evening. Dissatisfaction with the new management was the reason for the strike.

TSOY TING-FANG, commander of the Chinese torpedo squadron, who was captured at Weihai-wei, and kept at Osaka, escaped to America before the Chinese prisoners were sent home.

THE *Naigai Tsushin*, *Kokkai*, *Chuo Shimbun*, *Yorozu Choho*, and *Kaika Shimbun*, of Tokyo; *Niigata Shimbun*, of Niigata and the *Shin-mikawa*, of Aichi, were suspended by the Authorities on the 13th inst. Several of these papers have since been released from the ban.

PRINCE KUJO entertained the members of the Imperial family on the 16th inst. at his residence

at Akasaka to celebrate the marriage of his daughter, the Lady Nori-ko, with H.I.H. Prince Yamashina Kikumaro.

THE Directors of the Japan Cotton Spinners' Union have addressed all the Commercial Chambers in the country asking for their support in the agitation to abolish the import tax on cotton.

FROM the commencement of the year up to August 31st, 21,314 Japanese were attacked by dysentery of whom 4,228 died. Compared with the corresponding period of the previous year the figures show a decrease of 60,198 patients and 12,748 deaths.

REUTER telegraphs:—The Earl of Dunraven, being unable to obtain the necessary guarantees that the *Valkyrie* would have a clear course in the third race, merely crossed the line with the *Defender*, and then stopped leaving the *Defender* to finish the course alone. The *Valkyrie* returns to England forthwith. The Earl of Dunraven declares that he will never race the *Valkyrie* in American waters again. The Right Hon. Sir Joseph Renals, Lord Mayor of London, and the Lady Mayoress, received a most cordial public welcome in Paris, on their way to the Bordeaux Exhibition. Their official visit is exciting interest in France. The U.S. Government has resolved to demand a separate enquiry with regard to the Chêngtu riots. The Porte has notified the Embassies of various concessions regarding Armenia. The Emperor Francis Joseph is attending the German manoeuvres which are to be held in the presence of Emperor William II, and this is regarded as a matter of political importance. Sir Joseph West Ridgeway, K.C.B., K.C.S.I., has been appointed Governor of Ceylon. A rescript by the Emperor of Germany appeals to the people against enemies knowing no Fatherland, who in times of national enthusiasm like the Sedan fêtes, revile the memory of their great Emperor, William I.

THE Import trade continues much as last reported, there being now plenty of business in the principal lines. There have been good sales of Yarns at hardening prices, besides dealings for early arrival. Shirtings continue to improve in value, 9lb. being mostly sought after. There has been some life infused into the Fancy Cottons and Woollen trades, and there is a promising outlook for these goods. There is a more general enquiry for Metals of all kinds, and Iron of most sorts is expected to be dearer as the trade revives. There is no change to note in Kerosene, the market being quiet at late rates. Dealers only buy for immediate requirements, but deliveries continue on a good scale. Sugar is not moving to any great extent, there being but a poor business in Browns. White sorts, however, are in better demand, and the trade in these is satisfactory. Last week, after writing, there was a large and sudden development in the Silk trade, and some heavy settlements were effected. At present quotations are more or less nominal, but it is reported that as much as \$1,000 has been offered for a parcel of special extra quality, though all round there is much less doing, and holders are fairly current. A fair amount of business has been done in Waste, which might possibly have been extended to a large trade had not holders attempted to force an advance. There has been rather more done in the Tea trade, but prices are unchanged, and the stock is of very moderate dimensions. Settlement figures still keep ahead of those of last season, and would appear to indicate that the total shipments of this year will exceed those of last. There has been very little alteration in the rates of exchange during the week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The present week has included the anniversaries of the two Japanese victories that decided the issue of the war between this country and China, namely, the battle of Phŷng-yang and the Naval engagement in the Yellow Sea, on the 15th and 17th of September, 1895, respectively. These anniversaries have been the occasion for celebrations throughout the country, though the scale of rejoicings was not so general and enthusiastic as might have been expected. This was doubtless owing partly to a feeling of suspense created by the diplomatic complications that have arisen out of the war, and partly to the fact that attention is diverted to affairs in Formosa. The two memorable battles, especially that of the Yellow Sea, have received due notice in the columns of the vernacular press. We may refer here to a representative article in the *Jiji Shimpō* on the anniversary of the Naval battle. "The declaration of war," says our contemporary, "was hailed by the nation with extraordinary enthusiasm, for it was felt that the time had arrived for raising Japan's prestige in the world. One cause of anxiety only existed, namely, the Navy. As to the Army, every Japanese being fully convinced of its superiority to the Chinese forces, no doubt was entertained of complete victory on land. But in several important respects, the inferiority of the Japanese fleet to the Chinese was appreciated, and the nation relied simply on the valour and skill of officers and men. No person openly expressed fear, but everybody remained in breathless anxiety as to the issue of a naval encounter. . . . This heavy load of secret but intense anxiety was happily removed by news of the signal victory gained by our fleet in the battle off the Yalu this day last year." Our contemporary then dwells upon the important bearing that this success of the Japanese arms at sea had upon the subsequent course of the war. In conclusion, attention is called to the importance of creating a Navy powerful enough to secure these islands from all hostile attacks.

The political world has on the whole been comparatively quiet, though some of the Opposition parties have begun to show activity. The much talked of fusion of these parties into one body does not seem to make any progress. Apparently the time has not yet come for such a measure. The *Nippon* has an interesting article on the subject. It shows remarkable insight into the present condition of things in the field of party politics. There are now more than ten parties in the Diet. They are ranged in two general groups, the Extremists and the Moderates. But this state of things is only temporary. Something of the difficulty and inconvenience under which the arrangement is maintained may be gathered from the fact that concert on any given subject can be effected only by repeated and protracted conference between the different groups. Mr. Taguchi Waichi, the leader of the Economical Reform Party,—we quote from the *Nippon*,—is an enthusiastic advocate of amalgamating the different sections of the Opposition. The proposition has received the approval of the Progressionists and others, but has been defeated by the uncompromising opposition of the Constitutional Reform Party. Meanwhile, a similar project has been mooted, only to experience a similar fate, among the Moderates. The Radicals are desirous of uniting themselves with the National Unionists, but the latter are against such a scheme. As to the reason why the Constitutional Reformists are opposed to amalgamation, the *Nippon* remarks that the mystery is to be explained by the peculiar relations they maintain with the Military section of the Government. The Constitutional Reformists are principally from Kyushu; that is to say the locality to which belong most of the Generals and Admirals that played leading parts in the recent war. Thus these politicians shrink from joining any combination having for its object to attack the Government, in which their fellow provincials and clansmen hold such distinguished posts. In this respect their posi-

tion is somewhat similar to that of the National Unionists, who are avowed supporters of the military section of the Government. But the connection of the National Unionists with the military statesmen is not so close as to make them declared supporters of the Government, or so slight as to allow them to go hand in hand with the Progressionists and others in an unreasonable crusade against the Cabinet. But the most potent influence impeding the success of any scheme of amalgamation is jealousy and suspicion between the leaders of the different political bodies about the position and influence each should enjoy after fusion. The National Unionists, on the one hand, fear that, in the event of union with the Radicals, their own influence would suffer injuriously; while on the other, a similar apprehension troubles the minds of the Constitutional Reformists, who fear that they would be swallowed up by the Progressionists.

Writing on the subject of an increase of armament, the *Jiji Shimpō* takes care to emphasise the fact that in adopting this step Japan is not actuated by hostile motives against any of the treaty Powers. It is true, says our contemporary, that the Japanese have been deeply offended by the high-handed proceedings of Russia with regard to Liaotung, but it is a mistake to suppose that the relations between the two Empires are therefore strained. Deficient as they are in the experience of diplomacy, the Japanese know very well how far the code of international morality can be relied upon, and how, after all, selfishness is the ruling element in the intercourse of nations. They were, therefore, quite prepared for the conduct of the Northern Power. Increase of the Army and the Navy has ever been an object with the Japanese nation, but the achievement of that purpose has hitherto been impeded by the prior claim of other measures of internal improvement. Japan, however, now thinks herself capable of carrying out her long cherished desire, and in doing so she has no hostile intentions toward any country in particular. If any external cause has quickened her decision in this matter, it has been the general condition of uncertainty prevailing since the termination of the war with China.

The maintenance of commercial supremacy by Japan in the Korean peninsula furnishes a subject for earnest discussion to the Tokyo papers. Considerable uneasiness has been caused among the Japanese by news that the Chinese are returning to Korea in great numbers, and slowly wresting the trade there from Japanese hands, the Japanese merchants being content with the trifling profits obtained by supplying provisions and other necessities to their country's forces quartered in Korea. Moreover, the good reputation of the Japanese among the Koreans is suffering serious injury owing to the presence of a large number of men of the *soshi* class, who make it their business to annoy Korean officials of high rank. This question is discussed seriously by the *Jiji*, and several other journals, all urging their countrymen to maintain their commercial supremacy in the peninsula against the encroachments of the Chinese.

The well-known essayist, Mr. Nakanishi Ushiro, writing in the editorial columns of the *Nichi Nichi Shimbun*, discusses the possibility of reforms in China. Foreign wars have not succeeded in rousing the big Empire from its torpor, but have nevertheless produced an impression upon the country. There seem to be indications that the barrier of conservatism is being slowly sapped by the tide of progress and improvement. The recent war with Japan appears to have led China to introduce some reforms, the principal of which are changes in the *personnel* of officials, reorganization of the Army and Navy, and construction of railways. The first of these reforms is not worth notice, but the two others are of far-reaching consequence. To what extent will it be possible to carry out these reforms under the existing political organization? That question the writer undertakes to answer. His

opinion is that under the existing system, in which the Viceroys are semi-independent princes, it is absolutely impossible to effect any reform on a sufficiently large scale and that centralization of political power must precede national regeneration. But that is exactly what the present Manchu dynasty is afraid to essay, its existence depending upon the continuance of decentralization. Any departure from that system would be the death blow of the Peking Court. Mr. Nakanishi's conclusion is that no effective reform is possible under the present dynasty. Whether or not the progressive instinct of the Chinese people will be powerful enough to bring about the downfall of the Manchu Government, he does not undertake to prophesy.

EDITORIAL NOTES.

THE REVOLUTIONARY FORCES AND EDUCATIONAL DEVELOPMENT IN RUSSIA.

THE recent reports of revolutionary movements in some parts of Russia has again called the attention of Europe and Asia to the situation in that vast empire. When in the eighties, Nihilism had reached the height of its destructive activity, a noted writer said, "The Czar is now a military prisoner of the revolution at Gatschina and Russia furnishes the outposts of the revolutionary movement in Europe." If this had the appearance of truth at the time, it is certain that Nihilism, as such, had at the same time about spent its force and was breaking up. Some fragments, here and there, might create a passing terror which presently disappeared, and it was found that the revolutionary cyclone of Nihilism was at an end. We have before us, in *Die Neue Zeit* (Socialist, Stuttgart), an elaborate article, written by an ex-Nihilist, in which he most regretfully admits that the "revolutionary movement" has, during the past ten years, entirely disappeared from the surface of Russian life, while all that remains of it is a faint remembrance, which is fading more and more from year to year. The survivors of the "revolution," he says, are in a most pessimistic mood, for it has created a moral "Katzenjammer" among them. When the once boastful Nihilists volunteer such a confession, there is certainly no reason to doubt its correctness. This same writer admits that the social element in Russia never was in a revolutionary temper, and he adds, "The glory and strength of the revolutionary movement in the sixties and seventies had its root in the individual self-sacrifices and energy of a certain class of students, or the 'intelligence of democracy.' And in speaking of its vital weakness, he no doubt is correct in pointing out that it was not a native product and found no root in native soil. It was in fact necessary to keep away as far as possible from native soil in order to appear as a genuine revolutionary force. "The enthusiasm and faith of the revolutionary democracy of Russia stood in direct contrast to the profane interests of daily life and the social environment. Our intelligence represented in this respect the counterpart to the legendary hero of ancient Greece who was invincible as long as he touched mother earth from whence he derived his strength. We, on the other hand, were invincible, morally speaking, just so long as we stood high above the earth, above the social reality which was antagonistic to our cause." Of course such a "lofty position" in the air, was all but natural, and had to fall sooner or later. Thus, being without a congenial soil or atmosphere in which to thrive, the government was safe in taking the most stringent measures to crush the "revolutionary movement." And the writer says, "The physical defeat brought in its train moral disappointment on the part of the democracy of intelligence, and the loss of faith in the revolution." This ended finally in the loss of the "revolutionary instinct." For centuries the social and educational development of the mass of the Russian people was comparatively slow, and could scarcely be otherwise under a rigid feudal system, such as obtained for ages in the Russian empire. The emancipation of the peasantry

by Alexander II. produced a great change for the better, but it would indeed be passing strange if every trace of the effect of the feudal period already had altogether disappeared. The writer, whom we have quoted above, admits that "within the bounds of absolutism the people have been Europeanized and the national resources have been greatly developed." The intellectual development in a modern sense is also very noticeable, and even an ex-Nihilist cannot deny that the government has greatly improved the educational system. But just in this educational movement, and the enlightenment of the lower strata of the nation, he finds a ray of hope for the "coming revolution." Not a revolution of the Nihilistic type, far above the people, but rather from the people and of the people. In short, something on the line of the Social Democrats of Germany and France. He thinks the time is ripe for such a movement as the discontent is great in all the chief centres of the empire.

THE FIVE HUNDRED ARHATS.

ATTEMPTED or contemplated sales of celebrated pictures by the priests of some great Japanese temple furnish material for periodical notes in the vernacular press. There is always an incredible element in these stories, namely, the price alleged to have been offered or demanded for the pictures. The latest tale of the kind appears in the *Kokkai*. It relates to pictorial scrolls of the Five Hundred Arhats, from the brush of Kobo Daishi. We are told that a resident of Kyoto offered to purchase these scrolls for a hundred thousand yen, and that the priests of Daitoku-ji, seeing in such a sum a means for supporting the temple, and being assured by the purchaser that the pictures were not to leave the country, made formal application to the Authorities, and received permission to dispose of the pictures. The buyer, however, no sooner obtained possession of them than he carried them off to America and tried to re-sell them. Obtaining no offer at such a figure, he returned to Japan, and urged the priests to reduce the price by one half, to which proposal they reluctantly assented. But the parishioners now interfered, insisting that the conditions on which official permission was procured had been violated, and that the priests were deliberately conniving at the very result most undesirable, namely, the transfer of the scrolls to foreign hands. In the end the Abbot of Daitoku-ji was obliged to resign, and the purchaser of the pictures was given 15 days within which either to return the scrolls or pay up the remaining fifty thousand yen. We find difficulty in crediting this tale. There is no sane man in existence, we think, that would think of giving fifty thousand yen, not to say a hundred thousand, for any set of Arhat scrolls in Japan, nor do we think that the Authorities would sanction the sale of any well known temple treasure, since such a precedent, once established, would lead speedily to the denuding of all the temples.

SCHOOL CADETS.

THE boys of the Osaka Public School have organised a well equipped Cadet Corps during the vacation. Drilling has been energetically gone in for every evening in the Nakanoshima Park. They have lately been armed with rifles, and they have provided a military band, ambulance and commissariat sections, and a Red Cross field-hospital. The eldest boy, says the *Hiogo News*, is 13 or 14 years old only. School Cadet Corps have flourished for some time in Yokohama.

CHOLERA IN SENDAI.

THE spread of cholera in Sendai from the 4th to the 7th instant was so rapid that it was deemed wise to postpone the opening of all the schools in the Prefecture to the 20th instant. One cause of the rapid increase of cases is stated to be the pollution of a stream of water that enters the town by way of Kimachi-dori. Many of the inhabitants residing near this stream have been in the habit of drinking the water, which, as a rule, has been noted for its purity. But some days ago, the fact that cholera patients mostly hailed from the vicinity

of the stream led the authorities to analyse the water, with the result that it was pronounced quite unfit for use. With their usual promptness the members of the Board of Health issued notices warning people of the danger of using the water. Subsequently to this action the number of cases of cholera has steadily decreased. On the 11th inst. the temperature underwent a change, which was followed on the 12th by a thunderstorm. It is generally considered that there is nothing further to be feared from the ravages of Japan's most deadly foe, as far as Sendai concerned.

THE RECENT STORM IN KOREA.

A CONSULAR report from Fusan, Korea, concerning the recent storm, states that a strong wind rose on the 4th inst., and increased in violence till the night of the 5th. The rain ceased falling the following noon, but the wind raged more violently. High waves broke on the southwestern shore. During flood-tide on the night of the 6th still higher waves swept the beach, and precautions were taken to prevent damage being done to buildings. Some Korean houses were washed away by the waves, and the roads were severely damaged. Two breaches were caused in the stone wall along the shore of the Settlement. The water in the Nak-dong-gang greatly increased, and floods took place in the towns along the banks of the river. The water was three feet above the telegraph wire between Sam-no-jin and Mil-yang. The debris of the ruined houses and corpses of men as well as of horses, are still floating down the river. The water did not subside until the 8th. It is said that serious mischief has been done along the banks of the river. Telegraphic communication between Fusan and Seoul has been interrupted since the 6th inst.

LUNACY IN ENGLAND.

THE report of the British Lunacy Commissioners this year still further enforces the conclusion drawn from the report of 1894, and the effect of both together is practically to destroy the hasty assumption that madness is increased by what is called the "wear and tear of modern life." In the first place, it is an unproved and very doubtful assumption that it is increased at all. More lunatics are discovered, enumerated, and interned in asylums, but that is probably only the result of greater care for the insane. In the second place, it is not the highly civilised, nervous, literary, modern man who is most afflicted, but, curiously enough, the huckster, the costermonger, the woolstapler, and even the labourer, who hold the highest places on the list. Civil servants, also, in spite of the supposed tranquillity and security of their calling, contribute more than their share.

PROFESSOR MILNE.

PROF. JOHN MILNE and Mrs. Milne have reached England, and have taken up their residence in the Isle of Wight. The Professor, says a contemporary, lost no time in getting to his particular work, for the day succeeding his arrival he was busily superintending the digging of a pit and erection of a column on which to place instruments to record the movements of old England and receive messages through the earth from Dai Nippon.

LOSS OF THE "SATSUMA."

THE *Pekin* arrived at Shanghai on Sept. 11th from Ningpo, bringing Captain Swenson and the officers and crew of the British barque *Satsuma*, which was wrecked on Friday last. The *Satsuma* left Nagasaki on the 1st instant, with a cargo of coals and charcoal, and all went well, the weather being fine, till the 5th inst., when the vessel was off the Saddles. She anchored off Gutzlaff owing to the threatening weather, but drove from her anchors and drifted to the north side of Chusan island, where she struck on the rocks on the 6th and became a total wreck. Captain Swenson, with the aid of the fishermen on the island, got ropes ashore by which all hands safely landed, though they could not save any of their effects. The shipwrecked crew remained two days on the island, the guests of the

fishermen, who treated them kindly, and then provided them with a junk to go to Chinhaï at the mouth of the Ningpo river, where they arrived on Tuesday evening. Captain Swenson telegraphed the news up to Ningpo and the *Pekin* stopped to take them off. The *Satsuma* was built in 1860 at Sunderland, and was a vessel of 364 tons register. She was owned in Shanghai. The *Lucia* and *Mary Stewart* left Nagasaki with the *Satsuma*, and the first named vessel has arrived at Shanghai.—*N.C. Daily News*.

A CURIOUS ARTICLE OF EXPORT.

CONSUL SCOTT mentions a curious export from Swatow, viz., ducks' eggs, which he has observed on steamers bound south for Bangkok and the Straits. They have, for the most part, been incubated to within a few days of hatching. They are brought on board the steamers in shallow baskets in large numbers. In the baskets they are arranged in layers two or three deep, each layer carefully covered and surrounded with soft Chinese paper. No sort of artificial heat is applied to them. The baskets are placed anywhere about the deck or slung to the awning supports. The soft paper and the heat of the climate as the vessel runs south are sufficient to preserve the newly-hatched ducklings from injury! and not only so, but before the vessels reach their destination most of the eggs are hatched out, and in lieu of the eggs that were shipped hundreds of young ducks are landed at Singapore or Bangkok, "all doing well and thriving."

THE STRIKE AT THE CLUB HOTEL.

THE strike of boys at the Club Hotel on Monday evening was admirably timed to cause the greatest trouble and embarrassment to the management, taking place almost immediately before the dinner hour. The grievance of the strikers seems to have been the dismissal of two of the Japanese staff by the new manager, which along with other actions on his part caused a lot of resentment. All day yesterday police were stationed at the entrances to the hotel, to prevent any acts of violence taking place, if any were contemplated by the strikers, but beyond threatening some Chinese who were on the way to offer there services as boys to the management, no disturbance took place. Meanwhile, the hotel is being run by the European staff with the assistance of the servants of the guests and a few Japanese.

A HUMOUROUS POSITION.

THE writer of "Stray Notes" in the *Kobe Chronicle* remarks that the plurality of offices, mostly honorary, held by Mr. Ensle, was amusingly illustrated last week, when the letters respecting the Japanese police and the Settlement were read at the Kobe Municipal Council. In those letters, Mr. Ensle as Chairman of the Municipal Council addresses Mr. Ensle as Doyen of Consular Body and conveys to Mr. Ensle as Doyen the information Mr. Ensle has received as Chairman of the Council. The procedure is of course perfectly correct, and is adopted, we presume, in order that the matters referred to may go on record; but a position in which the writer of a letter, addressing himself, has to sign "Your obedient servant" nevertheless strikes the unofficial mind as a little comic.

THE "BELGIC."

SOME details of the operations now being conducted by Captain Forbes, Superintendent Captain of the N.Y.K., on behalf of the stranded steamer *Belgic* were gathered on Thursday from persons who had just come up from the scene of the stranding. Captain Forbes went down the Bay on the 11th, and found the *Belgic* lying broadside-on on the beach between Susaki and Mela Head. The vessel was about 500 feet above low water mark. By the afternoon of the 15th six anchors had been laid out and on the following morning heaving commenced, with the result that by four o'clock the vessel's head had been shifted seaward, from N. 25° W. to N. 62° W. A heavy sea soon set in and operations had to cease. As night drew on the rollers became heavier and longer and the

big steamer began to roll. Then she bumped the beach violently and a bollard on the port side snapped off short, while the cat davit on same side of the vessel was unshipped, so great was the strain on the ropes. Under the circumstances the only course available was to slacken the ropes and the ship went back again on the beach. At daylight it was discovered that the ship was leaking, No. 1 hold reporting 5 feet, and No. 2 hold 11 feet. The head of the *Belgic* is now pointing out to sea clear of Sunosaki point. The body of the late second officer of the *Belgic* was discovered last week floating in the sea about seven miles away from the scene of the stranding. The body was brought up to Yokohama on Saturday by Captain Efford. The unfortunate man had recently been married, on his last trip to San Francisco we understand, and much sympathy will be extended to the bride of a month so cruelly made a widow.

THE CROWN PRINCE.

THE latest report concerning the Crown Prince is as follows:—12th inst.: temperature, between 36.3° C. and 37.75° C.; pulse, between 77 and 104; respiration, between 24 and 28; 13th: temperature, between 36.2° C. and 37.7° C.; pulse, between 80 and 100; respiration, between 22 and 28; 14th: temperature, between 36.4° C. and 37.75° C.; pulse, between 75 and 96; respiration, between 22 and 28; 15th: temperature, between 36.4° C. and 37.3° C.; pulse, between 80 and 96; respiration, between 24 and 28; 16th: temperature, between 36.3° C. and 37.4° C.; pulse, between 80 and 94; respiration, between 20 and 28; 17th: temperature, between 36.15° C. and 37.5° C.; pulse, between 76 and 96; respiration, between 22 and 28; 18th: temperature, between 36.3° C. and 38.3° C.; pulse, between 74 and 100; respiration, between 20 and 30.

THE LOSS OF THE "CATTERTHUN."

THE *Northern Territory Times* publishes the following telegram *in re* the loss of the *Catterthun*:—

Sydney, August 15th.

A curious thing has taken place in connection with the wreck of the *Catterthun*. At the enquiry which is being held into the causes of the disaster, the second mate, Langfear, refuses to answer certain questions. The enquiry was adjourned to enable the coroner to consult the Law Officers as to Langfear's conduct.

The *Catterthun* inquest is still adjourned. Witness Langfear has stated in his evidence that the ship was going 11½ knots an hour at the time of the accident. He blames the current and a heavy swell for the disaster.

The underwriters are hopeful of being able to salve a good deal of the most valuable cargo.

THE NEW O. B. C. LTD., IN LIQUIDATION.

THE following circular has been issued to the creditors of the New Oriental Bank:—

19, Old Broad Street, London, E.C.,
10th August, 1895.

Dear Sir,—I beg to inform you that the proceedings taken against the directors and other officers of this Bank, in accordance with the resolution passed at the meeting of creditors held on 20th June, 1894, have resulted in the matter being compromised, with the sanction of the Court, for the sum of £18,216 17s. 9d., being the amount of the last dividend distributed to the shareholders by the directors.—I am, yours faithfully,

G. M. DRURY,
Member of Committee appointed by the
Court to conduct the proceedings.

COLLISION IN KOBE HARBOUR.

As the N.Y.K. chartered steamer *Asamor* was entering Kobe harbour, at a few minutes after eight on Tuesday morning, she came into collision with the Norwegian steamer *Donau*. The former, says the *Hiogo News*, was apparently manoeuvring so as to clear other shipping when she crashed into the latter's stern. The *Donau* was at anchor, and an anchor was immediately let go by the *Asamor* to prevent her running back upon another vessel. The damage sustained by both vessels is said to be serious.

SICAWAI OBSERVATORY.

THE work done at the Sicawei Observatory by the French Fathers is above all praise for effi-

ciency and completeness. We learn from Shanghai papers that Père Chevalier, Director of the Observatory, will be absent for several months, and that during his temporary absence it will remain in the charge of the Rev. Louis Froc, S.J. This gentleman, after having worked for three years (1884-1887) in the Sicawei Observatory under the direction of Père M. Dechevrens, S.J., returned to Europe to complete his scientific studies. He came out to China again in December last, and having been employed since then at the Observatory is thoroughly competent to take charge of that important establishment.

TROUBLE ON THE "SATANELLA."

FROM a telegram in one of our Japanese contemporaries, says the *Kobe Chronicle*, there appears to have been some trouble at Nagasaki on the steam yacht *Satanella*. As we announced recently, the *Satanella* has been sold to a Russian gentleman, and is now *en route* to Vladivostok, having called in at Nagasaki on her way. While there she was re-christened with a Russian name, but on learning that she had been sold to the Russians it is stated that eight of the Japanese sailors struck work and refused to proceed. The steam yacht appears to be still at Nagasaki.

SIR NICHOLAS O'CONOR PROMOTED.

A TELEGRAM from Pekin which appears in this issue announces that the British Minister to the Court of Pekin has been appointed to St. Petersburg. The Rt. Hon. Sir Frank Cavendish Lascelles, G.C.M.G., is the present Ambassador to the Court at St. Petersburg, where the pay is £7,800 as against £5,500 at Pekin.

STEALING RICE.

A COOLIE was arrested on Tuesday afternoon by the Settlement Police on a charge of having stolen a quantity of rice, the property of Mr. Essabhoy, while in transit from the Hatoba to the godowns at Moto-hama-cho. So far 3 boxes and 4 bags have been recovered.

THE KING OF SIAM.

HIS MAJESTY the King of Siam in the coming spring will make a European tour, says the *Singapore Free Press*. The precedent of the Shahzadah of Afghanistan, and the illustrated papers, opines our contemporary, have encouraged His Siamese Majesty to the trip.

THE CHENG-TU COMMISSION.

WE learn that telegraphic instruction from Washington has been received by Captain Barker, Naval Attaché to the United States Legation in Tokyo, ordering him to proceed to Szechuan for the purpose of taking part in the American Commission of Inquiry appointed in connection with the Chengtu riots.

INSPECTOR KAWADA PROMOTED.

FOREIGN residents in Yokohama will learn with much pleasure that Inspector Kawada, of the Kagacho Police Station, has been promoted to the post of Superintendent of Ishikawa Station. A better man for the post than Inspector Kawada would be impossible to find: by his courtesy, ready tact, and energy he has won the esteem of all having business at the Settlement Police Station.

MORE STEAM ACCOMMODATION.

ANOTHER new Russian Steam Navigation Company is said to be in the course of formation for the purpose of conveying mails, passengers, and goods between European Russian ports and India, China, Eastern Siberia, and Saghalin, the special object being to bring colonial produce direct to Russian ports, thus avoiding transshipment at London or Hamburg.

THE COLLISION IN KOBE HARBOUR.

THE damage done by the collision of the *Donau* and *Asamor* in Kobe harbour is very serious. The overhanging stem of the *Asamor* smashed into the stern of the *Donau* some three or four feet, breaking three plates and doing damage that will cost from two to three thousand dollars to repair, and which will cause a detention of about

a week. The stem of the *Asamor* is slightly twisted by the blow, and she will probably have to undergo repairs in Hongkong.

A DISSATISFIED SAILOR.

WILLIAM CHARLES, a sailor on the *Auretta*, being dissatisfied with the food supplied and the hard work which fell to his share on board the vessel, refused duty on Thursday. Mr. Justice Mowat heard his statement in answer to the charge preferred against him by the Master in H.B.M. Court on Friday, and then ordered the man to go back to the ship and pay the costs of Court.

S. ANDREW'S CHURCH, SHIBA.

THE ordinary services are now resumed after the summer, viz.:—Sundays, 11 a.m., Morning Service and Sermon; 5 p.m., Evensong: Holy Communion, first Sunday in the month at 11 a.m., third Sunday at 7 a.m. Week-days, 5.30 p.m., Evensong: Holy Communion on Tuesdays, Wednesdays, and Fridays at 7 a.m.

THE ITALIAN CELEBRATION.

ON Friday, Count Orfini, *Chargé d'Affaires* for Italy, met his nationals at the Consulate in Yokohama and made an address, the occasion being the anniversary of the restoration of Rome as the capital of united Italy.

THE BRITISH FLEET.

H.M.S. *Centurion* (Flagship), *Undaunted*, *Edgar*, and *Alacrity* have arrived from the north. They saluted the port this morning. It is hoped that one or perhaps two cricket matches will be arranged between the Club and the Fleet ere the latter leaves.

COUNT MUTSU.

COUNT MUTSU, Minister of Foreign Affairs, who has been staying at Oiso for some time, returned to Tokyo yesterday.

"LECTURES ON COMMERCIAL GEOGRAPHY."

Professor E. J. Blockhuys, of the Higher Commercial School in Tokyo, has published in book form a summary of lectures on commercial geography delivered by him to the students under his charge. The work possesses great value, for it gives, in a well digested and compendious form, all the information ordinarily accessible with reference to the resources, products, and commerce of the civilized countries of the world. It is regrettable, we think, that the author did not arrange the various countries in alphabetical order, as reference would have been greatly facilitated thereby. For the rest, the book seems to deserve praise only.

THE "CHISHIMA-RAVENNA" CASE.

STAY OF ALL FURTHER PROCEEDINGS.

In H.B.M. Court for Japan (Kanagawa) on Thursday afternoon, before Mr. Justice Mowat, sitting in Chambers, Mr. Walford presented the following motion:—

(IN ADMIRALTY.)

The Imperial Japanese Government, plaintiffs, and the Peninsular and Oriental Steam Navigation Company, defendants.

The plaintiffs by their Counsel, Mr. Ambrose Berry Walford, move this honourable Court upon the consent hereunder written that the defendants having paid to them the sum of £10,000 sterling in full satisfaction of all damages and all costs, except the costs already adjudged to the plaintiffs, all further proceedings in this action may be stayed, except such as may be necessary for enforcing payment of costs already adjudged as aforesaid.

A. B. WALFORD,
Counsel for the Plaintiffs

I consent,
J. F. LOWDER,
Counsel for the Defendants.

The Order sought for was made accordingly. Only the two Counsel concerned were present, and upon His Honour entering the Order, proceedings terminated.

FORMOSA NEWS.

The Tokyo papers have just published letters from their correspondents in Formosa, describing the operations of the Imperial Guard south of Taikia, especially the engagement in the vicinity of Chang-hua, in which about 5,000 insurgents, including a large number of Black Flags and others regulars, took part.

The bulk of the Guards Division left Taikia on the 24th ultimo, but a detachment under Colonel Nakaoka, forming its extreme left wing, left there following day. The distance between Taikia and Taiton, on Taiwan—as the two names denote the same place—is a little over twenty-five miles. It was arranged that by occupying the latter place by the 26th at latest, a general attack upon the insurgents' strongholds in the vicinity of Chang-hua should be carried out on the 27th. But the execution of this plan was deferred until the 28th by an unforeseen resistance met with by the extreme left detachment under Colonel Nakaoka in the neighbourhood of Taketsao. The last mentioned place is not marked on the map before us, neither do the letters from which we are quoting contain the slightest reference to its geographical situation. But from the context we infer that it is a distance of four or five miles north of Taiwan. Now the Nakaoka detachment reached the vicinity of this place some time on the afternoon of the 25th, when it was surprised by a party of insurgents who started from a grove a little distance ahead. Almost simultaneously the rear was attacked by insurgents from houses on the roadside. These houses, as usual, were surrounded by densely grown groves of bamboos which afforded excellent protection for the desperate insurgents who had taken their position among them. Several attempts were made by the Japanese to force their way through the bamboo thickets, but the latter were so dense and the fire kept up by the lurking foe was so deadly and hot, that the attempts failed each time. One or two succeeded in penetrating the thickets, but only to be shot down by the well aimed bullets of the insurgents. One of these unfortunate Japanese, named Meguro Chugo, a private, after making his way through the bamboo grove, went straight to the house and was about to set fire to it when a bullet brought him to the ground. Observing that some of his comrades were struggling hard through the grove to come to his rescue, he cried out to them that it was useless to come further under such deadly fire, and to stop their perilous course, then he plunged his bayonet into his body and instantly died. The fighting also continued in front and on the flanks of the detachment, it being apparent that the number of the enemy, already seven or eight hundred strong, was gradually increasing. The day having closed while the engagement was still in this dubious state, the Guards bivouacked in the field that the night, the sentinels being continually surprised by the enemy's fire.

On the morning of the 26th, the Engineering Corps succeeded in blowing up the houses that had given so much trouble the preceding day. The insurgents in front and on the flanks were also put to flight, with heavy loss, and in the course of the afternoon, the Nakaoka detachment entered Taiwan. In this engagement the enemy's loss was over a hundred in killed alone, while the Japanese loss was twenty in killed and wounded, including Lieutenant Nakamura, who fell while leading a charge into the bamboo groves on the 25th.

Major-General Yamane's troops were the first to enter Taiwan on the 25th, the rest of the Division joining them on the 26th. On arriving there, the Japanese found a large army collected on the opposite bank of the Taito-kei, a river of considerable width flowing in a westerly direction south of Taiwan. The insurgents had thrown up earthworks of some importance on the banks, while on the dry stony bed of the river they built formidable breastworks. A little way from the river there stood the lofty fort of Hakkezan which dominated the whole plain. Altogether the position selected by the enemy seemed strong

and capable of keeping the Japanese at bay if well defended. The waters of the river were deep and about 300 yards wide.

The attack was fixed for the morning of the 28th. During the preceding day the Japanese camp was busy with preparations. In the evening of the 25th, a small party of officers and men, under great difficulties had succeeded in discovering a practicable ford about 1,500 metres up the river from where the two armies were confronting each other. Lieutenant Yokota, stripping himself of all clothing, plunged into the river, and crossing to the opposite bank, succeeded in reconnoitering the enemy's outposts.

The attack was conducted by dividing the troops into three parts, the right and left wings and the reserves. The right wing under Major-General Ogawa was to keep the forts and the enemy encamped on the river banks engaged, while the left wing, under Major-General Yamane, crossing the river, should take the enemy's right flank.

A little after midnight, a portion of the left wing under Colonel Naito began to cross the river at the above mentioned point. The water was about three feet deep and the current strong. Favoured by darkness, the Guards got on the opposite bank without creating any alarm. They at once marched through the fields in the direction of the fort on Hakkezan to storm it from a direction opposite the river. The distance was only about 4,000 metres, but such was the rough nature of the ground that the day began to dawn as they neared the fort. It was now about half past five. The right wing, under Major-General Kawamura just then opened fire with field guns into the camp on the opposite bank. About the same time the remainder of the left wing under the immediate command of Major-General Yamane had also crossed the ford. Everything being ripe for action, the Naito column began to climb the hill at the back of the fort of Hokkesan. The garrison, perceiving this, opened fire, but nothing stopped the steady march of the Japanese up the hill, and the van of the column, under Lieutenant Koyama, charged into the fort and easily took possession of it, the bulk of the garrison flying in confusion, while a few who remained behind soon met their death. It was a little after seven when the fort fell into Japanese hands.

Meanwhile, after an artillery duel for a short time, the right wing also commenced to cross the river right in front of the enemy's lines, and the whole Division was in motion against the insurgents. The latter soon lost heart, and fled in two directions, a part going southward toward Chia-i and a part westward toward Lo-kiang. They were pursued by detachments of horse and foot. The greater part of those going to Lo-kiang took boats there and succeeded in escaping to the south. Some of the insurgents also entered Chang-hua, where, however, they were immediately followed by the Japanese, about two hundred and fifty being cut or shot down in that town. The field was entirely in Japanese hands shortly before eight o'clock in the morning.

Thus the army of the Black Flags and other regulars sent up by Liu Yung-fu, which he had doubtless believed would check the advance of the Japanese, melted away before the latter without offering any resistance worth the name, leaving the prosperous city of Chuang-hua in the hands of the Imperial troops. Chuang-hua contains about 20,000 inhabitants and abounds in solid and fine looking edifices. Lo-kiang, its seaport, admits small steam craft, and is a tolerably flourishing place.

Concerning the strength of the insurgents that held the intrenched position on the left bank of the Taikokei in the vicinity of Chang-hua, late reports tend to put it at a larger number than that originally estimated. We stated that it was 5,000, our authority being the generally trustworthy correspondence published by the *Nichi Nichi*. But some writers are confident that the enemy mustered not less than 8,000. As to the loss sustained by the insurgents, the *Nippon's* correspondent, who doubtless writes

on the evidence of an official report, says that as many as 620 dead bodies were left on the field. This number includes those that fell in the actual fight, and those afterwards shot or cut down in the streets of Changhua or while flying to Lo-kiang and Chia-i. The casualties on the Japanese side were 2 killed and 6 wounded. The spoils consisted of two Krupp mountain pieces, three guns of old type, a large quantity of small arms, ammunition, and uniforms, and a number of horses.

On the 31st of August, nine desperadoes were arrested at Tuatutia in Taipeh-fu, while in the act of concerting plans for the assassination of the Governor-General and other high officials. Various stories are told about this affair, but none is so circumstantial and apparently trustworthy as that published in the *Nippon*. According to that journal's correspondence from Taipeh, the conspiracy had been secretly in progress for more than a month. The principal actor in the drama was an ex-officer of the volunteer corps named Wu Teh-fu. At the fall of Kelung, he was made prisoner by the Japanese, but managed to elude the vigilance of the guards, and escape to his native village in the vicinity of Taipeh. Before enlisting as a volunteer, he had been a medical practitioner, but his ferocious nature made him the terror of the whole neighbourhood. Shortly after his return home, Taipeh-fu also fell into Japanese hands, but Wu, being a man of desperate courage, busied himself in collecting an army to regain the capital of the island. In this task he was assisted by five associates of character similar to his own. They succeeded in obtaining the promise of two or three thousand persons to take up arms against the Japanese, but they had to postpone any open measure as they were hopelessly deficient in arms and ammunition. They are said to have looked for a supply of these necessary articles from a powerful supporter in Amoy, who promised them ample rewards of money and official titles on the success of their intended operations. Arms and ammunition were secretly landed in the neighbourhood, and several boats carrying them were discovered by the Japanese. About this time an alarm, inexplicable at the moment, spread among the Chinese in Taipeh and its vicinity. Hundreds of them fled to the continent with the utmost precipitancy. It is now evident that the alarm was caused by news of the big conspiracy then in active preparation. The existence of the plot was not known to the Japanese, but in consideration of the general excitement among the Chinese and some unusual signs in the vicinity, every possible precaution was at once taken by the military authorities at Taipeh. Such increased vigilance on the part of the Japanese, as well as an insufficiency in their supply of arms and ammunition, convinced the leaders of the plot of the utter impossibility of driving the *Wojen* from the capital. A conviction that received confirmation from the drastic measures adopted by the Imperial Guards to clear all insurgents from the districts between Taipeh and Shinchuh. About thirty of the leading conspirators assembled at the house of their chief, Wu Teh-fu, in the beginning of August. They vowed to consecrate their lives to the assassination of the principal Japanese officers; and, incredible as it may seem, the ferocious Wu killed his own child of five years and the inhuman desperadoes pledged their faith by drinking the blood of the boy.

Indistinct tidings of the affair came to the notice of the Japanese gendarmes, but the information being doubtful, they consulted some trustworthy Chinese of Taipeh-fu, who also stated that they had heard a similar story. This set the gendarmes in motion. They obtained the services of a faithful Chinese in the capacity of detective. For some reasons his name is withheld from publication. He feigned to be disaffected with the Japanese, and succeeded in winning the confidence of the would-be assassins so far that he was finally admitted into their secret. Towards the end of August, he invited Wu Teh-fu and the rest of the gang to his house at Tuatutia, but on the appointed day none of them made

their appearance, and it was feared that his assumed character might have been discovered. News came by and by that, their inability to fulfil their promise had been caused by their chief's indisposition. The meeting took place on the 31st of that month, when, secretly apprised of the fact, thirty gendarmes surrounded the house, and arrested nine would-be assassins then present. They resisted, and force had to be used, leading to slight wounds being inflicted both on captors and captured. The chief conspirator, Wu, is said to have died in prison by dashing his head against a stone pillar. A search of the houses of the delinquents resulted in the discovery of some official papers signed by a certain powerful personage in the neighbourhood of Amoy, urging upon the addressors to raise troops and drive out the Japanese.

The violent storms that swept over Formosa in the beginning of the present month inflicted serious damage. Several houses were blown down at Tsalutia, and quantities of provisions were washed away in Taipei-fu. Six of the crew of a torpedo-boat at Tamsui were drowned, and the captain of the warship *Saiyen* (formerly *Tsai-yuen* of the Peiyang Fleet) was swept overboard but happily saved. The transport *Kagoshima Maru*, which was on her way to Kelung, lost six of the horses she carried, and a number of her crew received injuries.

At the date of the letter from which we quote, namely, the 8th instant, the weather at Taipei had become quite endurable, the temperature being about 85° or 86° Fah. at midday and 70° at night.

The Authorities contemplate opening a Japanese school at Taipei to educate twenty intelligent Chinese youths at the Government expense, with a view to their employment after graduation as interpreters.

The transports that are to convey the Second Division to a point in the south of Formosa, somewhere in the vicinity of Anping, will be collected at Kelung by the 25th instant. The remainder of the Division still remaining in Liaotung, is expected to leave Talienwan in time to reach Kelung by the above mentioned date. It is not believed that the fleet of transports will undertake the voyage to the south within the present month, inasmuch as the operations against the Black Flags at Tainan are not to take place until the second week of October. The delay that has occurred in the despatch of this expedition is to be ascribed to two causes, namely the state of the sea, which always remains rough until the beginning of October, and the question of hygiene which dictates postponement till cooler weather sets in.

Information thus far received from Formosa all tends to indicate that the savage aborigines of the mountains are well affected toward the Japanese. The latest report favouring this view is contained in a letter from the *Nippon's* correspondent at Taipei. On the 29th of last month, Major Watanabe, commanding the garrison at a place called Tai Kuakan, took about 45 officers and men, including military surgeons and others, and set out to hold a conference with an aboriginal tribe, arrangements to that end having been made previously through the medium of some Chinese. On reaching the appointed rendezvous at the foot of a mountain, the Japanese party halted, and in less than half an hour were joined by seven aborigines, including the chief and two women. Instead of the savage-looking persons that the Japanese expected, they found that their visitors had frank and genial countenances. The chief was somewhat advanced in years, but amicable and straightforward in his demeanour. There was a young boy of about 15 or 16, who attracted attention by his intelligent looks and active motions. Except this boy, all the male representatives of the aboriginal population had peculiar marks tattooed on the forehead and cheeks. The women were in Chinese costume, spoke Chinese fluently, and had none of the bashfulness of their Chinese sisters; while the men wore their own primitive clothes. The conversation between the Japanese officers and the aborigines was conducted through the medium of the Chinese guides, who spoke

the tongue of the mountaineers. The meeting proved extremely cordial on both sides, and the affability of the aborigines was increased by liberal presents of liquor, tobacco, canned fish, and silver pieces. They evinced much pleasure at these presents, but did not seem to understand the value or use of the silver coins. They asked for another meeting, on which occasion they promised to show their guests over all the habitations of the different tribes. A second party of Japanese officers, is known to have ventured into the district of the aborigines, but nothing has yet reached us as to the result of the expedition.

CURRENT TOPICS.

It is reported that the coming winter session of the Diet will be opened earlier than has hitherto been the custom. The date is supposed to be about the 10th of November. According to this report, the Imperial Proclamation convening the Houses will be issued at the end of the present month or the beginning of next.

The Home and Foreign News Agency (*Nai-Gai Tsushin-sha*), which is notorious for fabricating baseless stories, has just distinguished itself conspicuously. For some political purpose, it supplied the metropolitan papers with an item to the effect that Marquis Yamagata had visited Count Okuma at Oiso, and again at Waseda, after the Count's return to that place. The News Agency even went so far as to say that on the occasion of the two statesmen's meeting at Oiso, there was present a third party, namely Mr. Karuki, Public Procurator-General. Some of the Tokyo papers were silly enough, or unscrupulous enough, to give the item a prominent place in their columns. The fact, as stated by the *Nichi Nichi*, is that Marquis Yamagata once called on Count Okuma to condole with him on the loss of his mother. But that was three months ago. Since then the visit has not been repeated, either at Oiso or at Waseda.

Mr. Sato Torajiro, owner of a prosperous store on Thursday Island, spoke on Australian subjects at the meeting of the Oriental Association of Tokyo on the 16th instant. He discussed various topics, such as the relations between Japan and Australia; the suitability of Australia as a field for emigration and trade; the present and future of Japanese emigration; the Japanese on Thursday Island, the bringing of the Chinese in Australia under Japanese control and protection, and so forth.

The bold meteorologist, Mr. Nonaka, who purposes spending the coming winter on the top of Fuji, is the son of Judge Nonaka of Tokyo. A hut, constructed under his own supervision, was finished on the 4th instant; and he is now in Tokyo making preparations for the final ascent to his temporary habitation. His wife courageously insists on accompanying him to the top of the mountain and sharing his dangers. All the remonstrances of her parents-in-law and her husband have not induced her to change her mind.

Count Inouye, who is now on his way home from Korea, is the subject of various speculations as to what he will do on his return? Will he enter the Cabinet, and if so, what portfolio will be accepted by him? These questions have been debated ever since it became evident that his stay in Seoul was to be brief. The general belief is that, although not desiring to occupy any Ministerial seat at present, his chivalrous disposition will probably induce him to accede to the entreaties of his friends, especially the Premier. Some persons believe, or rather wish, that his return may be the signal for a reconstruction of the Ministry. We reproduce, these various rumours to show what kind of political gossip is now in the capital.

The various factions constituting the Opposition are beginning to show some signs of reviving activity. They are despatching lecture parties to the different provincial centres, and in Tokyo and elsewhere they are holding conferences and passing resolutions on current

political topics. These resolutions are couched in very ambiguous language, and afford little clue to the ideas held by the various parties with reference to the questions under consideration. One point, however, is plain and unmistakable, namely, that all the sections of the Opposition are agreed as to the necessity of the utmost economy being practised by the Government in administrative affairs, before the people are asked to contribute more to the needs of the country. There is no longer any doubt that on this ground the Extremists intend to measure their strength with the Government.

Mr. Suyehiro Shigeyasu, one of the originators of the *Doshi Kai*, is said to have just finished a political novel under the title of "Japan after the War" (*Senso-go no Nippon*). He is the pioneer of political novelists, the principal of his productions being the *Se'chu Bai* (Plum Blossoms in Snow) and *Meiji Shiju Nen no Nippon* (Japan in 1907), the latter of which was noticed in these columns some years ago. The talented author and politician is suffering from abscesses in the mouth, which are so bad that he believes the present work will be the last production of his pen.

The well known politician, Mr. Oi Kentaro, is now staying at Singapore, where he is believed to be engaged in business. In a recent letter to a friend at home, he speaks with admiration of the influence exercised by the Chinese population there, and of the general trustworthiness of Chinese merchants. Another surprise to him has been that the summer is more endurable at Singapore than in Tokyo, and a third cause of astonishment is the cheapness of house rent. He suggests that it might be profitable to organize a society for the emigration of carpenters, plasterers, and other artisans from Japan.

THE CHINESE MINISTER.

In an editorial warmly welcoming the newly arrived Minister from China, the *Yomiuri Shim-bun* remarks that peace having now been happily restored between the two countries, not a single Japanese fails to be actuated by sentiments of genuine friendship toward the Chinese, especially as Japan's object in taking up arms was to promote the cause of the Orient's permanent peace. Our contemporary, though unwilling to publish such a criticism, can not choose but observe with regret that had Mr. Yu's predecessor kept his Government correctly informed about the condition of affairs in this country, the recent unfortunate interruption of the two empire's friendly intercourse might have been avoided. The Chinese diplomatists hitherto accredited to this Court may have been men of intelligence and learning, but it cannot be said of them that they discharged the first and most important duty of a Minister, namely, to be in touch with the current of life and thought in the country. Their intercourse was confined to men in official circles, and the few individuals with whom they associated outside the Government were visionary scholars and unpractical men of letters. The *Yomiuri* does not mean to say that association with persons of the latter classes is in itself reprehensible: its contention is that they are eminently unfit and untrustworthy media of information as to the state of affairs in Japan. Hence the *Yomiuri* ventures to advise the Mr. Yu Kên, in addition to officials, should seek friends and acquaintances among men outside the Government. By so doing, he will easily discover how it is that the Japanese can so effectually unite at an important crisis; how genuinely friendly they are toward his country, and how trustworthy Japan would be as a friend and ally. The *Yomiuri* concludes in the following strain:—"It will be well not only for Japan and China, but also for the Far East in general, if Mr. Yu's observation of Japanese affairs proves to be correct and impartial. We respectfully offer our greetings to the new Chinese Representative, and hope that, whatever changes or complications may arise in this part of the world, the friendship between the two empires may remain firm and unaltered."

ECONOMICAL AND INDUSTRIAL.

The amount of convertible notes issued by the Bank of Japan has reached 153,170,770 yen. The following table shows the increase of these notes during the past few months, together with amount of specie and guaranty reserves :—

	Convertible Notes. Yen.	Specie Reserve. Yen.	Guaranty Reserve. Yen.
June 3rd—8th	129,461,502	66,578,473	62,883,009
July 1st—6th	142,262,169	65,085,418	77,176,751
August 5th—7th	142,879,734	64,789,154	78,090,580
September and—7th	153,170,770	67,724,149	85,446,621

The principal cause of the recent increase in the issue of convertible notes is ascribed to the accommodation made to the Government for the expense of the army in Formosa.

The project for the establishment of a company for the direct exportation of silk has borne fruit. The company is to be named Ki-ito Shokuyu Go-shi Kaisha (The Silk Direct Export Company, Limited), the capital being 356,000 yen. The head office will be in the premises of the Morimura-gumi, No. 30 Kuchome, Kobikicho, with a branch at Yokohama, in the compound of the Ki-ito Gomei Kaisha. Mr. Yamada Matsusaburo will be the General Manager. The partners number twenty-six, including Messrs. Hirose Saihei, Hara Rokuro, Hara Zenzaburo, Asada Masabumi, Morimura Ichizayemon, Kawasaki Hachiyemon, Ikeda Kenzo, and Mogi Sobei.

It is reported that Mr. Yoshikawa, President of the Nippon Yusen Kaisha, will resign on account of his health, and that he will be succeeded by Mr. Sonoda Kokichi, President of the Yokohama Specie Bank.

The leading inhabitants of Hakodate, as already stated, have under contemplation both the improvement of the harbour and the establishment of a dockyard. The former scheme is estimated to cost 820,000 yen, of which 300,000 yen is to be obtained from the State, and the balance, 520,000 yen, by raising a Municipal Loan. It is reported that the Government is in favour of this plan. As to the dockyard scheme, the projectors intend to start the concern as a joint stock company with a capital of 800,000 yen. They are, however, taking steps to get a subsidy of 400,000 yen from the State. Should this sum be granted, the works will be on a correspondingly larger scale. The scheme is said to be strongly supported by the Nippon Yusen Kaisha.

Some merchants of Osaka and Kyoto are said to project the formation of an association for the purpose of promoting trade with Russia. This scheme was on the tapis last year, shortly before the outbreak of the war, which temporarily postponed its execution.

The practice of carrying on commercial transactions by means of promissory notes is rapidly coming into favour in Japan. The amounts of notes discounted in Tokyo during the eight months ending August were as follow :—

1895.	Yen.
January	16,699,630.023
February	20,983,299.028
March	23,334,093.093
April	22,519,632.649
May	21,659,211.454
June	26,497,584.166
July	24,682,371.228
August	21,184,732.508
Total	177,560,554.149

The following table shows the amounts of money accommodation in the form of overdrafts of current accounts, and of notes discounted, by the banks of Tokyo and Yokohama that belong to the Bankers' League :—

	Aug., 1895.	Aug., 1894.	Aug., 1893.
Money Accommodation	51,087,555...	49,225,061...	46,697,740
Overdrafts on Current Account	7,862,206...	6,597,665...	6,467,429
Notes discounted	13,652,314...	11,500,286...	11,393,188
Total	72,602,075...	67,323,013...	64,557,857

The above increase in the amount of advances and so forth is accounted for by the revival of business. While, on the one hand, an augmented demand is thus made on the banks for

accommodation, there is, on the other, an increase in deposits of all kinds, and consequently the banks have ample margin to meet a further application for advances. The following figures relate to deposits of various kinds in the banks of Tokyo and Yokohama belonging to the Bankers' League :—

	Aug., 1895.	Aug., 1894.	Aug., 1893.
	Yen.	Yen.	Yen.
Deposits of public money	1,160,821...	1,207,086...	1,404,855
Fixed deposits	11,835,215...	10,218,887...	12,156,901
Current deposits	19,985,187...	15,831,303...	15,523,016
Miscellaneous deposits	12,951,183...	11,640,763...	9,292,500
Total	45,932,406...	38,898,039...	38,377,272

The Chugai Shogyo Shimpo reports that a project is on foot in Kyoto for the establishment of a silk-weaving factory. The original idea was to start the concern with a capital of 300,000 yen. But the accession of new capitalists, like Messrs. Abe Ichitaro, Koizumi Shinkichi, Yabuta Kambei and so forth has led to the capital's being raised to 1,000,000 yen.

The question of the construction of a harbour for Tokyo is engaging the serious attention of the Tokyo City Improvement Commission. A special committee of investigation has just been nominated by the Chairman of the Commission, Governor Miura. It consists of Professor Furuchi Kunitake, Chief Engineer of the Household Department, Captain Kimotsuki, I.J.N., Mr. Sudo Tokiichiro, Mr. Sato Hideakira, Director of the Navigation Bureau in the Department of Communications, Mr. Sakuma Teiichi, Colonel Furukawa, I.J.A., and Mr. Shibusawa Eiichi, President of the 1st National Bank.

A large number of carpenters and other working men having lately been despatched to Formosa and Weihaiwei for constructing barracks, wages have risen a great deal in Tokyo, and a scarcity of expert labourers is causing much inconvenience to the builders there. Not only wages, but building materials have risen, as these latter are also being sent to Formosa and Weihaiwei.

THE ATTACK ON TAINAN.

There has been some confusion with respect to the movements of the Japanese forces in Formosa, owing to the similarity of the names "Taiwan" and "Tainan." The two places are quite distinct, the former, which lies 95 miles to the north of the latter, being the chief town of the province of the same name, whereas Tainan is the southern capital—as Taipeh is the northern. At Tainan the Black Flags have their head-quarters, and there, if anywhere in the island, a stout resistance is to be expected by the Japanese. They took Taiwan without much difficulty, but they anticipate a different state of affairs at Tainan, and are making their preparations accordingly. The various corps forming the Second Division will doubtless be mustered for the assault, and there does not seem to be much probability that the place will be attacked before the early days of next month, by which time the climatic conditions will be better fitted for campaigning purposes than they are at present. According to the Japanese press, the Black Flags are expected to prove very formidable adversaries. But we do not share that opinion. It is true that these guerilla warriors gave the French considerable trouble in Tonquin, but if the reason for their trivial successes in 1884-5 be scrutinized, it is seen that they owed incomparably less to their own prowess than to the insufficient preparations of the French. The latter, having undertaking a large task with very inadequate forces, were constantly obliged to entrust duties of outpost, reconnaissance, and even attack, to mere handfuls of men, and these, working under topographical circumstances of extreme difficulty, offered to the Black Flags precisely such opportunities as suited the latter's peculiar tactics. In an open fight, Liu's warriors would not have had any chance whatever against the French, and we do not expect that they will make a very serious stand at Taiwan, despite the long time they have had at their disposal to make defensive preparations.

NOTINGS FROM PERIODICALS.

The Kokumin-no-Tomo of the 13th instant laments the complete breakdown of social discipline in the present day, and looks back with fondness to the rigid etiquette and wholesome restraints under which men used to live and die in pre-Restoration days. This regrettable state of things is noticeable not only in society in general but in circles where absence of discipline is particularly deplorable, namely in the church and the school. With a very few exceptions, professors and instructors in educational institutions all over the country are pronounced little better than "retail dealers in knowledge," the primary object of these institutions being to curry favour with the students, who in the position of customers, are allowed to do as they please. In the church, too, the Kokumin regrets to observe a gradual relaxation of moral discipline. In the early days of Christian propagandism in this country, church-goers went to the extreme of abhorring even such things as drink and tobacco. But nowadays, they drink and smoke, visit theatres, and do sundry other things that they formerly condemned as sinful. In short, the Kokumin states that there is at present little to distinguish the conduct of Christians from that of unbelievers. Perhaps our contemporary goes a little too far in depicting the prevalent evil of the time, but there is no doubt that the abuses it complains of have actual existence and that its warning is timely and wholesome.

Among the contributed articles in the same journal, we notice one by Mr. Ozaki Yukio, the well known Progressionist. The subject he chooses is the degree to which taxation may be increased in Japan. He alleges that nobody now objects in principle to an increase of taxation to meet the expenses required for augmenting the Army and Navy, but the question is to what point may the increase be safely carried. To solve this problem he has recourse to figures taken from Mulhall, showing the proportions between revenue and national wealth in the principal European countries. The wealth of Japan is estimated by him at 6,000 million yen, though he does not state the process by which he arrives at the figure. His researches lead him to think that 100 million yen should be, for the time, the limit of public revenue, and that, consequently, the present national burdens may safely be increased by 10 or 20 million yen. As to the strength of the Army and the Navy, he thinks that, in proportion to her revenue, Japan's armament is already above the average of European Powers. But the late war and the diplomatic complications arising out of it, have imposed upon this empire responsibilities demanding an energetic foreign policy and a corresponding increase of fighting capacity. He is, therefore, prepared to support large measures for developing the national armament. But, at the same time, he reminds the Cabinet Ministers that, in asking the people to exert their utmost efforts for the sake of the country, they ought themselves to set the example by introducing rigid economy in all parts of the administration.

The Tokyo Keisai Zasshi of the 14th instant is full of interesting articles, of which one or two may be noticed here. On the subject of Open Ports, our contemporary urges the importance of opening a large number of new places for foreign trade. It refers to the open ports of the principal countries in Europe and America, and remarks that seven ports only are far too small a number for a country like Japan. The ports specially mentioned in this context are Shimonoseki, Yokkaichi, Tokyo, Sendai, Aomori, and Otaru. Several places on the coast of the Sea of Japan are also pronounced ready to be opened for foreign trade.

In another article the Keisai calls attention to the growing tendency among public men in this country to favour a policy of protecting industries by State subsidies. Both the Radicals and the National Unionists have declared themselves in favour of such a course. Successive Ministers President of State, except Marquis Ito,

have also evinced the same disposition. The present Premier has not, indeed, made any definite pronouncement on the subject, but the *Keizai* thinks that he, too, does not seem opposed to a protective tariff. Our contemporary, having always been opposed to State protection of industries, strongly denounces the policy now coming into favour, and urges the Opposition parties to declare themselves against the pernicious programme.

THE TOKYO CITY COUNCIL.

The Tokyo City Council held a meeting on the 11th instant to debate upon the report of the Committee entrusted with the investigation of the contract with the Japan Iron Foundry Company. That company failed to supply the City with the specified pipes for Water-works, but appealed for the City Council's indulgent treatment on the pretext of its peculiar financial position. The Committee recommended the dissolution of the contract on terms very favourable to the company, namely, by releasing the latter of its obligations to indemnify the City, as agreed upon in one of the clauses. This proposition called forth vehement opposition from a majority of the Council, the most conspicuous among them being Mr. Kojima Kango, Mr. Tsunoda Shimpei, M.P., Mr. Yokoyama Tomijiro, and so forth. After a very animated debate, it was decided that the company be called upon to fulfil the conditions of the original contract, and to pay the full amount of indemnity for its inability to carry out the contract. It was further decided that a part (21,903 yen and a fraction) of the security money be forfeited in accordance with the terms of the contract.

"JAPANESE COMMERCIAL LAW."

We have had before us for some time a volume by Dr. L. Loenholm on Japanese Commercial Law. Dr. Loenholm is Professor of German Law at the Imperial University in Tokyo. He has evidently made a most careful study of the Commercial Code of this country, and with a view to the time, now not very far distant, when the foreign residents of Japan will be brought under Japanese jurisdiction, he has prepared a digest of the laws of bankruptcy, partnerships and companies, bills of exchange, and notes and cheques, and issued the fruits of his labours in convenient and well marshalled form. We had hoped to review this excellent work at some length, but we find, on perusal, that to do so would involve nothing less than an exposé of the whole subject so ably epitomized by Dr. Loenholm. It must suffice to say, therefore, that the learned author offers us, in the clearest language and in a manner comprehensible to the least legal mind, a full résumé of Japanese commercial law, adding the various forms of document recognised by the code, and supplementing the whole by an index that gives easy access to the contents of the volume. He has taken the wise precaution of appending the Japanese terms in all important cases, a step that will greatly facilitate commercial intercourse between foreigners and Japanese. We do not hesitate to say that this admirable little volume is a necessity to the foreign merchant trading in Japan, and that the public is greatly indebted to Dr. Loenholm for its compilation. Much of the distrust felt by the average foreigner toward Japanese jurisdiction would be dispelled were a knowledge of the country's laws and legal procedure brought within easy reach. It is greatly to be desired, therefore, that some competent jurisconsult—why not Dr. Loenholm himself?—should give us a clear and authoritative digest of the criminal laws. The public would then cease to be misled and perturbed by the baseless assertions now so often advanced, as to the police having power to enter private houses without a warrant, editors being liable to imprisonment without trial, and so forth.

DR. KITAZATO'S TREATMENT OF CHOLERA.

The *Nichi Nichi Shimbun*, the *Hochi*, and other vernacular papers comment favourably on Dr. Kitazato's new method of treating cholera. The disparaging criticism that has appeared in certain journals is not founded on minute knowledge of the course pursued by Japan's greatest bacteriologist. Dr. Kitazato's preparations for a successful treatment of cholera-morbus extended over several months. In April last he obtained cholera bacillus from Kobe, with which, during the month of May, he inoculated both sheep and goats. He subsequently conducted a series of experiments on horses belonging to the Home Department. The dose of bacillus was increased from one to fifty grammes. From the animals that had shown themselves cholera-proof lymph was extracted, which was subsequently utilised in the inoculation of human beings. Dr. Kitazato's hospital is now crowded with cholera patients. Owing to the inadequate supply of lymph, it is found impossible to subject all the patients to the new method of treatment. This fact has enabled the medical authorities connected with the hospital to compare the results obtained by the new and the old modes of treatment. The figures given are as follow:—

DR. KITAZATO'S METHOD.—Patients, 34. Cured and discharged from the hospital, 5. Deaths, 1. Removed to the Convalescent Ward, 15.

TRADITIONAL METHOD.—Patients 21. Cured discharged, 1. Deaths, 5. Removed to the convalescent ward 2.

It will be seen that these statistics are imperfect, as in each instance there are a number of cases unaccounted for. Of the fate of 13 of Dr. Kitazato's special patients and 13 others nothing is told us. According to the vernacular papers, from which we quote, the total number of cholera patients that entered the Hirowo Hospital between August 8th and September 3rd was 88. Of these 34 died; 22 recovered and were discharged, 16 were placed in the convalescent ward, and 16 are still under treatment. Of the above total number of patients, only 57 were subjected to the new method of treatment, 7 of whom died, 20 recovered, 15 reached the convalescent stage, and 15 were still under treatment on the 3rd inst. These results are certainly satisfactory, but Dr. Kitazato is of opinion that the time has not yet come for pronouncing the new treatment an entire success, nor for advocating its universal adoption. He himself is well satisfied with the results given above and regrets that the insufficiency of the supply of lymph prevents his operating on a larger number of patients. The process of injecting cholera virus into animals until they no longer show any signs of being affected by the poison, necessarily extends over a week or ten days at the very least, since the operator has in every case to wait for the subsidence of the fever produced by an injection before administering a second dose. Thus, although Dr. Kitazato has a large number of animals under treatment, the supply of anti-cholera matter is not enough to allow of its extensive use. The lymph obtained from one horse, we are told, only suffices for the inoculation of 4 or 5 patients. Consequently, Dr. Kitazato has not been able to subject all the cholera patients that have entered the hospital to the new treatment. He has adopted the plan of choosing the more malignant types of the disease for special treatment. This course means that the new method is put to the most crucial test possible. It may justly be argued that were the indefatigable scientist not tolerably sure of the efficacy of his remedy, he would choose some less severe manner of testing it. The new remedy is known among the Japanese as the *kessei-jiryo*, or blood-purifying cure, a term which will doubtless be replaced by something less vague when the real nature of the new antidote is better understood.

PEKIN NEWS.

The letters from the Japanese correspondents in Peking describe the arrival there of Li Hung-chang, his present political position, and a few other matters. Leaving Tientsin on the 24th ultimo, he arrived at Peking on the 27th, accompanied by Wu Ting-fang and Mr. Pethick. He put up at an old shrine in one of the back streets, it being understood that the shrine is his private property. On the 28th, he had an audience with the Emperor, and the *Official Gazette* of the following morning announced that he had been ordered to remain in the capital and direct affairs of State in the Tsung-li Yamén, being replaced by Wang Wénshao as Viceroy of Chili and the Minister of Commerce in the North.

Concerning the present political position of Li, various conjectures seem to be offered by Peking gossip. According to one report, he is supposed to desire complete retirement from political life and return to An-hui, his native place, where his adopted son Li Ching-fang is said to be superintending the building of a great mansion for him. But the more probable report is, in the opinion of the Japanese correspondents, that, so far from contemplating retiring into private life, the old statesman has determined upon a plan for regenerating the Government in Peking. In support of this conjecture, reference is made to the improved relationship between him and his lifelong rival and enemy, Ong Tong-wo. Their reconciliation is believed to have been effected by the latter's secret visit to Tientsin, where he confessed his past errors in opposing the progressive measures of his colleague and promised his hearty co-operation in future for the regeneration of their country. This secret conference, it is said, has led to Li Hung-chang's journey to Peking and his permanent residence there as a member of the Tsung-li Yamén. Should this coalition between the two most powerful statesmen in China continue, it is hoped that China's eventual awakening may not be an impossibility.

After his arrival in Peking, Li is said to have been busy paying visits to the different members of the Government. But up to the time the letters from which we are quoting were written, namely, the 30th ultimo, he had not visited any of the foreign Ministers. Indeed, it is said that on the eve of his departure from Tientsin he had requested the Japanese Consul, Mr. Arakawa, to send word to Mr. Hayashi, that he would be unable to pay his respects during his first ten days in Peking, as he would be exceedingly busy.

EDUCATION IN CHINA.

With reference to the new educational programme inaugurated in Tientsin, at the instance of the much abused Taotai Sheng, and with the approval of the outgoing Viceroy Li and the incoming Viceroy Wang, we find the following in the *Peking and Tientsin Times*:—

Sheng Taotai, with the approval of His Excellency Wang Wén-shao, has decided to establish a foreign University at Tientsin, with which there will also be connected a Preparatory Department. It is expected that Preparatory Schools, similar to the one established here, will be opened in other localities of North China, and they will be, to a certain extent, under the management of the Tientsin University.

Besides a general scientific course, the University will provide special courses in Civil Engineering, Mining, Mechanical Engineering and Law, for which expert foreign professors will be engaged, to be assisted by native professors and teachers of foreign education.

The University will be under the control of Chinese Directors and a foreign President. It is understood that the directors will be the Hon. Wu Ting-fang and Ts'ai Chao-chi, Esq. The position of President has been accepted by Charles D. Tenney, Esq.

Three classes of the Preparatory Department and the lowest class in the College will be filled this autumn by examinations, soon to be held by Mr. Tenney, in Tientsin, Shanghai, and Hongkong.

One of the foreign professors has already been sent for, and will arrive in Tientsin before the closing of the river. The University will occupy the "Po Wén Shu Yuan" building, which has been secured by Sheng Taotai for this purpose.

This new departure is alluded to in enthusiastic terms by our Tientsin contemporary, which seems to think that the regeneration of China is at last commencing.

"CHINESE SNUFF BOTTLES."

To the *Opuscula* of the Odd Volumes Sette, Mr. M. B. Huish has contributed an attractive essay on the subject of Chinese Snuff Bottles. As an exponent of Oriental Art, Mr. Huish has placed the public under great obligations. He approaches his subjects generally from the ethnological point of view, preferring to consider the relation that works of art bear to the customs and traditions of a people, than to treat them as stepping stones in the history of technical development. Of course, that method of criticism is not entirely satisfactory to either the art student or the collector, but Mr. Huish does well in recalling both from their tendency to forget the motive, and remember only the beauties, of the objects they prize. No articles are more esteemed by the Chinese than snuff bottles and ink-pots. In each alike we find the most exquisite workmanship and the finest materials. There is no variety of porcelain, from the commonest to the rarest, that is not illustrated in Chinese snuff bottles, and as for the materials, they range over cameo glass, crystal, jade, amethyst, cornaline, chalcedony, heliotrope, sardonyx, chrysoprase, agate, damascened iron, and cloisonné enamel. Evidently, anyone devoting himself to the task of collecting these little objects, may be able to obtain illustrations of Chinese art workmanship on an almost exhaustive scale. Yet the undertaking has never found many devotees; for the obvious reason that a multitude of such tiny utensils can never serve any decorative purpose. A few may be placed here and there in a salon, but the great bulk must be treated as one treats coins or Japanese sword furniture, namely, put away in cabinets for the careful inspection of patient connoisseurs only. The history of porcelain snuff bottles is, of course, the history of Chinese ceramics, and as to the history of snuff bottles carved from precious minerals or cameo glass, they have apparently no history that can be written. Perhaps in the hands of some Chinese virtuoso, there lies an illustrated manuscript describing and depicting the celebrated snuff bottles of some era of art enthusiasm, and perhaps the document may yet come to light, as did the volumes discovered ten years ago by Dr. Bushell in Peking. But there is not much room for a story when we have to deal simply with little receptacles for powdered tobacco, chiselled out of precious stones. It might be a matter of primary interest to the collector to know when jade, or chrysoprase, or agate, or cameo glass was first used for such a purpose, but neither as illustrating the progress of art industry nor as marking the development of civilization in the Middle Kingdom, would the matter justify serious research. Mr. Huish has said about all that there is to say, and said it in a very attractive manner. It is a pity that only 149 copies of his little book have been printed, and that their circulation is limited to Odd Volumes members, for the text and the beautifully executed plates render the work a desideratum to all lovers of Chinese art.

CHINA NEWS.

A Shanghai paper finds that the delays and probable failure of the Kucheng and Chêngtu outrages Commissions—so far as the punishment of the proper culprits is concerned—is due greatly to be astute manner in which Sir Halliday Macartney manages the diplomatic reins at the Chinese Legation in England. The *N.-C. Daily News* bluntly declares that Lord Elgin's policy of fixing responsibility for outrages against foreign life and property on a central authority, has absolutely failed. Lord Salisbury is advised to take another course altogether; to let the British Admiral commanding on the China Station have standing instructions to send ashore landing parties whenever an outrage is committed, for the purpose of arresting the local officials, keeping order, and securing redress. The journal advocating this policy freely admits that such procedure would, in international law, be called invasion, but it pleads

the complete failure of the other method. In reference to Sir Halliday Macartney's ways of work, the Shanghai morning paper says:—The idea that a mere shift of geographical position can transform a Chinese official into an astute diplomat capable of dealing on equal terms with the finest of Western political intellects, is a silly figment of the mind which works great evil in our relations with China, because it obscures the true source of much of the British misunderrating of Chinese affairs. The Chinese Minister *quâ* diplomat is a fraud and always has been such by education and environment; he can be nothing else but a puppet, but unhappily a puppet whose strings are pulled with consummate tact and skill by a resolute and able Scotchman. Dr. Macartney led so retired a life during his long residence in China that he was never taken quite at his just value: his unimpeachable honesty and his zeal to his Chinese employers were recognised, but neither his ability nor his personal force of character was adequately estimated. When he chivalrously resigned his appointment at Nanking in responsibility for the actions of a worthless native subordinate, he went North to explain matters: the patent honesty of his conduct brought its own reward; through the influence of the Inspector-General, Li Hung-chang appointed him European Secretary to the 'new Legation. Never did a man in a dull age so luckily find his special *métier*; he studiously set himself to master the etiquette and forms of his new profession: and in a very short time became an institution at the British and French Foreign Offices. We recapitulate this because the personality of Sir Halliday Macartney is a profound element of the chronic Downing Street *misunderstanding* of the Chinese, precisely as that of Sir Robert Hart is an element of weakness in our Ministers at Peking. Sir Halliday takes his bundle of silk down to the Foreign Minister—curiously enough he has been a personal favourite in succession with Lords Granville, Salisbury, Rosebery and Kimberley, to say nothing of his high standing with the permanent officials—and by his skill as a translator and his personal magnetism gives a totally wrong impression both of his man and his case. His earnestness of manner, his oracular knowledge of this strange antique people, his finished knowledge of the minutæ and the jargon of the diplomatic art all tend one way. Then his rare skill in working *The Times* through the personality of M. de Blowitz (for he never deals directly with Printing House Square) and thus keeping his Embassy and its policy to the fore, still further deludes English official and public opinion. Every now and then it is true there comes a telegram that Chinese mobs have bashed in the brains of a few missionaries and have cut the throats of some Englishmen with the known connivance of officials; then our Ministers for a few days suspect that China is not altogether like the comical pictures of the nursery and the tea chests. But Sir Halliday wheels down his marionette to Whitehall, earnestly deplores the untoward incident, expresses the profound grief of his Imperial master and the regret of the Augustus Fat of the Tsung-li Yamên, assures the Minister that the Chinese authorities will investigate, will punish, and will make every reparation; and in short persuades the Foreign Office back to the belief that they are dealing with a highly cultured and interesting people. Should there still be suspicion and any hint of invoking the services of the Admiral on the China Station, then Sir Halliday plays his trump card—anti-dynastic conspiracies, secret societies, the dissolution of all government in China, and the probable scramble of the Russians and French for pickings. Some other acute phase of foreign politics comes up and straightway the China trouble is relegated to the Peking Legation with:—"Get what you can out of the Chinese; but on no account threaten force." When we add that the last two British Ministers have been unfortunately told to keep in touch with Sir Robert Hart, we have marked two of the main causes of British addle in China."

H.E. Senhor C'logan, the new Spanish

Minister to Peking, arrived at Shanghai by the last French mail.

The small arms and cartridge manufactories connected with the Hanyang Iron Works commenced work about three weeks ago. It is reported, says the *Daily News*, that the provincial Government intend to make 50,000 stand of arms for Hupeh alone as soon as possible, and that orders have been received from the other provinces to make for them small arms (and the requisite ammunition) varying from 15,000 to 60,000 stands.

An appeal is made in the Shanghai press by Mr. R. M. Campbell for funds to carry on the necessary agitation to obtain redress for the Kucheng massacre.

We gather from Shanghai exchanges that in the suite of H. E. Yü Keng, Chinese Envoy to the Court of Tokyo, there are two military *attachés* Lieutenant Fêng Kuo-chang and Pei Ch'i-hsuen, graduates of high standing in the Tientsin Military Academy. These appointments, as the *N.-C. Daily News* remarks, speak well for the liberal views of the Envoy, who would only appoint qualified officers to this important post and who is reported to have refused several candidates for the military *attachés'* posts whose only recommendations and title to recognition were, as in former times, their family influence.

The payment of the Tls. 700,000 indemnity of the French Roman Catholics who suffered by the Szechuan riots will be spread over a period of three years. In the new agreement entered into between the Viceroy Liu and the French Bishop the latter has apparently been able to procure a number of privileges, which it would be well for the future British and American Commissioners in Szechuan to demand also for the Protestant missions, under the favoured nation clause. The Chinese authorities will have no excuse for refusing to the one what has been granted of the other.

The leading Shanghai journal hears from Foochow that the Commission to investigate the circumstances of the Hwasang massacre is pushing its work with vigour, and the Chinese officials have been obliged to concede several points. Yet the Commission is still hampered in many ways. There is no one on the spot to represent the Viceroy, so that all evidence and many prisoners must be sent to him before a verdict can be secured and sentence carried out, which is absurd and a very useless waste of time. The Consuls are pressing Peking to insist on a properly authorised Commission being sent to Kucheng to dispose of the cases promptly there. At Kucheng there are now one hundred prisoners in gaol, and eighteen stand convicted beyond all doubt, while farther arrests are being made daily. A correspondent of this paper, writing from Foochow on 5th September, says that the last important man captured in the Yengpiang district, Ming Chiong-chok by name, said on his way down to Kucheng, that the Vegetarians cast lots as to which of three plans they should adopt: (1) to attack Kucheng city, set fire to it in two or three places, and, when the mandarins came out to see what was the matter, kill them; (2) to attack the Christian houses at that notoriously bad place T'engtiük; (3) to attack the foreigners at Hwasang. The lot fell on Hwasang. From a telegram, dated Foochow, September 9th, which appears in the *Shanghai Mercury*, we gather that Ming, the leader of the murderers at Hwasang, was tried on Wednesday week last. He made a full confession and said:—Miss Hartford's house was pointed out by some of the Hwasang people. After the murders he made some of his fellow associates in the crime carry him off in a chair belonging to one of the foreigners. When the Vegetarians met before the massacre three plans were proposed, viz.:—(1) To attack a rich merchant's house in a certain village. (2) To kill the foreigners at Hwasang. (3) To tear down the foreign houses at Kucheng. Lots were drawn and the lot fell to No. 2. On Tuesday the Prefect liberated eleven prisoners without telling the Consuls. On Wednesday, Colonel Hixon, the U.S. Consul, and Dr. Gregory demanded the reason why they had been released, and the Prefect was compelled to promise to

re-arrest them in five days. On examination of witnesses it was found that two of the eleven had been implicated in the massacres. Eleven of the prisoners have been selected for execution, as the first batch, and the authorities are only waiting for the Viceroy's decision.

The Lamas who have made mischief in connection with the Sikkim-Tibet demarcation are connected with the three great monasteries at Lhasa which really control affairs in Tibet. They form what may be called the national party, and are as intolerant of Chinese influence as of any relations with European Powers. Thus they defy the Amban from Peking, and as he has no armed force at his disposal to make his wishes, much less his commands, respected, he cannot bring any pressure to bear upon them. It was unquestionably by their orders that the boundary pillars were destroyed, and they are now probably studying the inscriptions on the slabs which they ordered to be carried to Lhasa. The Amban's position must be humiliating, but the officials sent from Peking are accustomed to scurvy treatment and have to submit to it with as good a grace as possible. On the other hand, it appears to the Allahabad *Pioneer* that the British Boundary Commissioner has remained quite long enough on the border, and his withdrawal would now seem desirable. It would be undignified on the part of the British Government to keep its representative any longer waiting on the pleasure of the lamas, and this is virtually the position. After all it is no great matter whether boundary pillars are erected or not, for the country is a mass of tremendous hills, and it is only at the passes that any question can arise as to territorial rights. So long as the Guatong post is held, the local Tibetans are not likely to give trouble.

The authorities in Peking seem to have taken another of their spasmodic steps forward in appointing Wang Tê-shêng, an able artillery officer, who stood well in his studies while in the Germany military academy at Spandau in the early portion of the eighties, and, until lately, Commander of the ex-Viceroy Li's picked horse artillery regiment at Tientsin, as Brigadier-General of Hochou in Shensi. This prefecture is just now the head-quarters of the rebel chiefs of the Mahommedan rebellion now in progress in the north-western province of China. As General Wang is only a Brigadier-General by brevet his leap to a full-fledged Brigadier-General is regarded as a part of the new scheme to supersede the ignorant officers of the past by younger men who have had European training. The *China Gazette* says that very alarming reports of the spread of the Mahommedan rebellion have reached Nanking, and Chang Chih-tung hastened on arrangements for the sending of troops, returning from the north, to Szechuen, whence they are under orders to make the best of their way into Kansu. The British steamers *Chang-wo* and *Shan*, and the China Merchants' steamer *Kweilee* are now carrying troops under charter from Hankow to Ichang. Fully forty thousand so-called soldiers, who were sent up to fight the Japanese last year, are now being brought back and those who do not desert before they reach Hankow are put on board the up-river steamers and sent off to quell the Mahommedan rebellion if they can.

The new American Chengtu Outrages Commission will consist of Mr. Sheridan Read, Consul of the United States at Tientsin, a naval officer, and a missionary. Colonel Denby appoints the missionary, the Admiral the naval officer, and the U.S. Government selected Mr. Read. It is reported on native authority from Chengtu that a *yamen* runner who had received bribes to let a certain important criminal, concerned in the recent anti-missionary riots, escape from the city, was, by order of the Viceroy Lu Chuan-lin, bamboozed to death. The runner, Liu Mingsai by name, was dead before 5,000 blows of the bamboo had been given.

An announcement is made in the Shanghai press that a Missionary Bishopric is being formed in Western China. There are some sixty Church of England workers in connection with the China Inland Mission and the Church Missionary Society in the province of Szechuan,

and they have hitherto been under the episcopal supervision of Bishop Moule. But they are some 1,500 or 1,800 miles from the base, and he has not had the time to take the journey of six weeks there and a month back which would be necessary to enable him to visit them. Consequently the converts have remained unconfirmed, and there are also candidates ready for ordination. Bishop Moule has accordingly requested the Archbishop of Canterbury to consent to the formation of a new diocese. Arrangements on the subject having been much discussed with the C.I.M., the C.M.S. Committee recently resolved to approve the scheme to guarantee the salary of the new Bishop (for which a new special fund is to be started), and to submit the name of a clergyman for approval as the first occupant of the See. The *N.-C. Daily News* understands, that the nominee is the Rev. W. Wharton Cassells, B.A., a missionary of the C.I.M. and that the Archbishop has accepted his nomination.

The deaths of two well-known men connected with seafaring pursuits have to be recorded to-day, says the *China Gazette* of the 9th inst. One is Mr. Alex. MacCallum, foreman boiler-maker at Messrs. Boyd & Co., one of the most industrious and deserving men in Shanghai, a thoroughly good Scot and a hard-headed man. He was a native of Oban, Argyshire, and came out to Shanghai for Boyd's in 1870. He leaves a widow and family to mourn his untimely death by cholera after a few hours' illness. The other is Capt. Vincent, a well-known pilot, who died terribly suddenly at sea on Saturday, while steering his pilot-vessel the *Siren*. It is believed he succumbed to an affection of the heart.

The Wenchow correspondent of the *China Gazette*, writing on the 10th inst., relates the following incident:—Our Consul had a lively half-hour the other day, in passing through the *hsien* city of Iue-an. He was returning from a visit to Ping-yang, and like all other foreign travellers going to or coming from that city, had to pass through a portion of Iue-an. He heard that foreigners were generally stoned, etc., when passing through that place, and so had taken the precaution to have a guard of *yamen* runners. All passed off well during his short passage through the city, and he was congratulating himself on his peaceful progress as he entered his boat. He soon learned the temper of the people, however, for no sooner had he got into his boat than a shower of missiles came from the people on the banks of the canal, and the usual vile yells rang from their throats. The windows of his boat were soon smashed, also a portion of his travelling crockery. This disgraceful state of things lasted about a quarter of an hour, when the *tipaos* of the district turned up and somehow got the people to desist. If a Consul is thus treated, what wonder that missionaries are sometimes roughly used? The Iue-an Magistrate came up to Wenchow to apologise for the discourtesy manifested to the British Consul, and we are hoping that an improvement in the attitude of the people towards foreigners will take place as a result of the rough experience of our Consul. Chinese literature is being sold here and being scattered over the whole district, implicating the British with the Formosan trouble. It is asserted that England has been helping and is helping Japan. This is stirring up much bad feeling. These small books are printed in Wenchow, and ought certainly to be put a stop to.

THE MOHAMMEDAN REBELLION IN CHINA.

With reference to the Mohammedan insurrection in Kangsu and Shensi, which threatens to assume serious dimensions, the following interesting particulars as to Mohammedanism in China are given in the *North China Daily News*:—

Chinese Mahommedanism has for long been so closely connected with the history of Central Asia and particularly Chinese Turkestan, that one cannot well be separated from the other, and this connection has been of more special moment during the last thirty years. The reconquest of Kashgaria and a portion of

Kuldja by the Imperial armies of China was completed in 1878, and for five years following the country was governed by martial law, nominally under the rule of the late Marquis Tso Tsung-tang, who obtained all the credit for the recovery of the country, being dignified by the title of "Conqueror of Kashgaria," though as the military administrator of the recently acquired territory he really never went farther west outside the Great Wall than the Mongol city of Hami—called Kham by Marco Polo—which is fully nine hundred miles east of Kashgar—the actual work of conquest having been effected by Liu Chin-t'ang. Prior to the Mahommedan rising, which took place in the sixties immediately after the suppression of the Taiping Rebellion, the country had been governed by Manchus or Mongol Bannermen exclusively, precisely as was the case with Kokonor, Jehol, Tarbagatai, etc., in which districts no Chinese were eligible for office of any kind. The extortions and corruption of these officials provoked the intense hatred of the Mahommedans, who rose against them, and in the conflict which ensued nearly the entire Buddhist population was slaughtered or made slaves by the rebels. When this rebellion was suppressed by Liu Chin-t'ang and tranquillity was once more secured, the Manchus made an effort to oust Tso Tsung-tang and his lieutenant from the positions gained by their prowess, and petitioned the Throne to appoint Tartar officials as formerly to administer the district, and to dismiss all Chinese. The Emperor, however, wisely referred the question to Tso Tsung-tang, as the one best able to determine if such a change were desirable, and received in reply a memorial which has been characterised as a very gem of classical sarcasm, in which the Emperor was frankly informed that it was owing to the corrupt rule of the Tartar Bannermen that the rebellion had been provoked, which had resulted in the destruction of upwards of 120,000 Manchus and Chinese Buddhists, and that if his Majesty desired to lose Kashgaria once more the appointment of Manchu officials was the best way to bring it about, and that it would be impossible to reconquer a country so lost, because the Chinese would refuse to shed their blood for the benefit of worthless Manchu officials. Tso Tsung-t'ang went on to say that, after fifteen years' hard work to restore peace at the cost of much Chinese blood, he had no idea of surrendering the territory to those who were unable to hold it, and that the country must be governed by Chinese exactly like those parts of the Empire within the Great Wall.

In the meantime the Board of Reorganisation had been busy surveying the country and defining the limits of the various sub-prefectures, departments, and districts of the new province, so that by 1884 all was ready for the exchange of the military administration for a civil one; the requisite number of civil officials were then appointed, and on Liu Chin-t'ang was conferred the post of first Governor of the New Dominion or Hsinchiang. In this was included the sub-provinces of Kuldja and Tarbagatai, the stronghold of the Kal-mucks and of Buddhism in Mongolia, to whose loyalty it was owing that the Mahommedan rebels failed in their attempted invasion of China proper by way of northern Mongolia and the grass plateaux.

The Chinese Mahommedans, or Tunganis, of the New Dominion settled down quietly to agricultural pursuits when the civil government was firmly established. They are of fine physique but are very clanish, and find great enjoyment in recounting the glorious deeds of their ancestors, the legends about which have been carefully handed down from generation to generation; and though the Tunganis are gradually diminishing in number they still form a very large and important section of the community, who would be peaceably inclined if left in full enjoyment of their religion and were not oppressed by their rulers. But, in spite of all, they meet with constant opposition from the Buddhists, whose hardly suppressed desire, apparently, is to exterminate the Mahommedans altogether. In intellect and personal accomplishments the Tunganis are quite the equal and frequently the superior of the native Buddhist. Many Tunganis stand high in literary rank and attainments, and they have several Hanlins amongst them, but unfortunately for them the law provides that no civil official above the 4th rank (Taotai and Prefect) can be a Mahommedan, and the follower of Islam is bound to renounce his religion and conform to practices which Mahommedanism forbids on gaining the rank of Taotai or Prefect. A military officer who is a Mussulman can only attain the rank of Captain, and if promoted to that of Major or higher must renounce his religion. In the case of both civilian and military appointments the official would be compelled to burn incense at Buddhist temples on the 1st and 15th day of the moon. The late Viceroy of Nanking, Ma, was a Mahommedan until he reached the rank of Taotai, and the late General Tso Pao-kuei, who was killed at Pingyang during the war with Japan, was at one time a Mahommedan, and despite their recantation both these men were to the last looked upon as Mahommedans by the followers of Islam.

Captain Jabez Loane, R.N., died at Dulwich on 4th inst. in his seventy-fifth year. He entered the navy in 1830, served during the first Chinese war in 1841, and was present at the operations on the coast of Borneo in 1846. In 1847 he was in command of two of Her Majesty's ships in China during the disturbances in the Canton river.

THE LONDON "ECONOMIST" ON THE EASTERN SITUATION.

THE London *Economist* has an interesting article on the situation in the Far East, but the writer obviously approaches his subject without much previous study, or any thorough knowledge of the conditions of the problem. Basing his conclusions on letters from the Tokyo correspondents of *The Times* and the *Daily News*, he accepts unquestioningly the dicta of the latter's contributor, and is misled in more than one important particular. His general conclusion is that, whereas the Japanese originally regarded China as their chief enemy, and counted her the principal barrier in the path of their country's aggrandisement, the story of the Liaotung Peninsula has opened their eyes and shown them that their real foe is Russia. Hence "the people are bitterly enraged against Russia, and their rage is the greater because it is impotent." Such a view seems to us very partial. It manifestly ignores the proximate cause of the recent war, which was to secure the independence of Korea, not certainly for Korea's sake, but with the aim of preventing the peninsula from ultimately falling into Russia's possession. So far as concerned Japan's real object, there need never have been any conflict between herself and the neighbouring empire. China had only to agree that her crippling and unpractical interference in Korean affairs should cease, and that she would thenceforth coöperate with Japan, or leave Japan a free hand in carrying out reforms calculated to restore Korea's national vitality, and to educate in the little Kingdom some capacity for self-defence. It is thus apparent that to provide against the danger of Russian aggression was the ultimate aim of Japan, and that, so far from ignoring the Great Northern Power, and entertaining hostile feelings against China only, the statesmen of Japan would willingly have coöperated with the latter to place an effective barrier in the path of the former's southward growth. These are elementary facts of recent history. It is altogether misleading to allege that the events connected with the restoration of the Liaotung Peninsula have shown Japan a new enemy in Russia. We are at a loss to understand how the Tokyo correspondent of the *Daily News* can have taken such a superficial view of the situation. His correlated assertion, that the people of Japan are "bitterly enraged against Russia," seems almost equally misleading. We do not think that the Liaotung affair produced any strong wave of anti-Russian sentiment in Japan, for the simple reason that the Japanese could easily appreciate Russia's motives, and did not fail to recognise that the nature of her interests in Manchuria and Korea warranted her interference to prevent Japan's annexation of either the Liaotung or the Korean peninsula. It is,

of course, difficult to measure popular feeling accurately, but, on the whole, we are disposed to believe that Japanese anger was stirred chiefly against Germany, whose action with regard to Liaotung was obviously dictated by considerations of European policy, and could not be justified by any reasoning directly connected with the questions at issue. It must have been a rude shock to Japan to find the cup of hardly won victory dashed from her lips by a Power hitherto uniformly friendly, and now possessing no title to interfere hostilely except that conferred by considerations of remote convenience. Both the *Economist* and the *Daily News* appear to us to misinterpret the lessons of the war. Japan has made no new discovery, except, perhaps, in the case of Germany. But China and Great Britain have added an unfortunate page to their diplomatic records. China's interests in averting Russian aggression were even more strongly involved than those of Japan. Yet, instead of welcoming Japan's coöperation in the common cause of the two Eastern empires' security, she fought a war that not only exposed her to the ridicule of the world and showed her to be at the mercy of any resolute aggressor, but also divided the Oriental house against itself and ended by involving her in the meshes of a Russian net from which no hope of escape presents itself. As for Great Britain, we shall surely not be speaking with the wisdom that follows the event, if we say that from the outset she ought to have recognised the importance of uniting China and Japan against Russia. There already existed between Downing-street and Peking a tacit understanding based on similarity of interests in Central Asia. Already, too, China, at Great Britain's instance, had obtained from Russia a promise to respect the integrity of Korea. When, then, Japan came forward with a programme that would have furthered the object of England and China, and would also have brought the two Eastern empires into a concert of far-reaching potentialities, England's most astute course would surely have been to exercise her influence in the direction indicated by Japan. It is true that she devoted herself frankly to the humane duty of preserving the peace, but her method of doing so was unfortunate, since it tended to strengthen China's unpractical and unprogressive position, rather than to promote Japan civilizing and sagacious proposals. No thoughtful student of contemporary history can fail to perceive the exceedingly complex nature of the problem proposed for solution by British statesmen in the early summer of last year. But the general clue was to be found, we think, not in pressing Japan to abandon, but rather in urging China to endorse, projects designed to raise Korea from a wretched state of corruption and national emasculation to a condition of civilized progress and capa-

city for self-defence. Between, on the one hand, the union of China and Japan for the purpose of checking Russian aggression, as well as educating Korea's competence to assist that result, and, on the other, the effectual division of Japan and China, and the abandonment of Korea to the former's unaided efforts under circumstances eminently calculated to create opportunities for Russian interference—between these two issues there ought not to have been much room for choice.

FRANCE AND THE POWERS IN CHINA.

THERE has been a most remarkable contrast between the action of the French in China and that of the British and Americans in connection with the Szechuan outrages. The French missionaries were incomparably the greatest sufferers, but neither in the press nor on the platform did they take any steps to ventilate their grievances. True to the self-effacing spirit that marks the doings of all Roman Catholic propagandists in the Far East, they quietly submitted their complaints and awaited in silence their Minister's action. Such is not the method generally supposed to be successful in China. Yet it succeeded in the present case. The French Prelate, Bishop DURAND, was invested with plenipotentiary powers, and investigations were at once undertaken by him in conjunction with the local officials, the French Representative in Peking so vigorously seconding the efforts of the Bishop—who was installed in the *Yamén* of the Provincial Treasurer in Chengtu and treated with the fullest honour and respect by the Chinese—that all the findings of the investigators were promptly endorsed in Peking, and the main terms of a settlement have now been practically agreed upon. On the other hand, the Americans and British held indignation meetings in all the principal towns where they reside; strong protests were made by journalists and orators; powerfully worded resolutions were forwarded to the Representatives of the two Powers in Peking; questions were asked at Westminster, and a wide-spread agitation resulted which, as yet, has produced no definite issue. Thus stated, the case looks well for the French. But it has to be remembered that they have separated themselves from their fellow-sufferers of other nationalities and established a principle of divided interests, than which the Chinese could desire nothing more convenient. It has further to be remembered that all this quietness and apparent indifference are precisely calculated to play the game of Chinese officialdom. Light and pother are the bugbears of the Chinese administrator. His one aim is to find a *via media* out of every trouble; to avoid friction and to eschew publicity. That missionaries should rely on the force of per-

suasion and exhortation rather than on the aid of the law; that they should oppose their own lives of patience, purity, and charity to the persecutions of ruffian fanatics and the injustice of corrupt officials, is a beautiful spectacle. But China is beyond the influence of such object lessons. They tend only to harden her conservative callousness and to postpone the civilized progress which she must embrace or lose her national integrity. The day may soon come when France will learn the value of the union that she now avoids. It is, of course, possible that her deliberate segregation in this instance may be the result of merely temporary circumstances. Her relations with England are not pleasant. She deliberately played for her own hand and against British interests in her recent negotiations with the Tsung-li Yamên. In fact, at the very time when the question of the Szechuan outrages came upon the tapis, M. GERARD is understood to have been engaged in negotiating in Peking a treaty against which Great Britain has been compelled to protest, since it transfers to French possession territory the neutrality of which had been previously guaranteed for the purposes of a buffer state. It might have been highly inconvenient and embarrassing for the French Representative to act in concert with his British colleague with regard to the Szechuan trouble at the very time that he was acting in covert opposition to him with regard to another important question. On the other hand, the French missionaries themselves may be responsible for the quiet undemonstrative course adopted. But whatever be the true explanation, the fact is worth noting.

THE NEW CHINESE MINISTER.

THE inevitable interviewer has waited upon the new Chinese Minister and published a conversation supposed to have been held with that official. A certain amount of interest always attaches to journalistic work of this kind, but no one can suppose that the utterances of a Minister under such circumstances deserve to be viewed very seriously. The things that must be said and the things that must be left unsaid are well known to every diplomat of ordinary training and intelligence. Mr. YU naturally avers that the sentiments of his country are now thoroughly friendly to Japan, that China views her neighbour with eyes very different from those of yore, and that the removal of His Excellency Marquis LI to Peking does not by any means indicate a diminution of his political influence or of the Central Government's trust in him. All this the Minister was bound to say, so that, when we come to sum up the significance of the interview, only one point seems really worthy of note, namely, that Mr. YU consented to be interviewed at all. That fact indicates a decidedly

un-Chinese-like belief in the utility of the press. As to the sentiments of the Chinese nation, who on earth is competent to express a faithful opinion? There is no such thing as a Chinese nation. What we have been accustomed to call by that name is an immense congeries of separate communities, linked together solely by the slender bond of faith in each other's pacific purposes. The Chinaman of Kwangtung lives free from apprehension that the Chinaman of Kwangsi harbours belligerent designs against him, but is troubled by no shadow of conception that the two Kwangs are under obligation to assist Hunan or Fuhkien against a foreign foe. As for the general impression made upon this heterogeneous colossus by the impact of one part of its bulky body with a foreign substance, the recent war has fully demonstrated how circumscribed are the effects of the rudest shock. All evidence tends to prove that China has not felt her beating, does not even know that she was beaten, and is as confident as ever in the invulnerability of her bulk. It is Mr. YU's duty to say pretty things. That is an essential part of the pacific programme contemplated by those that accredited him to Japan. But the Japanese will be deceiving themselves if they imagine that they have taught China any lesson likely to have progressive consequences, or that their recent display of prowess will be permanently felt in their intercourse with their neighbour. Such results, we fear, can not be hoped for. Not China, but Europe and America have learned a lesson from the war, and that lesson is that China has no ability whatever to resist a resolute foe. By how much the demonstration has shaken the stability of peace in the Orient, Japanese publicists are quite competent to judge for themselves. Japan's ludicrously easy victories have produced a state of the tenderest international equilibrium in the East, and it is her obvious business to be prepared for a huge *débâcle* at any moment. The removal of Marquis LI to Peking signifies the elimination of one of the factors making most strongly for China's intelligent and liberal association with outer nations. Some writers have been pleased to represent LI's new post as that of Prime Minister. He is no more Premier of China than the President of the Privy Council in Japan is leader of the Cabinet. The Great Viceroy may no longer be reckoned with as an important political potentiality, and his disappearance from the scene materially attenuates the chances of prolonged tranquillity.

The launching, at Havre, of the sea-going torpedo-boat *Forban*, now in course of construction, will, says the *Petite République*, be quite an event in the maritime world. The journal adds that, by the terms of contract, the vessel, which is being built according to a novel design, will be capable of steaming thirty knots an hour—a speed not hitherto attained in any navy in the world.

COUNT INOUE CRITICIZED.

AT the time of Count INOUE'S return from Korea all kinds of rumours were circulated about the cause of a step so perplexing to the general public. The Tokyo correspondent of the London *Daily News* seems to have accepted the most sensational of these stories, and to have forwarded it with full endorsement to the Liberal organ. Having explained that Japan's necessity to bow to Russian, German, and French dictation in the matter of Liaotung, had greatly impaired her prestige in Korea and thus crippled her capacity for usefulness—a result that must, we think, be partially admitted—the correspondent went on to say that the Japanese Agent at the Korean Court was now without power; that his advice was openly derided; that “no one paid attention to his counsel or considered it worth while to consult him;” that “his return to Japan was inevitable,” and that “he left for home a beaten man.” It is often disastrous to be obliged to gather up intelligence by a fixed date, in order to send it off by the mail, as is the fate of European or American journalistic correspondents in Japan. But a little prudence and some trifling accessibility to sources of trustworthy information, ought to have saved the *Daily News'* correspondent from such an error as the above. He must have been very quickly undeceived as to Count INOUE'S supposed failure in Sôul. Our readers long ago learned that the purpose of the Count's return to Japan was to lay before the Cabinet an exact statement of the conditions existing in Korea, and to submit a programme of policy that appeared to him best adapted to the circumstances. The nature of the influence wielded by him in Sôul is indicated plainly enough by the reports regularly transmitted from that place, while the fact that a fresh political crisis occurred during his brief absence from his post, and was promptly and successfully dealt with on his resumption of duty, shows how signally at variance with the truth is the discredited and ineffective position assigned to him by the correspondent of the London journal. For the rest, we cannot but marvel at the extremely unreasonable tone too often adopted by foreign critics in discussing Japan's action in Korea. When she undertook the task of introducing administrative and legislative reforms in the little Kingdom, the general cry was that she had committed the egregious blunder of attempting to grow exotics in a soil totally unsuited to them. Misled by the facility with which she herself had assimilated certain elements of Western civilization, she was about—said her critics—to submit the digestion of a chronically sick man to an even more violent process. Her schemes were altogether too drastic, her projects fatuously sanguine. What she should have done was to set about the

task of reform in a leisurely, tentative, and partial fashion, taking the utmost care to carry the nation with her as she went. That was what several wise observers wrote, and doubtless their sagacity would have been commendable had there been any certain indication that Japan contemplated the precipitate course assigned to her by them, and that she lacked perception of the every-day truism that no people can be permanently led beyond their capacity to follow. There were, however, no indications of any such silliness on Japan's part. Had she courted certain failure by attempting obvious impossibilities, she would never have chosen for her Representative in Korea a statesman like Count INOUE who, for all his courage of conduct and fertility of resource, is eminently practical, and whose whole career testifies firm faith in, and steady adherence to, the principle that measures of reform, unless they are to be mere fiascos, must be adapted to the conditions under which they are enforced. Most curious is it to find these same critics now declaring that Japan has altogether failed in her self-imposed mission because, in the space of a few months, she has not succeeded in civilizing Korea, or at least in effecting reforms of such magnitude as to be noticeable by the world at large. Yesterday they blamed her because she was attempting, as they alleged, the very task for not accomplishing which they condemn her to-day. Providence has not endowed all critics with a faithful memory. Three or four years hence it will be time enough, we think, to measure Japan's work in Korea by visible results. There is a great deal of impatience in a certain quarter about England's remaining in Egypt, but although she has been there during fourteen years, and although, beyond introducing order into the finances, and re-organizing the troops, she has effected little that can be placed to the account of the country's general civilization, we do not hear any critic venturing to question the soundness or sufficiency of her reforming work. Japan has not been occupied for even one full year in the regeneration of Korea. It is surely premature to expect that she can have achieved anything signal. She has been very successful in the matter of her own reforms, but as yet we know nothing of her capacity for reforming others. A considerable time must elapse before her doings in Korea may be justly judged by their results.

SIR NICHOLAS O'CONOR.

THE promotion of Sir NICHOLAS O'CONOR from the post of Minister in Peking to that of Ambassador in St. Petersburg is a step sufficiently striking to supply material to lovers of sensation. We can not suppose, however, that it has any special significance. The vacancy existed, and Lord SALISBURY chose the official best suited, in his opinion, to fill it. That is probably the gist of the incident. From the point of view of Sir NICHOLAS himself, there is a good deal to be said, but as a public measure the most reasonable interpretation seems to be that owing to the large material interest now acquired by Russia in China, as well as to the very active *début* recently made by the Great Northern Power on the stage of the Far East, HER MAJESTY'S Government deems it advisable to have at St. Petersburg a man not merely of proved diplomatic ability, but also thoroughly acquainted with Oriental affairs. No servant of the Foreign Office seems to possess these qualifications in a higher degree than Sir NICHOLAS O'CONOR, and to that fact, rather than to the adoption of any special line of policy by HER MAJESTY'S Government, he doubtless owes his promotion. His career has been exceptional. Nine years ago, Secretary of Legation in Peking, he is to-day Ambassador in St. Petersburg. Few men have ever been able to show such a record. Sir NICHOLAS has of late begun to be the object of local journalistic attack. Were one to credit the things written of him by some of the Shanghai and Hong-kong journals, he ought to be placed *en disponibilité* rather than deputed to the charge of British interests in one of the most important posts in Europe. But never yet did an English official in the East escape some measure of journalistic vilification. Great Britain has not at her command any servants quite up to the standard of local Oriental criticism. All are found wanting when weighed in the balance by the illustrious publicists that occupy editorial chairs in the Far East, and it must be a satisfaction to Sir NICHOLAS O'CONOR to reflect that the signal promotion conferred on him by his Government not only benefits his reputation and his pocket, but also removes him to a sphere where his actions will be analysed by the comparatively feeble and perfunctory light of journals like *The Times*, the *Standard*, and the *Daily News*. He is conversant with Bulgarian affairs; he is conversant with Chinese affairs, and it may almost be said, in view of existing circumstances, that his diplomatic career during the past ten years has been a special training for the Embassy in St. Petersburg. The Chinese, if rumour be credible, have been developing a desire to see Sir NICHOLAS transferred to a new post, while, on the other hand, his nationals have been chafing at the moderation and

leniency displayed by him in the face of terrible outrages and shocking violations of the Treaty. Both sides appear to forget how infinitesimal is the remnant of discretionary power that the telegraph has left in the hands of a Minister abroad. If Sir NICHOLAS O'CONOR's sense of discipline has led him to keep within the lines of his instructions, there can be little doubt that his sentiment as an Englishman has often tended to push him beyond them. We imagine that, in common with the great majority of his fellow countrymen in the East, he must have been tormented by a sense of want of proportion between the Kucheng massacre and the composition of the British commission deputed to investigate it. Yet, even in writing this, we remember that ever since the close of 1893, Sir NICHOLAS lived in apprehension of some such catastrophe as that of Kucheng, for he saw plainly that the almost reckless use of the female element in Chinese mission fields constituted a special source of danger. It must have been a point of duty with him to communicate this apprehension to the Peking authorities so as to enlist their aid in averting the peril, and if coöperation of that kind preceded the Kucheng troubles, its moderating effect would necessarily have been felt in dealing with them. The hard fact to which one always returns in considering China's modern history is that the very first result of sound Government, security of life and property, is conspicuously wanting throughout her vast empire. Somewhere within her borders an insurrection is constantly in progress. At the present moment, two rebellions, one in the south, another in the north, threaten almost to overtax her resources. If the Central Government is thus powerless to check disaffection against its own domestic administration, how can it possibly be expected to force from its subjects a hospitable reception for the abhorred alien. In truth, foreign intercourse with China is constantly exposed to accidents against which Officialdom in Peking can not safeguard it, though pledged by treaty to do so, and unless the power of the Throne can be largely augmented by intelligent reforms, the time must come when Western States will themselves assume the protective duties that the Central Government has proved incapable of discharging. Pending either one event or the other, Great Britain's diplomatic relations with Peking are necessarily of a most delicate nature, since her interests as a nation counsel her to avert a catastrophe which the discharge of her duty to her subjects tends to precipitate. Sir NICHOLAS O'CONOR is to be congratulated on his transfer from Peking at such a time. From St. Petersburg he will be able, when the time is ripe, to substitute a positive rôle for the negative and unsatisfactory part that he has been compelled to play in the Chinese capital.

American experiments with the Cunningham, a rocket-driven torpedo, do not appear to have been very successful. The weapon was supposed to travel several thousand yards, but after having run less than fifty yards it stuck in the mud at the bottom. Experiments with a Whitehead containing Mr. Leavitt's improvements were, on the contrary, very satisfactory. It came out incidentally during the trials that the mass of an armoured exercise has an appreciable attractive effect on a torpedo running in its neighbourhood.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SCHOOL OF ECONOMICS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Hitherto there has existed no institution in England for the specific study of economic and political science, or for the promotion of original research in these branches of knowledge. Outside of England institutions of this kind have long been established, as for instance, the *École Libre des Sciences Politiques* in Paris, and the school of Political Sciences of Columbia College, New York.

This deficiency has lately been remedied in England by the establishment of the London School of Economics and Political Science, organized under the direction of Mr. W. A. S. Hewins, M.A. of Oxford. I am requested by the Director to state that the School will open in October of this year. Lectures will be given on economic, political, and allied topics by specialists from all parts of England. On commercial subjects the School will be assisted by the London Chamber of Commerce. One of the aims of the institution is the promotion of *international* study of economic and political problems.

The work of the School has been organized as follows:—

- 1.—Public lectures on Economic Theory and History, Statistics, Commerce, Commercial Geography, Commercial History, Commercial Law, Banking, Currency, Finance, and Taxation.
- 2.—Special classes, arranged as a three years' course of study, concluding with a research course.
- 3.—Promotion by means of scholarships or otherwise of original research.
- 4.—Publication of works containing the results of researches.
- 5.—Collection of a library for the use of students of the school.
- 6.—Organization of an "information department" to assist students for the purpose of investigations.

For prospectus or information applicants may address, The Director, London School of Economics and Political Science, 9, John Street, Adelphi, London, W.C.

I am, yours faithfully,

GARRETT DROPPERS.

THE PLACE OF CHRIST IN HUMAN HISTORY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since humanity reached that stage of perception when a record—whether written or traditional it does not matter—of its daily actions and doings was treasured up to the present day, a large number of leaders in every province of human activity have appeared. Men who have stamped indelibly their personality upon the daily life of mankind; men who have created epochs in almost every department of thought, they are easily recognizable. As soon as they appear we carry them upon our shoulders and enthrone them in a pre-arranged niche in the temple of fame, whence no hand of the iconoclast can ever dare to remove them. We all know them, and daily fall down and worship them, therefore to mention their names would be worse than superfluous.

Of one person, however, this cannot be said. Human criticism and love of definition hitherto have been unable to find a place for the Carpenter of Nazareth. Even to-day opinions in regard to his person and nature are just as conflicting as they were 19 centuries ago, when some said he was the Christ and others that he was in league with devils. The majority of those writers who have opposed his doctrines and scorned at the dogmas legally evolved from the religious consciousness of the church which he has established, have scrupulously avoided the question of his person. Carlyle—that Timon of London—who could see nothing good in the great society bearing his name, did not dare even to mention his name in that comic-tragic drama when he was first setting his hero upon a gigantic pedestal of honour and summoning all nations and languages to fall down and worship him, then suddenly throwing him down from his high position and trampling him under his feet. The whole trend of argumentation of those famous lectures was leading towards Christ and Christianity as the finality of all religious consciousness of Europe. The sage was by duty bound to have expressed his opinions of the person of

Christ whose spiritual doctrines and tenets have created the modern civilization in contradistinction from the ethnic ideas of the Greco-Roman culture. He ought not to have leaped from England to Arabia in search of his theme. Undoubtedly that great genius foresaw the vast number of insoluble antinomies surrounding the subject, therefore left it untouched.

Fools rush in where angels fear to tread.

Another great personage of our Age—Daniel Strauss—attempted to solve the insurmountable difficulty of the subject by flatly denying the historical existence of such a person: merging the Christ of the Evangelists into the myth of universal humanity. In his latter days Strauss retracted the myth theory: mature judgment and experience had taught him the truism that historical events, even if for a little time the yare successfully-perverted by a persuasive sophistry, possess sufficient dynamic force to rectify themselves spontaneously and mercilessly torture the author who committed the felony. However, Strauss' "myth theory" has done a great service to the cause of Christianity. It has shown conclusively that the ideas and their ultimate potentialities, as we find them attributed to Christ by the authors of the Gospels, cannot be brought into ripe maturity and satisfactory actuality by any single individual mortal in the history of the world; the infinity of the scope attenuate them to the infinite ocean of humanity itself.

Strauss' contemporary and friend—Renan—took quite a different position. With his characteristic frivolity and audacious disregard for all dialectical uniformity, he made his hero of *Vie de Jésu* either a god or a lunatic, as his fantastic imagination guided him.

I shall not add any more instances of these futile endeavours. The question however, impels us to pause here and ask: Why should it be so difficult to assign a final place for Christ as has been allotted to all other leaders, past and present, of our race? We have moral teachers whose ethical codes enunciated more than three thousand years ago are in the present day the sole mainspring of action of the moral conduct of millions of our fellow-men. We have philosophers who have soared so high that no corner of the universe is left unexplored. We have seen naturalists who have brought to daylight every secret and mystery of nature's operations. Goethe's assertion,

What she (nature) reveals not to their mental sight
Thou wilt not wrest from her with levers and with screws,

made at the beginning of this century, has no further application at its approaching end. We have had conquerors and organizers whose sociological and governmental theories and plans have reached the acme of perfection. Nay, furthermore, we have seen gods and demi-gods walking amongst us in human form and over-awing us into slavish obedience. Why then, one is tempted to ask, that definition-loving human faculty which has defined the rank and assigned the place to each and every one of its heroes, but has not succeeded in finding that of Christ, in order that the bitter controversy which has been waging around his person since his advent should be finally closed?

The answer is not easy; because none of the places would befit him. He may be likened to many illustrious personages in the history of our world who have achieved great deeds and procured abiding results to our race. Human life both individually and collectively, is such a complicated world of thought and activity, of aspirations and desires, that if the canon of analogy and parallelism be a little attenuated, we may find many points of real resemblance between the actions of a conquering monarch and the ambition of a ragged beggar. Notwithstanding some striking coincidences between the actions of Christ and those of other great men, still the person of Christ remains alone in its unique solitariness. He was not a moral teacher like a Confucius or a Socrates. He inculcated some sublime moral precepts, but he never intended to make them the foundation of his spiritual religion. The development and perfection of all ethical ideas he left to the moral consciousness of followers; nay, rather, to the moral consciousness of humanity at large. He was not a teacher, or a prophet, or a founder of a religion, or sect, in the strict terminology of those words. We have to fall back again to our first question: What makes Jesus Christ uniquely incomprehensible amongst the children of men? Is it the sphere of ideas with their infinite variety and unapproachable sublimity which he unfolds before those who are willing to attach themselves to him:—"As thou, father, art in me, and I in thee, that they also may be one in us." Here he opens infinity to every human eye, and makes every individual a

sympathetic part of the universe. Here lies the secret of Christ's greatness. A greatness which baffles the human mind in its endeavour to grasp. It is this conception of human possibilities for expansion and elevation never dreamed of by any one before, that makes Christ unapproachably above all others. These ideas Christ did not discover like Plato "some patterns fixed in nature;" he created them. They do not affect only relatively the phenomena which daily change in the infinite space, but they enter into the innermost recesses of the human soul and remould the spirit and intellect so that a child of perdition finally becomes a son of God. Not a single instance in history can be cited when in a proper method their application was made and their operation was found ineffective. In that alone lies the eternal hope of that much desired pothenesis of a diseased humanity. In creating this new world of ideas Christ removes himself from the sphere of common mortals.

O.

September 17th, 1895.

LETTER FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.)

Taipeifu, Formosa, Sept. 2nd, 1895.

That the reader may be able to follow the Japanese in their occupation of the island, I will take up the trend of events since my last letter, which found the Japanese in possession of Takoham, and an occasional skirmish with the Chinese taking place at Teckham (Hsin Chu).

The troops have slowly, but steadily, been advancing south during the last month. We find them leaving Teckham, and on August 8th Lutow (Oowshua), and on the 9th proceeding further south and attacking and capturing the commanding position and fort at Sempisu hill; the Chinese fleeing before them as they advanced. As the Chinese learned of the approach of the Japanese, in many of the towns consternation prevailed. On the 10th, at Mahle, a town but a few miles away from the conquering Japanese, the Chinese soldiers were gathered to the number of several thousand. They seemed to be mostly Hakkas, although the leaders spoke the mandarin dialect, and were from Honan, Canton, and other districts on the mainland, and all were former officials under the old régime. One detachment of "Black Flags" had arrived from the south, evidently to cheer the soldiers up and to publish the mighty words of the mighty "Liu," the Chief of the Southern Republic. There seemed to be great dissatisfaction among the soldiers, who were anything but anxious for the fray, and the village Elders stated that they did not want to fight but were forced to by the Chinese soldiers, who would kill them if they refused. Several Hakkas had been beheaded because they showed signs of weakness and did not want to join the movement against the Japanese.

At Olan on the night of the 10th, eighty Chinese soldiers entered the town with great bravado to inspect the houses to see that no Japanese soldiers were concealed. A vigorous search was instituted in the closets, under the beds, and in the attics, in fact every place where they were not likely to be found. It might be mentioned that no search was made outside of the city. The next forenoon three Japanese arrived and entered the city, the villagers informing them that they did not want to fight and begged them to bring a body of soldiers as soon as possible, as they were afraid the Chinese troops would return. The Chinese soldiers, a few miles away, were burning the farms of the peaceful natives and were much feared by all the neighbourhood. The next morning the Japanese army advanced, passed through Olan (Coro), and were fired upon by the Chinese from the surrounding hills. Two men-of-war answered by bombarding from the sea. The Japanese artillery was brought into position, and after a few shells the Chinese were scampering over the hills with a great deal of haste, and no little confusion, but not until twenty or thirty had been killed, with one Japanese killed and seven wounded. The Japanese then going a bit inland took possession of Mahli (Biontsu) the next morning, the fifteenth. The division was then divided into two columns, one advancing to Changwha (Shoka), and the other to Taiton or, as it is sometimes marked on the maps, "Taiwan-foo," but there is no village there, only a few yaméns near by mark the spot where once it was intended to erect and establish a city to be the capital of Formosa.

On the 28th ultimo a combined attack was made on the forts outside the big inland city of Changwha (Shoka), the third city of importance

on the Island. One detachment took the road-way direct to the city, and built a pontoon bridge across the river which flowed between them and the city as well as the forts. The main army went to the eastward to attack the fort erected on a large hill to the east of the city. At five in the morning the artillery was brought into position and the attack commenced. For nearly two hours the Chinese held their ground, and then retreated in the greatest haste, so that the fort and city were both in possession of the Japanese by seven o'clock, and the big city with its fort armed with modern guns—which has been always considered the strongest of any on the island, and old residents had prophesied that the Japanese would have a difficult time when they tackled Changwha,—fell as easy a capture as any army could wish. The Chinese made such a hurried retreat that boxes, bundles, clothes, all were left behind. They evidently had not anticipated that defeat was possible, for the houses were found all in order. Fires were blazing and the food still cooking in preparation for the morning meal. Costly robes and valuables of many kinds were there undisturbed. The whole scene betrayed a retreat unexpected and one carried into execution at once. In the fort were four 12 centimetre Krupp modern breach-loading guns; and 410 other guns of different kinds were captured in and about the city, besides a great many small arms, flags, uniforms, ammunition, etc. The Chinese loss was about six hundred and the Japanese nine. A detachment of Japanese followed south for twelve miles to To-lo-kumun (Tolokum), and another party took possession of Lo-kang (Kokuko) the port for Changwha.

The Imperial Prince Yoshihisa is in command of the division. Troops and coolies in great numbers have been arriving almost daily at Kelung, the Japanese journals stating that there are forty-six thousand in all, which, I think, is considerably exaggerated; at all events the country is filled with them. One cannot look in any direction without seeing soldiers in great numbers. Since the Government of Formosa has been changed from civil to military control there has been a little ill-feeling created, caused by the forced obedience required by military rule, which in some cases seems to be exerted with rather a domineering spirit, and the ignorant Chinese, who are incapable of comprehending the workings of a military organization, takes the enforced strictness as a personal offence created only to allow of an opportunity for the Japanese to tyrannize and take advantage of their position.

In some cases there has been just cause for offence, and considerable ill-feeling has been created even among the foreigners, for many of the soldiers and the majority of the coolies seem to swell with consciousness of superiority and oftentimes in little ways make it disagreeable for the Chinese. It has to me been surprising that there has not been many cases of crime and disorder considering the great number of soldiers and coolies, but to the credit of the men and their officers has nothing occurred worthy of serious complaint; but it is the little irritating incidents that are of everyday occurrence that are driving the Chinese to the mainland by hundreds. The Japanese should exert a greater police supervision, with a stricter punishment for disobedience.

Guards are distributed all over the city both inside the wall and out, and Chinese passing these sentries were for some time forced to take off their hats as they passed. I think orders were only given for this rule to be observed at the city gates, and as the Japanese, whether he be of high or low rank must salute the guard in the same way, there is no criticism to be made if they wished to enforce this acknowledgement, but if such was the case, official proclamations should have been published about the city, that the Chinese might not have been subjected to the humiliating insolence of a common soldier, who in many instances knocked their hats off with his bayonet. This performance had not only taken place at the city gateways but on the public highway. It even reached to such an extent that Chinese passing the gates in jinrickshas were forced to step out and walk past the guard with uncovered head, then again get into the jinricksha and proceed. In one case a foreigner was ordered to step out of his jinricksha while passing the guard. Of course the foreigner did not comply, and as a result of the insult a written complaint was entered and the Japanese officials to their credit at once took steps to see that the offence was not repeated, as well as to rescind the order that the Chinese should uncover as soon as they found it was becoming very obnoxious. The insolence of the majority of coolies is greatly in need of control. The roadway seems to be their undisputed possession and foreigners are always forced to step to one side when passing them. They enter the houses at their pleasure and are a terror to all

Chinese who possess, as one of their most prominent characteristics, the desire for exclusion and privacy. As to the reports of the great number of Japanese suffering with sickness the following table will show to what extent the climate of Formosa is effecting the troops:—

Hospital.	Wounded.	Cholera.	Typhus.	Dysentery.	Berberi.	Malaria.	Enteritis.	Miscellaneous.	Total.	Average, for one day during the last week, of deaths.
Kelung.....	33	3	9	25	443	106	189	182	979	3
Taipeifu.....	7	10	0	54	203	16	188	237	715	9
Teckham (Hsinchu)..	4	28	0	24	23	6	860	46	291	6
Total ...	33	41	9	103	669	128	537	465	1985	18

New applications for admittance are coming into the hospitals at the rate of about one hundred a day, and about that number are being sent from Kelung to Japan on the transports. The great majority of cases are among the coolies.

The cause of so much sickness is only too evident to the foreigner, who watches the Japanese coolies pass by with hair cropped close and no hat or even cloth to protect them from the fearful Formosa sun. Even the Chinese, who are as little effected by the elements as anyone, are rarely seen out in the sun without a big hat or a cloth wrapped about their heads, and the few exceptions have their cues coiled about their heads which affords considerable protection. Water of any kind and from any place is readily drunk, and even when under the supervision of some petty officers I have seen the water heated, before it reached boiling point it was taken off to be poured down the throats of the thirsty men with the germs still alive and feeling healthier then ever. The men are all provided with hats, and strict orders have been given regarding the eating of fruit and drinking of unboiled water, but the ignorant coolies, who seem unable to comprehend that it is done for their own benefit, obey only while under the watchful eye of the officers. No one need be frightened over the unhealthiness of Formosa. That very little sickness is found among the foreigners is evidence that with the precautions necessary in any country with the same temperature, one can be as well and live quite as long in Formosa as anywhere else.

The savages in the vicinity of Tan-si-kak have been a little active, eighteen Chinese having been killed in six days. The villagers have been subjected to raids and riots, and some time were forced to make an agreement with a band of robbers by paying a sum of money every month, the robbers guaranteeing the people safety from their own raids as well as attacks from outside gangs. Several officials are scattered through the country recruiting Chinese to go north to oppose the Japanese, but the newly organized forces spend most of the time plundering the more peacefully inclined Chinese, under the pretext that they are in league with the Japanese. On the 6th, a man was burned alive for robbery at Toasia. Previous to that two men were decapitated by the Hakkas and apparently for no other cause than that they were Cantonese.

A Chinese official who was formerly a Protector of Savages, was arrested at Sangsikak and forced to pay two hundred dollars ransom money. He then went to Changwha, reported the case to the Magistrate, who in consideration of the robbery, appointed him tax collector for several villages including the one in which he had been forced to "shell out." He returned to this place accompanied by a lot of soldiers, who were informed on their arrival that the Mandarins had had their day, and that no one paid any taxes. The soldiers then returned and the tax-collector departed for other climes.

Three anti-Japanese societies have been organized by wealthy Chinese of this district, and have been very busy distributing most bloodthirsty literature. General Liu, the Black Flag Chief, is also sending proclamations to all Hakka villages, agitating and imploring them to stand together, and stamp out the very memory of the Japanese from the island.

The village elders have notified the inhabitants that owing to the great number of dangerous robbers about, they may shoot any person found prowling about the premises. Six robbers had their heads cut off in one village inside of a few hours.

After submitting to the extortion of a considerable sum, the natives of Tongsikak decided to dispense with the services of the robber band, whom they had engaged at the rate of ten dollars a month each man, to protect them against robbers, and a plan was laid to get rid of them. When the robbers came to collect their pay, the inhabitants were to spread the alarm and one armed man from every house was to help to surround the men, and they were to be burned alive.

Any house in which the occupants refuse to send a representative was to be pulled down and destroyed by the villagers.

The Chinese interested in the gold-washing have petitioned the Japanese Government to appoint a tax collector for the gold district, that they may be allowed to go on with the work without being interfered with by the host of robbers who do no work but live off of the gold washed by the labourers. Over a million dollars worth of gold was obtained by the "washings" near Kelung last year, and under a system of taxing very disadvantageous to the labourer. With a fair system of taxation, it is possible that the same locality could be made to yield double that amount.

Sept. 3rd.

Several of the Japanese men-of-war are cruising along the west coast and in the vicinity of Anping.

THE MURDER IN THE HARBOUR.

BOARD OF TRADE INQUIRY.

Mr. J. Carey Hall, H.B.M.'s Consul held a *pro forma* Board of Trade inquiry on Friday morning on board the C. P. steamer *Empress of India*, into the circumstances attending the stabbing of a Chinese cook named Lee Sing, the previous afternoon. Mr. G. H. Scidmore was present on behalf of the Chinese Government.

Chung Yuen Such, No. 1 Passenger Cook of the *Empress of India* and interpreter for the Chinese crew, said he knew the late Lee Sing, a ship's cook on board that vessel. The man died yesterday, about 2 o'clock. Witness deposed to seeing all the Japanese coolies going forward: this was about a quarter to two. The struggling had finished before he got to the spot. He saw Lee Sing last alive about 2 o'clock. He was cut in the neck and blood was flowing from the wound on to the floor of the quarter-deck.

Chen Sung, steerage cook, said—I did not see Lee Sing and the Japanese fight. I saw a man named Wong Fook chased by a Japanese. Wong Fook came into my room, so I tried to stop the Japanese from entering. Then he, the Japanese, stabbed me on the right upper arm with a knife. The knife was about three or four inches long. It was like a clasp pen-knife. The Japanese escaped after cutting me. The Japanese wore a dark, long dress.

Captain Marshall said that the witness had identified his assailant.

Witness, continuing—I do not know what the man's occupation is. He was a little shorter than I am. I should be able to identify the man if I saw him. He had a new wound on the eye-brow. One of the ship's officers afterwards got hold of the man. I did not see Lee Sing at all. Only one Japanese tried to get into my room. My room is near the Chinese steerage smoking-room. Wong Fook was running away from the Japanese when I saw him. Wong Fook is one of the boys employed in the intermediate class. He was not on duty at the time. I did not see Lee Sing stabbed. I last saw him alive at noonday. We were both aft. I saw him lying on the deck afterwards, but whether he was alive or dead I could not say. I do not know the man who cut Lee Sing. I did not see the Japanese man's hat: he had no hat.

Wong Yow Fook, one of the intermediate staff, said—I knew the dead man. A Chinese resident of Yokohama came aboard yesterday to sell some old pants and clothing. A pair of pants were stolen by a Japanese and the old clothesman tried to trace them. He asked the ship's Chinese to give him information in regard to the affair. I told the Chinaman myself that the pants had been thrown overboard, and that a Japanese boatman had got hold of them. The Japanese who stole the pants then came up to me, and said something in Japanese which I did not understand. Then the Japanese, taking a knife from his pocket, opened a blade, and chased me to the Chinese smoking room, where Chun Sheng and Lee Sing were. Both these men called out to me not to fight. I got into the smoking-room, and the two Chinamen told me to stay there and not go out until the Japanese had gone. Chun Sheng and Lee Sing asked the Japanese to leave their room, and Chun Sheng in attempting to put the man out soon received a wound on his arm. And then, soon afterwards, I saw the Japanese cut Lee Sing in the neck. The wound started just above the shoulder. Lee Sing was outside the smoking-room, near the gangway, when he received the cut in his neck. Neither of the two Chinese had a knife at the time. The men were not grappling with the Japanese when they were stabbed: they were merely pushing him out of their room. Lee Sing was pushing with both hands. I only saw one Japanese present and could recognise him again. The

Japanese was about the same height as myself; he was clothed in a dark long coat and Japanese pants. Below the nose his face was pock-marked. After being stabbed, Lee Sing could do nothing, neither could he talk. Two of the Chinese shipmen ran and held him up. The Japanese tried to escape, going forward. He threw his knife away and jumped on to the lighter. The ship's officers now began to whistle to the crew, and soon afterwards an officer found the Japanese. I was attending the dying man all this time. When the Japanese police brought a man on board, I was asked if I could identify him. I looked at the man and saw that he was the man who had stabbed Lee Sing. At this time the Japanese man was wearing no pants. I am quite sure that the Japanese man shown me by the police was Lee Sing's assailant. He was still wearing a long, dark Japanese *kimono*. I did not see a girdle, as the skirt of the *kimono* was folded up. The man was at first wearing foreign trousers of bluish colour. This Japanese I clearly recognised, for he tried to cut me before he cut Lee Sing. A number of Yokohama Chinese and a lot of our crew were around and might have seen the stabbing. There were also some Japanese near-by.

Captain Marshall said the stabbing took place in the narrow passage leading from the smoking-room to the gangway.

Witness, continuing, said that he was the only man who really saw the stabbing, and he chased the man. He did not call out, as he did not think, nor know, that the wound was sufficient to kill.

Adolf Bergerowski, foreman of the stovedores, said:—About ten minutes past one o'clock yesterday I saw a Japanese quarrelling with a Chinaman on the deck aft. I saw the Japanese take a knife from his pocket and open it with his teeth. Then I saw the Chinaman run away. Just then another Japanese came up and snatched at the knife but failed to get it. The first Japanese then ran into the Chinese rooms and the Chinaman took up sticks and planks to oppose him or knock him down. Soon after this I saw a Chinaman come out of the passage with a wound on his arm. The Japanese was clothed in ordinary Japanese dark blue clothes. The whole affair took about a minute and a half. I don't know why the second Japanese snatched at the knife. There was a row going on just before the knife was drawn. There were only two Japanese in the crowd. The knife was a small pocket-knife. The Japanese had been disputing with the Chinese before this. I do not know if the knife was drawn for self defence. I was about 7 or 8 yards away from the Japanese when the knife was drawn. I should not be able to recognise the Japanese, as I did not see his face properly. I saw this same Japanese and another run forward. They went over the side and jumped on to a lighter.

Yong Fook said—I saw the Japanese cut Lee Sing. It took place in front of No. 1 Boy's room, in the passage leading from the smoking-room. I saw three Japanese coming out of the room, and one of them stabbed Lee Sing as he stood at my side. Lee Sing had tried to prevent the Japanese from fighting, so he cut Lee Sing. The Japanese had been chasing Wong Fook, along with two others. I could identify the man, and did do so when the police showed him to me.

Oliver B. Harbell, quartermaster, said—I saw nothing of the affray, except seeing the Japanese running forward. They tried to go down the gangway, but I prevented them—there were two of them. They then mounted the rail and jumped on to the lighter. I saw no knife. Upon reaching the lighter they ran down the hatchway. Before jumping down one of them threw a long Japanese coat on to the deck of the lighter. One of the men came up again and walked about unconcernedly. There were no others visible. I am certain that the man who came up and walked about was one of the Japanese who jumped over the rail. The lighter was afterwards searched by the Chief Officer, and a man was found in hiding. I saw that no boats came to or left the lighter all this time, that being my orders.

To Capt. Marshall—I noticed that the second man held his wrist after he came up from below the lighter's hatches. He seemed to have hurt his wrist. I pointed him out to the Japanese police, but they took no notice. Both men went past me so quickly that I could not confidently recognise them now.

Henry Parish, First Officer of the *Empress of India*, said that upon hearing of the affray he went forward and saw the man Lee Sing lying on the deck, bleeding profusely. He tried to staunch the blood by lint bandages, etc., but from the first the case was hopeless. Then he bound up the other man's wound. Continuing, the witness said—As a result of inquiries I boarded the lighter which was lying alongside. Mr. Pope

mustered the lighter's crew, consisting of about twelve men. One man was missing. The Chinese cook who had been wounded in the arm could not identify any of the men drawn up, and then I had the lighter searched by our own crew. Then another man was found concealed under some mats. The wounded Chinese immediately recognised him as his assailant. I then banded the man over to the water police. The man had a cut over the left eye. A gown which had been thrown overboard when the two Japanese jumped over the side, was claimed by the arrested man. Some blood was upon it. Lee Sing died within a quarter of an hour of being stabbed.

John Bernard, Fifth Officer, said—I was on duty yesterday between twelve and one. A disturbance was started by the Japanese and Chinese near the gang way, and failing to separate the men, I reported the matter to the Chief Officer. I should say there were about half a dozen Japanese on board at the time, but as to the number engaged in the quarrel I cannot say. I saw no blows struck, nor any weapon raised. It was merely a wordy altercation at the time when I went to report to the Chief Officer. The affair seemed to start up very suddenly.

Dr. Meadows said the cause of death was a punctured wound at the root of the neck on the left side. It was 2½ inches deep, and one and three quarter inches long, penetrating the top of the lung and separating the large vessels of the neck. The loss of blood was sufficient to cause death—the place was swamped with it. The man died within half an hour of receiving the wound. He, the doctor, returned to the ship at two o'clock, and the man was then dead.

In answer to Captain Marshall, the Consul said that he thought it highly desirable in the interests of justice that the three Chinese witnesses remain behind in Yokohama. He would write them off the articles.

The proceedings then terminated.

BRITISH CONSULAR TRADE REPORT FOR NAGASAKI.

Mr. Consul Quin's report on the trade and navigation of Nagasaki for 1894 states as follows:—

GENERAL TRADE.—The aggregate of the foreign trade of Nagasaki for the year 1894 totalled to £953,470, which shows an increase over the preceding year of £81,830. This increase is entirely in imports, which have improved by £120,763, while exports have decreased £38,933. The figures in dollars, however, for the two years given below, show a large increase in both imports and exports:—

Imports1894...\$5,413,747...1893...\$3,522,488
Exports1894...3,558,711...1893...3,226,061
Being \$1,891,259 in imports, and \$332,650 in exports. The result in sterling is due to the difference in exchange, which for 1893 was about 2s. 7d. to the dollar for imports and 2s. 6d. for exports, whereas for 1894 the rates average 2s. 1½d. for imports and 2s. 1½d. for exports. The increase in imports is mainly due to larger importations of metals, coals, rice, beans, &c.

IMPORTS.

COTTON MANUFACTURES for local consumption are, as in previous years, very unimportant, but the import has slightly decreased. Imports, however, during the last four months of the year were very large, owing to a revival in the Korean market, brought about by the war, which seems to have given the Koreans a market for their produce, and pay for their labour, and caused a sudden rise in the value or purchasing power of their currency—i.e., copper cash, which rose from 4,200 cash to the dollar, about the rate ruling up to August last, to 1,500 cash to the dollar, and this enabled them to buy white and grey shirtings, drills, victoria lawns, &c., freely. At the same time the Japanese ascendancy in Korea threw the trade entirely into the Japanese hands again, and they have not been backward in taking full advantage of it. Moreover, it is very likely that when peace is concluded that a good deal of the Korean trade previously done by the Chinese in Shanghai will remain in the hands of the Japanese merchants at Nagasaki.

The trade is entirely done by transhipment in bond, the goods simply passing through without paying duty; but they actually change hands here, the Japanese merchants purchasing from the foreigners, and then taking all responsibility from this port.

WOOLLEN MANUFACTURES, like cottons, remain about the same, but are not worth mentioning.

METALS.—A small and regular business seems to be springing up, and considerable quantities are now coming from Europe and China. Tin plates, sheet iron, nails, yellow metal, steel and

iron wire rope, bar iron, and bamboo steel being the principal items on the list. There has also been some demand for secondhand metals, mostly from China. The Japanese merchants in Nagasaki are apparently recognising the fact that they can import for themselves cheaper than buying from hand to mouth in Osaka, as has hitherto been the custom. Why should Nagasaki be dependent on Osaka? There is no reason why it should not become an independent centre, with every prospect of an increasing trade with Korea, and being the natural port of entry for the whole of Kiushiu. The import in 1894 amounted to £30,882, and in 1893 to £13,481, showing £17,401 in favour of 1894.

SUGAR.—There was a steady trade in refined grades of White Sugar, and prices were well maintained all through the year, until the rates touched \$9.60 to \$9.90 per picul (133½ lbs.), for good quality, in October. After this the price fell steadily up to the end of the year, closing at about \$8.60 to \$8.90 per picul, for the same quality. The total amount imported, however, shows a decrease compared with 1893, the figures being 11,379,701 lbs., valued at £68,998 in 1894, against 12,892,001 lbs., valued at £85,717 in 1893.

A considerable business, though less than in 1893, has been done in Brown Sugar from Hongkong and Manila, at prices ranging from \$4.25 to \$5.35 per picul: previously this quality of sugar had found its way here through Chinese in Hongkong in retail quantities, but latterly shipments have been made direct to Japan, and given more satisfaction. This is a trade that will probably increase on account of the difference in prices between this quality and the Hongkong refiners' sugars.

The import of KEROSENE OIL again shows an increase, the total amounting to 3,722,806 gallons, valued at £40,295 against 2,647,215 gallons, valued at £34,116 in 1893, being an increase of 1,075,591 gallons, and £6,179. Stock at the beginning of the year was very small, being about 10,000 cases, mostly Russian case oil. Arrivals during the year were about 346,000 cases (of 10 gallons each) of American oil in three steamers and five vessels, and 26,000 cases of Russian oil in one steamer and about 630,880 gallons of Russian oil in two tank steamers. Deliveries to consumption were larger than the previous year, the largest deliveries being during November and December. Re-exports of oil to Korea were larger than ever before, being nearly 51,000 cases, about half of which was during the last two months. The American oil is still greatly preferred, but owing to the cheaper price of the Russian bulk oil a large quantity, say 620,000 gallons, has gone into consumption.

The tanks for the reception of the Russian bulk oil, and capable of holding 1,475 tons each, were completed early in the year, and the first cargo was pumped in the month of May.

The increased deliveries are largely due to the Japanese Government demand for steamers, having taken many of the small coasters entirely off the regular line from Osaka, and made freights so high that this market is now supplying almost the entire island of Kiushiu by junks, whereas formerly a large quantity of oil was brought from Kobe and Osaka by the steamers at nominal rates of freight to this immediate vicinity. For the same reason prices here have ruled somewhat higher of late than the Osaka market rates. Japanese also report an actual increased consumption, the result of the longer hours which the people have found it to be to their advantage to work in making army supplies, and the fewer hands there have been to do the work.

COAL.—During the latter part of the year, a large quantity of Cardiff coal was imported, in addition to the annual supply for the British men-of-war, for the Japanese navy, on account of the war with China. This year also French, German, and Russian men-of-war have taken Cardiff coal. 27,765 tons were imported, valued at £39,851, an increase of over £25,000 in comparison with the previous year.

RAW COTTON.—The import of raw cotton was 9,820,811 lbs., valued at £128,454, being an increase of more than 1,500,000 lbs. over that of 1893. The value in sterling for the import of 1893, came, however, to £130,129, or £1,675 more than the total for 1894. This result, however, is due to the exchange as the dollar cost of raw cotton shows an increase of \$193,726 over the dollar cost of the previous year's imports. The trade was a steady one, and, as in other years, the bulk of the cotton imported came from China, though increased supplies were received both from India and America. The proportions were as follows:—China supplied 7,464,027 lbs.; India, 1,954,872 lbs.; and America, 401,912 lbs. The figures for 1893 were:—China, 7,009,445 lbs.; India, 1,212,325 lbs.; and America, 77,882 lbs. This business is almost entirely in the hands of the Chinese and the Mitsui Bussan Kai-

sha. In addition to direct imports, a considerable quantity of American and Indian cotton has come from Kobe.

RICE.—The import of rice has risen from 8,851 tons, valued at £50,929, in 1893, to 20,957 tons, valued at £103,304, in 1894. The greatest quantity came from Annam, then followed China, Korea, Siam, and Rangoon. It is difficult to get freights from Burmah and Saigon to Nagasaki unless for large quantities at a time, otherwise we might see a fair trade done direct with the rice ports.

Imports of **OIL-CAKE** show an increase in quantity and value over 1893, the difference being over 8,000,000 lbs. and £6,638.

A very considerable increase also took place in the importation of **BEANS, PULSER, &c.**, which were imported to the value of £16,472, against £6,647 in the previous year.

SPINNING MACHINERY for the Kurume and Miike cotton mills was imported to the value of £29,518, 10,000 spindles being for Kurume, and 5,000 spindles for Miike.

One **STEAMER** was sold during 1894.

EXPORTS.

The export of **TEA** during 1894 was pretty nearly the same as for 1893, showing, however, a small decrease of £839.

During 1894 3,993 tons of **RICE** were exported, valued at £28,544, as against 4,383 tons and £31,258 in 1893, of which over 3,000 tons were shipped to Vladivostock, and the remainder to Korea.

COAL continues to show a falling off in the export. Including coals of all descriptions the export was 324,761 tons, valued at £132,788, against 381,631 tons and £156,459, being a decrease of 56,870 tons and £23,671.

The breaking out of the war between Japan and China in August last caused the price of coal to rise very considerably. The Japanese Government requisitioned the total output of the large coal from the Takashima mines, as well as that of several other coal mines of repute, for the use of their navy and transports. For some time, also, difficulties were placed in the way of export, so as to prevent the Chinese being supplied, but stocks accumulated very rapidly, and the restrictions were soon withdrawn, and large shipments followed at fair rates, Moji and Shimonoseki, which are practically the same place, doing the bulk of the business. Karatsu shipments show an increase, the quality of Koigama coal being very good. A drawback to Karatsu, however, is its exposed harbour, where steamers often lie several days without being able to take in cargo.

The figures from the special ports are as follows:—

	Tons.
Shimonoseki	332,536
Moji.....	388,017
Karatsu	73,126
Kuchinotsu	384,831
Misami	8,230

Total 1,186,740

With a value of £468,192, being an increase of 196,628 tons over the export for 1893.

GRAIN, PROVISIONS, &c.—There was a considerable increase in the export under this heading, amounting to £36,386, the export for the preceding year only amounting to £9,027. Flour also shows a considerable improvement, having risen from £4,020 in 1893 to £14,777. The flour is the produce of the Nagasaki Roller Flour Mill Company, and was exported principally to Vladivostock, with some to Korea.

The remainder of exports are of the usual miscellaneous nature for the Chinese market, and need no special comment.

SHIPPING.

The total number of vessels entered in the port of Nagasaki during 1894 was 713, exactly the same number as the preceding year, but the tonnage shows a slight increase, being for 1894, 1,027,837 tons, against 950,540 tons for 1893.

In addition to the various lines of mail steamers, hitherto calling at Nagasaki, the steamers of the Messageries Maritimes commenced running here on August 14 last, and between that date and the end of the year 20 steamers of 42,505 tons entered and cleared. British shipping shows an increase of 45 vessels, with an increased tonnage of 92,375 tons. The German, Russian, and United States shipping all show an increase, both in number of vessels and tonnage. In Norwegian shipping there is a decrease of 5 vessels and 5,032 tons. In Japanese shipping there is a decrease of 87 vessels and 111,723 tons, but this is explained by the fact that on the breaking out of the war in August the Government requisitioned nearly every available steamer, large or small, to serve as armed cruisers, transports, or despatch vessels, &c., and they were consequently taken off the various lines.

KUCHINOTSU.—The total shipping return for the special port of Kuchinotsu shows a decrease both in number of vessels and tonnage. 152 vessels of 205,259 tons having entered in 1894, as against 224 vessels of 237,647 tons in 1893. Of these 74 vessels of 120,568 tons were British.

MOJI AND SHIMONOSEKI.—The total shipping for Moji and Shimonoseki amounted to 636 vessels of 764,505 tons. This shows an increase of 131 vessels and 158,434 tons. British shipping stand at 302 vessels and 513,740 tons, against 228 vessels of 384,004 tons in 1893, an increase of 74 vessels and 129,736 tons. German shipping also shows an increase of 33 vessels and 35,367 tons.

The **TOTAL SHIPPING** for the three ports amounts to 1,501 vessels of 1,997,601 tons. To make these figures, England contributes 626 vessels of 1,128,208 tons; Japanese shipping, 400 vessels of 337,573 tons; Germany, 261 vessels of 220,149 tons; Norway, 74 vessels of 66,372 tons; and Russia 62 vessels of 3,015 tons.

KARATSU.—Though not included in the above tables it should be mentioned that the shipping from the special port of Karatsu shows a return of 29 vessels of 36,778 tons for 1894, while in 1893 there were 19 vessels of 24,116 tons. Of these there were 15 British vessels of 24,469 tons, 10 German of 7,177 tons, the remainder being 1 Japanese, 1 Korean, and 2 Norwegian vessels.

LOCAL INDUSTRIES.

DOCK AND ENGINE WORKS.—The dock at Tategomi on the other side of the harbour was lengthened during the year to admit vessels of 500 feet in length on a draught of 26 feet. It has been constantly employed during the year. At the commencement of the war the dock was requisitioned by the Government, and since then vessels other than those belonging to the Japanese navy or transports have to obtain special permission to dock from the naval authorities at Sasebo.

A new dock, 300 feet long, is to be added to the docking facilities of the port, and the patent slip, which can take on vessels of 1,000 tons, had a siding added lately, and can now accommodate two vessels.

The additions to the machinery in the engine works are very extensive, and new shear legs have been erected capable of lifting 80 tons. The ship yard is being enlarged, and will be laid out for vessels up to 500 feet in length. One of 300 feet will shortly be laid down; the last one built and just finished was 1,500 tons register, and took about ten months to complete. The shipbuilding machinery is also being largely added to, heavy rolls for plate bending being amongst other important machines; a steam hammer of large size is also being added, and a railway round the works. When the machines get to work, the new dock finished, and all the projected improvements carried out, there will be perhaps as complete an establishment as can be found to the eastward of the Cape, in the port of Nagasaki.

During the past year, 51 Japanese vessels, with a tonnage of 60,544 tons, and 30 foreign vessels, with a tonnage of 54,756 tons, were docked or taken on the slip.

COTTON SPINNING MILLS.—The cotton spinning mill just outside Nagasaki has time after time been closed, and it changed hands last year and was again re-opened. Owing, however to want of skilled labour it was found impossible to run it night and day, and the machinery moreover got out of order. It ran 300 days; 65 men and 70 women were employed; there are 3,550 spindles at this mill, and it turned out 255,530 lbs. of yarn first quality and 9,444 lbs. second quality yarn; the wages of the men averaged 14.03 *sen*, and for the women 8.05 *sen* per diem. The markets for the goods are Osaka, Kumamoto, Oita, and Kago-shima. The export duty having been decreased, there was an outlet in the China market during the middle of the year, but the war put a stop to this business. Prices ranged between 86 *yen* (£9 ts.), and 77 *yen* (£8 2s) per bale of 400 lbs.

The **ELECTRIC LIGHT COMPANY** mentioned in last year's report is still working, and there is also one at Kumamoto, with a capital of 75,000 *yen*, in 3,000 shares, but the profits in these two enterprises do not so far tend to make them a financial success, as the dividends for year in either case do not reach 1 per cent.

KIUSHIU RAILWAY.—The extension of the railway system in this island is very slow. During 1894 there were only 3 miles 5 chains between Kumamoto and Kawajiri, opened on August 21. During 1895 the mileage opened was between Kawajiri and Matsubashi, 6 miles 19 chains; Kokura to Gyoji, 14 miles 64 chains. It is hoped that an extension from Saga to Tsukazaki, 17 miles 60 chains, will be opened next month.

GENERAL REMARKS.

The year 1894 was a good one for business generally, both native and foreign, the latter half

especially so. On the breaking out of the war between China and Japan most of the Japanese steamers were taken up by the Government, and foreign ones were chartered to take their places. Junks also were called into requisition to take the place and carry the cargo of the small steamers in the coasting trade, and freights advanced very much.

In September a sudden improvement took place in the trade with Korea; demand for all kinds of both foreign and native manufactures sprung up, and continued for the rest of the year.

The presence of an unusual number of men-of-war in the harbour was of considerable benefit to the trade of the place, and especially so to small traders, storekeepers, &c.

Generally the port may be considered to show good signs of recovery from the depressed condition of the past few years, and real permanent improvement it hopefully looked forward to.

Customs accommodation is now very inadequate to the improved condition of trade, and notwithstanding some additional shed room provided during the years, cargo often has to be kept in boats for days, or landed in the open for want of covered space. Even cargo boats have been scarce at times on account of delay in landing the cargo from the steamers.

The Customs authorities have done all they could to assist by allowing the cargo to be landed at once and put in the merchants' godowns, but of course, this entails extra coolie hire, which neither importer nor purchaser is willing to pay.

The population of Nagasaki on December 31, 1894, amounted to 66,851, of whom, however, only 39,304 are registered as inhabitants, i.e., 18,892 males and 20,412 females, the remainder (27,547) being traders, visitors, and workpeople from neighbouring districts.

BRITISH CONSULAR TRADE REPORT FOR HAKODATE.

Mr. Consul Hall's Report on the Trade and Navigation of Hakodate and the Island of Yezo for 1894 contains the following remarks:—

Judged by the tables, the foreign trade of Hakodate in 1894 would appear to have been considerably less in value than in the preceding year, the comparison in sterling being:—

Exports	1894	£70,288	1893	£81,952
Imports	1894	6,830	1893	3,281
Total		£77,118		£85,233

Decrease (apparent) in 1894, £8,115. But the fact was quite otherwise, as is manifest when, instead of the gold values, the actual figures of the steady silver values for the two years are given:—

Exports	1894	\$668,472	1893	\$639,627
Imports	1894	55,420	1893	24,322

Total		\$723,892		\$663,939
-------------	--	-----------	--	-----------

Increase (real) in 1894, \$59,944.

The comparison in sterling is thus simply misleading as regards the actual movement of trade. Instead of a decline, there was a marked improvement both in exports and imports. The cause of the fallacious indication of the table is, of course, the disturbance in exchange. In the course of the twelvemonth the silver money of this country lost its power of purchasing the strictly gold-priced manufactures of England and the West to the extent of 20 per cent., its value as against commodities here and throughout Eastern Asia remaining virtually stable. To that extent has the chasm between the two masses of the world's coinage been widened and deepened in the year following the Indian currency legislation of 1893.

EXPORTS.—The prospect of a stoppage of trade on the outbreak of the war against China in the middle of the year gave a temporary stimulus to the staple export. Nearly double the quantity of edible seaweed was hurried off to Shanghai, notwithstanding the glut of that commodity noted in last year's report, though, of course, at greatly reduced prices. The export of sulphur to America rose to 11,000 tons, as against 9,000 tons in the previous year.

IMPORTS.—The marked rise in imports is due to the nascent trade with Eastern Siberia. The fact that these imports, mainly of salted fish and other marine produce, from Russian Manchuria rose from \$6,000 in 1892 to \$20,000 in 1893, and to \$50,000 last year, and that they constituted in the two last years 85 per cent. and 90 per cent. respectively of the total foreign import value of trade of the port, seem of sufficient importance to invite attention.

TRADE WITH RUSSIA.—As Russia is Japan's near and only neighbour to the north, it was to be

expected that a trade of some sort would in the course of time spring up between Yezo and the adjacent Russian territories, though, in view of the sparseness of population, that trade was not likely at first to be large. A change in the situation, however, is now in progress, and a more momentous change in prospect. On the one hand, this island has doubled its population within the last ten years, having now well over 500,000 inhabitants. On the other, the immense resources of Russian Manchuria, terrene and marine, are being rapidly developed, and, with the opening of the Trans-Siberian Railway, some four or five years hence, a great influx of settlers, into the fertile basin of the Ussui may be confidently anticipated. Meanwhile, the fisheries have made a good start. Each season from 10,000 to 12,000 Chinese from the Shangtung province find lucrative employment in gathering in the harvest of edible seaweed; whilst the Japanese, with their superior aptitude as fishermen, have betaken themselves to the not less promising work of catching and curing salmon, salmon-trout, herring, and cod. The seaweed is taken direct to the North China markets; but the fish produce nearly all comes to this island.

But there is an older and larger branch of this industry on the Japan side of the Gulf of Tartary. The germs of it were already in existence when Saghalin passed completely into Russian possession in 1875, and it has been steadily growing since, though not much noticed. Owing to the fact that no import duty is charged by the Japanese customs on marine produce from Saghalin, commerce with that island is not included in the statistics of foreign trade. The rate at which the business is growing can be seen from the following figures:—1891, \$45,418; 1892, \$102,743; 1893, \$191,746; 1894, \$241,745. Some details as to the present state of the industry may be worth noting.

SAGHALIN FISHERIES.—The Japanese fishing stations in Saghalin, seventy-one in number, rented by twenty capitalists from the Russian administration, extend from Cape Notozo, the south-western corner of the island, round Aniwa Bay, to Cape Shiretoko, the south-eastern corner, and thence up along the east coast as far as Patience Bay. They give employment to over 1,400 fishermen during the season—that is, from the middle of April till the middle of September.

As an illustration of what may be done by foreign enterprise in a seemingly unpromising field, I may here mention that on the opposite, or western, coast of Southern Saghalin an Englishman, in partnership with a Russian merchant, rented a fishing station about seventeen years ago, and applied capital and energy to developing the business. For several years he had a very uphill struggle with difficulties of various kinds, not the least trying of which was the employment, under official compulsion, of convict labour. But perseverance was rewarded with success, and the partners now exploit the whole of the south-western coast, employing in a season as many as 1,500 men. For fishing, only Japanese from this island and Ainus, natives of Saghalin, are employed; but for gathering and drying the edible seaweed crop their workmen include Chinese from Shantung, Koreans, and Russian convicts. The revenue derived by the administration from the various imposts on the fishing industry of Southern Saghalin amounts to more than R. 40,000 a year.

From Saghalin the business has, within the last few years, been extended to the Siberian coast, where, as above indicated, it seems to be rapidly striking root. Last year a set of regulations for the control of it were issued by the Governor-General of the Amour. Under these regulations the industry is thrown open to Russians and to foreigners of all nationalities, under conditions which may be thus summarised:—

The fishing stations are only to be established in places sanctioned by the administration; but the taxable area, wherein the licences are to be granted by the local authority of each district, extends from the mouth of the Tumen River to Plastun Bay. Northwards of that limit, where no police or other authorities are yet established, licences can be obtained only from the Governor-General of the Primorsk at Vladivostok. Foreigners applying for licences must be furnished with a passport and consular certificate of their respectability.

The taxes are to be as follows:—(a.) Per pood (36lb.) of cured fish (salmon, trout, herring, cod, fish-guano, cured fish-roe, sharks' flesh and fins), and dried seaweed: c.5 for Russians and c.7 for foreigners, Russian paper currency. (b.) Per pood of cod and herring oil: c.10 for Russians and c.16 for foreigners.

Wood for boiling the caldrons will be supplied by the Russian Forest Bureau at the rate of c.10 per bedro.

In the course of last year nearly 400 Japanese

went from this port with passports to Russian Asia, most of them for the fisheries.

While on the subject of trade with Siberia, I may remark that Hakodate, the shipping centre for the trade of Northern Japan, is also the nearest port to Vladivostok; the distance between them being only 424 miles, in a straight line. It seems probable, therefore, that when the Siberian Railway is completed, direct steam communication will be opened between the two ports. No other port on the west side of Japan presents so many advantages as this, whether in point of excellence as a harbour or in extent of trade and shipping.

SHIPPING AND FREIGHTS.—Last year was marked by an unprecedented increase in the foreign, and especially in the British, shipping of this port: 84 vessels, of 25,351 tons, having entered direct from foreign ports, as against 57 vessels, 11,010 tons, the preceding year. Of this total, 42 vessels, 14,227 tons, were British, being exactly half the ships and more than half the tonnage. Only 11, however, out of the 84 were steamers, 7 British and 4 German, the remaining 73 being sailing ships, of which no less than 58 were sealing schooners.

But the shipping from foreign ports formed but a small portion of the tonnage under the British flag last year. There were entered besides, at this consulate, 41 steamers, 72,100 tons, from Japanese ports: nearly all in the last 4 months of the year. This was due to the war with China, and the steamers were all under Japanese charter, or newly bought by the Japan Mail Steamship Company. What happened was this. Although the war did not begin till towards the end of July, the company's steamers which ply between here and the southern and western ports were withdrawn by Government requisition in the middle of June, for transports; and from that time till the beginning of September there was a sore dearth of shipping, a whole month's interval once elapsing between two sailings. By September, however, the company had bought or chartered enough foreign steamers to meet the most pressing requirements. By a wise moderation in raising the rates of freight it also continued largely to preclude competition in its time of difficulty. It gave out that the increase in the rates of freight should not exceed one-fifth during the continuance of the war. General cargo to Yokohama was raised from \$5 to \$6 per ton; but the abatement of three-tenths formerly allowed on agricultural produce was withdrawn, and the old full rate of \$5 per ton charged thereon.

THE SEALING FLEET.—The entries of sealing schooners cruising off the Japan coast last year numbered 61, as against 37 in 1893. Besides the 61 schooners entered, 5 others, British, called at the port without entering, having skins on board to the number of 4,484; making the total catch for this side of the Pacific in the first stage of the hunting season, 64,434 skins, so far as could be ascertained at this port. There were, besides, however, other schooners hunting which neither entered nor called here, probably over 30 in number; whose catch would probably increase the above total to about 90,000 skins.

Some points of interest in connection with last season's operations may here be noted. One is the superiority in skill of the Canadian over the American hunters; the average, taking the two years together, being 1,120 skins a season per schooner to the Canadians, as against 784 skins per schooner to the Americans. Another point is the appearance of the Japanese flag amongst the pelagic sealing craft. Three Japanese schooners, two of them belonging to the Imperial Marine Products Company, engaged in the industry. That the number was not larger is partly due to the prevalence of an impression that the above-named company's monopoly of hunting rights extends to the open sea, and partly to the difficulty of procuring sufficiently skilful hunters.

Last year, too, the rules framed by the Behring Sea Arbitrators came into force. Of the 32 Canadian schooners calling here, the masters of 20 obtained at this consulate licences for hunting in Behring Sea. A few of these had Siwash Indians, experts with the spear, as part of their crews; others, convinced that with due practice white hunters can equal or even excel the Indians, had spears made at this port for their first season's experience. Hence very few of the schooners chose the western side of Behring Sea for the later stage of the season's hunting. Not a single arrest was made within the Russian zones, and but very few schooners were sighted by the patrol cruisers in that vicinity. I here take occasion to state, in emphatic contradiction of an allegation that was publicly made elsewhere, that in not a single known instance has any trespass been committed in Japanese territorial waters by any one of the sealing schooners, whether British or American.

THE TRADE OF THE ISLAND.

Turning now from the foreign trade and shipping of the port to the home trade and general progress of the island, the subjoined tables, condensing two years' later statistics, show that the increasing prosperity noted in last year's report continued unchecked through 1893. The statistics for last year are not yet compiled.

Imports...	1893	\$17,268,832	...	1892	\$21,644,979
Exports...	1893	19,475,688	...	1892	14,420,018

Total ...	1893	\$36,744,520	...	1892	\$27,064,997
Increase in 1893, \$9,679,523, or over 35 per cent.					

In this increase Hakodate participated in good measure, its trade as given below, being nearly one-third of that of the whole island.

Exports...	1893	\$6,118,535	...	1892	\$4,785,157
Imports...	1893	6,849,992	...	1892	4,795,218

Total...	1893	\$12,968,527	...	1892	\$9,580,375
----------	------	--------------	-----	------	-------------

Increase in 1893, \$3,388,152, or about 26 per cent.

Although the statistics of last year's trade for the whole island are not yet collected, those for this port have been, and are given in the condensed tables in the Appendix. From these it will be seen that last year the progressive movement sustained a severe check, the total value of the trade showing an increase over 1893 of less than \$200,000, about 1½ per cent. whilst the shipping entries fell off from 1,190,490 tons in 1893 to 881,211 tons in 1894, being a decrease of 309,278 tons, or about 26 per cent. This serious decline was due, of course, to the war.

DEVELOPMENT OF RESOURCES.—The subjoined table shows the development of the three great sources of produce, the sea, the soil, and the sub-soil:—

	1893.		1892.	
	Tons.	Dollars.	Tons.	Dollars.
Marine	225,653	8,756,492	184,387	7,172,992
Agricultural	116,867	2,484,622	109,699	2,230,878
Mineral ...	260,127	2,135,561	280,141	2,182,666
Total	—	13,376,675	—	11,586,466

AGRICULTURAL.—In 1893 there were 6,486 acres under rice crops, of which 870 acres were new tilth; and 137,020 under other crops, of which 27,400 acres were new tilth. There were 76 stock-farms in the island, having a total area of 117,886 acres, and 1,262 head of cattle, and 5,658 horses. The total number of cattle in the island was 4,893; of horses, 55,969.

MINERAL COAL.—The total output of coal in 1893 was 248,967 tons, which was all sold, and over 20,000 tons of previous year's stock as well, price \$1,204,774. Of this output, 236,161 tons were from the four mines in the Ishikari coalfield belonging to the coal mines and railway company, namely, Ikushumbetsu, Poronai, Utashinai, and Yubari; whilst the remainder, 12,806 tons, were from four small mines owned elsewhere by other persons.

SULPHUR was obtained from eleven places to the amount of 41,160 tons; of which 8,223 tons were sold for \$205,174.

MANGANESE.—Last year, for the first time in the history of the island, manganese appears amongst the mineral exports. The mine was recently discovered at Kunui, on the south shore of Volcano Bay. The output last year was over 1,700 tons. It is a rich ore, containing 58 per cent. of metal, and brings about \$14 per ton on the Yokohama market.

The **POPULATION** of this port at the end of last year was 66,333 persons, living in 15,019 houses. In the whole of Hokkaido at the end of 1893 there were 529,892 inhabitants, 111,184 families; of whom 12,760 families or 49,047 souls were immigrants of that year. These number are, of course, exclusive of the annual influx of labourers and fishermen who return to their homes in Northern Japan at the close of the fishing season. Out of 154,484 men who were employed in the various fisheries and seaweed gathering in 1893, less than 52,000 were inhabitants, the other two-thirds coming for the season from the main island.

For some years ago, no troops of the regular army have been stationed in the island; but the number of the military settlers (Tonden) has been steadily growing. Five years ago these troops were under 1,500, now they are over 4,000, of whom 300 are cavalry, artillery, and engineers, the rest infantry. They are distributed over seven camp villages, numbering 4,405 houses; and their families, males and females of all ages, amounted in 1893 to over 21,000 or, including the troops, 25,000 all told.

RAILWAYS.—The coal mine railway last year, on its three lines, carried less than 500,000 passengers and under 110,000 tons of general merchandise. This was, of course, exclusive of the Company's own coal, of which over 500,000 tons were carried, at the very modest charge of c.50 per ton. The year's earnings of the lines are set down at \$333,000.

PUBLIC EVENTS.—Two events of some interest as bearing upon the future of trade were:—

1. The opening of a short line of railway in the main island opposite, thirty miles in length between Awamori and Hirosaki. This is but the first section of a line which is to connect Awamori with Akita and the west coast generally. Hirosaki, the castle-town of the former Lordship of Tsugaru, has over 30,000 inhabitants, and overlooks the most northern of the rice plains of Japan, whence this island draws its main supply of that cereal, and also of the great quantity of straw mats and manufacture of various kinds used in the fisheries.

2. The opening of Muroran as one of the special ports of export. This small but well sheltered harbour at the north side of the entrance of Volcano Bay is also the terminus of the railway from the coal mines and Sapporo to the south-east of the island. Since it was opened in June last, only three steamers have cleared from it taking coal cargoes valued at \$28,000.

THE WAR.—In conclusion, the influence of the war on the trade of the port may be briefly noticed. The first effect, which was also the main cause of the other effects, was a rise in freights; a rise which in spite of the action taken by the great subsidised steamship company, amounted in some cases to 50 per cent., and even 70 per cent., on the rates of the preceding year. In the next place, as this island has to import the larger portion of its food supply, the rise in freights at once sent up the price of all provisions. To the same cause was due, in the third place, a great fall in the prices of all articles of export, and a consequent tightness in the money market; banks refusing to make advances against the commodities with which the storehouses of the port were glutted. Hence a general dulness of trade, which still continues, and affects all classes and all commodities, down even to the value of land and houses.

THE LOSS OF THE "CATTERTHUN."

In the *China Mail* of the 5th inst., we find the following notes taken from Australian exchanges, relating to the loss of the *Catterthun*:—

At the time the vessel struck, a heavy southwest gale was prevailing. When the vessel hit, there was a severe shock that could be felt in every portion of her. The passengers were greatly alarmed and there was much confusion. The Captain reassured them, stating that there was no danger. He thought the steamer had only been struck by a heavy sea. The ship continued on her way, but before many moments had elapsed it was found that she had a hole in her bottom and was making water rapidly. She began to settle down and took a list to starboard.

Other dispatches say that the Seal Rocks are 110 miles north of Sydney. The *Catterthun*, in addition to having a general cargo, had on board 11,000 sovereigns. Mrs. Mathias, wife of the captain of the steamer *Cam*, trading between Bombay and Japanese ports, had been at Sydney visiting friends. When the *Catterthun* cast off her lines at the wharf Mrs. Mathias' niece was on the wharf crying bitterly. She said to her aunt, "Oh, auntie, you'll be drowned. I will never see you again."

The fires under the *Catterthun's* boilers were soon extinguished and the vessel was then helpless. She "broached to" and the sea swept over her fore and aft. Every effort was made to lower the boats, but the crew were baffled by the seas which swept them on board after they had been swung out on the davits. The port lifeboat was lost entirely, it being washed from the davits. Notwithstanding the dangerous position of the steamer, which it was seen was doomed, excellent discipline was maintained. During an attempt to lower the starboard cutter an immense sea broke aboard the steamer and carried away the cutter. It also swept from the bridge the Captain and chief and second officers and Captain Fawkes. The last-named, having been unable to reach his cabin to obtain a lifebelt had borrowed the captain's knife and was in the act of cutting the lashings of a small table on the bridge when he was swept off into the sea.

A few minutes later, after a very great effort, the starboard lifeboat was lowered and it picked up Captain Fawkes, who was clinging to some of the floating wreckage. Only three other Europeans were rescued. These were second officer Langfar, Dr. Copeman, and a passenger named Crane, belonging to Melbourne.

A dispatch from Melbourne says that divers have left for the scene of the wreck for the purpose of attempting to recover the 11,000 sovereigns in specie on board the steamer. The dispatch further says it is now known that the total number of lives lost in the disaster is forty-four, many of the Chinese passengers and crew being saved. Of the Europeans on board only the four previously mentioned survived.

COUNT OKUMA INTERVIEWED.

Count Okuma may be called the John Sherman of Japan. He was the finance minister of the empire for twelve years during the formation of the present system of government, and shaped the financial policy that has since been followed. He has held portfolios in several cabinets, and was minister of foreign affairs four years ago and made a series of treaties with the United States and European powers, similar to those which have recently been concluded with Great Britain, Russia, and our own government. No man in Japan, except Marquis Ito, the present prime minister, or Count Inouye, who has recently returned from the Korean mission, has been so active as a leader, and although he is not a member of the present government, Count Okuma is still regarded as one of the ablest statesmen in the empire and one of the most ardent apostles of progress. The political party, or rather the faction, of which he is the leader are called the Progressionists, and their criticism of the present administration is chiefly that it does not go so far and so fast in the adoption of modern ideas and methods as the welfare of the country demands.

Four years ago Count Okuma narrowly escaped assassination. As he was leaving the Foreign Office one day a bomb was hurled at him by a crazy young fellow of the *soshi* class, whose grievance was that new treaties which the Count was about to conclude were too favourable to the foreigners and not sufficiently conservative for the interests of Japan. This incident cost the minister an amputation, and he now hobbles around on a cork leg, leaning heavily on his cane, but it did not impair his energy or his intellect and he is living a contented life in a beautiful villa just outside the city of Tokyo, surrounded by groves and fish ponds and flowers. He takes no active part in politics, but is constantly consulted by younger men, who appreciate the value of his wisdom and learning and experience. Count Okuma understands English, but does not speak it, which I find to be true of several other prominent men in Japan. They can read English books and newspapers readily, just as many of our people can read French and German, but they have never had sufficient leisure to practice pronunciation.

With Mr. Masujima, one of the most prominent lawyers of Japan, as interpreter, I called upon Count Okuma and asked what suggestion he could make to the merchants and manufacturers of the United States in regard to the extension of their trade in Japan. He replied that the market for foreign merchandise in Japan was growing more and more limited every day, but there was a grand opportunity for the introduction of American machinery and for the sale of our raw products, such as iron, cotton, and wool.

"Japan is undergoing an industrial revolution," said Count Okuma, "similar to the political revolution which has occupied our attention for the last quarter of a century. Old ideas and methods which have been practiced by our artisans for centuries are being gradually discarded and new ideas and methods are being introduced. Manual labour is being supplanted by machinery, and our manufacturers are seeking the most economical and perfect methods of producing their goods. As you know already, this revolution has affected the textile industry thus far more than any other, but it will very soon invade other branches of manufacturing, and Japan will soon become one of the greatest workshops in the world, for we have all of the conditions necessary, with the exception of raw cotton, iron, and some other materials which your people should furnish us. I should be very glad to see a large increase in our trade with the United States."

"What methods can you suggest to bring about that increase?"

"I am not a practical man," replied Count Okuma, "and I am not sufficiently familiar with the details of manufacturing to be a wise adviser. I have a general knowledge only. Our country is still young. Our manufacturing industries, judged by modern standards, are still in their infancy, and such conditions always offer opportunities for profitable investments and for the sale of all forms of machinery that are required by modern methods of manufacturing. It will be years before the demand is supplied or our people are capable of making their own machinery. We have very skilful artisans, perhaps the most skilful in the world, but they have never been trained in mechanics, and for some time yet must depend upon foreign inventors and foreign experience to supply them with the machinery they need and teach them how to use it. Our people learn very rapidly, but they still require instruction in the applied sciences."

"To meet the new order of things," continued Count Okuma, "our first great requisite is capital, and the second is experience, and the people of the

United States can furnish us both. The new treaty will soon go into effect which gives them equal advantages and opportunities with our own citizens, and we shall hope to see many of your enterprising business men bringing their money and their machinery over here to add to our wealth as well as their own."

"Would you advise them to establish independent factories or organize companies in connection with your citizens?"

"I should think it would be better to combine. Our people know the local market and the conditions of labour better than yours, while your people have a better understanding of the use of machinery and the foreign demand. I should think better results could be accomplished by mixed companies, the shares being distributed among such of our citizens as might aid in the success of the enterprise, but it would be well for the investors of the United States to bring with them a few men of experience to act as superintendents and foremen, at least until competent Japanese are educated to perform such duties. Our people are ambitious and quick to seize upon new ideas, but at first they would be less capable of managing matters economically so as to produce the best results."

The experience of the iron foundry to which I have alluded in a previous letter was referred to as an illustration of the ambition of the Japanese, as well as the unfortunate results that often follow inexperience.

I then asked His Excellency how soon Japan would be ready to compete with the United States and other manufacturing nations in the markets of the world. "I do not think there will ever be any close competition between the United States and Japan," he replied, "but within twenty-five years I expect to see our manufacturers in control of the Asiatic market. By that time we shall be able to furnish nearly everything that is required on that continent and it will be a serious competition for England, Germany, France, and other European countries. It will be some years longer before we will be able to compete with them in machinery. We haven't that so well in hand, but in fabrics and almost everything else we shall be able to begin exporting very soon. Japan has a great future as a manufacturing nation, but its natural rivals are in Europe, not in the United States, particularly if your country retains its protective policy we may not come in competition with you at all."

"I understand that your government intends to adopt a protective policy as soon as the new treaties go into effect and you are able to make your own tariff."

"I hope not. I am not a protectionist, and I should regret to see the introduction of such a policy into Japan. I have no doubt that it will be expedient for us, after the new treaties go into effect, to impose higher duties upon tobacco, wines, spirits, and articles of luxury for revenue, but not for protection. I am opposed to taxing the necessities of life and to the doctrine of a protective tariff."

"Is not the present government contemplating such a policy?"

"There is no settled policy in the present government, but its tendency is in favour of protection, and an attempt will be made to adopt it, but it will not succeed. The Ministers of Finance and Agriculture and Commerce are protectionists, but their ideas are not popular. There are also a number of political leaders advocating a protective tariff, but the people are against it, especially those who are engaged in foreign trade. We have prospered under the present policy of free trade, and there is no occasion or excuse for abandoning it. If we charge higher duties upon luxuries imported from foreign countries we shall obtain sufficient revenue without additional taxation, and there is no reason for the protection of our labour against foreign competition. That has been demonstrated by experience. Our labouring classes are skilful and economical; they require but little to live comfortably, and are able to take care of themselves. Their industry and the superiority of their products make artificial encouragement unnecessary. In our spinning factories there are girls working for 10 sen (5 cents) a day who are as skilful and produce as fine yarns as labour of longer experience that is paid ten or twenty times as much in foreign countries, and the same conditions exist in other industries. That is a sufficient answer to the advocates of protection."

"Japan has only a silver currency. Are you in favour of bimetalism?"

"That is a difficult problem. It has engaged my attention for twenty-eight years. Twenty five years ago, when I was first minister of finance, I adopted the theories advanced at the Paris monetary conference because I thought they were sound and introduced the gold system of monometallism in Japan, but it was a mistake. It proved to be a

failure. Our country was not ready for it. Our business methods were not sufficiently modernized, and I would not try it again even now. We have a nominal bimetallic currency now, although we are on a silver basis, and I would not advocate a change under any circumstances. We are doing well enough with silver, and our prosperity has been affected less by the silver agitation than that of any country."

"I believe," continued Count Okuma, "that 100 years from now a monometallic system, or a single gold standard, will be generally adopted throughout the world, because that theory is sound, but the time has not come for a gold standard of money. The United States, Japan, India, and other new countries are not ready for it. They need a great deal of currency to transact their business, but as the world progresses and nations intermingle more and more uniform trade systems will be developed which will enable them to do with less, and each development will dispense with large amounts of the circulating mediums until they gradually become able to accept gold. When that time comes, and I think it will be not less than 100 years from now, there will be sufficient gold in circulation to meet the demands of commerce. For example, England does the largest commercial business of any nation in the world, and has the best financial system, but her circulation is not half as large as that of the United States. France has also a very large amount of money in circulation. The fact that England can do so much business with so little money shows the high development of her credit system and her banking facilities. With the French money is more a plaything than a medium of commerce. The Frenchmen do not understand the true use of money. Supposing Englishmen were put in charge of the commerce and finance of France. They would reduce the circulation one-half by withdrawing the money and investing it elsewhere, which is due to their superior experience and prudence. As our system develops commerce will be carried on by credit and not by cash."

"This theory is my own, and I sincerely believe in it, but it cannot be applied at present, particularly in new countries like Japan and the United States, and whatever we may believe we should consider present conditions and conform our policy to them. Our politicians are not usually broad-minded or far-sighted. They do not or cannot see far enough ahead. The action of the British Government in suspending silver coinage in India under the Gladstone ministry was a terrible mistake, and the whole world is suffering from it. The passage of the Bland Act and the Sherman Act by your own Congress were also mistaken and makeshift. These examples show that no attempt should be made to correct financial trouble by arbitrary legislation in a single nation. There should be mutual agreements and organization like the Latin union among all civilized nations to regulate and maintain the value of money. However powerful and rich a country may be, it cannot afford to have a selfish or an individual policy. All nations should unite to maintain the value of money so that business may not be affected by fluctuations. But the ratio of 15 to 1, as adopted by the Latin unions is too small. It cannot be maintained now owing to the reduced value of silver."

"What ratio would you suggest?"

"It is very difficult to suggest any, but with the present value of silver it ought to be as great as 25 to 1. I think that would be about right now. The old value of silver will never be restored. Bimetalism will sooner or later be adopted throughout the world as a temporary expedient, but monometallicism is the only sound policy, and we will come to it within the next century. As silver increases in quantity it will cease to be considered a money, and drop down among the industrial materials."

Count Okuma asked about the financial condition of the United States and the progress of the struggle now going on there for the remonetization of silver. When I told him of the great agitation in favour of a 16 to 1 ratio he replied:

"If your Government adopts a 16 to 1 ratio your rich money-lenders, your creditor class, will be ruined. The trouble in the United States is universal suffrage. It is not just or reasonable that the man who earns \$1 a day with a pick and shovel, who spends it all for food and clothing, who owns no property and pays no taxes, should have as much influence in shaping the financial policy of a Government as one who pays taxes upon \$1,000,000. I am not in favour of universal suffrage. The experience of the world has demonstrated that it is a failure. There should be educational or property qualifications required as a condition of suffrage. A Government should be directed and controlled only by its intelligent citizens and taxpayers. I think our plan here the

wisest. No man can vote in Japan unless he pays \$15 or more in taxes annually."

I asked Count Okuma if he had any suggestions to make for the benefit of those who desired to come here from the United States to engage in manufacturing or other business. He replied that he was very much interested in the subject, but was not sufficiently informed to offer wise advice, but he would confer with some of his friends who are better posted and would be glad to have another talk with me.—WILLIAM E. CURTIS, in the *Chicago Record*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 14.

The Earl of Dunraven, being unable to obtain the necessary guarantees that the *Valkyrie* would have a clear course in the third race, merely crossed the line with the *Defender*, and then stopped, leaving the *Defender* to finish the course alone.

The *Valkyrie* returns to England forthwith.

The Earl of Dunraven declares that he will never race the *Valkyrie* in American waters again.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hakodate, September 13.

Her Majesty's ships *Centurion*, *Edgar*, *Undaunted*, *Spartan*, *Rainbow*, and *Alacrity* left this port yesterday for Erimo Bay.

Muroran, September 16.

Her Majesty's ships *Rainbow* and *Spartan* left here yesterday, and the remainder of the squadron leave to-morrow. Destination unknown.

(FROM THE "N.-C. DAILY NEWS.")

Pekin, Sept. 9, 11 a.m.

The anti-Li party has scored another triumph. To prevent the Prime Minister from using his influence with the Emperor and Dowager-Empress, the enemies of Li Hung-chang have succeeded in getting the Emperor to decree that in future he is not to memorialise the Throne alone, but must do so conjointly with some other person of corresponding rank. In this way the anti-Li party will be able to learn all the Prime Minister's projects and intentions.

London, September 12.

The German Chancellor has arrived at St. Petersburg.

(FROM JAPANESE PAPERS.)

Söul, September 16.

The company of soldiers at Phyang-yang, who were ordered to proceed to Sang-won to deal with the riot there having no ammunition, troops will be dispatched from Söul.

Söul, September 17.

Li Tai-jun, Grand Chamberlain, has been appointed the King's Ambassador to Japan to convey the Royal thanks for the assistance given by the Emperor of Japan in establishing the independence of Korea.

Count Inouye, ex-Japanese Minister, left here for home to-day.

Pekin, Sept. 17.

Sir Nicholas O'Connor, British Minister to China, has been appointed to St. Petersburg.

Kure, Sept. 17.

A ceremony was held here to-day in commemoration of the Yellow Sea engagement.

Iwakuni, Sept. 16.

Messrs. Yamada, Superintendent of the Yamaguchi Police; Shiga, Councillor of the *Kencho*; Yoshitomi and Nishimura, M.P.s, and other have arrived here, and after consulting with the Headman and Chief of Police of this District, have taken more active means to bring about the defeat of the anti-Cabinet candidate in the parliamentary election of this District.

Shimonoseki, September 17.

The *Riojun Maru* arrived here yesterday with 180 coolies suffering from *kakke* from Formosa, and the *Kagoshima Maru* with 137 sick coolies.

Nagasaki, September 16.

At 2 p.m. yesterday a number of French sailors came ashore on leave, and having taken too much drink became very disorderly in and

around Izumochi, Oura. Order was maintained for a time through the efforts of the police, but when one of the drunkards smashed a *jinrikisha* the drawer attempted to take off the sailor's cap, the *jinrikisha* man intending to use the head-gear when appealing to the police about the damage done to his vehicle. This action caused a severe disturbance at Matsugayeicho in which about sixty sailors took part. They threw stones, and picked up staves which they handled as clubs. A police inspector promptly proceeded to the flag ship *Bayard*, and asked for help to subdue the disturbance. Four Japanese constables were badly wounded. Three constables and a resident were slightly injured. The sailors belong to the *Alger*.

Kyoto, Sept. 18.

Count Matsukata arrived here last night.

Otsu, Sept. 18.

Two hundred and eighty Otsu soldiers proceed to Formosa to-morrow.

Kobe, Sept. 18.

No. 23 torpedo boat arrived here yesterday, and left for Yokosuka at once.

Nagasaki, Sept. 18.

The British cruiser *Spartan* has arrived here from Hakodate.

Kumamoto, September 18.

The promoters of the Kumamoto-Otsu railway (13 miles) met here last night, and agreed to spend yen 390,000 in constructing the line.

Shanghai, September 18.

It is said that Japan and China will be left free to settle matters connected with the return of the Liaotung peninsula, and Russia, France, and Germany will not interfere at all.

Toyama, September 18.

The members of the Prefectural Assembly memorialized the Home Minister yesterday stating that they had no confidence in the Governor of this Prefecture.

Pekin, September 16.

Rumour has it that Li Hung-chang will be dispatched to Kansu and Kwangsi Provinces as an Ambassador, the Mahomedan rebellion there having developed alarmingly.

Honolulu, September 14.

Cholera has broken out here.

Aomori, Sept. 19.

Mr. Ishiguro, an expert in the Home Department; Captain Ijuin, and Fleet Engineer Soda have arrived here to inspect Ominato, which is to be made a naval port. They left for the spot yesterday.

Nagano, Sept. 19.

The election of President and Vice-President of the Prefectural Assembly has resulted in the success of Messrs. Tatsuno Shinichiro and Hatagoshi Hakkuro respectively.

The following Formosa telegram was received by the Government on the 18th instant.

Lieut.-General Viscount Takashima, Vice-Governor-General, left Taipeh on the 17th inst. for the south.

Nagasaki, Sept. 19.

The *Saikio Maru* arrived here from Formosa to-day. The British ship *Spartan* has gone to Chefoo.

Söul, Sept. 19.

Count Inouye will leave Ninsan for home on the 21st instant.

Bin O-shoku and 278 other prisoners were pardoned to-day.

A company of Korean soldiers was dispatched from this capital to-day to subdue the riot at Sang-won, Phyang-an Province.

The report that the Korean Government had specially permitted the American Trading Co. to work the mines in Phyang-an Province is erroneous.

Ninsan, September 19.

The King's Special Ambassador has decided to leave for Japan with Count Inouye.

Miyazaki, September 18.

The damage done by the storm of the 7th inst. throughout the Prefecture (Nishi-usukikun excepted) was as follows:—4 persons killed, 7 persons wounded, 581 houses partly overthrown, 2,905 houses damaged, 62 houses submerged, and 17 bridges destroyed. Much damage was done to embankments and roads.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 194.

WHITE. BLACK.
1—Q to K B 6 1—Anything
2—Mates accordingly.

Correct answers received from W.D.C., Sigma, E.D., Shogi, Kr., Digamma, W.H.S., J.D., W.B., and E. J. King.

All the solvers with one exception speak well of this problem, and declare that it took them much over the 15 minutes and that they had no chance of scoring against the ex-champion in this matter.

The one exception writes as follows:—"No. 194—Q to K B 6 solved in something under 5 minutes. See nothing extraordinary in the position. Pulitzer's problems don't deserve their reputation." Our friend should be merciful, even if he be strong, and remember that all solvers are not of his calibre.

PROBLEM No. 196.

By E. HOFFMANN.

"The following clever position is being posted at the various chess resorts, and is creating no little interest, as the average player is apt to pronounce it unsolvable."—*New York Herald.*

BLACK.

WHITE.

White to play and mate in three moves.

THE HASTINGS CONGRESS.

No further news to hand beyond that reported last week. The next steamer from San Francisco will probably bring a full budget; meanwhile we reprint two games. The failure of the veterans in this tournament seems to prove the truth of Blackburne's dictum:—"When we pass the age of 50 we must begin to think of making way for younger men."

GAME No. 346.

GAME No. 348.

The following is the first specimen we have given of the play of one who, eminent in the world of letters, has always been justly honoured and remembered as one of the first of English chess players. This game is, moreover, worthy of preservation as an example of strictly accurate calculation throughout. True there are no great sensations or surprises, except at move 21; but this by no means implies that there is no good chess:—

36—B to K 6	36—B to R 5
37—B to B 5	37—B takes R
38—B takes R	38—Resigns (h)

(a) It is generally better to allow the opponent to take the initiative in close games such as these. Hence P to K 3 is rather preferable here.

(b) We prefer P takes P, leaving the Kt strong for defence at B 3.

(c) And here the too-long delayed P to K 3. If then 7....., Kt takes Kt; 8—Q takes Q ch., K takes Q; 9—P takes Kt, &c.

(d) The pawn is cleverly won, and with much advantage.

(e) Or K R to K sq. If then 22....., B takes P; 23—R takes B, R takes R; 24—R takes P, and wins.

(f) A good move. Not R takes P, because of R takes B ch., &c. B takes P is also inferior on account of the pin by R to B 4 or R to Q sq.

(g) R to Q Kt 7 would have troubled White more.

(h) The ending is easily won for White, who threatens K to K 5 or B 5, B to B 3, &c. These games are pleasant because well played and not too profound.

GAME No. 350.

THE TIME LIMIT.

It is not generally known that until quite recent years chess was played without any time limit whatever, and naturally this gave rise to no end of observations and abuses. At Hastings the rather slow but reasonable limit of 15 moves an hour is to be the rule. The *Adelaide Observer* asks who invented the time limit and introduced the use of clocks? The story is told by Staunton in the *Chess Praxis*. A chess player had for some pressing necessity (which we at present forget, but it can be found stated in the *Praxis*) bargained and sold what appears to have been his only remaining asset to a personage whose popular designation is unfit for polite ears. The vendor was afforded a chance of redeeming by playing a game of chess on the double or quits principle. The accuser—for so we may call him—who, notwithstanding his great power, appears sadly deficient in prevision and common sense, played his part of the game with such skill that the unfortunate soul vendor saw that he would shortly be mated. The happy thought occurred to him that as he was entitled to whatever time he pleased for considering a move, he need be in no hurry. He might as well take a million or two of years as a few minutes. He is said still to be considering his move. Conduct such as his cannot, however, be regarded with favour. In fact, it was distinctly fraudulent. There can be little doubt that it was this incident which led to the introduction of the time limit and the use of clocks, to the everlasting regret of all honourable votaries of the royal game. The accuser decided not to be had again in this way, and therefore got provision made for the future. As usual, the good have to suffer for the evil doings of the wicked.—*Weekly Times*.

METALS.

More enquiry generally, and dealers are beginning to realise the fact that Iron is likely to be dearer rather than cheaper in future. As the cooler weather comes on we shall see more trade here.

Best Bars, 4 inch	\$3.15	to 3.20
Flat Bars, 4 inch	3.20	to 3.25
Round and square up to 4 inch	3.15	to 3.25
Iron Plates, assorted	3.40	to 3.50
Sheet Iron	4.30	to 4.50
Galvanized Iron sheets	8.50	to 9.00
Wire Nails, assorted	5.50	to 5.90
Iron Plates, per box	5.25	to 5.40
1 lb Iron, No. 1	1.60	to 1.65

IRONWORK.

No change. Market quiet at last prices. Deliveries good, but dealers will only buy from hand to mouth at present. Surely there must be larger business ere long with the winter season approaching.

American	\$2.05	to 2.10
Russian	2.00	to 2.05
Langkat	1.90	—

SUGAR.

Brown—Quiet market and poor business with lower quotations all round. White—Improved demand, and the trade generally satisfactory.

Brown Takao	\$3.60	to 3.65
Brown Manila	4.15	to 4.35
Brown Daitong (New)	3.05	to 3.15
Brown Canton	3.15	to 3.65
White Java and Penang	6.10	to 6.20
White Refined	6.25	to 9.50

EXPORTS.

RAW SILK.

After our last was written the demand developed large proportions and heavy settlements were made, driving prices up rapidly. Our present quotations are more or less nominal—although \$1,000 was reported paid for 6 boxes of some special extra quality—as there is less doing at the close and no doubt sellers would be current in case of need.

QUOTATIONS—(NEW SILK.)

Flatures—Extra 9 11, 10 12 den.	Nom \$970	to 980
Flatures—Extra 13 15, 14 16 deniers	970	to 980

clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

August 3, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

THE PROCEEDINGS

OF THE
IMPERIAL JAPANESE DIET
IN BOOK FORM.

THE "Proceedings" include EPITOMISED
DEBATES, Translations of the Bills dis-
cussed, Budgets, Speeches of the Ministers of
State in full, Questions put and the answers of
the Government, and the Legislative Work of
the Session.

PRICE \$1.

To be obtained at the Office of the *Japan*
Mail, No. 51, Main Street.

YOKOHAMA: SATURDAY, SEPT. 28TH, 1895.

BIRTHS.

At No. 11, Kaga Yashiki, Tokyo, on the 17th inst., the wife of Professor MICHEL REYON, of the Imperial University, of a daughter.

At Yokohama on the 26th September, Mrs. JAMES KESWICK, of a son.

MARRIAGE.

On the 2nd of September, in Hongkong, A. P. A. HEIN to L. S. VON HEMERT.

DEATHS.

On the 24th September, at Kobe, GEORG NATERMANN of Bremen.

At the Grand Hotel, on the 28th instant, at 5.35 a.m., ELIZABETH LEONARD CHAPIN, of Chicago.

SUMMARY OF NEWS.

HONOLULU has declared quarantine against Japan.

THE bad weather which set in last Saturday has continued all the week.

THE *Kaika Shimbun* was suspended by the Authorities on the 21st inst.

THE British Fleet, after a very brief stay at Yokohama, left for Chinese waters.

A DELAY in the despatch of the Australian waders is said to have occasioned the fixing of

the Autumn Races of the N.R.C. for the middle of November.

THE new Chinese Minister was received in audience by the Emperor on the 26th.

MR. OI KENTARO returned from the Straits Settlements this week on the French mail steamer.

MR. NARABARA NOBUMASA, has been appointed first interpreter in the Japanese Legation in China.

THE Salvation Army commenced active work in Tokyo this week, with a meeting in the V.M.C.A. Hall.

NOTWITHSTANDING the strenuous exertions of the salvage party, the *Belgic* still remains on the sand at Suno-saki.

THE Autumn Festival was duly observed by the Court and nation on Monday, the day being a general holiday.

It is stated that Mr. Seki Naohiko will be chosen as chief secretary of the Yokohama Chamber of Commerce.

MR. LAFFIN's yacht *Mary* won the race for the 39-raters last Saturday, and thus becomes possessor of the "Maid Marion" Cup.

A BIG emigration company is proposed to be floated, with the object of facilitating the settlement of Kyushu people in Formosa.

THE total length of existing railway lines between Kelung and Shinchuh is about 63 miles, the number of stations being eleven.

THE *Shirasuki Maru* collided with the *Tokiwa Maru* near the east entrance to the Shimonoseki Straits on Sept. 22, and sank immediately.

AN electric railway between Yokosuka and Uraga is under contemplation. The proposed Company would have a capital of yen 200,000.

THE sale in Japan of No. 377 of the *Shin Sekai*, a Japanese magazine published in America, has been prohibited by the Minister of Home Affairs.

THE Ryomo Railway expects to pay an 8½ per cent. dividend this half-year: the Osaka Railway Company declare 12 per cent. for the same period.

MESSES. KATO HONSHIRO, Mutsu Hirokichi, Ochiai Kentaro, Ogiwara Shuichi, and Hirai Fukazo, have passed the examination for diplomatic cadets.

THE eleven of the Y.C. & A.C. beat a team from the Fleet last Saturday, easily, the scores being, Fleet, 89; Yokohama, 195 for three wickets.

MR. TAKASU, proprietor of the *Yiyu*, who was lately warned by the Authorities in accordance with the Admonition Law, was expelled from the *Yiyu-to* on the 20th inst.

THE Nobles' School for Girls held its annual graduation exercises on the 20th inst. H.I.M. the Empress was unable to be present, the first time for many years.

THE Japan Iron Foundry Company now proposes to carry out its contract for the supply of pipes to the Tokyo Water-works, but asks for an extension of ten months.

THE annual festival in honour of those who have fallen in war, took place at the Noge Shrine, Yokohama, this week, and was very largely attended. Governor Nakano was present.

YOKOHAMA Cricket Week commences on Monday, Oct. 14. There will be six days of cricket, the first two being Yokohama v. Shanghai, the two following Shanghai v. Kobe, and the last

Kobe v. Yokohama. Among the amusements to be provided for Yokohama's cricket visitors are a big smoking concert and a theatrical performance, in addition to the inevitable dinners.

THE Yokohama Chess, Philharmonic, Choral and Literary Societies start their autumn work next week though their first meetings will necessarily be to pass accounts and elect officers.

EIGHT cows died at the Wakana Dairy, Ota, Yokohama, on the 22nd inst. The veterinary surgeon stated that they were attacked by fever. A general meeting of Dairy keepers was promptly held to discuss measures to prevent its spread but no other animals have since been affected.

COLONEL FUKUSHIMA, the trans-Asian rider, intends to set out upon another ride, this time *via* Central Asia to India, whence he will proceed to Turkey, investigating geography and the general condition of affairs on the way. He will leave home before the close of this year.

REUTER telegraphs:—The British, French and Russian Embassies at Stamboul have sent a vigorous note to the Porte demanding an indemnity for the recent attack upon the Consular Officials at Jeddah and the punishment of the offenders. Germany has decided to support the Russo-French measures taken to hasten the evacuation by the Japanese of the Liaotung Peninsula. A letter from Uganda states that Captain Lothair shot a hundred followers of the trader Stokes, because they refused to join him. The Powers, especially Great Britain, are dissatisfied with the Porte's concessions with regard to Armenia, and further pressure is probable. It has transpired through official sources that the Pamir settlement is now complete, and only awaits ratification by the Cabinets concerned. It is understood that Lord Salisbury intends to insist on the Viceroy and other high officials, who are answerable for the Kucheng massacre, being brought to account, and that he will bring pressure to bear upon China for this purpose. The Spanish cruiser *Sanchez Barcassategui* has been sunk by collision off Havana. The admiral, four officers, and thirty-six of the crew were drowned.

THE Import trade is as good, if not better, than last reported. For Yarns there is a strong demand, especially for fine counts, both singles and doubles, "plain" and "gassed," and higher prices are paid for all descriptions. There is a good trade in Shirtings, particularly 9lb., and the market is strong, and Fancy Cottons of all descriptions have had a turn at satisfactory prices. Woollens are being enquired for, and Italian Cloth is in good demand at better figures. There is a good trade in Metals of various kinds, Iron more especially, and both sales and prices are more satisfactory than for some time past. Owing to competition between holders of American and Russian Oil, values have been let down. Buyers take advantage of the situation and deal sparingly, hoping to still further reduce values. There is a revival in the Sugar trade, and with large sales and limited arrivals the market is healthy and strong—all prices having advanced, the tendency being still upward. The principal Export has been quiet, and the high figures put upon desirable parcels of Silk tend to keep buyers away. More than a thousand yen per picul is reported to have been paid for a very choice parcel of Filatures, and holders of all grades are firm. For Waste there has been a better demand, and but for the attitude of holders a heavy business might have been done. A steady trade is still done in Tea, and the market is firm. Exchange has been steady, rates having fluctuated but slightly.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The attack upon the Radicals has occupied a considerable space in the columns of the Progressionist organs. The stories assiduously circulated by these papers have already been noticed by us, and we have also referred to their emphatic denial by the *Meimashi*, a petty journal, at present the only daily representative of Radical interests. These stories are entirely disregarded by respectable journals like the *Fiji Shimpō* and the *Nichi Nichi*. Outside the Progressionist organs, the *Nippon* and the *Kokumin Shimbun* show great zeal in disseminating the calumnies. The *Mainichi Shimbun*, writing on the subject, strongly censures the conduct of the Radicals since the first session of the Diet, when, under the disguise of being opponents of clan Government, they secretly worked hand in hand with the supporters of those in power. Since then, says the Progressionist organ, they have always played the same dastardly game, thereby thwarting the object of the people's true friends. Our contemporary would not blame the Radicals so strongly were they straightforward enough to openly avow their connection with the Government. What it finds most reprehensible is that they lack any such courage, and try to pose before the country as enemies of the Cabinet. The Government also comes in for a share of the *Mainichi's* criticism. It declares that the connection between the Cabinet and the Radical Party being now an open secret, the duty devolves upon those in power of making an open acknowledgment of this state of things, and thus paving the way for the introduction of Government by party. Any continuance of the present clandestine relations with the Radicals is pronounced discreditable to the known intelligence and sagacity of the Ito Cabinet.

The *Firon Nippo*, the latest addition to the dailies of Tokyo, is supposed by most persons to be under the influence of Count Goto. Its attitude in connection with the present persecution of the Radicals is characteristic. It does not refuse to open its columns to the most extravagant stories, but on the other hand, it displays no blind hostility to the Radical Party. Its attitude is that of a person prepared to have a hand in every mischief, not out of malice but merely for the sake of sensation. At bottom it is partial to neither of the contending parties. "The spectacle," it says, "of Ministers of State combining with political parties excites curiosity in this country, but belongs to the regular order of things in constitutional States of the West. Even in Japan, Marquis Saigo is connected with the National Unionists, and the Progressionists are now trying hard to establish relations with Count Kuroda, the President of the Privy Council. Hence the only difference between the Progressionists and the Radicals is that the former have been forestalled by the latter in the attempt to combine with those in power."

When the war had just been concluded, there was a tendency in certain circles to apprehend lest the increased personal prestige of the higher Military and Naval officers of Sat-Cho extraction might tend to strengthen the clan system of Government. The fear is still entertained, but the *Fiji Shimpō* is of a different opinion. Such a result, it says, might have been produced ten years ago, when no Legislature existed, and when the clan system had more vitality. But the times are now essentially changed. The halo surrounding the clan statesmen as conquerors in the war of the Restoration has nearly faded away, and the power of public opinion has in proportion increased. So far from clan influence being strengthened by the part played by Sat-Cho men during the recent war, these persons will be the first to acknowledge that the brilliant success achieved by the country was due to the powerful and united support rendered by the people to the Government. Speaking individually of the officers that distinguished themselves in the war, as for instance Marshals Yamagata, Oyama, and Nozu, Lieut.

General Kawakami, and Vice-Admirals Kabayama and Ito, our contemporary is informed that these persons have no intention whatever of meddling with politics, their sole ambition being to dedicate their lives to the service of the country in their special fields. As to the statesmen that had nothing to do with the conduct of the fighting, the *Fiji* finds it absurd to suppose that the war has in any way helped to increase their personal influence. Upon the whole, our contemporary believes that the war has had the effect of accelerating the final disappearance of the clan system.

Internal politics being in a state of temporary calm, journalistic attention is largely bestowed upon foreign affairs. Writing upon the question of foreign policy, the *Nichi Nichi* strongly criticises the propensity of some of its contemporaries to discuss the subject in a frivolous and thoughtless manner. It is especially discontented with the conspicuous lack of discretion shown with reference to the problem of an alliance. The newspapers loudly proclaim their advocacy of an alliance with either England or Russia, but do not devote any mature consideration to the *pros* and *cons* of the matter. Even those that refrain from making a definite choice between the two alliances, urge the Government to pursue a fixed and permanent policy by selecting a friend among the Powers of the west. The *Nichi Nichi* is opposed to such a hard and fast line of action. Should an alliance be necessary, there will be time enough to take active steps for its formation when the occasion arises. Meanwhile, an independent and neutral line of policy should be pursued. At all events, to disturb the present balance of power by an alliance would serve no useful purpose, especially when peace is of paramount importance to Japan while she is engaged in the development of her army and navy. Such in brief seems to be the idea entertained by our contemporary. As to the proposed English alliance, the *Nichi Nichi* observes that, although Russia's designs upon Korea and Liaotung admit of little doubt, it is not easy to say whether Japan's interests require that she should resist Russia's advance even by assuming the grave responsibility of an alliance with England. Neither is it at all certain how far England is prepared to go in preventing Russia from obtaining an ice-free outlet on the Pacific. On the other hand, it is difficult to see what advantage could accrue to Japan from an alliance with Russia. Were there a prospect of getting India, there might be sense in such an alliance, but that contingency is not to be thought of in the present state of things. Neither could a Russian alliance help Japan in the least in her commercial competition with England. Considered from every point of view, the suggestion that Japan should form a foreign alliance is ill-advised and premature. What is now important for Japan, says the *Nichi Nichi*, is not that she should look about for friends, but that she strain all her nerves for the completion of her warlike equipment. Pending the consummation of that paramount object, no good purpose can be served by ventilating hasty and crude opinions on the question of an alliance. When Japan has completed her qualifications to play a prominent part on the stage of the world, it will be her business to think of the question of alliance but not a moment sooner. At present Russian influence preponderates in the East, but there is no necessity for any immediate readjustment of the balance of power. It will speedily readjust itself should a disturbance takes place in this part of the world. Very probably an attempt on Japan's part to correct the balance would lead to a disturbance of equilibrium in the opposite direction. The safest course for Japan is to remain quiet and bide her time.

The *Nippon* thinks otherwise. Indeed, its outspoken advocacy of friendship with Russia and hostility to England may be regarded as one of the causes that evoked the *Nichi Nichi's* strong criticism. It clearly states that Japan interests are antagonistic to those of England, while with Russia, she has a natural community of interest, Japan's proper

sphere of expansion being toward the south and not toward the north. The development of Formosa, and the extension of trade in the southern part of China are the immediate concerns of Japan, and in these directions it is self-evident that England is Japan's natural and inevitable opponent. As to Russia, the *Nippon* thinks that an understanding between her and this country is the only safeguard for the integrity of Korea. Instead of wasting energy in the fruitless task of resisting Russian development in the north, Japan's interest, as well as that of Korea, would be better served by remaining at peace with Russia and making the utmost out of the commercial advantages of the Siberian railway. Our contemporary thinks it bad policy to be carried away by a temporary sentiment of resentment, and to join hands with a Power with which this country has nothing in common. But, indeed, it is premature to talk of an actual alliance, says the *Nippon*, the nation must simply make up its mind once for all as to which Power it will regard as a natural ally and which as a natural enemy. The Tokyo paper severely criticises what it characterizes as the "smiles on all sides" policy of the Government. To hunt two hares at the same time is to get neither, says the proverb. To attempt to be on good terms simultaneously with Russia and England, can be productive only of evil to Japan.

EDITORIAL NOTES.

THE WEST END ON WHEELS.

The *Badminton Magazine* gives the following description of the Rotten Row for bicycles recently established in Battersea Park:—"Never did a fish look more thoroughly out of water than does a powdered six-foot-high footman as he stands solemnly holding up his mistress's bicycle while she pins down her skirts preparatory to the start. Of members of Parliament and peers there are no lack; some of them have been long enough in Her Majesty's service to attain to the rank of privy councillor, judges of the High Court, or officers commanding crack cavalry regiments; while in many cases I am bound to say that the wives of these distinguished gentlemen are the apter riders of the two. There is a charming spot adjoining the County Council refreshment kiosk, known as the Lake House, where, screened by a wealth of may and blossoming chestnut from the gaze of the passing cyclists, the breakfast-table may be spread on the shores of the ornamental water, with no other outlook than that afforded by numerous leafy islands, having the lake dotted with swans and wild fowl in the foreground—a spot which but for the occasional glimpse of passing carriages through the boughs at the back might be in any gentleman's park a hundred miles from London. There a former caterer at the Royal Aquarium can at short notice provide a breakfast amply satisfying to the keen appetite engendered by the ride. In the main avenue Mr. Cameron has canvassed off a small slice of his kiosk, and on the lawn adjacent the members of White's Club provide breakfast and strawberries and cream for themselves and their friends. Upon occasion this little plot of grass is as crowded as the Royal Enclosure at Ascot, and with faces not less pretty nor dresses less smart." Not the least curious fact about this new playground for the aristocracy is, as Lord Onslow remarks, that its existence is largely due to the administrative care of John Burns, the hero of the Dockers' Strike of 1889.

THE CHINESE MINISTER RECEIVED IN AUDIENCE.

H.E. Yu, the newly appointed Chinese Minister, had audience with the Emperor on Thursday at 10.30 a.m. Prior to the time fixed for the interview a Master of Ceremonies was dispatched to the Chinese Legation with a carriage to receive the Chinese Minister. On arriving at the Palace, the Foreign Representative was at once conducted to the reception room, where he was received by Marquis Saionji, Acting Minister of Foreign Affairs; Viscount Kagawa, Grand Master of Services to Her Majesty the Empress;

Mr. Sannomiya, Grand-Master of Ceremonies, and others. The Chinese Minister was then conducted by Mr. Sannomiya to the Hoo-no-ma, where the Chinese Minister presented his credentials to H.I.M. the Emperor. The Minister and his wife were afterward introduced to the Kiri-no-ma, where they were received in audience by H.I.M. the Empress. Other members of the Chinese Legation were also received by Their Majesties.

OPIMUM IN HONAN.

It is impossible not to admire the fine old faith exhibited by the writer of the following letter, the Rev. J. J. Coulthard:—It has been our custom in Honan, for several years, to pray definitely, at our Wednesday evening meetings for prayer with the native Christians, that God would in some way or other put a stop to the traffic in Opium. For two years running we have had remarkable answers in the almost total failure of the Opium crops in this province. Three years ago the supply was of such a good quality and of such a quantity as to make it worth the while of the Chinese Government to establish a new Opium Customs barrier to levy taxes upon the export of the drug from the province. In 1893 the Opium crop was destroyed by frost, and in 1894 by drought. When we passed through some of the Opium-growing districts last June, there was a universal demand for medicine to break off the Opium habit, because, "Heaven forbade the cultivation of it," and the high price made its consumption far too expensive for the many. The people themselves declared that it was obnoxious to "Heaven," and if they could break off the habit they would be done with the cultivation of the poppy once and for all. I am sorry to add, however, that the production in the adjoining province of Shen-si was colossal, and large quantities were imported by the Honanese. I have not yet been able to ascertain how much is under cultivation this year, nor if the people are morally courageous enough to resist the temptation to cultivate a drug which yields in favourable years a profit twenty times that of wheat or cereals. In answer to united earnest and definite prayer why should we not expect God, by means of His great army (Joel ii. 25), or by frost, flood, and drought, effectually to destroy the poppy not only in one part of the world, but wherever it is sown for profit at the expense of debauching its consumers. It would be an object lesson for the world, reminding them of the existence of God and of His irresistible might." Prayer, according to this account, is efficacious only within the province where it is offered up. The Honan crop was destroyed in answer to prayer in Honan, but no supplication having been made on account of the adjoining province of Shensi, the devil was able to contrive a fine harvest there.

MISSIONS TO FORMOSA.

THE island of Formosa, says the *Living Church*, having been ceded to Japan as one of the results of the war with China, the convocation of the North Tokyo district of the Church in Japan has unanimously resolved to ask the Board of Missions at home to send missionaries to that country. The accessible portions of Formosa are at the northern end of the island and along the western coast. The interior and the mountains of the eastern coast are inhabited by an unsubdued race of wild men, of whom little is known except that they are cannibals and very fierce and intractable. We observe, also, that it is proposed to send missionaries to Korea, and that Korean students have been placed at St. Paul's College, of whom hopes are expressed that they may turn out to be fit persons to bear the message of the Gospel to their countrymen.

THE WEAR AND TEAR OF COINAGE.

It was calculated, after a careful examination conducted by the Bank of England thirty years ago, that in a period of ten years the loss by abrasion was about 19s. on 100 sovereigns taken from the vaults of a banker. The loss was 23s. on £100 when taken from the hands of a tradesman. The difference was caused by the extra handling and rubbing through which the trades-

man's gold had gone. The loss in silver is about four times as great, simply because the smaller coin is in more extended circulation than the larger denomination. It was estimated that in the smaller silver coins the loss would be about 50 per cent. in 100 years. The United States Government loses about 4 per cent. on its handling of its silver coinage.

NARROW ESCAPE.

HOME papers say that the Prince of Wales and the Duke of York appear to have had a rather narrow escape in connection with their trip to the Needles in the new torpedo-boat destroyer *Charger*. It transpired that about two minutes after the Prince and the Duke landed at Portsmouth, the attention of the engineer's staff was directed to the peculiar manner in which smoke was issuing from the *Charger*. It was then found that the crown of the fire-box was cracked right across. The fire was immediately drawn to prevent the boiler bursting, and there the incident ended.

MR. J. W. LOWTHER.

THE *Spectator*, referring to the appointment of Mr. J. W. Lowther to the Chairmanship of Committees of the House of Commons, says:—"We are glad to see that it is the intention of the Government to appoint Mr. J. W. Lowther to the Chairmanship of Committees. That is an excellent choice, for Mr. Lowther is greatly liked and respected in the House and enjoys its confidence. Though a young-man, as politicians go, he was, we believe, placed on the panel of Deputy-Speakers in the last Parliament. The only pity is that Mr. Lowther's sound sense and clearness of vision should not be utilised in the work of administration. He made an excellent Under-Secretary for Foreign Affairs, and his speeches were models of firmness and moderation. The principle of inverted nepotism was, however, held to exclude him from the Ministry. His wife is a niece of Lord Salisbury." Some of our readers may not be aware that Mr. J. W. Lowther is a brother of Mr. G. Lowther, Secretary of the British Legation in Tokyo.

A JUNK ON FIRE IN KOBE HARBOUR.

BETWEEN seven and eight o'clock on Friday, a junk bringing oil from one of the ships in Kobe harbour to a godown on the beach at Ono caught alight. The fire instantly spread over the whole of the cargo, and the junk became a floating mass of flames. The great volumes of smoke, together with the flames, attracted a very large crowd to the spot. The junk was anchored well in to the water's edge, and under the superintendence of a police officer a number of men threw baskets of sand upon the burning mass, while another regiment were throwing water over the men at work nearest the fire. In half an hour the junk had been burnt to the water's edge, and the sand was being thrown on so ineffectively that the whole of the timber seemed likely to be consumed. The *Kobe Chronicle* understands that there were something like 600 cases of kerosene in the junk, belonging to the Standard Oil Company.

ROYAL CHESS-PLAYERS.

It was at the special request of the Queen that the Duke of York became a patron of the Hastings Chess Tournament. Few of her subjects derive a keener pleasure from the game, it is said, than does the Queen. The London correspondent of the *Manchester Courier* says her Majesty rarely plays chess herself now, but delights in watching a game played by the members of her family, and often after "checkmate" is called will give advice as to how the game "should have been played." Every member of the Royal Family is a skilful player, but her Majesty, when she moves the pieces, is able to show her superiority over all other Royal players, except the Empress Frederick, who is rarely defeated. The Queen received her lessons in chess from the Prince Consort, who was also an enthusiastic player.

LADY'S CYCLING.

LADY HENRY SOMERSET, in a remarkably able presidential address delivered recently to the

British Women's Temperance Association, spoke of cycling for women in these terms:—"The basis of all our work is a sound body as the necessary setting of a sound mind. Nothing is foreign to us that relates to this, and I can but congratulate our World's W.C.T.U. on the patience and perseverance of its founder in gaining the mastery of the "mettlesome steed" as she aptly terms it, that opens a new realm of exercise to womankind. Sir Benjamin Ward Richardson, than whom no name stands higher on our roll of honour, while he advocates all the progressive movements to which we are committed, declares in his preface to Miss Willard's book on "How I learned to ride the bicycle," that no single advance in this century means so much to the home-makers as the invention of this mode of locomotion and the breaking down of public prejudice against its use by women. It is needless to say that along with this great blessing has come a new perception of what is rational in costume, and while we who represent the old régime shall not be likely to develop into the larger liberty of what is called the reform dress, we can speak our good word for it while our younger sisters advance with steadier steps than ours along the highways of that new liberty which means so much to their physical development and the better endowment of generations yet to be."

THE VICEROY LI AND MARQUIS ITO.

THE Shanghai Special Correspondent of the *New York Herald* draws very definite conclusions from the minutes of the Shimonoseki conference, as published in Tientsin:—Count Ito's handling of the great Li, the "Bismarck of China," in the recent Shimonoseki negotiations, is disclosed in the papers that Li has been foolish enough to publish in Tientsin. If ever a man was damned out of his own mouth, Li Hung-chang is damned as a statesman by these papers. From start to finish he never rose beyond the level of a wretched shroff (Chinese bill collector) trying to get a pressing creditor to cut a little off his bill. His ideas of statecraft were shown to be about equal to his knowledge of military and naval affairs, which has been proven to be absolutely *nil*, yet for years he traded on his reputation as a great captain, and his flatterers never undeceived him, because it would not pay to do so. In the hands of an able and determined man like Count Ito, the Chinese "man of blood and iron" proved of softest wax, and he only got slight concessions where the Japanese Envoy was already prepared to concede.

THE "BELGIC."

LATEST news regarding the *Belgie* is to the effect that heaving commenced on Monday afternoon and the vessel's head was brought 16 degrees to the westward, and that her head is now pointing 60 degrees further out. All Tuesday operations continued, with the result that at six o'clock in the evening she had slipped some ten feet further off the beach and now lies easy, with her head to the W.S.W. No. 2 hold is reported to be nearly free of water. On Saturday the *Belgie's* head was about 20 feet off the shore, and if wind and weather continue favourable the big mail boat may be floated in about five days.

THE CLUB HOTEL STRIKE.

ON Saturday morning a deputation representing the striking boys waited on the Manager of the Club Hotel and tendered an apology. Mr. Sioen said that he would take back the boys, with the exception of the six whom he had dismissed, and the leader of the strike. The terms were accepted by the boys, and arrangements were made for them to go back again. On Sunday morning another interview took place between some representatives of the strikers and Mr. Sioen, and as a result we believe arrangements were come to which will now terminate the affair.

THE CRICKET WEEK.

THE Kobe team for the Interport cricket match will probably be composed of Messrs. C. M. Duff, Captain, F. J. Abbott, W. Braess, G. Braess, W. D. S. Edwards, C. H. Lightfoot,

H. C. K. Lucas, W. W. G. Ross, J. Scrymgeour, E. W. Tate, and F. E. Wilkinson. The Shanghai team may, we gather, include the following gentlemen, viz., Messrs. A. P. Wood, E. P. Wickham, W. Platt, R. D. Hill, Farbridge, H. Adams, W. F. Inglis, W. B. Cheetham, R. Macgregor, Keith, Stabb, Buchanan, and Mann or Lanning.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for August, showing the foreign trade of the empire for the month:—

	1894. SILVER YEN.	1895. SILVER YEN.
Exports	11,131,786.090	16,249,954.390
Imports	10,782,848.260	18,820,847.080

Total exports and imports	28,070,801.470
Excess of exports	4,429,107.310

CUSTOMS DUTIES.

THE CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

We are informed that advice by telegram from London has been received to the effect that at the approaching meeting of shareholders, the Directors of the Chartered Bank of India, Australia, and China will recommend an interim dividend for the past half-year at the rate of 7 per cent. per annum free of income tax.

THE LATEST NAVAL DISASTER.

THE *Sanchez Barcistegui*, which has been sunk by collision at Havana, was a wooden sloop of 935 tons displacement and 1,100 indicated horse-power, carrying 5 guns, and was built in 1876.

ECONOMICAL AND INDUSTRIAL.

The profits realised by the Nippon Yusen Kaisha on account of ships chartered by the Government as transports, are said to have aggregated 1,378,373 yen up to the end of March last. From this sum has to be subtracted a certain amount for repairing the ships and rewarding the company's servants, but even after due allowance has been made on these accounts, a handsome balance will remain as net gain. The profit arising from the same source during the current half-year, namely from the 1st of April to the 30th of September, will be probably still larger. We find the first mentioned sum extraordinarily small.

The Osaka Shosen Kaisha proposes to extend its steamship service to Formosa and the principal Chinese ports, as Shanghai, Foo-chow, Canton, Amoy, and so forth. With that object in view, the company has decided to send its Director, Mr. Sugiyama Kohei, and Mr. Ishihara, head of the transport department, to the above mentioned places. They are to leave Kobe on the 25th instant for Shanghai by the *Nagato Maru*.

Letters from provincial districts improve in tone as harvest time approaches. The crop will be more or less below the average of the past few years, but is expected to prove far better than was at first apprehended. The rice-dealers of Fukagawa in Tokyo have made extensive enquiries about the prospect, and the answers received by them indicate that the yield for the whole country will be but slightly below a normal crop, while in some places, notably in Higo and Owari, it is expected to be better than usual.

The cotton factories are busy, there being a constantly increasing demand for yarns. Most of the factories are increasing the number of their spindles, and several new companies are projected. The spindles ordered from England, through the Mitsui Bussan Kaisha, by the existing factories, during the six months from March to August, aggregate 87,788.

The Cotton Spinners League has addressed a circular to the Chambers of Commerce throughout the country, requesting their co-operation for abolishing the import duties on cotton. A petition on the subject has been presented to the Diet more than once, but the measure has not yet received the approval of the country's legislators. Its importance has been increased ten-fold by the treaty of Shimonoseki, since Western capitalists are now able to compete with the Japanese mills on easier terms than before, and the result may be highly injurious to Japanese spinners. The co-operation of the Chambers of Commerce is earnestly solicited by the framers of the circular, and it is believed that they will readily comply, for the majority of their members are known to be in favour of the proposed reform.

The Osaka Chamber of Commerce recently organized a Committee to investigate subjects connected with the extension of trade with China, Korea, and the newly acquired Formosa. The Committee held its first meeting on the 18th inst., when, among other things, it was decided that a commission be sent to the above mentioned countries to conduct researches *in loco*.

CONSCRIPTION IN HOKKAIDO.

Imperial Ordinance No. 126, promulgated on the 20th instant, announces that the Conscription Regulations are to be applied in parts of Hokkaido from the 1st of January, 1896. The provinces covered by the Ordinance are Oshima, Shiribeshi, Iburi, and Ishikawa, that is to say, the south-western half of the island. Settlers in these localities, if engaged in definite occupation, are, however, to be exempted from enlistment during the five years from the date of emigration. Hitherto conscription has been enforced in the three towns of Hakodate, Fukuyama, and Ezashi alone.

CHINESE DOCKS AND ARSENALS.

Heavily as China had to pay for the construction of the dock at Port Arthur, the loss of it is doubtless a temporary relief to her exchequer. For it appears that her dockyards and arsenals have been a steady and serious annual drain upon her purse, and that she has obtained little or no return for the outlay. An Imperial Decree, issued on August 11th, is quite pathetic on the subject. Referring to a censor's memorial in favour of selling the State's dockyards and arsenals to private individuals, the Decree says that these establishments aggregate "eight or nine," that they are "numerous and adequate," but that the workmen being lazy and inexpert, arms and ammunition had to be purchased abroad during the recent war. The Fukhien docks, we read, cost at least 600,000 Tls. yearly, "but not a single iron-clad or vessel has been made there," and the expense of the Hupeh arsenal is nearly as great, "though it has done no special work." Hence the Viceroy and Governors in whose districts the docks and arsenals lie, are directed to ventilate the idea of private purchase, promising official protection to buyers, and even suggesting that if the latter lack money, funds should be officially lent to them.

THE NEW CHEFOO.

To get at Chefoo, the only sea-side summer resort hitherto supposed to be within reach of Tientsin or Peking, it is necessary to travel by steamer from Taku. But a writer in the *Peking and Tientsin Times* has discovered a new Chefoo. It is within about 4 miles of the Pei-tai-ho station on the line from Tientsin to Shan-hai-kuan, and as one can make the railway journey from the former to the latter place in some 6 hours, the new Chefoo has the great advantage of easy accessibility. The writer in the Tientsin paper has this to say about the place and its surroundings:—

The distance (from Pei-tai-ho to the place in question) is beguiled by the fact that it lies through the mountains, amid the most charming scenery, where picturesque heights and rocks divide the attention with streams and brooks and most lovely wild-flowers. Your step is elastic and the eye beams at the sight of so many beauties, and the fresh pure air of the mountains is as delightful to the nostrils as the blue expanse of ocean, which you are in sight of for at least half the way, is to the eye. Once there you could not imagine a more delightful spot. We do not think there is any place to compare with it in North China. Chefoo or the Western Hills are not to be mentioned in the same day. At this time of the year, when the grain is in the fields and the wild-flowers abundant on the hills, one is conscious of no exaggeration in calling it an earthly paradise. There is magnificent bathing. The sea is blue and clear, and the beach gently shelving so that bathing is safe and warm and the bed kind to the feet. The sand of the beach is slightly coarse and ground out of the rocky hills about the coast, and has a peculiarly pearly look when taken in the hand. The beach extends for as many miles as you like, so that you can weary yourself with walking on the sands to your heart's content. The facilities for pleasure, afforded by the mountains, are hardly less than those offered by the sea; in fact it is not for the glorious delight of bathing we should say they far surpassed them. It is ecstatic to climb a breezy height in the fresh morning and look southward upon miles and miles of blue ocean, and northward, eastward, and westward upon distant mountains. When you are tired of one hill you can try another, for there are five or six within easy walking distance. Or you can follow the course of the shallow river looking at the bull-rushes and tracing its meandering turns. It is a keen delight to get in the lovely glens, thickly wooded and threaded by babbling brooks, and gather ferns and flowers amid the rocks. In the shortest walk in any direction you can gather a finer bouquet of flowers than you would easily procure from the gardens of Tientsin. During a fortnight's daily excursions we have never failed to find a new specimen at each walk. Wade amongst delicious and soft fine rushes that sweep round the feet, gather flowers and ferns, stretch at your length on soft grass where you are sure no Chinaman is in sight, bask in the coolness and freshness of these mountain streams, lift your eyes from time to time to the lofty rocks about you, and the purple hills in the distance alternate the roar of the sea with the lazy dulcet fall of fresh streams running over stony beds, watch the shadows moving gay and playful on the sea and silent, sombre, ghostly o'er the land, and thought of Tientsin rolls over the mind like a wave of sorrow. You wonder and pity that there should be such a place.

A case of cholera was reported in a fishing boat at Fusan, Korea, on the 1st inst. During the three days commencing the 7th, five cases were reported there, of which two occurred in fishing-boats and three in the Settlement.

CURRENT TOPICS.

The Radical party is just now the object of an acrimonious attack in the columns of a section of the press. The material is supplied by that notorious news agency the *Naigai Tsushin*, which during the past few months has more than once gained unenviable notoriety. The well known character of the source from which the stories emanate has hitherto made us hesitate to give publicity to them in these columns. But as the persecution is kept up with unusual pertinacity, it may be as well to briefly notice the subject, if only to show what kind of writing occupies a prominent place in the columns of the Opposition journals. The most important of the items is an alleged confession by a certain Radical, whose name is of course suppressed. This unknown person—who is said to be a member of the Diet—commences by stating that, much as he dislikes revealing the secrets of his own Party, a sense of duty toward the public in general, and the pure-minded section of his own Party in particular, impels him to publish the real facts relating to certain transactions at the head-quarters of the Party. The story he has to tell opens with the compilation of the manifesto issued a few months ago. "It was drawn up by Mr. Kurihara Ryoichi, who handed it to Mr. Hayashi Yuzo with a view to have it shown by him to a certain statesman, then a Count. Mr. Hayashi took it to Baron (then Mr.) Ito Miyoji, who (sic) one or two parts of it. The document being deemed satisfactory, was then made public. At the same time, a sum of 5,000 yen was delivered to Mr. Hayashi from a certain personage. In consultation with a few of his friends, Mr. Hayashi decided to devote the money to defraying the expenses of lecture parties sent throughout the country. The Radical Party, however, did not submit any definite conditions to the nameless person in question, until the resignation of Count Matsukata, when the principal members of the Party, including Messrs. Kono Hironaka, Hayashi Yuzo, and others, held a conference to consider what demands should be preferred to the Cabinet. Mr. Kono proposed that the Government should be required to give Count Itagaki the post of President of the Privy Council, or a seat in the Ministry, his idea being that a mere Privy Councillorship would be unsatisfactory. Mr. Hayashi, however, thought it unlikely that such a demand would obtain the approval of the Government. He, consequently, suggested as a more practicable plan that the Government be required, upon the prorogation of the 9th session of the Diet, to appoint five Radicals to Local Governorships. The latter proposition being approved by those present at the conference, it was arranged that, while Mr. Hayashi should undertake to effect an understanding with the Government, the submission of the demand should be formally made to Mr. Yoshikawa and Viscount Nomura by Messrs. Shigeno Kenjiro, Doi Kokwa, and Tamura Junnosuke. As to the five candidates for the post of Local Governor, four were definitely decided upon, namely Messrs. Kono Hironaka, Matsuda Masahisa, Ishida Kannosuke, and Ebara Soroku; it being left unsettled whether Mr. Nishiyama Shicho or Mr. Hayashi Yuzo should be the fifth. Thus terminated the secret conference. Nothing, as the proverb says, is more likely to get known than a secret. The facts soon became known, and produced serious disorder in the ranks of the Party." The confession then goes on to say that, in view of the rebellious mood of a large section of the Party, the leaders at head-quarters wrote to the principal Radicals in the provinces to come up to the capital with all speed. Mr. Ishida Kannosuke was the first to arrive in response to the summons, but notwithstanding the fact that his name stands as a candidate for a Governorship, he is understood to be heartily dissatisfied with what has been done at head-quarters. The confessing Radical concludes by stating that, should things prove irremediable, the only course for Mr. Ishida will be to renounce his connection with the party. The same news agency further reports that Mr.

Hayashi Yuzo will ere long receive an appointment as Vice-Minister of State, probably in the Department of Agriculture and Commerce; and that Messrs. Tamura, Doi, Shigeno, Ishizuka, Ito, and Saito of the Radical Party are indignant because they have not been included among the candidates for Governorships. Thus far these stories stand unrefuted and will continue without denial for some time, for the Radical Party having at present no daily organ, can have recourse only to its monthly or bi-monthly publication, the *To-ho*.

Next to the Radicals, the National Unionists are the objects of abusive attacks. In their case, there is no accusation of a sordid nature, but their refusal to join in a blind career of indiscriminate opposition to the Cabinet, is an unpardonable offence in the eyes of the Progressionists and others. The National Unionists, however, are not likely to be intimidated into acquiescence with the unreasonable programme of the Opposition. The latest report concerning their policy in the coming session of the Diet is that they will approve, without the slightest reservation, the Government's measures for an increase of armament, in deference to the desire of their leader Viscount Shinagawa, who is reported to have declared it extremely fatuous that outsiders should presume to judge the merits of schemes elaborated in the sequel of careful consideration by men thoroughly acquainted with the needs of the country. As to the so-called question of Ministerial Responsibility, they will of course refuse to pursue the policy proposed by the Extremists, if the latter intend to employ the question as an instrument for obstructing the passage of the Military and Naval measures. But should the Extremists be content with a more moderate course—such, for instance, as the passing of a resolution recording the Diet's condemnation of the Ministry's policy with regard to Liaotung—then the National Unionists may support the motion. Even in that event, however, it is said to be undecided whether they would do so as a party, or in accordance with individual choice.

The Progressionists and other Extremist seem now hopeless of being able to bring up the Liaotung question at the opening of the approaching session. Their idea, if our information be trustworthy, is to pass the Army and Navy Bills and then to invite the House of Representatives to adopt either a resolution or a representation to the Government, expressing dissatisfaction with the latter's policy in the matter of Liaotung. Such a motion, even if passed by the House, would have no practical results: it would simply be ignored by the Cabinet. The only source of apprehension is the attitude of the Opposition on the question of administrative expenditures. There are signs that the Opposition parties intend to demand sweeping reductions in official expenses, and it is feared that controversy on this point may lead to a serious collision between the Government and the Diet. But there is reason to doubt whether any scheme of extensive retrenchment will be endorsed by a majority of the House. Upon the whole, therefore, the 9th session of the Diet does not at present seem likely to be stormy.

Concerning the attacks on the Radical Party, we have already stated that they must remain authoritatively unanswered until the publication of the next number of the Party's official organ, the *To-ho*. The *Mezamashi Shimbun*, however, has taken upon itself the task of refuting the charges. Though not an official organ of the Party nor exercising much political influence, the *Mezamashi* is reputed to be connected with a certain section of the Radicals, and its utterances may, on that account, be noticed. Its first step in the matter was to challenge the news agency, the *Naigai Tsushin*, to reveal the name of the Radical alleged to be the author of the pretended confession. The challenge of course receiving no notice, the *Mezamashi*, in a series of two articles, has emphatically contradicted the accusations one and all, at the same time severely condemning

the conduct of the news agency that was unscrupulous enough to fabricate such a canard, and the newspapers that lent their columns for the ventilation of the vile calumny. The burden of proof resting with the accusers, the Radical organ is not called upon to produce any counter-evidence; but in order to give an example of the untrustworthiness of the so-called confession, it points out that Messrs. Shigeno Kenjiro, Doi Kokwa, and Tamura Junnosuke were not in Tokyo at the time when they are alleged to have visited Mr. Yoshikawa, Minister of Justice, and Viscount Nomura, Minister of Home Affairs, for the purpose of submitting the Radical Party's views as to the conditions on which they were willing to support the Government. It is not our purpose to pronounce any definite opinion on the matter; but we may observe that, in spite of its circumstantial character, the story circulated by the *Naigai Tsushin* seems wholly extravagant and unworthy of credit.

Count Inouye continues to be the subject of much contradictory gossip in the capital. The latest story about him is that he will succeed Marquis Ito as Minister President of State, it being the latter's intention to resign on the conclusion of the Liaotung business. The position assigned to Marquis Ito in that event is the Presidency of the Privy Council, the present occupant of that post, Count Kuroda, receiving the Lord Keepership of the Privy Seal. But this story, emanating from the *Teikoku Tsushin* (Imperial News Agency), seems to be regarded with a good deal of suspicion even by the most credulous of the metropolitan papers.

THE VICEROY LI.

The general impression with regard to Marquis Li's removal to Peking is evidently that the great man's day is over, and that his progressive influence is lost to China. The Grand Secretariat, of which Li now assumes the Senior Grand Secretaryship, was once the Supreme Council of the empire, but has for some time occupied a position secondary to the Grand Council. It has four members, two Chinese and two Manchu. Marquis Li's Chinese associate is Chang Chih-wang, brother of the Viceroy Chang Chih-tung, who is the reverse of friendly to Li. It can scarcely be supposed that Li and Chang will work very cordially together. As for the two Manchu members, whatever influence they may wield, their names are little known in modern Chinese history, and it may be taken for granted that they will be completely overshadowed by Li and Chang, should the Grand Secretariat be restored to the paramount functions originally discharged by it. In point of fact, Marquis Li has been Senior Grand Secretary for ten years, having received the appointment in 1885. His transfer to Peking, therefore, does not signify promotion, but means simply that, surrendering the numerous active offices hitherto occupied by him in Tientsin, he enters upon a post that he has long held as a sinecure. The question now is, will the Grand Secretariat continue to be an inferior body, or will it, under the control and direction of Li, resume the leading place that once belonged to it. Foreign opinion inclines to the former view, but the Japanese, whose knowledge of Chinese affairs is very intimate, believe that Li is really to be the leading official in the capital, and that his transfer thither marks the central Government's conviction of its own inability to get on without him. There is apparently little hope of discovering the truth immediately. Reports vary within wide limits? Yesterday, a rumour came from Peking to the effect that no less than sixty memorials hostile to Li had been presented to the Throne since his arrival in the capital; that they had all been accepted by the Emperor, and submitted for the consideration of the Princes. To-day, we are told that Li is to be sent to deal with the Mahomedan rebellion, now a trouble of very serious dimensions. We ourselves incline to think that the Japanese view of his position is correct, but there are no grounds, so far as we know, to speak positively.

KOREAN NEWS.

The 4th instant being the anniversary of the founding of the present Korean dynasty, is said to have been observed in Sōul as a grand national holiday, the principal event being a ball at the Court, a thing never before heard of in Korea. One of the chief buildings of the palace, named the "Kei-kwairo" (Hall of Auspicious Assembly), was fitted up for the purposes of the entertainment. The spacious hall of the edifice was temporarily separated into two compartments by means of bamboo blinds. On one side the King presided, the guests being the Ministers of State, the members of the Diplomatic Corps, and officials of *Chokunin* rank; while the other side was set apart for the ladies with the Queen as hostess. This was the first instance of Korean ladies taking part in a public function of the kind. The guests aggregated about a hundred and fifty. For the entertainment of the fair sex, female dancers were provided, and boys performed a similar function on the gentlemen's side. A fine display of fireworks also took place in the palace gardens.

The fortnight preceding Count Inouye's departure from Sōul is stated to have been very busily employed by him in giving advice to the Korean Minister and the Japanese merchants. On the 8th instant, the Ministers of State assembled at the Home Department, where they were lectured by the ex-Japanese Representative for several consecutive hours on various topics connected with administration. On the same day, he collected at the Consulate the principal Japanese merchants and addressed to them a long speech, in which he called their attention to various subjects bearing upon their business position. In the first place, they were reminded of the importance of treating Koreans with proper consideration and respect. The Count regretted very much to observe that some of his nationals were prone to be over-bearing in their conduct towards the Koreans. They were also advised to be industrious, persevering, frugal, and united, so that they might be able to maintain their ground against the competition of the Chinese. The Japanese merchants expressed their thanks for the valuable advice bestowed upon them by their late Minister. They asked Count Inouye to use his influence at home to have a parcels post service opened between Japan and Sōul, and also to see what could be done to supply them with cheaper capital, the present rate of interest charged by the bank agencies in Sōul being as high as 18 per cent. per annum. Count Inouye promised to exert himself to have their reasonable wishes satisfied. On the 10th he was invited to dinner by the Japanese Advisers of the Korean Government. The Korean Ministers and other high dignitaries of State are said to have been constant visitors at the Japanese Legation. Leaving Sōul on the 17th instant, the Count spent a few days at Ninsen, and sailed from that place on the 21st by the *Shirakawa Maru*.

As to the position of the Coalition Cabinet organized under Count Inouye's advice, it appears that the different factions represented in it are working with tolerable harmony. Thus far, therefore, Count Inouye's conciliatory policy has been attended with success. But whether the combination effected under his personal influence will hold together after his withdrawal from the scene; whether the Court will continue satisfied with the moderate share of initiative authority reserved to it under the present system; whether Kim Koshu and a few other Ministers, not in favour with the Queen, will be able to maintain their positions—these points are generally considered doubtful. But the *Nichi Nichi's* correspondent states that the suspicion with which the Queen and her faction were hitherto regarded Japan has been completely removed. Moreover, the new Minister of Finance, Chin Shokun, who represents the Min interest in the Cabinet, is said to be a man of considerable practical sense and breadth of view, and it is consequently hoped that he will not be guilty of any precipitate steps prejudicial to the permanence of Ministerial unity. However, the task devolving upon the new Japanese Minister, Viscount Miura, is

one of great difficulty and responsibility, for upon his tact and energy depends the stability of the structure founded by his distinguished predecessor.

The work of reforming the local administrative system seems to be making slow but steady progress. To the communes is left autonomic power, somewhat after the fashion followed in Japan. It would be an interesting study to investigate the customs and practices prevailing in the peninsular kingdom in connection with communal administration. Recent observers say that the Korean village organization has more in common with the Japanese than with the Chinese.

In a former issue we reproduced some correspondence relating to the incompleteness of the machinery for collecting taxes in Korea. We are now informed that the Sōul authorities have under contemplation the establishment of revenue offices throughout the country, independent of the local administration.

The compilation of codes of law for Korea is making rapid progress in the hands of the Japanese Advisers. They hope to finish their work before the close of the present year. The codes will be simple, the idea being to adapt them to the present condition of the Korean people. It is alleged that the Criminal Code will consist of less than one hundred articles. The Korean Government having expressed a desire to set limits to mixed residence in Sōul, the matter was recently discussed by the Foreign Ministers at the Japanese Legation. It is believed that the streets south of the principal avenue running between the East and West Gates will be designated as the locality where foreigners may reside.

A Royal Ordinance relating to primary schools was promulgated on the 10th instant. According to its provisions, the schools are to be of two classes, higher and ordinary. It will take years to give effect to these provisions throughout the country, but that the Koreans are in earnest is evident from the fact that there has already been established a normal school in Sōul where future teachers are receiving instruction under Japanese professors.

By Royal Ordinance promulgated in the *Official Gazette* of the 6th instant, the Korean Government disbanded all the provincial troops. Some of the Japanese correspondents fear that this step may lead to trouble. The dismissed local officials and the disbanded soldiers, meeting together, may cause serious embarrassment to the newly appointed provincial administrators. But the Korean Government is credited with knowing what it is about. We read that it would not have decided upon such an important measure unless it were sure of its own capacity to quell any resulting disturbance. The new army drilled under Japanese officers, assisted by the Japanese troops stationed in different parts of the country, is apparently amply sufficient to maintain peace in the peninsula.

The recently reported disturbance in the Sang-wōn district of Phŏng-an-do seems to have occasioned considerable anxiety to the authorities in Sōul. Nor is it yet known definitely that the trouble has been completely settled. From Sōul letters just received we gather the following facts. On the evening of the 10th instant, a numerous gang of malcontents suddenly attacked the official residence of the chief official of the Sang-wōn district, and subsequently committed depredations at various places in the locality. The ringleader was Kim Kokyo, an ex-official of high standing, who, conceiving himself wronged by the Government, assembled and put himself at the head of the local malcontents, a class of persons numerous enough in consequence of the wide-spread misery caused by the late war and the state of anarchy at present prevailing in the provincial districts generally. Avoiding the neighbourhood of places where Japanese troops were stationed, the crafty leader of the malcontents fixed the rendezvous in Sang-wōn, about forty miles north-east of Phŏng-yang. There a body of about six hundred collected by the 9th instant. It is reported that they were armed for the most part with firearms of foreign make, probably weapons thrown away by the

Chinese soldiers in their hasty flight from Phŏng-yang. In reply to the request of the district authorities of Sang-wōn, a detachment of about a hundred soldiers drilled in the new style, were speedily despatched from Phŏng-yang. The local Korean officials are said to have applied for help to the Japanese troops also, but it is not known whether the request was granted. The first reports about this disturbance may be more or less exaggerated, but it is evident that the affair has assumed more serious dimensions than did the recent troubles in Chol-wō and Sui-wōn. Even in the capital itself the contagion of agitation appears to be felt. On the 13th instant, late in the afternoon, the citizens were surprised by intelligence that the disbanded soldiers had risen in revolt. The affair did not take the character of an insurrection. It was merely a pecuniary trouble. About a thousand of the disbanded soldiers besieged the Home Office, where the Minister of War had taken refuge, demanding payment of arrears of salary. Mr. An, the War Minister, came out on the balcony and urged the soldiers to disperse, but they refused to do so unless their grievance was properly attended to. Their aspect became so threatening that the War Minister asked the Japanese officer in command of a company stationed in the neighbourhood of the palace to come to the rescue with his troops, but the request was not complied with. Mr. An then had recourse to constables, a large body of whom charged with drawn swords and arrested about thirty of the most clamorous soldiers. Thereupon the rest dispersed in all directions without committing any violence. Before disbanding these troops, it is understood to have been the Government's intention to disburse all arrears of pay, but the condition of the Treasury interfered with the execution of this purpose. The soldiers arrested by the police were soon released by special command of the King, who, on inquiring into the origin of the affair, is said to have declared that the disbanded troops were not to blame.

The question of railway construction in Korea was once much discussed, and surveys were actually made along the projected routes. But the matter subsequently dropped out of sight, and little was heard of it until the time of the departure of Count Inouye from Sōul, when people began to talk about the enterprise once more. It is said that the ex-Japanese Minister strongly represented to the Korean Government the importance of laying a railway line between Ninsen and Sōul, and between the latter place and Phŏng-yang, and that the Korean Ministers are all in favour of the undertaking. In what manner the enterprise is to be carried out, and how the necessary capital is to be obtained, Japanese correspondents writing from Sōul give no information.

The Tokyo papers state that on the 22nd inst. a long telegraphic message from the Japanese Minister in Korea was received both at the Foreign Office and at the Imperial Military Head-quarters. The nature of the message is not definitely known, but it is supposed to have had reference to the Korean Government's request for assistance in putting down the disturbance in Phŏng-an-do.

MILITARY HONOURS.

The third distribution of honours for distinguished service in the war took place at Court on the 20th instant. The fortunate officers on this occasion were those of and above the rank of Major, belonging to the Second Expeditionary Army. Their names and the honours bestowed are given in the *Official Gazette*, but it seems scarcely necessary to translate the list into these columns. The officers number 74 in all, and the Orders conferred on them range from the Fourth Class of the Golden Kite to the Sixth Class of the Rising Sun. Major-General Miyoshi is the officer of highest rank on the list, but the name of Colonel Oki—who often figured in important operations—stands first.

FORMOSA NEWS.

We have already alluded to the desperate resistance encountered by the left wing of the Imperial Guards during its march upon Taiwan, at a village called Taketsao, on the 25th ultimo. From later letters, it appears that the men giving so much trouble to the Japanese were the Hakkas, the same tribe that similarly distinguished themselves between Taipei and Shinchu. At Taketsao, these tribesmen were under the direction of a local grandee, Liu Tachun, scion of the great Liu. His residence, a spacious and fine building, was levelled to the ground. After the fighting had ceased, the houses in the village were thoroughly searched. In one of them the Japanese soldiers found a woman about thirty years of age lying in bed with two little children. As soon as she saw the soldiers, she ran out of the house with her children under her arms, and plunged into a pond close by. She and her little ones were rescued by the Japanese soldiers, who took her to the head-quarters of the regiment. There she again threw herself into a well, and was again saved. But she was so bent upon death, that finally, eluding the vigilance of the troops, she killed her children by dashing their brains out against a stone, and then put an end to herself in the same desperate manner.

The citizens of Chang-hua are said to be extremely obedient to the Japanese. At first they declined to receive any payment for articles supplied to the Guards. Accustomed to the disorderly conduct of the Chinese troops, they were surprised to find the Japanese willing to purchase everything they wanted.

The Japanese interpreters with the army only speak the official language of China. Hence they were found to be of little use in Taipei and Kelung, where that language is not used. In these places, however, a few Chinese were found who understood the official tongue, and thus communications with the people were maintained through the double medium of these Chinese and the Japanese interpreters. But as the army advanced southward, this complicated method of interpreting proved unavailing, for a dialect unintelligible to the Chinese of the northern part of the island is spoken there. Still there seem to be everywhere a few men that can read ideographs, and conversation in writing was resorted to whenever no means of oral communication existed.

We recently noticed a visit paid by a party of Japanese officers to the aborigines. On the visit being repeated by the Japanese according to promise, they were very courteously received by the mountaineers. The friendliness of these savages toward the Japanese seems to be general and genuine. A chief and his relations recently came to the Governor-General at Taipei, where they stayed a few days, receiving the kindest attention from Japanese of all classes. On their return they were given presents of various kinds. The earlier visit of another chief to the Japanese troops at Miaoli, about which we expressed doubt at the time, proves to have been a fact. On that occasion the chief and his attendants obtained permission to accompany the Imperial Guards on their southerly march and actually followed the troops for some distance, when the Chief's son having injured his foot, the party were obliged to return. All the aborigines that have come in contact with the Japanese thus far have shown themselves addicted to drinking and smoking. They evince hearty contempt for the Chinese.

NEWS FROM PEKIN.

The latest batch of letters from the Japanese correspondents in Pekin contain nothing particularly interesting or important, but one or two items may be noticed. As to the Mohammedan rising in Kansu, the Japanese correspondents do not attach great importance to it. From what they gather in Pekin, it is a purely local affair, with little or no political significance. The apparent success of the rebels is ascribed to the fact that the local military forces having been mostly withdrawn to the vicinity of

the capital in consequence of the war with Japan, there was not a sufficient force on the spot to deal with an insurrection. It is consequently believed that the revolt will be speedily suppressed as soon as the reinforcements recently despatched arrive in Kansu. General Wang, who was lately sent to the province to assist the Viceroy there, is said to be an officer of great ability, having studied tactics in Germany. He is a favourite of Earl Li's.

The *Kokumin Shimbun's* correspondent pays a profound tribute to the indefatigable zeal of H.E. Earl Li for the benefit of his country. His rival, Wang Tung-wha, being now at the zenith of his power, the Earl's position is said to be anything but enviable. But despite his general unpopularity and his advanced age, he is believed to entertain no idea of retiring from the public service.

Since his arrival in Pekin the Earl, we read, has not visited any of the foreign Legations. Mr. Wu Ting-fang, who is staying with him, has, however, visited Mr. Hayashi twice, and on the 7th instant the Japanese Minister called upon Earl Li at the Temple of the Wise and Good in the street of Golden Fish. The great Chinese statesman's chamber is said to be entirely without ornaments or comforts such as might naturally be looked for in the residence of a man of his wealth and rank. Instead of fine carpets, the floor is covered with straw mats, and the only articles of furniture in the room are a bed of European pattern, a round table, and a number of ordinary chairs. Everything in the apartment, it is said, indicates the poor scholar rather than the rich and powerful Mandarin. The conversation between Mr. Hayashi and the Earl lasted two hours, but nothing is known as to the topics discussed. The *Kokkai's* correspondent, however, states that Earl Li, alluding to the conclusion of the Treaty of Commerce and Navigation, hoped that the negotiations might be concluded in the course of a fortnight; to which the Japanese Minister is said to have replied that if the Chinese Plenipotentiaries were reasonable enough to agree to the Japanese proposals without raising objections, the work might be finished in two days. The Chinese statesman is reported to have maintained his part in the conversation with great energy and good humour.

The Pekin Government is said to be very much perplexed about the appointment of a Plenipotentiary to assist Earl Li in negotiating with the Japanese Representative. The Ministers of the Tsung-li Yamên do not care to risk their popularity and influence by taking part in a transaction whose issue is sure to prove distasteful to conservative officialdom in Pekin. Hence they endeavour to evade being appointed, advancing a plea of ignorance of diplomatic business, a singular pretext in the mouth of officials charged with the conduct of the Empire's foreign affairs.

DR. KITAZATO AND THE CHOLERA.

The *Hochi Shimbun* seems to think that Dr. Kitazato's cholera cure is now an established fact. It describes visits paid to the distinguished bacteriologist by foreign physicians, and speaks of the latter's admiration in very strong terms. We trust that this confidence is justified, but are inclined to think that Dr. Kitazato himself would regard it as premature. The *Hochi*, for example, appears quite content with the rough record that out of 83 patients treated by Dr. Kitazato only 12 died, but as that indicates a rate of mortality of 15 per cent. we can not say more than that it shows a signal step in the right direction. Thus far, the rate of mortality during the present epidemic has been over 51 per cent. If Dr. Kitazato's method can reduce it to 15, he has certainly accomplished an immense improvement. It means, in fact, that had his treatment been in general application from the time of the epidemic's appearance this year, 16,013 lives would have been saved, supposing the number of cases to have reached its present aggregate.

THE NEW AUSTRO-HUNGARIAN MINISTER.

The Government of Austro-Hungary has appointed Count C. Wydenbruck to represent the Dual Monarchy at the Court of Japan. Count Wydenbruck is a comparatively young man—only thirty-nine—but he has already established a high reputation in the diplomatic service of his country. He acted as Private Secretary to Count Kalnoky during three years, and subsequently served as Councillor in the Austro-Hungarian Embassy in London. We believe that Count Wydenbruck's promotion has been quicker than that of any member of his service now living, his exceptional capacities having been recognised from the very outset of his career. The Count's father was Austro-Hungarian Minister in Washington, and his sister is married to Count Victor Crenneville, Austro-Hungarian *Chargé d'Affaires* in Lisbon. Countess Wydenbruck's maiden name is Countess Fugger. It is expected that the new Minister will reach Tokyo at the end of December.

THE ANTI-FOREIGN FEELING IN CHINA.

Ugly rumours are circulating in China as to the probability of fresh anti-foreign outrages. From Hankow it is reported that a day had more than once been fixed for attacking the foreigners, but as that kind of thing had been going on for the past three years, no particular attention was paid to it until news came that a despatch had come from Pekin ordering a reduction of 20 per cent. in the pay of the Wuchang garrison and the discharge of a considerable number of soldiers for the sake of economy. The probable effect of these measures was to induce the removal (Sept. 12th) of all foreign ladies and children, as well as of the girls in the American Mission Boarding House, from Wuchang to the concession. Whether owing to these precautions or to some other cause, the threatened trouble did not break out. But it is easy to conceive that the adoption of such measures may attract the very peril they are intended to avert; since they serve to indicate the most vulnerable point on the foreign side. In Kiukiang, also, a feeling of uneasiness prevails. There is talk of the inauguration of extensive reforms, under instructions from the Central Government, involving the dismissal of numerous useless officials and the disbanding of seven-tenths of the soldiers that proved themselves such a worthless rabble during the recent war. If these steps be taken, the situation, already critical for foreigners, will be complicated by the presence of a multitude of needy malcontents ready for any form of outrage or pillage. In Wenchow things are not dissimilar. At a place called Suan, between Wenchow and Pingyang, the missionaries have for years past been stoned and insulted, and the same fate was recently experienced by the British Consul on his way back from investigating the Pingyang riots. The elements for an anti-foreign tumult are always ready to become violently active if only an incentive be provided. In truth there is no avoiding the conviction that foreign life and property are everywhere unsafe in China to-day, and that the conciliatory policy pursued by Western Powers in their dealings with the Middle Kingdom has been entirely misconstrued by the Chinese. Many men of letters seem to employ their pens for the deliberate purpose of misleading and exciting the people. Cartoons, brochures, and vernacular newspapers, such as they are, combine to work mischief, recounting, even now, wonderful tales of the defeats inflicted on Japan during the late war, and of the misdeeds of aliens in general. Whether this undercurrent of fierce conservatism is being worked up as a factor to assist in the overthrow of the Manchu dynasty by embroiling it with foreign nations, or whether genuine antipathy for Occidentals permeates the masses in China, it is becoming plain that the situation may at any time demand measures of a most drastic character.

SIR TREVOR LAWRENCE'S JAPANESE COLLECTION.

We have received a copy of the recently compiled Catalogue of Sir Trevor Lawrence's collection of Japanese Works of Art. It is a magnificent volume of 160 pages, printed in large clear type upon paper of rich quality, and beautifully illustrated. The specimens catalogued number 2,289, and comprise *netsukes* and other cognate examples of glyptic art; pipes, pouches, portable inkstands, &c.; lacquer; objects in metal; shrines; hanging pictures; embroideries; combs, ceramic wares, and so forth. The cataloguing has been done by Mr. Huish, whose descriptions indicate extensive research. The collector that can afford to publish such a sumptuous record of his beloved objects, is in a happy position, especially when he can find a coadjutor so able as Mr. Huish. Sir Trevor Lawrence, in a brief preface, says that although the "ever increasing flood of commercial productions" now sent abroad by Japan, show great deftness of hand, "like all imitations and reproductions, they rarely catch the true spirit of the old work." We do not share that view. It is true that in response to the wholesale and indiscriminating demand of exporters in the foreign settlements, numbers of wretched specimens, falsely named "art objects," are poured upon Western markets, to the discredit of the country and to the ultimate discouragement of purchasers, however devoid of true taste. But apart from these inferior examples, there are produced in Japan multitudes of beautiful and worthy representatives of her genuine art. The collector of old objects is too apt, we think, to forget that the specimens descending from past eras represent the cream of the work turned out in their time, and that among their contemporary products which have not survived, there were doubtless great numbers as defective in technique and as false to true canons, as are the worst of later-day parodies. It would not be fairer to judge modern Japan's capacity by the "commercial productions" of the *Meiji* era than it is to accept rare specimens of old work as generally representative of their time. Still, the testimony of connoisseurs like Sir Trevor Lawrence, Mr. Huish, Mr. Bowes, and others of scarcely less note should be remembered by the Japanese, for it shows that the popularity hitherto enjoyed by their art is greatly imperilled by the wares exported so indiscriminately from the open ports.

FINE ART EXHIBITION.

An exhibition of the pictures classified as *Ukyo-ye*, is to take place in the Mitsui Assembly Hall, Yuraku-cho, Tokyo, on the 28th and 29th instant. The artists by whom these pictures were painted are known to Europeans as the Popular School. Formerly they were not held in high esteem by their countrymen, being counted inferior to masters that clung faithfully to the traditions and conventions of the classical schools. But within the past twenty years they have come to be appraised at their true worth, namely, as the real exponents of Japanese pictorial genius; men that inaugurated a new era of decorative æsthetics, disclosed an immense variety of new motives and applications, and composed an illustrated history of Japanese customs, fashions, and fancies. In a word, the *Ukyo-ye* is the only thoroughly unadulterated school of Japanese pictorial art, and if a good collection of representative specimens can be brought together, the promised exhibition ought to be a great treat.

PRIVATE SECRETARIES.

Imperial Ordinance No. 124, promulgated on the 20th instant, enacts that the Civil Service Examination Regulations will henceforth be inoperative in so far as concerns the appointment of Private Secretaries to Ministers of State. This exemption has long been regarded as a desideratum.

THE KUCHENG MASSACRE.

The details of the investigation conducted at Kucheng in the presence of a commission consisting of two Consuls—British and American—and other foreigners, have been published. It will be remembered that the Prefect objected originally to the foreign commissioners' taking any part in the inquiry, and that, as this obstacle necessitated an appeal to the Viceroy, considerable delay was anticipated. But in point of fact the delay extended to only three days. The commissioners reached Kucheng on the 17th of August, and by the 20th the Prefect had received telegraphic instructions from the Viceroy telling him to do exactly as the Consuls wished. Accordingly, the examination of the prisoners commenced on Wednesday the 21st; or rather their re-examination, for before being brought up to give their evidence in the presence of the foreign commissioners, they had already been questioned by the Chinese Magistrate. What this preliminary questioning involved must be left to the imagination. Something of the pains that the prisoners had to undergo may be gathered from the remarkable readiness of their admissions before the foreign commissioners, but only in two cases are we told that the men bore plain marks of the devices employed to extort confession. It is unfortunate that American and British officials should be implicated, however, indirectly, in a legal process involving such barbarities. But happily after the examination of about a score of prisoners, evidence had been collected sufficient to clearly indicate the persons chiefly concerned in the outrage. Then, at the instance of the Consuls, the Prefect telegraphed for the Viceroy's permission, and obtained it, to dispense with the confession indicated by Chinese law as a preliminary essential to capital punishment. It was conclusively proved that not more than a hundred Vegetarians were present at the murdering and burning. Some two hundred set out from the Association's fastness in the hills, but a moiety of the number dwindled away *en route*. Very few of them seem to have known exactly what was in contemplation. They went along in blind obedience to their leaders, but were ready enough to stab and plunder when the occasion presented itself. Indeed, the general programme of the Vegetarians in the Kucheng district is violence. The principle of their procedure is to take the place of the duly constituted authorities, and to substitute a reign of force for the control of legal tribunals. It does not appear, however, that other branches of the same association in various parts of China adopt similar methods, though probably all are prepared to raise the standard of rebellion if a favourable opportunity offer. Even the Kucheng Vegetarians profess to be nothing more than an anti-opium society. Several of the prisoners recently examined, said that they had entered its ranks for the sake of getting cured of the opium vice. In practice, however, the regular custom of the leaders is to settle by force disputes that would otherwise go before the law courts, and an instance is on record of their openly entering the *Yamen* of a magistrate and compelling him to release some of their associates whom he had arrested. There can be no doubt that the culpable perfunctoriness of the local authorities in dealing with these Vegetarians was ultimately responsible for the Kucheng tragedy. Magistrate after magistrate had paltered with the law-breakers, and when at last two hundred soldiers were sent, they lay inactive in Kucheng while their presence was ascribed by the leaders of the Vegetarians to foreign interference. The murderers of the missionaries appear to have facilitated their own apprehension by openly boasting of what they had done. Nevertheless, the energy displayed by the authorities, and the success achieved in hunting down and arresting suspects, indicate that the frequent failures of officialdom in China to bring retribution upon the heads of anti-foreign rioters in the past were due to want of will rather than of ability. At Kucheng the proverbial cupidity of the penurious Chinese was excited by promises of

large rewards—as much as nine hundred dollars were paid for the apprehension of one of the leaders—and it is said that two cart-loads of silver were distributed from the Magistrate's *yamen* in connection with the arrests. Some of the prisoners showed much reluctance to speak, but were ultimately induced to do so by the application of torture or by the incriminating evidence of their associates. Others were quite ready to acknowledge the part taken by them. One, both before and after his arrest, spoke frankly of having killed "a small foreigner;" another described readily how he had helped to butcher Mr. Stewart and stabbed a lady in the back; a third recounted how the children were "stabbed just outside the house where they were gathering flowers," and how he inflicted the first wound on Mrs. Stewart by stabbing her in the lower jaw; and a fourth said:—"I was with the body of men, about twenty, that surrounded the lower house where the ladies were. They offered us money and said they would go to the city church with us if we would let them, and give them their umbrellas. This they said to Tai Nu-long. We killed them after the flag came with the command, carried by Chio Hi. One little man from Sungang and a tall man began and then we all stabbed them. I stabbed a tall lady." In this way the particulars of the terrible tragedy were elicited. The chief instigator of the outrage seems to have been a man known as "Long Finger Nails," a professional fortune-teller. His motives are a mystery, but the evidence shows that he went among the Vegetarians telling their fortunes, and that he made a point of warning them that they must choose between killing the foreigners or being done to death by them. Yet it would appear that the attack upon the mission was nominally the result of chance. The Vegetarians, having made up their minds that some step must be taken to assert themselves against the Authorities, cast lots whether they should destroy the house of a certain rich Chinaman, or set fire to the town in three places and kill the magistrates, or slaughter the foreigners at Whasang. Three times in succession the lot fell upon the last course. Similarly, by a mere chance, the victims failed to receive warning. One of the Vegetarian leaders, Tioug, quarrelled with "Long Finger Nails," and gave information to a Christian, named Pang, of what was in progress. Pang sent word by letter to Mr. Stewart, but before the messenger reached his destination the catastrophe had been consummated. A difference of a couple of hours would have saved the lives of eleven foreigners. After the first access of zeal, the Chinese Magistrates were overtaken by an apathetic mood. They averred that no executions could take place until the arrival of the Taotai; they released prisoners without consulting the foreign commissioners; they showed a disposition to think that as eleven persons had been murdered, eleven decapitations would suffice, and they ceased to evince much desire for collecting evidence. But they were ultimately roused from this temporary perfunctoriness, and on September 20th, seventy-six of the Vegetarians were executed in the presence of the foreign commissioners. At first the foreign Consuls had demanded that all the culprits and leaders should be taken down to Foochow for re-trial and execution, but they ultimately modified this in the sense that the actual murderers should be executed at Kucheng and the leaders alone sent to Foochow. Never before has the taking of foreign life in China been so signally and fully avenged. The warning ought to prove deterrent.

The first news referring to the recent deadlock at Kucheng was received in Shanghai through the agency of three telegrams dispatched to the *N.-C. Daily News* from Foochow on the 16th September at 4.25 p.m., 8.45 p.m., and 8.55 p.m. They run as follows:—

Latest news from Kucheng leads to the belief that the foreign Consuls are being played with. Between: first the release of prisoners without the Consuls being consulted; second, the issuing of a certain proclamation without the Consuls being consulted; third, the sudden difficulty of obtain-

ing evidence from the prisoners; and fourth, the sudden indifference shown by the Chinese; it is apparent the Consuls are being treated with contempt. All this arises without doubt from no proper support and backing being given to Mr. Mansfield from the first in this important investigation, in the way of at least two or three men-of-war lying in the river. The Chinese are evidently taking advantage of what they thus consider the indifference that is being shown by the British government. It is not improbable that the investigation will collapse.

Hsu Taotai, who arrived at Kucheng on the 10th, says he is instructed to close the investigation. He will satisfy the Consuls in the matter of the heads they may require, but the examinations must cease. The Consuls protest and are firm, and the result is a deadlock. Fears are evidently entertained of officials being incriminated.

News has come from Hinghua of two churches being attacked by a mob at a place called Siogin. The buildings were partially destroyed, and the houses of the native pastors and teachers plundered. The pastor was attacked with knives and swords, but he escaped with his life. The magistrate allowed the rioters to have their own way.

The hospital at Kienningfu is threatened, and anti-foreign placards are posted about. It is reported that the Vegetarians at Kucheng are catching and torturing native Christians as a set-off against the imprisonment of their comrades.

H.M. ships *Caroline* and *Linnet* are in. The latter is to come up to the Settlement on Thursday.

The Rev. E. Smyth, of Foochow, also telegraphed Shanghai to the following effect:—

On Friday Hsu Taotai, who was sent as Imperial Commissioner to Kucheng, called on the Consuls and said he had full power to deal with the Whasang massacre case. He said he could execute any number of criminals that would suit the foreign Governments, but that he could not and would not execute one till all other claims were settled. All trials therefore stopped. Consuls wired for instructions and are now waiting for them. The Vegetarians seeing the action of the officials are springing up again and seizing and torturing the native Christians. Please publish at once.

On the 17th September a telegram was dispatched from Foochow at 8.25 p.m., which said that seven executions took place at Kucheng that morning, in the presence of the British and U.S. Consuls, and that H.M.S. *Caroline* had left for the North.

Telegrams received in Shanghai on the 18th from Chinese and private sources said that the Prefect voluntarily suggested the names of thirteen of the condemned murderers to be sent to the Viceroy for his approval of death sentences being passed upon them. The Consuls agreed to this, but the Viceroy authorised the execution of only seven of the murderers. The other six he arbitrarily reversed and remanded without trial. It is feared that the action of the Viceroy will result in future executions being longer contested and delayed. That morning at 7.05, these seven men were decapitated in the presence of the Consuls at Kucheng. Eleven prisoners, two of whom were beyond all question guilty of actual murder, were secretly released by the Prefect, and up to the present the demand of the Consuls that they be re-arrested has not been complied with. The matter has been referred to the Viceroy, but little is expected from him. He has obstructed, in every possible way, the work of the Commission.

The method of procedure at the investigations at Kucheng, says a Shanghai contemporary, is as follows:—The first trial of the prisoners is before the Commission, the second before Hsu, and the final decision rests with the Viceroy. The Viceroy and the Tartar-General are instructing Hsu directly contrary to the Imperial Edict. He and all the other Chinese officials concerned in the Kuchang investigation are determined to make it a farce, and unless very strong and positive instructions are wired from Peking there is reason to fear that they will succeed. The Viceroy's dictating to the Commission ought to be stopped at once and our foreign representatives at Peking should see that it is stopped. Justice to the memory of murdered innocents as well as to a common humanity and to Christian civilisation alike demand that a fair investigation should be made; and Great Britain and America should see that such an investigation is not obstructed, yea defeated, by the chicanery of implicated officials.

CHINA NEWS.

At the invitation of the Viceroy Wang Wen-shao, the Viceroy Liu K'un-yi, who is a very sick man, will take up his quarters at Tientsin in order to be near the best medical advice obtainable. For this purpose the Admiralty buildings on the French Concession have been refitted to serve as a temporary residence where Liu K'un-yi can convalesce.

According to a decree of the 11th instant, Governor Tê Hsing, of Kiangsi, a Manchu, is cashiered and will probably have to give up his post at once. It appears, says the *N.-C. Daily News*, that a Censor denounced Tê Hsing for receiving bribes and using avaricious and unscrupulous subordinates. Chang Chih-tung was ordered to investigate, and although he exonerates Tê Hsing of the most serious charge—that of accepting bribes—he still accuses him of the second charge and also of frivolity unbecoming a man of his high position. This was for engaging a theatrical troupe to play before his family ten days at a time, while the country was plunged in war with Japan. It was sufficient to deprive the Governor of rank and post. In consequence of this, Tê Shou, Governor-elect of Hunan, is transferred to Kiangsi, and to the governorship in Hunan thus made vacant, Ch'en Pao-chên, the provincial Treasurer of Chihli is promoted. The new Governor of Shensi is Hu Ping-chih, who was made Treasurer of Chêkiang a couple of months ago.

The Tientsin correspondent of the *N.-C. Daily News* writes:—The Tientsin University was announced as a concrete fact this week. The word University is probably a misnomer for the present, and only means High School or Polytechnic; for though there will be a catholic desire to embrace all studies there will not be power to confer degrees. This scheme has been in the air for years, and at one time it was hoped that Li Hung-chang's many protégés would liberally endow a great collegiate establishment in perpetual memory of their patron. I think some such idea was held when the Po Wen Shu Yuan was built nine years ago. It was hoped that this would become a sort of nursing mother to foreign education and the new learning throughout the empire, and ultimately that the Emperor might by formal decree give it a charter and the power of conferring degrees. The scheme fell through, although it had powerful backing, both native and foreign. Mr. C. D. Tenney is appointed President of the new institution and will probably develop it on American lines. His Chinese colleagues in the directorate are Wu Ting-fang and Ts'ai Chao-chi, a former American student. These gentlemen, although fairly conversant with foreign affairs, have no pretensions to be educationists: it is devoutly to be hoped that they will have sufficient sense to give Mr. Tenney a free hand. Mr. Tenney has met with great success in a private school for the sons of Chinese gentlemen, and has had a large and varied experience with officials. He was for some years tutor to the Viceroy's sons and is a *persona grata* to Li. Public opinion up here is very favourable to the new departure and it is held auspicious that so great and unexpected a change should mark Wang Wen-shao's acceptance of office. Shêng Taotai's co-operation in the affair was also a surprise. At the same time the older and more cautious critics think the whole thing will end in addle from the simple fact that no career will be opened in due course to the men of foreign education. Their non-participation in the honours of native scholarship and office will work disastrously.

The Viceroy Chang is said to be about to start a military academy in Nanking upon the Tientsin model. There will be a European officer, and his assistants will be ten graduates of the Tientsin Academy and three or four foreign officers. The land for the new academy has been bought and the foundations will be laid in a fortnight. As it is intended to commence the school as soon as possible, a number of old government buildings will be utilised at once for the purpose, more than a hundred candidates having already had their names enrolled on the Academy books. The *N.-C. Daily News* contains a paragraph concerning another project of this enlightened Viceroy.

It says that a native paper publishes a rumour which, upon enquiry, it is inclined to believe in the main correct although the figures are probably excessive. The rumour avers that the Viceroy Chang is now in correspondence with Governor Chao of Soochow for the establishment of a Bureau for the encouragement of manufactures after modern methods. It is proposed that the provincial government guarantee a foreign loan of ten million taels as a sinking fund, and that a further sum of Tls. 2,500,000 for working capital be lent from the provincial government treasury. This large sum is to be the capital for the establishment of five cotton spinning mills and five silk filatures. The official Directors are to be the Provincial Treasurer and Customs Taotais this side of the Yangtze, and the commercial Directors are to consist of several of the most influential among the mercantile classes in Shanghai and Soochow. Tls. 3,000,000 are to be employed for the establishment of silk filatures, and Tls 7,000,000 for cotton spinning mills, the interest on the loan to be at most six and at least five per cent. per annum. These ten establishments are to be farmed out to as many syndicates, the members of which are to pass a satisfactory examination as to resources in private capital, etc., by the commercial Director of the said Bureau.

A lecture recently delivered in Shanghai by Dr. Arthur Smith, a gentleman whose knowledge of Chinese characteristics is unique, furnishes the text for the following interesting article by the *N.-C. Daily News*:—In the able lecture given by Dr. Arthur Smith on Monday evening last at the Astor Hall, he referred to many of the differences between China and India. One difference described by him is that China has history and India has none. The Confucianist belongs to a race which is agricultural and commercial, and he never forgets the practical view of things, while the Brahmin is a dreamer on the infinite and the eternal, whose chief aim is to keep himself free from the population of the surrounding world. He will not write the history of passing events because he feels a great contempt for them, but the Confucianist, the Chinese scholar, has other sympathies. He desires success in life, family, prosperity, the knowledge of social facts, the securing of social position, the most profitable expenditure of wealth, and he spends money in printing historical works when he become rich. If he is a scholar he enjoys the compilation of a book containing a detailed account of his native city, and in this book he will insert all the names by which the city has been known for two thousand years. Biographies of all the celebrated persons who have been born there, or have lived there, or have been magistrates there, are contained in the same book. The revenue collected, the productions of the soil, the old customs maintained among the people, are described. Just as we have country histories, so have the Chinese. There is among them a love of home and of archæology which leads them to compile and print such works, showing that they have in this respect the European spirit. The Chinese are interested in political matters, and have made for themselves a code of laws which has been a model for the legislation of Korea and Japan. The making of these laws has been with the Chinese the steady work of time. In India there is the Hindoo law, Mahomedan law, and the British law. In China the law is entirely of native origin and originates in daily edicts. A crowd of transcribers are always at work in the palace; every branch of the administration has writers, and everything that passes is on record. The Emperor's words at audience and the answers to his enquiries given to Ministers and all persons admitted to audience upon their knees, are taken down at the time. These daily records of things done are the foundation of Chinese history. After a suitable interval a Minister is appointed to made up a collection of documents in some department; he is assisted by a commission and a ponderous book is the result. The commission appointed to compile the complete description of Anhui province numbered one hundred and eighty persons,

whose names appear at the beginning of the work. At the head of this list are eight persons who had been Viceroy or acting Viceroy of the Two Kiang provinces. Shen Pao-cheng stands first and Tseng Kwo-fan second. Then comes the name of Ma Sin-i, the Mahomedan who was assassinated at Nanking while Viceroy there. The eighth on the list is Liu Kun-yi, the same who has lately been placed over the army to organise and improve it on Western lines, so that China may not again prove unequal to her island neighbour and adversary in a great war. Three names follow, of those who have been governors of Anhui, and then succeed a chief manager of the grain tribute and four persons who have acted as provincial chief examiners from whom all the Bachelors of Arts of the province receive the degrees. We have here sixteen persons on whom has devolved the chief responsibility in the preparation of the book, which consists of 360 chapters. But in the commission are embraced many *chih-hsiens* who have collected information on the city which they govern. There are also prefects, who do the same for their prefectures. But the real workers are the *literati* who have private property and official titles, and they make up the concluding and most efficient portion of the long list. They belong to the province and have libraries, while their contributions of material are forwarded to the editors, who are men possessed of literary skill, archæological zeal, and leisure for the work. The official class in China are all *literati*. When in office they all have under them an army of clerks constantly recording the day's incidents. Thus, every prefect and city magistrate is in fact a historian acting with the unremitting assistance of his scribes. The Hindoo dream of an ideal world, pantheistic or nihilistic or atheistic, has no place in the Chinese official mind. What the Chinese administrative officer thinks of and by aid of his secretaries records, are such things as we find in this book published eighteen years ago, such as the decrees of the emperors having reference to Anhui province. Then comes its astrology, its boundaries, its physical features, the changes of time in its names and jurisdiction, its mountains and rivers and the customs of the people. Its custom houses and antiquities have to be described as well as its ancient temples and tombs. Statistics follow embracing the river navigation, the census of the population, the land tax and taxes on all agricultural productions, and these are mentioned with much detail. The eminent men of the province all have their biographies in the book as well as the women who have become famous for filial piety and chastity. At the end the books written by authors in the province are mentioned, and to close all, supernatural occurrences are recorded and there are notices of famous Buddhists and Taoists. History is the inevitable result of the Chinese political and social system. By carrying out their ideas age after age on one complete but self-consistent system, they have succeeded in spreading their laws and method of political administration among more people than have ever before, since man appeared on earth, been subject to one emperor and to one organised legal control, and this is the reason that while India has submitted to be governed by outside races, China has always been under the government of her own laws. China makes industry the basis of the social fabric, while in India a religious caste has usurped the position of superiority to the rest of the nation. Our moral sympathy and our intellectual consent must be given to the people who have consistently from the first devoted themselves to the development of practicable political ideas, through which countless millions may live together in comparative peace welded into one great unity. It is the greatest of pities that China cannot be faithful to her own ideal, noble as it, and that by her unfaithfulness she falls daily into disagreement with her neighbours far and near.

The latest news in reference to the Kansu rebellion is that the Boards of Civil Appointments and of War having recommended that the Viceroy of Shen-Kan, Yang Chang-chün, and the Commander-in-Chief of Kansu;

Liu Chen-kuan, should be instantly dismissed from office and stripped of their rank and titles, for their negligence in relation to the Mahomedan Rebellion: the Emperor confirms the latter part of these sentences, but allows the culprits to retain their posts. The Viceroy is now making frantic efforts to materialise his paper army. Meanwhile, news has reached Pekin that the important city of Sining, in West Kansu, is entirely invested by the rebels, and is likely to soon fall into their hands. The Shantung authorities recently captured a large quantity of gunpowder, Mauser and Winchester cartridges, and nearly a million leaden bullets supposed to be on their way to supply the rebels in Kansu. These warlike stores were conveyed by about 80 men all of whom have escaped arrest. It is reported from Pekin that a brigade of 10,000 men under General Ch'eng Ch'ung-tsou of Hnpeh, quartered near Pekin during the war, who were on the point of disbandment the other day, have suddenly received orders from the supreme War Council to be ready, instead, to go off on active service—probably to Kansu.

The *China Gazette* of the 16th inst., contains the following paragraph:—We learn that the British Government has offered the post of Minister Plenipotentiary and Envoy Extraordinary at Pekin to Sir Robert Hart, the present Inspector-General of the I. M. Customs.

The *North China Daily News* of the 19th inst., published a telegram which it received from Pekin, under date Sept. 18th, 9 a.m. It had reference to the Shanghai-Nanking railway, and ran as follows:—"The Emperor gave consent a short time ago to a joint proposition of the Viceroy Chang of Nanking and Governor Chao of Soochow to connect the latter city with Shanghai by a railway. When this is completed the line is to be extended northwards through Wusieh on to Chinkiang, and from thence westwards a branch line will be laid to Nanking. All these cities are in Kiang-su province. A secret decree has been sent to the two high officials to commence work as soon as practicable. This is apparently to forestall an anticipated demand of the Japanese to be allowed to build a railway between Shanghai and Soochow and Hangchow as soon as these two ports shall have been formally opened as Treaty ports. It is also averred that the Emperor has given his consent to a scheme strongly recommended by the Viceroy Chang with the cognisance of Governor Chao, for the establishment by a Chinese syndicate of a river steamboat service between Shanghai, Soochow, and way towns. This new Steamboat Company will also undertake to carry the mails. The Kiangsu Government will be given the power to inaugurate the postal administration on European lines, and to simplify matters as well as to avoid friction, the numerous private postal agencies will be given the opportunity of acting as government agencies at the various towns. There is every reason to believe that the first two schemes named above will be inaugurated very shortly, the various head officers of the movement having been already fixed upon by the provincial government in question."

His Excellency F. M. Knobel, the new Minister for the Netherlands to Pekin, arrived at Shanghai by the last English mail. H.E. was formerly Minister to Teheran.

Work has already commenced on the Shanghai Ewo Cotton Mill. The land secured for the site of the mill is next to the old Ningpo Wharf and measures about sixty *mow*. The locality is said to be very favourable, being situated in the centre of the shipping and affording facility for labour. The order for the machinery from Messrs. Platt Bros., of Oldham, is completed.

The Shanghai morning journal says that the boom there in land and houses continues. The "Judge's Bungalow" has been sold for Tls. 18,000; the Agra Bank's property on the Carter Road, including the houses built by the late Mr. Benjamin, for Tls. 50,000; and the Agra Bank's property on the Kiukiang and Szechuen Roads for Tls. 65,000.

The acting agent of the China Mutual S.N. Co., Limited, in Shanghai, has received the following telegram from the Managing Director

at London:—"Pay Interim Dividend of 3 per cent. on the Company's Preference Shares, this being at the rate of 6 per cent. per annum. Dividend payable 1st October (being for the) six months ending 30th June 1895."

The new Viceroy of the Liang-kiang is said to be Yu Chih-kai, a Hunan man, who has been Provincial Judge of Szechuen, and Treasurer and Acting Governor of Kuangtung. He retired in May, 1890.

A Chinese Native paper states that Tang Ma Hing, ex-governor of Formosa or President of the Taiwan Republic, has up to the present resided in Bubbling Well-road after making his escape from Formosa. He left for Nanking recently, his object being to interview H.E. Chang Chih-tung on some important affairs. It is rumoured that he will make his return voyage to Hangchow to be present at his son's wedding.

The succession to Sir Nicholas O'Connor, says the *N.C.-Daily News*, seems to lie between Sir Arthur Nicolson and Mr. Henry Howard. The former has had considerable experience of the East, having been Second Secretary at Pekin in 1876 and Secretary of Legation and *Chargé d'Affaires* at Teheran. Mr. Howard was Secretary of Legation at Pekin in 1887, and made a tour of inspection of the Consulates at the Treaty Ports of China in the last four months of 1889 before returning home. It is not expected, however, that Sir Nicholas will leave Pekin for some time, and possibly the definite appointment of his successor may be deferred for the present.

On Thursday evening, Sept. 19th, there was quite a riot in North Szechuen Road, says our Shanghai morning contemporary, four French sailors having been attacked by upwards of a hundred jinrickisha coolies, who had armed themselves with the wooden seats of their vehicles. A foreigner living in the vicinity went to the assistance of the men-of-war's men and by a judicious application of a stick succeeded in rescuing them till the police arrived on the scene. The row was caused through the sailors not paying their fares, upon which the coolies raised the cry "*Ta, ta*," and had it not been for the timely intervention of the resident, the sailors would have fared worse than they did.

While the *Lyceum* was discharging cartridges into lighters in the powder limits at Shanghai on Wednesday, the 18th inst., a case dropped and there was an explosion, a number of the cartridges going off, but fortunately nobody was hurt.

The *Peking and Tientsin Times* says: "We learn that it is stated that the Japanese will evacuate the Liaotung Peninsula within two months."

A high officer, a bannerman named Yan Mao, has been appointed to investigate some special matter in the Amur province. The Viceroy Wang is dismissing a number of the Grand Secretary Li's *protégés*. The Lazarists have established a school at Tientsin for teaching Chinese boys the French tongue.

Dr. Marshall, while passing through Tientsin on his way to his station at Laoling, was accidentally shot in the thigh with a revolver by a friend who "did not know it was loaded."

The Tientsin journal learns that "the Chinese policeman who rescued Mr. J. F. Moore, at the risk of his own life, during the assault at Shan-haikuan, has been presented with a very fine silver watch by the employés of the Railway. There is also, we believe, to be a present of a more substantial nature later on. Such pluck and daring in a Chinaman, where a foreigner is being assaulted, do not come under our notice every day."

Trustworthy news from the north reaches the *China Gazette*, that as a further step toward the settlement of the French claims in Szechuen the mandarin of the town of Mienlin, in the Kien-chuen district, has been degraded and cashiered.

Eight cows died at the Wakana Dairy, Ota, Yokohama, on the 22nd inst. The veterinary surgeon stated that they were attacked by fever. A general meeting of dairy keepers was promptly held to discuss measures to prevent its spread, but no other animals have since been affected.

THE ITO CABINET.

THE calm that has succeeded the storm recently raised by Opposition agitators, is commented on by one or two vernacular journals. The *Kokkai*, for example, writing in a strain distinctly unfriendly to the Premier, is nevertheless compelled to note that he has achieved the prime object of a statesman, silenced his enemies and satisfied his friends. A journal frankly disposed to cast up its country's accounts would itself become the appraiser of what Japan has done and what she has left undone within the past two years. But the *Kokkai* adopts the ungracious device of making Marquis ITO chaunt his own pæans through the medium of the always available anonymous interviewer. Yet, in whatever form the subject be introduced, it must set the public thinking. There have been in the story of Japan's career during the past quarter of a century many pages that her friends would be pleased to blot from the record. But it is undeniable that through evil report and good report she has struggled steadily forward, until the goal of her ambition is fairly in sight. For many years the strength of Occidental conservatism threatened to prove too much for her. The idea of admitting an Eastern State to the comity of Western nations had never been seriously entertained in Europe until Japan became its exponent, and even in her case the possibility that such a step might be taken, seemed always so remote that those most directly concerned felt no grave uneasiness. They saw nothing conclusive in the complaisant action of the United States, nor yet in the friendly consent of Germany, for they understood well that so long as England remained obdurate, the end could never come. To placate England, then, was part of the great task that lay before the ITO Cabinet when it came into office. There was also the scarcely smaller difficulty of placating Japan. For such a storm of political discussion raged around the question that little hope remained of a solution satisfactory to all parties. Japan's historians, therefore, will have much to say about the double victory achieved in 1893, when for the first time an Oriental State was admitted to equal intercourse with the West, and when the terms of admission were such as to silence the clamour of hostile factions at home. Under different circumstances such a victory would have evoked a burst of national applause. But it had been preceded by so many disappointments that when success finally came, the nation had grown weary waiting for it, and public satisfaction was marred by a sense that justice had been too tardy to deserve enthusiastic welcome. The Cabinet might not expect full recognition from men in such a mood, but what had been accomplished could not fail to be appreciated one day or another. After

that, fate certainly treated Japan kindly in preparing for her an opportunity to prove her title to the confidence that Europe had placed in her. The war with China went far to justify England's practical acknowledgment of Japan's claims; for though a display of martial prowess does not necessarily imply judicial and legislative competence to assume charge of foreign life and property, no doubt can be entertained that the qualities shown by Japan in her struggle with China—qualities of organization, of prevision, of strategy, of patience, of general obedience to the best canons of civilized belligerency—indicated a nation against which Europe could no longer justly discriminate. To the ITO Cabinet the country owes the honour of having played so distinguished a part upon a world-watched stage. Elsewhere the honour would have been fully recognised. But it has not here received more than a fraction of due recognition. Japan's misfortune at present is a strong predominance of the personal element in her politics. Her parties represent not principles but men. We may hope that, by and by, this fault, inevitable, perhaps, in a transition stage from government by prominent clansmen to government by great parties, will disappear. But for the moment it throws a disfiguring shadow over national affairs. There seems to be no such thing as public gratitude. Political leaders that ought to start the chorus of approval when the nation's interests are really served and its prestige is conspicuously raised, appear to remember only that their rivals have been successful, not that their country has benefited. Journalists, that should know something of the important share taken by civil officials in the successful conduct of war, and above all, in the negotiation of an honorable and profitable peace, disingenuously endeavour to distinguish between the fighting forces and the Cabinet, and ungratefully forget the many advantages secured by the Shimonoseki Treaty in order to recall the complications connected with Liaotung. Possibly the prevalence of this spirit of detraction hides from Japan the real significance of her warlike and diplomatic successes, and probably she is fortunate in her want of perception, for certainly the danger involved in over-estimating what she has done is above all things to be dreaded. Yet, if she is without a due sense of gratitude for what her statesmen have already accomplished, she may also have a very imperfect idea of the greatly increased responsibilities that she has herself incurred, and in that direction, too, there lies considerable peril. Altogether the so-called "sweets of power" in Japan have at present a very bitter element. The approval of a grateful country, than which no higher incentive exists for public servants, is wanting, and instead of the warm applause of their contemporaries her statesmen must be content to await the cold verdict of future historians.

THE "CHISHIMA"-"RAVENNA" CASE.

MANY comments have been elicited by the unexpected ending of the *Chishima-Ravenna* case, the general sentiment apparently being one of surprise that the Peninsular and Oriental Company, by agreeing to pay a sum of £10,000, should have virtually admitted that the *Ravenna* may have been to blame. Such an admission is certainly calculated to astonish critics originally confident in the correctness of the verdict pronounced by the naval court of inquiry. The public has not forgotten how curiously intemperate these critics showed themselves in the face of the slightest contradiction. One would have supposed from their angry diatribes that the *Japan Mail* had committed a cardinal sin because it denied, not that the blame rested with the *Chishima*, for that point was never discussed in these columns, but that the Japanese Government was bound to abide by the finding of the British Naval Court. In point of fact the findings of such courts have often been reversed by legal tribunals—instances of the kind are on record with regard to collisions even in Japanese waters—and at any rate to carry into a court of law a case already decided by a naval court of inquiry, is as natural a proceeding as to appeal from a lower to a higher tribunal. If, as the critics asserted, Japan should have bowed submissively to the finding of the naval court, it follows that she should have agreed, without further query, to compensate the Peninsular and Oriental Company for the damage sustained by the *Ravenna*. On the other hand, had the finding of the naval court been adverse to the *Ravenna*, the Peninsular and Oriental Company, by parity of reasoning, would have been bound, then and there, to satisfy the pecuniary claim of the Japanese Government for the total loss of the *Chishima*. We imagine that the critics will pause before they commit themselves to either of these propositions. The fact is that whatever value may attach for some purposes to the findings of a naval court of inquiry, they have no competence whatever as regards the pecuniary liability of the parties concerned, nor are they even admitted in evidence by a court of law. These things were pointed out by us at the time, and simple and self-evident as they are, they drew upon our head a storm of abuse so hot and so blind that violent race prejudice had evidently over-ridden the commonest principles of justice. Had the *Ravenna* been in charge of an Englishman at the time of the catastrophe, it would have been possible to attribute some part of our assailants' anger to natural confidence in the navigating capacity of a fellow-national as compared with that of a Japanese naval officer. But since she was in charge of a

Japanese pilot, the question between her and the *Chishima* was not one of British maritime skill *versus* Japanese, but of Japanese against Japanese. That the *Ravenna* was owned by a British company enlisted British sympathy on her side, as a matter of course; but if she was in the right, why should there be any fear of invoking a British Law Court's decision? However, we need not dwell further upon the disgraceful exhibition of prejudice that marked the criticism of that excited time. Writers that seek to establish their patriotism by violating the attributes held dearest by Englishmen the world over—justice and fair play—do but drag the name of England in the mire.

Concerning the finale of the case, we can not suppose, as some writers do, that the Peninsular and Oriental Company preferred to pay a sum of £10,000 rather than incur the costs of a suit at law. The Company knew well that if they obtained a verdict, their costs would be borne by the other side. Neither can we believe that the embarrassment of collecting evidence had much to do with the result. In that respect both sides laboured under the same difficulty. On the other hand, there is surely no ground for the hypothesis advanced by a Kobe journal that the suit having been instituted by the Government at a time when anti-foreign feeling ran high, has been compromised in deference to the calmer tone prevailing to-day, and because of diplomatic regard for England's friendship. The Government, we imagine, simply pursued what it believed to be its rights, and assuredly we do not rate Japan's estimate of Englishmen so low as to suppose that she fears to excite their anger by appealing to their law courts for justice. The question of money, we have the best authority for saying, had no primary importance in the eyes of the Japanese Government. They sought principally to vindicate the reputation of their naval officers against the slur cast upon it by the finding of the court of inquiry, and that being their prime purpose, the amount paid by the Peninsular and Oriental Company in acknowledgment of the *Ravenna's* possible fault mattered little as compared with the acknowledgment itself. For we are compelled to regard the action of the Peninsular and Oriental Company in the light of such an acknowledgment. With all the facts of the case before them, the Company's legal advisers doubtless concluded that they could not reckon with certainty upon a favourable verdict. We have no intention, at this late period, of entering into a detailed discussion of the case. But to show our readers how much even British master-mariners found to say on behalf of the *Chishima*, we now print two of the letters addressed by them to this journal immediately after the finding of the naval court of inquiry.

THE LATE COLLISION AT SEA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Perhaps too much has already been written in connection with the late deplorable collision between the *Chishima* and *Ravenna*, but as much unfairness and even race prejudice have been exhibited in all the matter that has appeared thus far, I beg space for a few unbiassed opinions formed after careful perusal of the full report of the proceedings of the Court of Inquiry held at the British Consulate at Yokohama. In order to make myself thoroughly understood, I shall be obliged to quote some of the Articles from the "Rules and Regulations for preventing Collisions at Sea."

Article 15.—"If two ships under steam are meeting end on, or nearly end on, so as to involve risk of collision, each shall alter her course to starboard, so that each may pass on the port side of the other. The only cases to which this article applies are: When each of the two ships is end on, or nearly end on, to the other, in other words, to cases in which, by day, each ship sees the masts of the other in a line, or nearly in a line, with her own; and by night, to cases in which each ship is in such a position as to see both the sidelights of the other."

It seems to me from the statements made in the British Naval Court that the *Chishima* and *Ravenna* were not in a position to see each other's both sidelights, and, therefore, by the above rule, neither of them was compelled to port her helm. Consequently, the *Chishima* was within her rights when she starboarded her helm in order to clear a shoal on her starboard bow, she having at the same time ample room to clear the *Ravenna*, if the latter vessel had not interfered with her by porting to her green light, against all rules. The statements made to the Court that the *Ravenna* ported her helm several times to clear the *Chishima* are misleading, and not borne out by other statements; for instance: The *Ravenna's* proper course from the position $\frac{1}{2}$ mile off Nabotsuna-shima was S. 61° W. true, but instead of steering this course she first steered S. 50° W. true, and thereafter S. 55° W. true; and here it must be borne in mind that the *Chishima's* white and red lights were in sight all that time. Why was the *Ravenna* not kept on her proper S. 61° W. true course at once under those circumstances? Does it support the statement that the *Ravenna* ported to clear the *Chishima*, or to give her more room? In my humble opinion it does not; but, on the contrary, it plainly shows that the *Ravenna* was courting the danger of a collision, and it shows nothing else.

The Chief Officer's statement that he feared the pilot was edging the *Ravenna* too close to shore, is also misleading, and was apt to lead the Court to the belief that the *Ravenna* had ported much, even to a dangerous degree, in order to give the *Chishima* room, and to avoid the collision. Let us, therefore, consider what the Chief Officer stated afterwards. He said:—"I then went to the starboard side of the bridge and looked through my glasses to the Island of Oishi. I knew by former experience this should be a few degrees on the starboard bow if we were steering a safe course. It was a minute or two [during which he could not have watched the *Chishima's* lights very closely] before I could make out the Island satisfactorily, the night being so dark." Does this statement not clearly show that the *Ravenna* had at that time not ported to the westward of her proper and usual course?

The position where the *Chishima* now lies was scarcely taken into consideration by the Court, although it is known to be in 33° 56' 20" N. and 132° 40' E. The *Ravenna's* position at 4.45 a.m. was $\frac{1}{2}$ mile off Nabotsuna-shima Point. Now, placing the ruler over these two positions, it will be found that in order for the *Ravenna* to reach the point of collision she would have had to be steered S. 53° W. true $2\frac{1}{4}$. Comparing this with the statements that she steered S. 50° W. and S. 55° W. true, and that she was heading West at the time of the collision, it can be readily seen that she did not port after having been placed on the course S. 55° W. true. This being established, it is readily understood that the orders "port" and "hard-a-port" were given within a very short interval; also, that from the time of the order "hard-a-port," to the time of collision the *Ravenna* must have changed her course about 35° to starboard. I therefore am of opinion that the *Chishima* had ample time to pass ahead of the *Ravenna*, if the latter had done the right thing, namely, kept on her course. The distance run from $\frac{1}{2}$ mile off Nabotsuna-shima point to place of collision, namely, $2\frac{1}{2}$ miles, has not been satisfactorily accounted for in time, and I am of opinion that some two or three minutes elapsed between putting the *Ravenna's* helm hard-to port and the time of the collision. The

place where the *Chishima* is said to now lie is southward of the *Ravenna's* proper and usual course.

Art. 16.—If two ships under steam are crossing so as to involve risk of collision, the ship which has the other on her own starboard side, shall keep out of the way of the other.

Art. 22.—When by the above rules one of two ships is to keep out of the way, the other shall keep her course.

When, according to statements, the *Chishima's* green light appeared, it was only one point on the *Ravenna's* port bow—(it seems a pity that its distance was not more fully investigated)—and then the *Ravenna's* helm was put hard-to port; after this the Chief Officer stated: "I watched the *Chishima* for a second or two, expecting to see her open her red light again, instead of which she forged across our bows with great rapidity. I did not think that it was possible to clear her with the helm, so I jumped to the telegraph and rung 'stop' and 'full speed astern.'"

Why did the *Ravenna* do the only thing which she ought not to have done? Why did she port when, according to Articles 16 and 22, she ought to have kept her course? The *Chishima's* green light appearing showed plainly that the *Chishima* intended to cross the *Ravenna's* bows. Why was this not understood by the pilot of the *Ravenna*? Had the pilot acted in accordance with Rules 16 and 22, there would not have been a collision. Even after the pilot found that he had made a mistake and endeavoured to rectify the same by ordering the *Ravenna's* helm to "hard-a-starboard," the collision might probably have been prevented, judging from the angle at which the *Chishima* is said to have been struck, if the Chief Officer had not interfered with the pilot's intention by putting the engine to "full speed astern," for every nautical man knows that putting the engines (right-angled propeller) to full speed astern is equal to giving the vessel port helm. The Chief Officer, in this case, perhaps unintentionally, foiled the pilot's aim.

Art. 18.—Every steamship when approaching another ship so as to involve risk of collision shall slacken her speed, or stop and reverse, if necessary.

It was not the *Chishima's* place to slow because the faster she went the sooner she would cross the *Ravenna's* course; but the *Ravenna* should certainly have slowed a long time before she eventually did. She should at the very least have slowed and stopped as soon as the *Chishima's* green light appeared. In my opinion she should have slowed her engines at the time she was steering S. 50° W. true, instead of steering her proper course, namely, S. 61° W. true, having at that time the meeting steamer's white and red light in sight.

Art. 24.—Nothing in these rules shall exonerate any ship, or the owner, or master, or crew thereof from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precautions which may be required by the ordinary practice of Seamen, or by the special circumstances of the case.

Did the *Ravenna* neglect any precautions which are required by the ordinary practice of seamen? It seems to me that she did. Apart from what has already been stated regarding the neglect to steer her proper course when meeting the *Chishima*, she neglected to go at a moderate speed in comparatively narrow waters. She neglected to steer by the wheel on the bridge where the helmsman would have been under the immediate observation of the pilot. She neglected to give two blasts of her steam-whistle when her helm was put "hard-a-starboard," and three blasts when her engines were put to "full speed astern."

Many statements were made at the inquiry not fully borne out by others, but as my letter is already longer than I anticipated I shall conclude by merely drawing attention to the Chief Officer's statement, namely:—"When I thought we were sinking I jumped forward to the fore hatch turning out the able seamen who were berthed close to the hatchway. I told them to jump down as soon as possible to see if there was any water in the hold. On lifting off the hatch I found no water, and concluded we were not in immediate danger ourselves. I then called out, 'Away accident boat,' and then heard the captain give the order, 'Lower away all boats.'"

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Ravenna-Chishima* collision is the local "Topic," more especially as the verdict of the Japanese Naval Court of Inquiry has acquitted Captain Kabaraki of blame in the matter of the collision. Let us look into this matter a little more closely than the Courts of Inquiry have done. According to the testimony of the *Ravenna's*

officers, she had run about 147 miles in a little over 10 hours; and according to the time of the moon she should have had a head tide nearly all the way. This should have given her a speed over the bottom of rising 14 knots, whereas it was testified that her speed was 12½.

The French Engineer of the *Chishima* testified that up to the time of the collision the *Chishima*'s engines were making 125 revolutions per minute, while the Captain in his evidence says his ship was steaming between 9½ and 10 knots. There is something wrong about the stated speed of both ships.

The fact of the matter seems to be this:—The two ships were approaching each other at a speed of about 20 knots, and before they were aware of the situation they met. That they were approaching each other nearly head on until a collision was inevitable, appears a positive fact. That from the time the *Ravenna*'s engine telegraph was rung "full speed astern" until the shock of the collision, was not 60 seconds, seems plain.

The law says—"Each shall do his utmost to avoid a collision." Did the *Ravenna* take a proper and safe position 15 minutes before the collision? No. Ten minutes before? No. Five minutes before? No. At no time previous to the collision was the *Chishima* three points on the port bow of the *Ravenna*—a proper and safe position. Did the *Ravenna* keep a good safe distance on her proper side, so that, should the other approaching ship draw too near, through bad steering or by having to diverge from her course to avoid fishing boats or junks (contingencies that should be provided for as far as possible in narrow waters) a collision could have been avoided? She did not.

Had the *Ravenna* given the approaching *Chishima* early and unmistakable information of what she intended to do, there is no question but that this disastrous accident would have been avoided. From the evidence there was ample time for each ship to have secured a safe position. The writer of this has some little knowledge of the locality of the collision, and there is ample room for twenty ships to pass, but it was, "What is the other fellow going to do?" until too late. That experienced local ship-masters would have rendered a different verdict from that given by the Naval Court, held at the British Consulate, I am positive. "Both to blame, lump and divide the damage," at the very least. There is too much of "Oh, the Japanese are entirely to blame of course." I beg to differ totally from such an opinion. I believe the *Ravenna* to be equally to blame. Certainly no unbiased sailor can acquit the *Ravenna* of all blame.

All things considered, the Peninsular and Oriental Company seem to have acted prudently and conscientiously in this embarrassing affair, and it is permitted to hope that by an amicable compromise both sides have contributed to allay the painful feelings arising out of the catastrophe.

JAPAN'S ATTITUDE TOWARD FOREIGNERS.

SILENCE has fallen upon the voices that formerly devoted themselves to clamouring against the foreigner. They were never very influential voices, nor yet very numerous, but they made noise enough to be disagreeable. Why have they ceased? The explanation is not difficult, we think. It is furnished by two facts—Treaty Revision is practically accomplished, and Japan feels that her success in war has rescued her from the ill concealed contempt against which she used to chafe impatiently. Some critics insist that a rooted antipathy to foreigners exists among the Japanese, and that the ebullitions frequently witnessed three years ago were evidences of that sentiment. We could never endorse such a view. It is impossible to conceive a national conspiracy for the purpose of concealing popular feeling. At no time

could it be truly said that the Japanese, as a nation, were unfriendly to foreigners. The same courtesy, the same hospitality, the same helpfulness invariably greeted the stranger wherever he travelled in the interior. Such a state of affairs, continued year after year without change, could not be the outcome of a simulated mood. It indicated the prevalence of genuine good will. If there came a time when in the streets of Tokyo, in the columns of second-rate vernacular newspapers, and in the environs of the foreign settlements, the European or American found himself exposed to insult, we must not forget that every month of that evil era had been preceded by a year of freedom from such exhibitions of hostility, and that special incentives operated to provoke them. No nation composed of the human beings that people this planet could have passed through the struggle from which Japan has just emerged, without some access of soreness and umbrage. After all, whatever inferiority Western critics may have thought that they perceived in Japan she could not be expected to perceive it herself. In her own eyes she was always an independent State, entitled to full recognition of her sovereign status, and fighting against an injustice that she considered flagrant. The foreigner was the living representative of that injustice; above all, the resident foreigner, who never spared any effort to prove her unfitness for the functions that she strove to have restored to her. We often marvelled at the patience displayed by the Japanese under these circumstances; at the absence of vindictive writing in their journals and of recriminatory conduct on the part of the people. Then came the time when Treaty Revision was dragged into the arena of party politics; when the agitators of the Opposition advanced a theory that the only elements needed to secure success were greater self-assertion on Japan's part and the abolition of all non-conventional or illicit privileges, the enjoyment of which rendered the situation tolerable to foreigners. The enunciation of this doctrine, its plausibility, and the vigorous crusade undertaken by its supporters, certainly produced a temper which, in some of its more unreasoning displays, might easily be mistaken for anti-foreign prejudice. But there was also produced at the same time an openly opposing sentiment, having for its representatives not only the whole official class, but also the most powerful political party in the State, the *Fiyu-to*. Nobody observing these conditions ought to have imagined that a reaction against foreign intercourse could ever assume national dimensions in Japan, or that the old *Foi* spirit survived in any form stronger than an impulse of self-assertion. The Japanese did sorely want to assert themselves; they did long to prove that they were not the contemptible mannikins described by Western critics,

and that they deserved something better than their supercilious tolerance of Europe and America. An ambition of that kind is variously translated into action according to the mood or intelligence of the translator. It inspires the student to shout challenges, the street gamin to throw stones, and the petty journalist to pen scurrilities. During the recent war, something worse threatened, for a moment. The Japanese were shocked and bitterly chagined to find that in a tremendous crisis of their national destiny the resident foreigner stood, as a rule, against them, and made no secret of his desire to see them defeated. There was an intelligible reason for that unfriendly display: everything tending to raise Japan's prestige tended also to weaken the objections urged against her full exercise of sovereign rights. Men with a rooted aversion to being placed under her jurisdiction were naturally unwilling that she should win such renown as might hasten that contingency. Otherwise the general sentiment of the foreign residents would certainly have been with Japan. But the Japanese themselves could scarcely be expected to understand all these things. They saw only that there were living within their gates strangers inimical to their national success and ready to welcome their defeat by a foreign enemy. For a time it seemed likely that the discovery would create a permanent breach, nor can we be so sanguine as to suppose that its effects will be entirely dissipated for many years to come. But the comfortable assurance that they have given abundant proofs of national virility, and that their right to be respected by the Occident is no longer open to dispute, has probably removed the feeling of soreness from the minds of the Japanese. They are no longer consumed by a morbid anxiety to assert themselves *vis-à-vis* foreigners, and they seem to have lost much of their former sensitiveness to slights or discourtesies. No journalistic campaign was undertaken against the refined female that danced the skirt dance a few weeks ago before the Shrine of Gongen in Nikko, and folks only laughed at the reporter that constructed a column of sensation out of a foreigner's ignorant ride into the precincts of a temple. It appears that a better era has dawned. Let us hope that it will be permanent.

"NOTES ON SHIPPO."

MR. JAMES L. BOWES, an indefatigable student and exponent of Japanese Art, has given to the public another beautiful volume entitled "Notes on Shippo," which term, as many of our readers doubtless know, is applied in Japan to enamel, whether of the *cloisonné* or *champlevé* style. For our own part, we should not have supposed that Japanese work of this species in pre-Restoration days justified the elaborate attention bestowed upon it

by Mr. BOWES. Such, certainly, is the opinion of Japanese connoisseurs themselves. They relegate the enameller's art of former days to an altogether auxiliary place, and although in many of their collections vases, bowls, censers, and other objects of Chinese enamel are preserved and regarded with esteem, we are not acquainted with so much as one instance of a pre-*Meiji* Japanese enamel similarly honoured. Mr. BOWES, however, commencing in the early sixties, got together a considerable collection of Japanese enamels—vases, bowls, plates, and so forth—and subjecting them to the very keen analysis characteristic of all his æsthetic researches, arrived at the conclusion that they might be chronologically divided into Early, Middle, and Modern Period wares, the first of these eras, so far as we can gather, being synchronous with the Ming dynasty of China, the Second, ending with the re-commencement of Japan's foreign intercourse; and the third covering the time when a Japanese estimate of Western taste governed the art artisan's designs. More than once already we have expressed emphatic disagreement with this classification, and ready as we are to be convinced by Mr. BOWES' arguments, marshalled in his last publication, we find in them no reason to abandon our original view. Nor, indeed, should we be justified in doing so. For between the date of our first dissent—recorded both in these columns and in "Real Japan"—and the issue of "Notes on Shippo," Mr. BOWES was kind enough to send for our inspection "a number of specimens"—we quote his own words—"comprising the Early, the Middle-period, and the unmistakably Modern Wares." These specimens were submitted by us to numerous connoisseurs and working artists in Japan, whose unanimous and unhesitating verdict was that every one of the examples had been manufactured within the past thirty-five or forty years. In that sense we wrote to Mr. BOWES. Our words are reproduced in "Notes on Shippo":—"The specimens were made in Nagoya; the manufacturers there know them, and are as confident about them as any workman can be about the results of his own handicraft. They represent the work of 1865-75, when the art of cloisonné enamelling was revived in Japan. Not one of these pieces goes further back than 1865." Nay more. We procured from one of these very manufacturers a specimen declared by him, and after close examination considered by ourselves, to be chronologically identical—within reasonable limits—with those of Mr. BOWES. Yet Mr. BOWES was not persuaded. He declares the Japanese craftsman's verdict mistaken; concludes that we accepted his view without due scrutiny, and while admitting that the example sent by us is undoubtedly modern, says that its crude and impure colours and imperfect workmanship differ-

entiate it emphatically from the wares among which Japanese experts class it. Evidently the discussion must remain undecided. If Mr. BOWES will not acknowledge that Japanese manufacturers of *cloisonné* enamel know more about their own handiwork than Western collectors know, we can only admire the courage of his opinions. He may possibly have thought that our declared adherence to a view different from his own had some unwitting effect in inspiring the verdicts we obtained from Japanese artisans and connoisseurs. But it is not toward our witnesses alone that he assumes an incredulous mien. Among his specimens of so-called "Early Enamels" there is a cup bearing, by way of mark, the ideograph *Shō* (莚), or *Shiou*, as Mr. BOWES transliterates it. This mark, on being submitted to an Owari maker, a representative of the KAJI family, was by him pronounced to be part of the name "HAYASHI SHŌGORO," one of the successors and pupils of KAJI. Mr. BOWES rejects the testimony. On what grounds? Because "the piece on which the mark appears is undoubtedly old, and forms part of a group some pieces in which bear unmistakable evidences of great age, the metal foundations having been worn through by use"! He then goes on to contend that "*Shō*" might be a part of "SHŌSUKE," "SHŌBEI," or any other name containing the same ideograph, and that it can no more be taken to mean "SHOGORO" than "son" could be interpreted to indicate "THOMPSON" and not "ROBINSON." Mr. BOWES evidently fails to perceive that when a certain Japanese artisan is known by his brother artisans to have employed a certain ideograph—the significant character in his own name—for the purpose of marking his wares, and when that ideograph is found on a specimen, conjectures founded on the incomplete nature of the mark cease to have any value. The mark is "SHOGORO'S" mark. That is all there is about it. SHOGORO may have copied it from somebody else's mark, or a specimen bearing it may have been copied by some one else from SHOGORO, but it certainly is not the mark of SHŌSUKE or SHŌBEI, since neither of these persons is known to have employed it, or even to have worked in enamels, whereas its use by SHOGORO is an established fact. The same scepticism is shown by Mr. BOWES with reference to another mark, "*Bishu Yasumatsu Chōzo*," which figures on one of his "Middle-period" specimens. This mark the Japanese identify as that of CHOZABURO, a pupil of KAJI TSUNEKICHI, and therefore a *Meiji* workman. But Mr. BOWES thinks that "CHOZO" may be a complete name—which it could not possibly be according to the orthography—and, at any rate, not finding "CHOZABURO" on his own list of Owari *Shippo*-makers, declines to acknowledge the correctness of the Japanese

rendering. Scepticism can go no farther. For our own part, our respect for the zealous and painstaking character of Mr. BOWES' researches, as well as for his obvious desire to extract the truth, forbids us to pursue this controversy. Besides, there is little at stake. The specimens in question are very limited in number, and whatever be their origin or date, they occupy a plainly trivial place in Japanese art products. We do not for a moment venture to assert that the ability to manufacture them did not exist at the eras to which they are assigned by Mr. BOWES. But we do believe, in common with Japanese connoisseurs and artisans, that they were manufactured for the foreign market within the past forty years. There are, however, in Mr. BOWES' work, two points that call for comment. In *The Times* of Jan. 1893, appeared a notice of the late Dr. WAAGENER. The biographer of that true artist and noble-hearted man said:—"His main services to Japanese industrial art were two. The first was the improvement which he wrought in *cloisonné* enamels. Up to this time, Japanese *cloisonné* was dull and uninteresting, and received no attention from collectors, but his investigations taught the Japanese craftsmen to prepare and apply colours in such a way that *cloisonné* has now reached a high degree of artistic excellence." Commenting on this, Mr. BOWES writes:—"We may assume that Dr. WAAGENER was one of the numerous class of Europeans who have interpreted to the Japanese craftsmen what is supposed to be foreign taste, according, at least, to the views of the dealers of St. Mary Axe and the Minorities, who have brought Japanese pottery and some other branches of art to their present level of degradation." Never was crueller injustice done to the memory of a great man. WAAGENER an interpreter of the canons of bric-à-brac dealers in St. Mary Axe and the Minorities! WAAGENER a degrader of Japanese art! No, one, we are persuaded, will more sincerely regret the use of such words than Mr. BOWES when he knows the true character of a man whose talents were as much respected as his gentle, self-effacing instincts were beloved. The second point demanding a passing protest is Mr. BOWES' manner of quoting a comment of our own on the subject of NAMIKAWA SHOSUKE'S "cloisonless" enamels. Here is the quotation:—"We find innumerable specimens of almost shockingly inartistic character. * * * It is incredible that workmen should be deliberately set down to reproduce in enamels, at great outlay of labour and money, designs palpably faulty in drawing and grossly defective in composition." This criticism had no reference whatever to the general nature of NAMIKAWA'S work. It referred explicitly to the fact that despite the laborious and costly nature of his technical processes, the man himself is so far want-

ing in true art instinct as to employ decorative designs quite unworthy of permanent reproduction. Whether NAMIKAWA'S method be theoretically consistent or inconsistent with the logic of art is a question wholly apart from his occasional blunders as to choice of designs, and when Mr. BOWES misconstrues a special comment on the latter subject into a comprehensive verdict on the former, he betrays a want of accuracy that we should not have looked for in his writings. Finally, we do not at all agree with Mr. BOWES as to the present degradation of Japanese "pottery and some other branches of art." Apart from pictorial art—and even in that sphere there are to be found some worthy representatives of the old schools—we are entirely persuaded that, in respect alike of technical skill and decorative excellence, Japanese art products never stood on a higher plane than they do to-day, and that, in several directions, the modern art artisans have far outstripped their predecessors. What is more, we believe that Mr. BOWES himself has contributed materially to this happy result by the prominence into which his many admirable books have brought Japanese art. If we do not agree with all his conclusions, none the less we appreciate his zeal, his discriminating instinct, and his unsparing industry, all of which qualities are well displayed in the volume before us—a beautiful volume, for the rest, as to illustrations, typography, and paper.

PARLIAMENT & THE WHA-SANG ASSASSINATIONS.

IN the course of the debate connected with the Address to the Speech from the Throne, some noteworthy remarks were made in both Houses on the subject of the Wha-sang tragedy. Lord ROSEBERY especially is credited with a statement which, if rightly reported, requires much explanation. He said that "the massacre of missionaries in China formed one of the melancholy consequences of the terrible war which had lately been waged in that country." Such an assertion, coming from an ordinary member of either House, might be attributed to mere ignorance, but how are we to account for it in the mouth of the head of the last Cabinet? There has never been the remotest idea in the East of connecting the Kucheng atrocities with the war between China and Japan. What connection, indeed, can there possibly be? The war never made itself felt at all at Foochow; still less at Kucheng, which is three days' journey farther inland, and no one has ever dreamed of suggesting that the Vegetarians gave any thought to Japan's victory when they drew lots to determine what form their deed of violence should take. It is most improbable that Lord SALISBURY labours under any such delusion. We observe that, referring to

the matters mentioned in the Speech from the Throne, he said:—

Without dwelling on the fact that those who have suffered by those terrible crimes are ministers of religion, looking upon them merely as travellers, British subjects enjoying certain rights under treaty engagements with the Chinese Government, we have a right to feel the deepest indignation at the horrible treatment to which they have been subjected. I am bound to say that feeling, so far as we know, is fully shared by the Chinese Government itself. The Emperor of China caused his Minister at this Court to convey to me the extreme horror and indignation with which he had heard the news, and his resolution to bring to speedy and condign justice those who are guilty of these atrocious crimes. I quite agree with the view the noble lord advanced—or was it by my noble friend behind me?—that it is not only those who were the actual perpetrators of the crime, but also those whose connivance or carelessness may have created the opportunity for the perpetration of the crimes ought equally to be brought under punishment. At present we have every reason to believe that the Chinese Government is earnest in its desire to measure out to them the justice they deserve. Of course, if any different indication shall arise our duty may alter. At present our duty is to urge the Chinese Government to put the machinery of justice in motion and visit the due penalty upon the crimes that have been committed, to support it in that action, and if any neglect or lukewarmness shall be afterwards discoverable it will be our duty to try and supply its defects in that respect.

We are disposed to suspect that Lord SALISBURY has not found the Chinese Government's action quite so satisfactory as their original expressions of regret led him to anticipate. His Lordship committed himself to a serious proposition when he declared that "not only those who were the actual perpetrators of the crime, but also those whose connivance or carelessness may have created the opportunity for the perpetration of the crime, ought equally to be brought under punishment." Very possibly it is to the British Cabinet's resolve to carry that view into effect that the present movements of the Fleet are to be attributed. At first sight it may seem harsh to hold a Government responsible for the protection of a place like the missionary station at Wha-sang. Such a remote and isolated situation could scarcely be guaranteed against mob violence in any country. Sir CHARLES DILKE acted as the exponent of that view when he said:—

His honorable friend (Mr. Balfour) spoke strongly, indeed, against mob violence, which, he said, any civilised Government ought to be able to put down. But did he know that the Chinese had been hunted for their lives, their houses burned, and their property violently taken from them by mobs in portions of the British Empire, and this country had not been able to perform its treaty obligations towards China? He mentioned this because at moments when public opinion was naturally and violently aroused it was just as well to put in a word of caution and to show there was something to be said for tenderness and care in dealings with the matter.

But the Vegetarians were not a "mob" in the ordinary sense of the term. They were an organized association, of whose existence the authorities had full cognisance and whose continued defiance of the law would long previously have caused the arrest of their leaders and the dispersal of the society in any properly administered country. Such, at any rate, is the impression conveyed by the evidence hitherto published, and such seems to be the view taken by HER MAJESTY'S Government, since, so far as concerns the apprehension

and punishment of the assassins themselves, there does not appear to have been, on the part of the local authorities at Kucheng, any display of perfunctoriness or any attempt at evasion sufficient to call for a naval demonstration. It looks as if Lord SALISBURY were determined to give to the Chinese nation a sharp object lesson by bringing to justice not only the miserable rustics that perpetrated the crime "but also those whose connivance or carelessness created the opportunity" for its commission. If that be indeed the decision of the London Cabinet, and if the Fleet is to be employed to give effect to it, complications of a troublesome nature may ensue. Sir CHARLES DILKE'S plea for "tenderness and care" deserves all respect, and we can not but applaud the spirit of frankness and fair play that prompted his remarks. But how long are these outrages to continue? How long are foreign life and property in China to be at the mercy of an ignorant rabble, perpetually misled by their superiors and unrestrained by those whose duty it is to control them? The problem is one of immense difficulty. Apparently, however, the time has come to insist that the responsibility for horrors like that at Wha-sang shall not be limited to their actual perpetrators, but that every Viceroy, Taotai, Governor, and Magistrate in China shall be personally liable for treaty violations such as a reasonable exercise of zeal and vigilance would prevent. We greatly doubt, indeed, whether the Chinese can be coerced into obeying a creed of that kind without recourse to very far-reaching measures, but if the attempt is to be seriously made, England is unquestionably the Power to make it.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

REV. MR. McCALEB.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with much interest, and certainly have received much instruction from, the recent letters published by you from the pen of the Rev. Mr. McCaleb. I welcome such a learned writer to Japan, and I avail myself of the opportunity to be taught by him. For years I have closely studied the Bible, in search of Truth, but often having been left alone, and unaided, I have not been able successfully to solve some of the great problems of life. The learned writer says, for instance, that for seven hundred years before, the coming of Jesus had been foretold. Will the Rev. Gentlemen tell me where in the Bible are such predictions made? Where is the "Son of God" once mentioned by that name in the Old Testament? An answer will be thankfully received by an

ANXIOUS INQUIRER.

Kobe, September 18th, 1895.

CHINESE CHARACTERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me a few remarks in reply to the letter published in the *Mail* on the 13th.

I think it scarcely just to take no notice whatever of points in which an opponent cannot be confuted. In such cases the author of "Chinese Characters" has the habit of saying "and so on," perhaps meant as a happy periphrase of my own "and so on's" in my first letter. There is, however, a difference between the two. When I say "and so on" I do it

because in each case I could have increased the number of my examples very considerably, if space had permitted, which, if desired, I am quite ready to prove, whilst his "and so on's" mean nothing but that he is at an end with what he could possibly bring forth.

I most willingly admit that the author is right as to 鹿—this form being better than 鹿—and as to Kagoshima, which indeed can be written 鹿島 besides 鹿兒島. In the rest of his arguments, however, he has been decidedly unfortunate.

To take first the characters pointed out as erroneous in the beginning of my first letter, I have, as the author says, committed an error, because I considered 復 misprint for 復. Well, if it is no misprint, I wonder the more how the character could find a place in the selection. In Japan it is never used, the best proof of which is its absence from Gring's 8,000 selected Chinese characters, nor indeed, as it seems, in China either, for it is also absent in the Dictionary of Williams, although this work contains about 12,500 characters. I consequently could not but take the occurrence of 復 in a selection of the 4,000 most common characters in Japan for a misprint.

I find that he speaks only of 復 and 策—the two instances already mentioned—but says nothing at all of the eight others except "and so on" with his corrections." In German we have the saying "to be silent is also an answer." I take silence in this instance as negative testimony to the correctness of my statements, for I can scarcely be expected to accept of the author's summary remark "And so on" with his corrections" as anything like confutation.

卐 is not a Chinese character, but, as is confirmed by the very authority quoted by the author, "a mystic emblem of high antiquity, the Indian swastika." The same authority, Williams, also adds "it is the hammer of Thor and is common in Norse mythology." A curious circumstance has still to be mentioned: the questionable "character" in "Chinese Characters" is not the 卐 of Williams, but another Buddhistic symbol, the sawastika 卐 (see Chin. characters, p. 22), so that the author's right to appeal to Williams appears a little doubtful.

Many other references are made to Williams' "Dictionary of the Chinese Language." But the question is not, if a character is used in China, but if it is used in Japan. I think I can save me the trouble to point out the great differences in the use of characters here and in China. In a work bearing the title, "Chinese Characters for the use of Students of the Japanese Language," I could not but expect to find Chinese characters treated from the Japanese standpoint, and from that standpoint therefore I thought myself entitled to view it. As the work has the purely practical object to give students of Japanese the characters of most frequent occurrence in this country, the criterion of the characters it contains can only be, if they really are in frequent use here, irrespectively how the case may lie in China. As to the question of "correctness" I have expressly taken care to say "I always give the 'principal,' that is the correct, or at least the more usual form first." If this should not be sufficiently clear, I will explain myself still more explicitly: I think the correct form should always be given the preference, unless it has become obsolete in this country, in which case the more usual form ought to have the precedence. If this standpoint is justified, as I think it is when dealing with a work of such an outspoken practical tendency as the work in question, then there can be no doubt that 澁, 携, 場, 岩, and all the rest of the forms to which the author objects, as well as the others recommended by me which he passes with silence, must have the precedence, whether they stand in Williams or not.

As to the forms 凡, 劍, 尊, 研, 吊, 往, 并, 忍, 汚, 添, and 畫, which he takes so much trouble to prove to be the better forms, he must entirely have misunderstood me. I have, in the most distinct manner possible, designated all these forms as the better ones, and have suggested the other forms (凡, 劍, 尊, 研, etc.) as secondary ones only,* for which I recommend him to give the passage in my letter his attention once more.

I have still to mention that in my letter 汗 is a misprint for 汗. This latter character, which of course has nothing to do with the former—the rich information on which was unnecessary—is used as a secondary form of 汚, and will be found for instance—in case a misprint should happen again—in the Dictionary of Gring, p. 175, just below 汚.

* I however, notice, that in the case of 忍 and 忍 their respective places appear in my first letter inverted by accident.

Again I have not said that 眞 is not under the Rad. 目. What I have said, namely that "some characters occur under Radicals where under ordinary circumstances they are not looked for," is quite right, for 眞 occurs, besides under 目, also under 匕, 局 besides under 尸, also under 口, 染 besides under 木, also under 彳, and 穀 besides under 禾, also under 米. As to 渠, it is true that most in dictionaries it is placed under 彳, although in its present form it more naturally belongs to 木, like 染 and 梁.

I see no occasion to repeat my opinion regarding many of the kun or yomi in the book. If the author still upholds that idokoro is a good yomi for 座, or misu no kuma for 灣, or megumu for 徳, or matsurigotodono for 衙, our ideas of what are valuable and what are worthless yomi differ widely. His statement that the yomi is "as every one knows, purely arbitrary," holds good indeed for those "yomi" which are nothing but "mere expletive Japanese translations," as I called them in my first letter.

As I know of no example where 差 is read shi, I suggested sha, because in 差別, shabetsu (difference), it is read so. The other, much more used on: sa was not mentioned, because that on is correct and consequently could not find a place in a list of erroneous on's. 惆 is read chō, and not chū; it is scarcely ever used except in the two combinations 惆然, chōzen, and 惆愁, chōshū. According to the dictionary of Gubbins, which is the best authority on such subjects, 拐 is gai, not kai, and the legal term 拐帶 is gaitai, not kaitai. 撒 is not ordinarily read san, but satsu—see the eight examples in Gubbins, p. 718. As to 播, I am referred to the "original Chinese" in Williams, p. 1,179, the Kōkijiten and a mysterious "& on." I prefer the authority of Gubbins, who (p. 167) gives eight examples for han, but not a single one for ha. "旁 is hō, bō is used, but some dictionaries only give hō." Then some dictionaries are wrong, 旁 being actually read bō, and never hō. There are indeed a great many on, which lead a mystic existence in dictionaries only, but they ought not to be given the preference to the on in actual use.—牀 is jō, not shō—see Gubbins, p. 312.—I should like to know, when and where 囊 is read dō and nō; in the four examples of the most careful and elaborate Dictionary of Gubbins (p. 318), it is read jō only. I take also the same authority's shin (not jin!) for 稔 (p. 824) to be correct. See also Gubbins for 竄, where (p. 1,107), six examples are given for zan, but none for san. If the on of 狩 is shū as well as shu, then this latter on at least ought not to have been omitted; but it is a well known fact, that 狩 is never read shū, but always shu. "Again, take 簪. In all the dictionaries I have searched the on is given as ha as I give it, not hi." The work of Gubbins then seems not to have been among those dictionaries, as I find in all three examples given there (p. 205) hi, and not ha.—As 欠 is also read ketsu "in colloquial," this on ought to have been given, as well as nitsu for 日, which is by no means so unusual an on as the author seems to imply, Gubbins giving no less than 16 examples of it.

On p. 383 Williams gives not only 減, but also 減 and adds, that the latter form is the more common. But however that may be in China, every student of Chinese characters in Japan knows, that the form 減 is used here almost exclusively, whereas the form 減 is here all but unknown.

How the "intelligent student" is to determine which of two on is Kanon and which is Goon without any information furnished him, I am at a loss to understand.

I am at a still greater loss to understand how it can be asserted that I have "not noticed the presence" of 弊 and 弊. First 弊. I have not even so much as mentioned this form at all, but I have mentioned 差 as being not in the book. Thereupon I am given the answer: 弊—quite another form—is in the book. I really cannot make anything of such refutation. "弊 is (弊!) on page 43, under 才, see Williams, page 949." But 弊 is not on page 43, nor in fact anywhere in the whole book, whatever Williams may have to say on that topic. Besides, how could 弊 stand under the Rad. 才? It is strange that the author should accuse himself of such a—fortunately wholly imaginary—error. "The character 基 he will find on page 86 as 基." I should

prefer to find the character 基 as 基, and as nothing else. "叫 is on page 25, and so on." 叫 is on page 25, and there are also 31 other characters on the same page, but not 叫, the character I have stated as missing.

There remain three more characters, concerning which I am set at right: 寶, 歡, and 歎. But let us see, how: "寶 is on page 116." Yes, it is, but under the Rad. 貝 instead of 王. In my letter I have expressly said:—"It is possible that some of these may be in the book, but certainly I did not find them under their usual Radicals." Now 貝 is not the Radical of 寶, but 王, as every one knows.—"歡 is on page 50, under 懽 with which it is interchangeable (Gubbins Dict. p. 566)." I knew that before, but 歡 ought to stand not "under 懽," but under its Radical 欠. "On page 27 he will find 歎 under 嘆, with which it is interchangeable." This was not unknown to me either, but it does not alter the fact that the place of 歎 ought to be under its Radical 欠, and not "under 嘆," for I suppose that the characters in the book were not arranged after their meaning, but after their Radicals. As to the author's "and so on," by which he implies that also the absence resp. misplacement of the other 15 examples—at least of "most" of them—is a mere fancy of mine, I think I may dismiss it without a further remark.

Finally as to the nanori, he says: "If he can read them all correctly he can read most Japanese names." Well, I am quite ready to admit that I think so too. But for all that I am still of the opinion, and perhaps others with me, that such eminently familiar nanori as Yoritomo, Ieyasu etc. might well have been included. It can be taken for granted that such names will be among those looked for first, and that for instance Kiyomori serves the purpose of imparting the acquaintance with 清, kiyo, resp. 盛, mori, as well as some less conspicuous nanori. But setting apart this suggestion which scarcely can be called an "unreasonable" one, I do not find fault with the list in question.

I remain, Sir, yours very sincerely,

P. EHMANN.

Tokyo, Sept. 16th, 1895.

THE CHRIST ACCORDING TO PROPHECY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Of course, the lavish encomiums of "Earnest Inquirer" are not to be taken in a serious way. Nor am I at all sure there is much earnestness in the inquiry; but as there is nothing to lose in so doing I shall give my friend the benefit of the doubt, and proceed with an earnest attempt at a reply nevertheless. I may also be permitted to say that I prefer to decline the honour (?) heaped upon me by the title "Rev." as I am only a common sort of Christian such as you read about in the New Testament.

In my letter of September 9th, will be found the following:—"He came in fulfillment of a certain line of prophecy that had long since gone before upon him, even concerning his name. The name Cæsar was not included among them; they were such as, 'Wonderful,' 'Counsellor,' the 'Mighty God,' Immanuel, 'Christ' 'Jesus': all of which had their peculiar significance as to his nature and work." In Isaiah, ninth chapter, we have the following (B.C. about 741): Nevertheless, the dimness shall not be such as was in her vexation, when at the first he lightly afflicted the land of Zebulun, and the land of Naphtali, and afterward did more grievously afflict her by the way of the sea, beyond Jordan, in Galilee of the nations. The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined. . . . For unto us a child is born, unto us a son is given, and the government shall be upon his shoulder; and his name shall be called, Wonderful Counsellor, the mighty God, the everlasting Father, the Prince of Peace. Of the increase of his government and peace there shall be no end, upon the throne of David, and upon his kingdom, to order it, and to establish it with judgment and with justice from henceforth even for ever. The zeal of the Lord of hosts will perform this." Matthew applies the words of Isaiah in the following language (Matt., 4: 12-16). Now when Jesus had heard that John was cast into prison, he departed into Galilee; and leaving Nazareth he came and dwelt in Capernaum, which is upon the seacoast in the borders of Zebulun and Nephthalim. That it might be fulfilled which was spoken by Esaias, the prophet, saying, The land of Zebulun,

and the land of Nephtholim, by the way of the sea, beyond Jordan, Galilee of the Gentiles; the people which sat in darkness saw a great light; and to them which sat in the region and shadow of death light is sprung up." There can therefore be no doubt that the names, "Wonderful," "Counselor," "The Mighty God," "the everlasting Father," "The Prince of Peace," were in reference to Jesus. In Isaiah, 7.14., we have the following: "Therefore the Lord himself shall give you a sign; Behold, a virgin shall conceive, and bear a son, and shall call his name Immanuel." Matthew applies the prophet's words, thus: "Now the birth of Jesus Christ was on this wise: When as his mother Mary was espoused to Joseph, before they came together, she was found to be with child of the Holy Ghost. . . . Now all this was done, that it might be fulfilled which was spoken by the prophet, saying, Behold a virgin shall be with child, and shall bring forth a son, and they shall call his name Emmanuel, which being interpreted is, God with us." (see Matt., i. 28-23). There can be no doubt then that the name Immanuel was also in reference to Jesus. The woman at the well said (John, 4.25), "I know that Messias cometh, which is called Christ, when he is come he will tell us all things." How did she know this? From prophecy. Messias (or Messiah) means Christ, or Anointed and whether the one name or the other, be used depends on whether one be a Hebrew, a Greek, or one speaking the English tongue. Daniel says: (B.C. about 538), "Seventy weeks are determined upon the people and upon thy holy city, to finish the transgression and to make an end of sins, and to make reconciliation for iniquity, and to bring in everlasting righteousness and to seal up the vision and the prophecy, and to anoint the Most Holy. Know therefore and understand, that from the going forth of the commandment to restore and to build Jerusalem unto the Messiah the Prince shall be seven weeks, and three score and two weeks: the street shall be built again and the wall, even in troublous times. And after three-score and two weeks shall Messiah be cut off, but not for himself: the people of the prince that shall come shall destroy the city and the sanctuary; and the end thereof shall be with a flood, and unto the end of the war desolations are determined." (Daniel, 9. 24-26). It need hardly be added here that in prophecy a day is taken for a year. In Ezekiel we have: "And when thou hast accomplished them, lie again on thy right side, and thou shall bear the iniquity of the house of Judah forty days; I have appointed thee each day for a year" (Ezk., 4. 6). See also Numbers, 14.34. The seventy weeks of Daniel then till the time, "to make an end of sins, and to make reconciliation for iniquity, and to bring in everlasting righteousness, and to seal up the vision and prophecy, and to anoint the Most Holy" are seventy weeks of years, or 490 years. Shaff and Herzog's Encyclopedia of Religious Knowledge has the following note on this point: "Artaxerxes (great warrior). The honorary title of Persian kings. Two are so called in the Old Testament. 1. Pseudo-Smerdis the Magian, the pretended son of Cyrus, and brother of Cambyses, who seized the throne, B.C. 522, and was murdered after eight months, (Ez. 4. 7-24). 2. Ezr. 7: 7 and Neh. 2. 1, both speak of a second Artaxerxes, who is generally regarded as identical with Artaxerxes Longimanus, son of Xerxes, who reigned B.C. 464-425. Therefore Ezra's journey can be set down in B.C. 457, and Nehemiah's B.C. 444." The decree referred to in the prophecy of Daniel was that given to Ezra to rebuild Jerusalem which, according to the authority just quoted and also as high an authority as Sir Isaac Newton, occurred before the birth of Christ 457 years. Jesus being crucified at the age of 33 would make just 490 years till the "anointing of the Most Holy" or till the beginning of the Messiah's reign. That the Christ is referred to therefore, in this prediction of the prophet is very evident, not only from the time of its fulfillment in him but also from a number of other incidents referred to in the same prophecy that were accurately fulfilled in the Christ. Again, in the Psalms of David (B.C. 1047) we have the following, "I will declare the decree; the Lord hath said unto me, 'Thou art my son; this day have I begotten thee.' (Ps., 2.7). Paul in Hebrews, 1.5, applies the "decree" to Jesus by raising the question as to the superiority of the Son: "For unto which of the angels said he at any time, 'Thou art my Son, this day have I begotten thee.' This passage makes it quite clear that Jesus was spoken of in the Old Testament even a thousand years before his birth as the "Son of God" also. Yea, more, Isaiah speaks of him as "The Mighty God." And Paul in Hebrews says (Heb. 1.8) "But unto the Son he saith, Thy throne, O God is for ever and ever, a sceptre of righteousness is the sceptre of thy kingdom." John

says (John, 1.1,2) "In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God." To review briefly then the ground thus far gone over as to the prophetic names of Jesus we have, "Son," "The Prince of Peace," "Immanuel," "Christ," "My Son," "The mighty God," all of which were given him from a thousand to five hundred years, before his birth, and which he received and wears from the time of his nativity till now. This line of evidence could be still lengthened if necessary, but I deem this much only entirely sufficient within itself to establish the sonship of Jesus and the purpose of his coming into the world.

But I would by no means be understood as believing that this line of prophetic evidence relates to nothing but the names of Jesus. He was to be given the "throne of David," and Matthew's genealogy shows him to be a descendant of David; he was to establish and order his Kingdom "in justice," and not only the New Testament writers establish this fact in the account of his life but even his enemies are constrained to do the same; his Kingdom was to last "from henceforth even forever;" and he said to his disciples "I am with you alway even to the end of the world;" he was to be born of a "virgin," and "the birth of Jesus Christ was on this wise: When as his mother Mary was espoused to Joseph, before they came together, she was found to be with Child of the Holy Spirit;" he was to be "a son" not a daughter, and Mary "brought forth her first born son;" he was "to make reconciliation for iniquity," and, according to Paul, "all things are of God, who reconciled us to himself through Christ, and gave unto us the ministry of reconciliation; to wit, God was in Christ reconciling the world unto himself, not recording unto them their trespasses, and having committed unto us the word of reconciliation;" the "Messiah" was to be "cut off" "but not for himself," and at his execution even Pilate, a Roman governor that believed not in his divinity, after seeking his release thrice, washed his hands saying, "I am innocent of the blood of this just person;" a "great light" was to spring up among those "that walked in darkness," and according to Matthew and John, "the people which sat in darkness saw a great light; and to them that sat in the region of the shadow of death light is sprung up;" and "In him was life and the life was the light of men;" the darkness was to be in the land of Zebulon and in "the land of Naphthali by the way of the sea beyond Jordan in Galilee of the Gentiles," amid which the light was to spring up; and according to Matthew, the land of Zebulon and the land of Nephtholim; by "the way of the sea beyond Jordan, Galilee of the Gentiles; the people which sat in darkness saw great light; to them which sat in the region of the shadow of death light is sprung up;" he was to be begotten of God, and according to Luke, "the power of the Highest shall overshadow thee [Mary]; also that holy thing that shall be born of thee shall be called the son of God."

Most sincerely, J. M. McCALEB.
12, Tsukiji, Tokyo.

KOBE CONVENTION.

A few months ago, at the suggestion of some missionaries, the Rev. B. F. Buxton, of Matsue, of the C.M. Society, announced a gathering, of the character of the famous "Keswick Convention," to be held in Kobe, at the Methodist Church.

This Convention met last week and continued for four and a half days, with two daily sessions. The attendance, from the first, was very good, frequently being as much as a hundred. Some came from a distance to be present. Among the places represented were Nagasaki, Osaka, Yokohama, Tokyo, and Sendai, besides those from the nearer vicinity and several missionaries from China. A number of English speaking Japanese were also in daily attendance, together with several prominent pastors from Osaka, Kobe, and Hiogo.

The Convention was in charge of Rev. B. F. Buxton, who conducted the services to the eminent satisfaction of all and in a way that made them very helpful spiritually. Mr. Buxton's Bible Readings were both instructive and impressive, and his application of the truths presented cut their way home to the hearts of many of his hearers. Few of those who heard them will soon forget the lessons drawn from the story of the Transfiguration of Christ, Peter's Walking on the Water, Jacob's Wrestling with the Angel, or Isaiah's Vision.

Several helpful talks were given by Dr. L. W. Gulick, of Miyoshi, Bingo, the Supt. of the Christian Alliance Mission. Two or three English speaking Japanese Christians gave brief talks,

which showed that they had obtained a grasp on the spiritual truths of Christianity, far beyond the average Christian.

Rev. J. Hudson Taylor, M.D., Founder and Chief Director of China Inland Mission—the largest Mission in the world—was present at most of the sessions of the Convention, speaking five or six times to the great delight and edification of all who heard him. Dr. Taylor is a man of decided ability and, in many respects, a remarkable personage. Perhaps his most striking characteristics are his implicit faith in God, and his unswerving belief in the Bible as the revealed will of God. Added to this, there is a naturalness, a simplicity, and a childlikeness about the man that make him both interesting and attractive to a remarkable degree. His expositions of scripture showed a spiritual insight into the meaning of the Sacred Text that made luminous passages, the meaning of which had been dark and obscure to many of his auditors. In several instances, a few words of explanation of a verse, or of some aspect of Christian truth, removed difficulties in a minute that had troubled sober, serious students of the Bible for years. Nothing more helpful than Dr. Taylor's Bible Readings has been heard in Kobe in many years, at least in the judgment of many. The commands, "Have faith in God," "Abide in me," "Be filled with the Spirit," and the statements—"I am the Vine, ye are the branches," "I am the bread of Life," &c., have new meanings now to many and are vital with life and power, as never before.

The Convention this year was of the nature of an experiment; but so successful was it that it was decided, without any hesitation, to announce another for September, 1896. It is proposed to hold it at the same place, the Kobe Methodist Church, as the one just held. Due announcement thereof will be made.—Communicated.

TO STELLA.

With eyes like silv'ry summer stars, you smiled at me:
And white pearls shone between your sweet young lips.
Your hair gleamed forth, like glitt'ring gold, and seemed
to be

A lake, lit by the sun, before it dips
And sleeps behind the hills. Your colour came and went,
Like radiant rosy dawn that bids adieu to night:
As from those turquoise eyes, a slumb'ring look you sent,
Veiled in the mystery of vague twilight.

'Twas thus my heart did wake!

And through an ether space of dreams, we wandered, dear:
Together tuned the harp to Passion's song:
A song that filled with splendid strains the perfumed air,
And bore our souls in ecstasy along!

For one short summer time, upon my breast you lay,
And by the sunlit sea the sweet winds sighed,
As dew-drops kiss the rose,—I kissed your lips that day:
Then,—with a far-off shadowed smile,—you died!

'Twas thus my heart did break!

E.M.D'A.

REVIEW.

A Japanese Conversation Course. By H. Mutsu.
London: Kegan Paul, Trench, Trübner & Co., Limited, 2s.

THE few remarks on matters Japanese made in our editorial notes last month and the promise to reproduce in the columns of *Languages* a lecture dealing with the difficulties encountered in the Japanese language, have brought us some correspondence which tends to prove that a greater interest is taken in that tongue than we at first anticipated. There is little doubt that the difficulties said to be presented by Japanese are generally conceived to be very great indeed, much greater than Mr. Mutsu's little manual seems to warrant. The forty lessons contained in this conversation course are beautifully simple, and, as a stepping-stone to a more serious study of the tongue, they are bound to do very good service; moreover, we think that a traveller equipped with such knowledge as Mutsu can impart to him, should be able to make a short stay in the country itself most profitable and pleasant. Grammar in the abstract does not enter into the scope of the book; it deals with just the material necessary for ordinary conversations, and with the written language to the extent of producing the Kata-kana, and the more complicated Hira-gana (alphabets), out of the seven different styles of writing employed. The Japanese text of the exercises, including conversations and vocabularies, however, is, for the most part, rendered in Roman character. The author certainly has done his share to render the initial study of his beautiful tongue easy and full of advantage to the learner.—*Languages*.

LETTER FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.)

Taipei-fu, September 10th.

Sunday morning, August 31st, heavy rains were falling and continued with more or less severity on Monday, Tuesday, and Wednesday. On the evening of that day strong winds converted the storm into a howling gale, and the river rapidly rose until it overflowed its banks.

The Japanese in charge of the supplies stored along the river had not heeded the warning given by the foreigners who, with long experience in Formosa, knew what to expect, so that the river was well up along the street front before any attempt was made to move the stuff to higher ground. Then all was bustle and confusion: crowds of shouting coolies worked with all possible haste, and gangs of Chinese were driven through the streets carrying their loads to safer quarters, and then running back with all the speed that could be urged into them for more. But the delay was too long, the river soon came roaring along the roadway, and the remaining supplies were necessarily left to take care of themselves. At 11 p.m., a two-storey stone building came to grief. It formerly belonged to the Chinese Customs but at the time was occupied by Japanese, who seeing that it would be unable to withstand the strain, left it in a body; and none too soon, for a short time after the whole front and roof fell in with a crash, leaving only the back walls standing. Thursday morning, the streets of Tsa-tia-tia were surging rivers with from 6 to 10 feet of water in the lower and 3 and 4 in the higher streets. Along the street fronting the river was a rushing roaring sea, dashing waves against the buildings and throwing the spray 25 feet into the air. The large new hong occupied by Tait and Company was the only foreign property seriously damaged, the big stone and cement verandah that surrounded the house giving way from the front.

The greatest damage was to the Tamsui river railroad bridge, which had withstood many storms without injury, and while now still standing, is twisted from 3 to 5 feet out of line and is altogether in an extremely shaky condition. This is unfortunate for the Japanese, as it will take at least a month to repair it, and it is badly needed at present. However, as soon as other damages along the line are repaired, trains can run from the other side of the river and their loads be transported to them by boat. This bridge is by far the largest in Formosa, being 1,498 feet long, of which 1,465 feet are built of timber in forty-six spans; and at the end is a passage for junks 33 feet clear of everything, with an iron swinging draw centred on a stone pier. The railroad bridges both along the Kelung and the Hsinchu lines were nearly all destroyed, and in many places the ballast itself was washed out. At present writing, however, the road to Kelung has been repaired and trains are now running, but on the other line, it will take several weeks before it is all repaired.

The Japanese lost a considerable amount of stores by the flood and two or three horses. Many straw and mud houses of the inhabitants were swept away. The most serious loss of all was aboard the *Kagoshima Maru* transport, which arrived at Kelung on the day of the storm but owing to the crowded condition of the harbour could not enter. She then steamed around towards Tamsui but did not dare enter there, then going out to sea, she was dashed about by the storm for twenty-four hours, when it abated and the ship was able to enter Kelung. Several horses were washed overboard, and as a result of the fearful buffeting and the necessarily closed hatches, twenty out of the six or seven hundred coolies and soldiers below, died.

Notwithstanding the statement of certain journals that the Japanese had been fighting with the savages ever since their arrival, they first came into contact with them a few weeks ago near Olan, where four of the Ian gow tribe deliberately came down to the Japanese Camp, expressed their friendliness, and asked permission to accompany the soldiers for a few days; permission was given and they were provided with food and quarters with the army. After a few days of marching, one of the savages having injured his foot, the little party returned to the mountains, seeming to be thoroughly impressed with the idea that the Japanese were a great improvement on the Chinese.

Near Gelan, on the east coast, while several soldiers were strolling outside the camp, two savages armed with spears came suddenly from the forest. According to the soldier's story, they took them for Chinese soldiers and fired, killing one of them. It is a decidedly lame excuse, for their appearance is anything but similar to a Chinese soldier, and at all events two men armed with spears, whether they be Chinese soldiers or not, are scarcely in position to murder a squad of Japanese soldiers armed

with repeating rifles. It is unfortunate that the energetic and praiseworthy efforts of the officials, who have the welfare of the Formosans very much at heart, should be baffled by the blunders of the soldiers and the insolence of the coolies. The first regular meeting with the savages was held near Tokoham, when seven came down and held a "pow-wow" with the Major of the Japanese garrison stationed there. Arrangements were then made for the savages to send a deputation to meet some of the Japanese Civil Officials at a later date. So Mr. Hashiguchi, the clever Chief of the Agriculture and Industry Bureau, and Mr. Tanaka, the Prefect of Taipei-ken, made the trip to Tokoham, and word was sent to the savages by an interpreter that the Officials had arrived and would be pleased to see them. Before the interpreter returned with an answer, the party consisting of the above mentioned gentleman, escorted by about seventy-five Japanese soldiers made their way to the savage border, and reaching the base of the hills waited there the arrival of the savages. The officials were beginning to fear that the savages did not intend to make a visit that day, when a band of oddly dressed personages appeared at the top of the hill and upon spying their callers, hesitated and seemed to be holding a conference. It was then that a young savage, one of several boys given a Chinese education by Governor Lin, who had accompanied the Japanese, ran to the savages greatly elated, and with him they at once returned and were soon greeting the two officials with all the smiles at their command.

Many of the men wore small blankets about their backs, and a sort of a vest hanging from their shoulders provided with a pouch on each side. Large holes in their ears held pieces of bamboo, and their faces were tattooed on the forehead and the chin. Brass rings were about their wrists and strings of beads or buttons seemed the favorite decorations. On their heads they wore in some instances, a covering of deer skin. The women were dressed with a cloth under garment and a robe, hanging down from one shoulder wrapped about the body and fastened at the side. They had the same ear ornaments as the men, although highly decorated, and wore brass rings about their wrists. A broad line, perhaps two and a half inches wide, was tattooed over the lips, and continued back to their ears. The band consisted of 13 men and boys, and 9 women, some with babies on their back. The chief was asked if he knew that Formosa was now occupied by the Japanese? He answered in the affirmative. After considerable conversation and interest shown on both sides, the officials said to the savages, "Now that the Japanese have come we should become good friends, and if you will visit our cities we shall be glad to see you and we desire to visit your villages." After distributing presents of knives, showy red handkerchiefs, red woollen cloth, etc., food was given them which disappeared with great gusto. Before leaving, the savages were asked if some of them would not like to return with the officials to Takoham and twelve consented, the rest returning to the forest. After reaching Takoham a big dinner was prepared at which the savages were to be the honoured guests. With a scent like blood-hounds, however, these sons of the forest forstalled their waiting hosts, by tracking the food to its sources and then following the servants carrying the victuals to the dining hall, they helped themselves most liberally en route, after which, with their appetites scarcely tickled, they sat down to the feast. They got through the courses with amazing rapidity and continued to repeat the dose until there was danger of swamping the commissary department, and famine stared the garrison in the eyes.

The savages were delighted to see Tokoham burnt down, and one of them, first pointing to a Chinese, let forth a shout and then pointing to the burned out walls expressed his extreme satisfaction that the town had been destroyed. And well they might, for more dastardly treacherous tricks to kill the savages had been originated and executed in that city than in any other place in the north.

After the savages had consumed several days' rations and were for the time satisfied, they were asked if they would not like to accompany the Japanese to Taipei-fu. This sent them all into the most solemn conference, in which the "pros" and "cons" were discussed for some time, the Chairman finally conveying the decision that they were very sorry but as they had not left their homes with any intention to stay so long, they could not take such a long trip without some preparation. The officers said they were also sorry; they thought that the guests would have a good time, they would show them lots of soldiers, let them hear Japanese music, and would give them plenty to eat. The last condition seemed to strike a pleasant chord in the assembly, and the decision of the last con-

ference seemed to be in danger of being overruled, as a man named "Motoneban" and his wife, two boys, and one girl decided that the reward was worth the venture, and signified their willingness to go. Before the reception broke up, they were invited to come to Tokoham again, to which they answered that three or four hundred would gladly come down, but that the Japanese would need to cut up three or four cows for the dinner. To which their hosts answered that they would be sure to have the cows, but how would the savages receive them if they should return the visit.

This was too important a question to be answered at random, so another conference was held which threatened to continue most of the night. Finally, upon the Japanese pressing them for an answer, they very reluctantly replied, that while it would please them very much to have the Japanese visit their village, they did not know how they would be able to feed three or four hundred. The next morning the officials, after presenting the chief with a cow, returned to Taipei-fu accompanied by their newly acquired friends, arriving here on the eighth.

Upon reaching Government House they were taken to meet the Governor-General. They danced and sung their native songs, after which the Japanese military band of fifty members was called together and played for their special benefit. The music frightened them at first, but later seemed to please them, especially the bass drum which they probably compared with their own war drums.

At the last meeting with the Governor-General his excellency asked them to inform their people that the Japanese wished to be friendly with them, and that some of the boys of the tribe should come to Taipei-fu and be educated by him. That he hoped they would have perfect confidence in the Japanese, for without it there would be constant trouble. And continuing he said: "We will not deceive you. When we make a promise we will keep it." To which the savages answered, "Yes we will be good friends. We like you to do what you promise us. The Chinese always broke their promises; we do what we say we will, if I say, 'I will kill you, I will not break my word, I will kill you.'"

With this last chilly certificate of character the interview ended, and the savages returned to the quarters provided for them, where they good-naturedly received many visitors, and spent their time in trying to persuade the uniformed attendant that it was approaching their usual time for eating.

I leave to-morrow morning for Changwha, and from there I will join the Japanese Army for a few days fighting to the south, but will return in time to join the main expedition for the southern forts, which will probably leave here the last of the month. The Vice-Governor, Lieut.-General Takashima arrived this afternoon, and will take charge of his duties at once. Six ringleaders of a band of robbers who have not stopped at murder to secure their booty, were decapitated in the city the day before yesterday.

AUSTRALIAN NEWS.

Sydney, August 21st.

The intelligence of the loss of the *Catterthun* within a few hours of the vessel leaving Sydney created a painful sensation throughout Australia, and was at first received with expressions of disbelief; but, so far, little beyond a bare record of ascertained facts has appeared in the papers, pending the conclusion of the inquest and subsequent enquiry by the Maritime Board. It is, however, impossible to resist the conviction that the disaster arose from hugging the land too closely, half a point constituting the difference between danger and safety. At present it is uncertain what can be done in the way of salvage, everything depending upon the depth of water in which the ill fated vessel lies. If it should not exceed twenty fathoms, an attempt will be made to obtain the gold, which, to the value of £11,000, lies locked up in the ship's strong room, dynamite being employed for that purpose. As for saving the mails, the idea is not even entertained, as they must have become destroyed by the sea water, unless preserved in some unforeseen manner. The E. and A. Company are in nowise discouraged by the severe loss sustained. Their Sydney Agents, Messrs. Gibbs, Bright, and Co., have been advised that the steamer *Pathan* 2,700 tons, has been chartered to take up the down trip of the wrecked steamer *Catterthun*. The *Pathan* will load in Japan and Hongkong, sailing for the colonies about the middle of next month. The agents have also received advices from the directors of the E. and A. Company that they have contracted with Messrs. Napier and Sons, Limited, the well known shipbuilders, of Govan, to build a fine screw vessel for the trade between the East and Australia. The vessel will be of about

3,500 tons dead-weight capacity, built of steel to the highest class, and fitted with modern improvements. Her engines will be of the triple expansion type, and capable of about 17 knots. Accommodation will be provided for first, second, and third class passengers. The saloon accommodation will be made a feature of the ship, surpassing that of any of the boats now engaged in the trade.

One immediate result of the Kucheng massacres will be the temporary cessation of the somewhat questionable system of sending female missionaries to places where they are liable to insult and persecution. There has been a great rush of young ladies eager to take up the work of their murdered sisters, but the papers have been singularly unanimous in discouraging anything of the kind, insisting that the task should be left in the hands of able and experienced men. Despite the intense feeling of indignation which has become aroused throughout the colonies, where the principal victims were widely known, there has been no display of revengeful spirit, the actual facts of the case being well understood, and every confidence being placed in the determination of the British Government to secure the punishment of the murderers. The Chinese residents in Sydney have held a meeting to protest against the acts of the Vegetarians, and this will be followed by others in the provinces. In the meantime, an impression is gaining ground that in the event of the Chinese Government being unable to enforce its authority in Ku-cheng and elsewhere, a combined British, French, and American occupation will follow.

The prospects of establishing a regular trade between Australia and Japan continue to be discussed in Sydney commercial circles, and recently one of the metropolitan papers published an account of an interview with Mr. F. Kanematsu, a Japanese merchant in Sydney, who, replying to his interviewer, said—"There is a very good prospect for wool and sugar in Japan, also for hides and tallow. I was the first to export wool from Sydney to Japan. In 1890 I sent 194 bales away. It was a trial shipment merely, and, of course, I did not make any profit by it. Last year, however, I exported 500 bales, and made a very fair profit by the transaction. The coming season I hope to send 1,000 bales away. Yes, there is a capital prospect for Australian wool in Japan. Up to the present there are not many woollen factories in Japan, and most of the woollen articles made in the country are coarse things like blankets. The wool for them comes chiefly from Tientsin and India. The demand upon Australia will be for fine wool to turn into goods of better quality. I may say that we are now getting about a third of the total wool imported from these colonies and for the past twelve months you sent us altogether about 2,000 bales. So that on the whole, you see it amounts to this: At the present time there is not a particularly good market for Australian wool in Japan. When I say the prospects are good I had the immediate future in my mind. The poor people, as of course, you know, dress exclusively in cotton fabrics. The better class wear woollen clothes, and up to now those clothes have been made almost entirely from materials manufactured in Europe. That was the way with the cotton goods, however, before we got our mills to work. The cotton fabrics were imported from Manchester and Bombay, and the costume only made in the country. Then the mills went up, and we had no more need of Manchester 'piece goods,' for we had begun to make our own cotton fabrics. What we wanted then was raw cotton. And, in the same way, when we get our woollen mills going, instead of buying English cloth, we shall require their equation, in Australian wool. The value of the woollen fabrics imported yearly into Japan is about a million and a quarter sterling. "And the probability that your people would be able to work up the raw wool into cloth at a much lower cost than it is at present manufactured in England would of course increase the Japanese demand for woollen goods, and thus increase the amount of Australian wool required by the Japanese factories?" remarked the interviewer. "Precisely. And what is more, you may depend upon it that the day is not far distant when Japan will be returning a portion of the wool you send her in the form of cloth to Australia. We have only one million head of cows in Japan, and seeing that we kill about 10 per cent. of them per annum, we naturally have to depend largely upon other countries for hides to turn into leather. Personally I have exported large numbers of hides from Sydney to Japan, but the fact that Australian hides are useless for making first class leather owing to the careless method of branding the cattle in this country has militated seriously against the success of my experiments in that direction. In point of fact, until some better method of branding is in-

troduced amongst the cattle-breeders here, there is no prospect whatever for your hides in Japan. You brand the beasts in the most valuable portions of the hide, and the marks remain in the form of serious defects after the skins have been stripped off the carcasses. The consequence is that we are forced at present to look to America for hides. But if once you can get over the difficulty in regard to the brands, I am satisfied that Australian hides will stand a good chance in competition with those of any other country."

The information thus afforded by Mr. Kanematsu has been republished in several papers, and naturally occasioned much comment. On the other hand, another Sydney paper furnishes an opposite view of the question, in the form of an interview with Mr. E. D. Fraser, who has just returned from a prolonged visit to Japan and China, and professes to see no prospect of immediate development of commercial intercourse between Australia and Japan. Speaking to his interviewer, he said—"Well, I haven't any too confident opinion of the possibility of extensive business being opened up with Japan—I mean on a big national scale. It is not as easy as it looks on paper. In the first place, you have a great competitor in Canada, which has very speedy communication with Japan; and then there are such circumstances as the difference in the tastes of the people which militates against the development of the trade. For instance, the Californian wine suits the Japanese better than the Australian wines and it is cheaper; while the *saké* they drink is largely in use. Then I was told by a man in a very high position that a considerable quantity of Australian tinned meat which was obtained for the army was thrown away without having been used—it was too fresh and tender, and was not to their taste. Then again, Japan promises to become, by and bye, a competitor of the Eastern nations in some things. They are very ambitious, and they have wonderful powers of imitation. Of course they import Australian wool, and it might be possible to send it there direct, though at present they largely buy in the London market. But so great is their power of imitation, although there is a remarkable lack of originality in the Japanese character, that they are learning very rapidly, and are almost able at present to convert the wool into any pattern. Large cotton manufactures are going up. But what constitutes the real difficulty in establishing any extensive national commerce with Japan is that the majority of the people are not in a position to buy such of our products as they want. They are too poor. And this is a fact, that nearly the whole of the commerce which in the past we have been carrying on with Japan has been done with the European population there—not with the mass of the Japanese people at all."

There was a good deal more to the same effect, which it is unnecessary to reproduce. Mr. E. Jerome Dyer, who takes a more hopeful view of the matter, has been contributing to the Sydney press an interesting article on the Japanese system of commercial education, which has attracted much attention, and forms a peg on which to hang many uncomplimentary remarks concerning Australian deficiencies in this direction. Mr. Dyer also lately delivered a lecture at the Melbourne Reform Club, on "Australian and the Asian Pacific," the subjects touched by him being:—(1) The geographical position of Australia and Western Pacific countries, (2) extent and demand of these countries' markets so far as they concern Australia, (3) the last half-century's development of the Pacific Coast countries, (4) their present state (5) Eastern Siberia and the trans-Siberian Railway, (6) China and the Chinese, (7) Christianising China, (8) Japan and the Japanese, (9) Japan's development, (10) England's policy in the East, (11) Australia's position in the Eastern question. Mr. Dyer, in concluding his lecture, ventured the opinion that, as the world had seen the Mediterranean era of power and commerce superseded by the Atlantic, so now the latter was about to see the Pacific age, in which he hoped Australia would prove no puny factor.

The action of the Japanese residents in protesting against any further immigration of their fellow countrymen into that part of Australia, has naturally awakened much curiosity and comment. The *Newcastle Morning Herald*, alluding to the matter says:—"The Japanese of Thursday Island are improving upon the modes and methods pursued in the Australian colonies for the exclusion of aliens. They are going one better, and are actually agitating for the exclusion of their own countrymen, and on the same ground that Australian colonists have agitated for the exclusion of aliens. Their action, moreover, is the more audacious because they are themselves aliens, and have no other standing in Thursday Island than that which is afforded them by the comity of

nations. If the European residents of Yokohama, or any other portion of Japan, were to prefer a demand that no more Europeans should be allowed to settle there, the Japanese authorities would probably denounce it as an arrogant and audacious presumption on their part, but it would not be one whit more so than the claim put forward by the present Japanese residents of Thursday Island to prevent any more of their countrymen from coming there, and for the reason forsooth, that it is likely to interfere with the profits being made by those who are already there. It is, however, but another phase of the policy of trade restriction, with which some people in this colony are so much infatuated, and which has for its object the conferring of monopolies upon a few manufacturers or dealers in certain articles to the prejudice of those who use or consume those articles. The underlying principle is the same in either case, viz., selfishness, which consists in seeking one's own gain irrespective altogether of the rights and interests of others, and often in defiance—not merely of the law of charity which bids us love our neighbour as ourselves—but not infrequently of the elementary principles of natural justice and equity.

The *Melbourne Age* has been attacking the Anglo-Japanese Treaty, especially in its relation to the race problem. It says:—"According to the terms of the treaty the citizens of each country were to enjoy all rights and privileges of natives in the other. England could very well afford to make a compact of that kind, her geographical position rendering a large influx of Japanese into the British Isles a highly improbable contingency. It is quite different with Australia, situated within easy reach of Japan, and with a territory enormously in proportionate excess to the present population. The Japanese have already commenced to invade Northern Queensland, and it may easily be understood that encouragement will not be wanting to the immigration of painstaking and intelligent Asiatics who are accustomed to an extremely meagre diet and very low wages. If the conditions of a Japanese industrial invasion of Australia were made easy, it would not be difficult for Japan, with her 40,000,000 of population, to swamp the Anglo-Saxons, and turn Australia into a Japanese province. It is true that the Japanese come into the northern parts of the continent now; but it is always in the power of the several Legislatures to restrict the inroad so soon as it threatens to assume alarming proportions. With the acceptance of a treaty which confers upon Japanese immigrants the rights and privileges of Europeans that safeguard would vanish. It would not be competent for the colonies to withdraw from an arrangement which had for its principals the Governments of Great Britain and Japan. Nor is it likely that the mother country would be willing to risk her great export trade with Japan out of consideration for the colonial scruples. The mere traders amongst us may be expected to take a purely commercial view of the question; but the colonies at large have to consider the matter from a higher standpoint, and say whether the design of making Australasia a permanent home for the Anglo-Saxon race is to be maintained or abandoned. It need hardly be said that the acceptance of the treaty with Japan would be inconsistent with the policy of Chinese exclusion, which all the colonies have adopted. It is true that the Chinese are a more numerous people than the Japanese, and that they are a little lower in the social scale; but yet the Japanese are numerous enough for their unchecked immigration to be a source of danger, and it would be obviously unfair to pit their low-priced labour against that of the working classes of our own race. It will be prudent on the part of Queensland to keep a watchful eye upon the Japanese colonies in the north. The race problem does not present its most difficult aspect in respect to coolies or Kanakas. These are imported for a term of service, and returned on its expiration, and the whole immigration is well within the grasp of the authorities. But there is no restraint upon the entrance or the residence of Japanese, even as matters now stand, and were Queensland to become a party to the treaty she might find herself involved in difficulties of a novel character."

The writer, who does not appear to have more than a superficial knowledge of Japanese national character, concludes as follows:—"One of the inevitable results of the Japanese victories will be the development of a more arrogant attitude towards foreign nations generally, and this feeling is likely to be displayed more readily when Japan has made large additions to her navy out of the proceeds of the Chinese indemnity. None of the Australian colonies would care to have difficulties with Japan or any other foreign Power, but the presence of Japanese in large numbers in any

part of this continent would afford an excuse for the fussy intervention of their Government, with possibly demands for the redress of grievances on the part of its subjects. Even if it could be more clearly shown than is possible at present that a certain accession to Australian trade would result from the adoption of the Japanese treaty, so far as Victoria is concerned, there is not any reason to be in a hurry about it."

CRICKET.

THE FLEET VERSUS YOKOHAMA.

An all-day match was played on Saturday between a team representing H.M.S. Fleet and an eleven of the Y. C. & A. C., but the game was very one-sided, the Club winning a hollow victory. The day was cloudy and rain fell in slight showers both before and after tiffin. The Fleet winning the toss sent in Thring and Harries to face the bowling of Walford and Denne. Thring went under to Walford's first ball before a run had been scored, then Blount joined Harries and 25 was telegraphed ere a separation was effected. Five wickets fell before tiffin for the palty total of 68. After the interval, the visitors did not make much of a stand and the innings closed for 89. Blount made the top score for the Fleet, 32, which included one 4 and several threes; Harries' 20 included 4 fours. Lias took three wickets for 10 runs; Edwards' taking four for 27. Crawford and Dickinson opened for Yokohama, and the latter was sent back to the Pavilion after six had been scored. Upon White joining Crawford a stand was made, and 190 was reached before Powlett held Crawford off Pearson. White scored the most rapidly, knocking up 109 while Crawford was making 77. Crawford made 4 fours and the same number of threes; while White's total comprised 8 fours and 9 threes. The light was now very bad, and White after scoring another boundary was caught by Donkin off Pearson and the innings closed. Scores:—

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 22.

The British, French, and Russian Embassies at Stamboul have sent a vigorous note to the Porte demanding an indemnity for the recent attack upon the Consular Officials at Jeddah and the punishment of the offenders.

(FROM TONKIN PAPERS.)

Paris, Sept. 2.

There has been rioting at Bayonne in consequence of the suppression of bull-fights, which are contrary to the law of France.

(FROM THE "SIAM OBSERVER.")

London, September 1.

The Dundee jute workers' strike has collapsed, the men returning to work on the old terms.

London, September 4.

The House of Commons went into Committee on the Indian Estimates, when a long discussion took place on the question of the retention of Chitral. Among those who took part in the debate were the Right Honourable H. H. Fowler (Separatist), who was Secretary for India in the last Government; Mr. J. M. Maclean (Conservative), one time Editor of the *Bombay Gazette*; Mr. M. M. Bhownaggee (Conservative); the Right Hon. Sir W. Harcourt; and the Right Hon. Lord George F. Hamilton, Secretary for India. The Government defended its policy in retaining Chitral, and finally the motion against it was lost.

In the House of Commons on Wednesday the Hon. P. J. Stanhope, Separatist member for Burnley, raised the question of the cotton duties in India, and Lord George Hamilton replied that it would be impossible, in fairness to all parties, to repeal the duties in question.

London, 2nd September.

The Turkish troops have been repulsed by a large body of Bulgarian insurgents to the south of Burghas, an important town on the Black Sea.

Simla, 3rd September.

The Pamir Commission is still near Aktash, where the surveyors are busily engaged in examining the local Chinese boundary.

London, September 5.

Both Houses of Parliament have passed a Bill re-enacting clause 13 of the Irish Land Act passed by the Conservative Government in 1891 to enable Irish tenants to purchase their holdings by the help of funds advanced by the State.

In the House of Commons last night Lord George Hamilton, Secretary of State for India, made his statement on the Indian Budget. The final results for the year would, he said, probably reveal a surplus of Rs. 1,230,000. The credit of India was never higher, he continued, than at the present time.

It is announced that Sir Arthur Havelock, Governor of Ceylon, will succeed Lord Wenlock in the Governorship of Madras.

Lord Salisbury has appointed a Committee to supervise the construction of the railway to Uganda. Sir Alexander Meadows Rendel, K.C.I.E., the engineer of several large docks in England, and Consulting Engineer to the Secretary of State for India, and a number of the Indian railways, has been appointed to the same office in connection with the new Committee.

(FROM THE "SHANGHAI MERCURY.")

Foochow, Sept. 19., 10.40 a.m.

The bearer of the red flag at the massacre, who gave the order to kill outright, was caught yesterday.

(FROM THE "N.-C. DAILY NEWS.")

London, September 20th.

Prince Lobanoff, who is at present staying in France, is to attend officially the great review which is to be held at Wiercourt in the presence of President Faure. The French Press regards this as a conclusive mark of the alliance between France and Russia.

The French have ordered the people of Kiangtung either to accept French authority or to cross to the right bank of the Meikong River.

The Spanish cruiser *Sanchez Barcaistegui* has been sunk by collision off Havana. The admiral, four officers, and thirty-six of the crew were drowned.

(FROM JAPANESE PAPERS.)

Kyoto, September 25.

H.I.H. Prince Yamashina Kikumaro leaves here to-morrow for Tokyo.

Kumamoto, September 25.

Viscount Higashizono, an Imperial Chamberlain, reached here last night, and will leave for Tokyo to-morrow.

Toyama, September 25.

A daily paper called the *Fuyu Shimpō* was started to-day as an organ of the Radical Party.

Akita, Sept. 25.

Messrs. Hatakeyama and Sudo have been elected President and Vice-President of the Prefectural Assembly respectively.

Nagasaki, Sept. 25.

The *Koreetz* and another Russian warship have left for Chefoo.

The British gun-boat *Pigmy* has arrived here from Kamtschatka, and the French vessel *Alger* has proceeded to Ninsen.

The *Soko-go*, formerly *Tsao-kiang*, has put into Sasebo.

Söul, September 25.

Ming Ei-chun has gone to Chhun-chhon.

Shimonoseki, September 25.

It is said that the transports *Tairen Maru*, *Kaijo Maru*, *Kokura Maru*, and *Riojun Maru* have already left Talien with soldiers of the Third Brigade for Formosa.

Osaka, Sept. 26.

A report has reached here to the effect that the staff of the Second Army division left Talien on the 8th inst., and reached Taipei on the 12th. Major-General Yamaguchi, Commander-in-Chief of the Third Brigade, has left Talien.

Shimonoseki, Sept. 26.

A party of 300 troops and 40 coolies left here to-day for Kelung by the *Ninsen Maru*.

Nagasaki, Sept. 26.

The French ships *Bayard* and *Lion* have left for Chefoo, and the British ships *Centurion* and *Edgar* have arrived here from Yokohama.

Shimonoseki, Sept. 26.

Count Inouye arrived here by the *Shirakawa Maru* this evening.

Söul, Sept. 26.

Li Sei-ritsu, Chief Secretary of the Cabinet, has resigned.

Söul, Sept. 26.

Reports have been received to the effect that riots are prevalent in various parts of the country.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club re-opens on Thursday, 3rd October.

The Tokyo Chess Club re-opens on Friday, 4th October.
